v.

THE UNION PACIFIC RAILROAD COMPANY; The Oregon Short Line Railroad Company; The Oregon Railroad & Navigation Company; The San Pedro, Los Angeles & Salt Lake Railroad Company; The Atchison, Topeka & Santa Fe Railway Company; The Southern Pacific Company; Northern Pacific Railway Company; Great Northern Railway Company; Farmers' Loan & Trust Company; Edward H. Harriman, Jacob H. Schiff, Otto H. Kahn, James Stillman, Henry H. Rogers, Henry C. Frick, and William A. Clark,
Defendants.

DEFENDANTS' ABSTRACT OF TESTIMONY.

TESTIMONY FOR COMPLAINANT.

VOLUME I.

NEW YORK CITY, DECEMBER 1, 1908.

*(3) ALEXANDER MILLAR. Millar.

Testimony given before Interstate Commerce Commission, January 4th, 1907, in the city of New York.

Witness is secretary of Union Pacific Railroad Company, of the Oregon Short Line Railroad, assistant secretary of the Oregon Railroad and Navigation Company, and of the Southern Pacific Company. The Oregon Railroad and Navigation Company is the owner of steamships. The other companies do not, as far as witness knows, operate steamships. The Union Pacific does not own

Secretary of Harriman Lines.

*The numbers in parenthesis refer to the pages of the printed testimony.

any steamship lines to the knowledge of witness. It is a stockholder in the Occidental and Oriental Steamship Company. The steamers of the Navigation Company sail from Portland, Oregon, to points on the Columbia and Willamette Rivers, and also to San Francisco. The San Francisco and Portland Steamship Company goes to San Francisco as successor to the Oregon Railroad and Navigation Company. The Navigation Company has no steamers engaged in trade with China and Japan. It has no stock in any company engaged in traffic between this country and the Orient. The ownership of the stock of the Occidental and Oriental Steamship Company is joint.

O. R. & N. Steamships.

(4) Thinks minority stockholders are individuals as well as corporations. Thinks the Southern Pacific is a part owner. The Southern Pacific Company is a leasing and owning company of railway from Portland through San Francisco, California, Arizona, New Mexico, Texas and Louisiana to New Orleans. It owns through stock ownership the companies operating the railroads between those points. "Q. And controls them? A. I should think possibly." Witness is secretary of the Southern Pacific Company, of Kentucky. That company has an office in Beechmont, Ky., also in New York; the general offices are in San Francisco and Oakland. The corporate headquarters of the company under the laws of Kentucky are located at Beechmont. Beechmont is in the suburbs of Louisville, Ky. M. B. Bergeron is secretary of the Morgan's Louisiana and Texas R. R. & S. S. Co. Witness is assistant secretary. The principal office of that company is in New Orleans. Witness does not know as to the amount of stock of the Morgan's Louisiana and Texas R. R. & S. S. Co. owned by the Southern Pacific Company.

Status of S. P. as a leasing and owning Co.

(5) The Southern Pacific Company votes the stock it owns, but witness is unable to state the proportion. Thinks it has substantial control. It owns a line of steamships running in connection with the Southern Pacific System from New Orleans to New York. Southern Pacific Company as an operating company does not connect with the steamship line at New Orleans, but connects with the Texas lines at El Paso. Generally speaking it owns the stock of and controls the line of railway from Portland to New Orleans. As a matter of fact Southern Pacific Company has no line in Texas or Louisiana. The Morgan's Louisiana and Texas line runs from New Orleans to the Sabine River, in connection with the Louisiana Railroad Company. Thinks the Southern Pacific owns the stock of these companies. The steamship line connects with that railway at New Orleans. "Q. So that by steamship and rail the Southern Pacific Company controls lines of transportation from Portland, Oregon, through San Francisco, California, New Mexico, Arizona, Texas, Louisiana and New York City? A. Yes." The Southern Pacific owns the stock of and controls and operates by lease the Central Pacific Railway, extending from San Francisco to Ogden. The

Relations of S. P. to Morgan S. S. Co. and Lines in Texas.

Union Pacific owns the line of railway from Council Bluffs and from Kansas City to Denver and to Ogden and Salt Lake.

U. P. Lines.

(6) Union Pacific owns substantially all the stock of Oregon Short Line. Oregon Short Line owns part of stock of Oregon Railroad and Navigation Company. Union Pacific controls the lines by ownership of stock from Council Bluffs and Kansas City to Portland. Southern Pacific, Union Pacific, the Short Line, and the Navigation Company all have the same president, Mr. E. H. Harriman; same vice-president, W. D. Cornish, but there are other vice-presidents. Witness is secretary or assistant secretary of them all. J. C. Stubbs is Traffic Director of all. They have the same assistant traffic managers, the same comptroller, the same general auditor, the same director of maintenance and operation, the same director of purchases, the same general counsel. (7) Identifies lists of directors of Union Pacific and Southern Pacific for 1900 to 1906, inclusive; also lists of executive committee of Union Pacific from 1900 to 1906, inclusive; also executive committee of Southern Pacific, O. S. L. and O. R. & N. during same period. (Complainant's Exhibit 1, pages 8 to 16 inclusive.)

Directors and Officers of U. P. and S. P. Lines.

(17) Prior to acquisition of Southern Pacific stock by Union Pacific, there were no directors in the Southern Pacific who were also directors in the Union Pacific. Stock of Southern Pacific was acquired by Union Pacific in spring of 1901. Witness identifies statement showing date of annual meetings of the Southern Pacific Company, the number of shares of stock voted, the number of shares owned by the Union Pacific or the Short Line. (Complainant's Exhibit 2, pages 18 and 19.) Statement shows that the majority of the stock present at each meeting of the Southern Pacific Company was voted by the Union Pacific or Oregon Short Line Company in person through its officers or by proxy.

Annual Meetings of S. P.

(20) Witness testifies as to personnel of directors, showing that some of the directors of the Southern Pacific are employees or connected with the Union Pacific.

(21) Identifies by-laws of the Pacific Companies. (Exhibits 3 to 9, inclusive, pages 21 to 50, inclusive.)

(51) Testifies as to method of sending for proxies. Exhibits 10 to 15 inclusive, pages 52 to 55, are forms of proxy sent out by Southern Pacific for years 1900 to 1905, respectively, with exception of year 1901.

Proxies for S. P. Meetings.

(56) All four Pacific Companies have offices at 120 Broadway, New York. The secretary's, comptroller's, president's and vice-president's, and counsel's office are all common. A majority of the persons designated in proxies to vote Southern Pacific stock are Union Pacific officials or employees. It is difficult to obtain full vote of the stockholders. Only companies in which it is possible to do so are those where stock is all owned by the Union Pacific.

Offices of Pacific Cos.

(57) Stock in Southern Pacific Company represented at meetings is as follows: Meeting of 1900, out of 1,884,000 shares, 1,859,000 shares were voted. In 1901 out of 1,978,000 shares, 1,736,000

Shares voted at S. P. Meetings.

shares were voted. Second meeting, same year, 1,742,000 shares were voted. In 1902, 1,573,000 shares were voted, and up to 1904 about the same number of shares. In 1905, after an increase of the capital stock, 1,974,000 shares were voted, and in 1906, a little over 2,000,000 shares. Reads Resolution of Union Pacific Executive Committee designating directors to be voted for in the Southern Pacific. Executive Committee is composed of five directors and has the power of the board when the board is not in session.

Resolutions for purchase of O. S. L. and O. R. & N. securities and S. P. stock.

(58) Mr. Harriman is Chairman of the Executive Committee of all the companies. Exhibit 16, pages 58 to 63, Resolution of Union Pacific Directors of August 29th, 1899, providing for the acquisition of Oregon Short Line and Oregon Railroad and Navigation Company securities.

(63) Witness states that resolution provides for the acquisition of the Income A Bonds and the Income B Bonds of the O. S. L., and a part of the preferred and common stock of the Navigation Company. Exhibit 17, pages 63 to 72, Resolution of Board of Union Pacific Directors, dated February 20th, 1901, providing for the acquisition of Southern Pacific stock.

Jan. 31, 1901, provision for financial requirements.

(72) Exhibit 18, Resolution of Directors, Union Pacific Co., adopted January 31st, 1901, confers power upon Executive Committee to make provision for present and future financial requirements of the company, including provisions for financing acquisition, now or hereafter contemplated, of securities of any other company or companies, etc. It authorizes the issue of bonds and obligations of the company in an amount not exceeding $100,000,000.00.

Equipment Ass'n and Pac. Fruit Express.

(74) Exhibit 19, Resolution of Executive Committee, Union Pacific Co., in regard to organization of Equipment Association, adopted December 13th, 1906. (75) Exhibit 20, Resolution of Executive Committee, Union Pacific Co., as to organization of Pacific Fruit Express Co., adopted December 13, 1906. (76) Exhibit 21, Resolution of Executive Committee, Oregon Short Line Co., adopted March 13th, 1903, authorizing the Chairman to sell Southern Pacific stock at not less than cost.

O. S. L. purchase of S. P. stock.

(77) Exhibit 22. Resolution of Executive Committee, Oregon Short Line, adopted March 11th, 1903, providing for purchase of 900,000 shares of stock of the Southern Pacific Company, from Union Pacific Company, for the price of $55,428,183.38. In partial payment therefor Union Pacific to accept at their par value, 162,814 shares of the common stock of O. R. & N., the balance to be paid by the issue to Union Pacific of obligations of the O. S. L. bearing four per cent, payable on demand.

Sale of S. P. stock to Wm. Rockefeller.

(78) Exhibit 23. Resolution Directors Oregon Short Line, adopted November 12th, 1903, in regard to sale of 300,000 shares of Southern Pacific stock to Mr. Wm. Rockefeller. (79) Exhibit 24, Resolution of Executive Committee, Union Pacific, adopted March 11th, 1903, relating to release of Southern Pa-

cific stock from First Lien Mortgage. (80) Exhibit 25, Resolution of Executive Committee, Union Pacific, adopted March 11th, 1903, relating to release of Southern Pacific stock from First Lien Mortgage.

Sale of securities by U. P. to O. S. L.

(81) Exhibit 26, Resolution of Directors, Union Pacific Co., adopted February 26th, 1902, relating to sale of stocks to Oregon Short Line, being the stocks of the Southern Pacific Company, common and preferred stock of O. R. & N., stock of Occidental and Oriental Steamship Co., Ogden Union Depot & Ry. Co., Pacific Express Co., Union Pacific Coal Co. (82) Exhibit 27, Resolution of Executive Committee, U. P., adopted March 11th, 1903, relating to sale of Southern Pacific stock to O. S. L. (83) Exhibit 28, Resolution of Executive Committee, U. P., adopted March 11th, 1903, relating to release of O. R. & N. stock from Short Line Income B Mortgage. (84) Exhibit 29, Resolution of Executive Committee of Union Pacific Co., adopted July 17th, 1902, relating to correspondence with Kuhn, Loeb & Co. in re Oregon Short Line Participating Bonds.

San Pedro agreements and conveyances.

(86) Exhibit 30, Resolution of stockholders O. S. L. of October 14th, 1903, approving San Pedro agreements, conveyances, etc. (109) Exhibit 31, Stock Trust Agreement between Wm. A. Clark, E. H. Harriman, and the Farmers' Loan and Trust Company. (122) Exhibit 32, Traffic Agreement between O. S L., San Pedro, and U. P. (137) Exhibit 33, Traffic Agreement between Southern Pacific and San Pedro. (140) Exhibit 34, Deed from O. S. L. to San Pedro Co., covering Leamington Cut-off. (143) Exhibit 35, Guaranty of U. P. to release lien of present and future holdings of Income A or Income B Bonds, being an agreement between O. S. L. Co., San Pedro Co. and Union Pacific.

(145) Exhibit 36, Lease from Southern Pacific Co. to San Pedro Co., covering railroad property between Riverside and San Bernardino. (155) Exhibit 37, Deed from O. S. L. Co. to San Pedro Co., covering O. S. L. lines south of Salt Lake City. (162) Exhibit 38, Deed from O. S. L. to San Pedro, covering Terminus Branch. (165) Exhibit 39, Salt Lake Yard Contract between O. S. L. and San Pedro Co. (182) Exhibit 40, Deed from Utah and Pacific R. R. Co. to San Pedro Co. (185) Exhibit 41, Deed from Utah, Nevada and California R. R. Co. to San Pedro Co. (187) Exhibit 42, Deed from New East Tintic Ry. Co. to San Pedro Co.

Pac. Mail, officers, etc.

(189) Officers of Pacific Mail Steamship Company, elected June 22, 1905,—latest at hand; E. H. Harriman, President; R. P. Schwerin, Vice-President and General Manager; William Mahl, Comptroller; H. S. Bradt, Assistant Comptroller; Alex. Millar, Secretary; Joseph Hellen, Assistant Secretary. (190) Erastus Young, General Auditor. Board of Directors,—Maxwell Evarts, George J. Gould, E. H. Harriman, George H. Macey, Ogden Mills,

Russell Sage, R. P. Schwerin, James Speyer, and Paul M. Warburg. Recollection is that Mr. Speyer and Mr. Warburg have resigned, and vacancies have not been filled. Vacancy caused by death of Mr. Sage has not been filled.

S. P. Co. owns a small amount over half the stock of the Pacific Mail S. S. Co. The general officers are president and auditor and comptroller; they are the same as U. P. Its financial transactions are under charge of Wm. Mahl and Erastus Young is general auditor. Does not think Mr. Stubbs has jurisdiction over traffic matters of that company. Officers of Portland & Asiatic S. S. Co. are as follows: E. H. Harriman, Chairman of Board and President; Wm. D. Cornish, Vice President; R. P. Schwerin, V. P. & Gen. Mgr.; W. R. Litzenburg, Sec'y; F. V. S. Crosby, Treasurer; E. Young, General Auditor; H. E. A. Railton, Auditor, Mr. Crosby, Treasurer, is also treasurer of U. P. and O. S. L. He has no connection with the S. P. Co.

O. and O. S. S. Co.

(191) Union Pacific owns one-half the stock of the Occidental and Oriental S. S. Co. S. P. Co. and individuals own the other half. S. P. and U. P. jointly own control of the O. & O. S. S. Co. The officials of the O. & O. S. S. Co. are as follows: R. P. Schwerin, President; W. F. Herrin, Vice President; D. D. Stubbs, Sec'y & Genl. Manager. Mr. Herrin is Counsel for the S. P. Co., living at San Francisco. Mr. Schwerin is General Manager of the Pacific Mail S. S. Co.

(192) The minority shareholders of the Pacific Mail are widely scattered. All these steamship lines, including Portland & Asiatic, run between Pacific ports and points in the Orient and are engaged in the transportation of traffic in connection with various Pacific railroads. S. P. Co. owns practically all of the stock of the Morgan S. S. Line.

Morgan Co.

Mr. Lovett states that the Morgan Company is a Louisiana company which formerly owned the steamship line between New Orleans and New York and owns a railroad extending from New Orleans to Lafayette, La., a part of the main trans-continental line. It does not now own any steamship plying between New York and New Orleans. They are owned by the S. P. Co. The Morgan Line owns only railroads and a few small river boats perhaps. The facts are that as these old ships which the Morgan company owned at the time the S. P. Co. bought its stock, many years ago, passed out of service and were replaced by new ships, the new ships were owned by the S. P. Co., and all of the old boats, I believe, are out of service and it is still known as the Morgan Line of steamers, but they are owned by the S. P. Co. There are boats plying between New Orleans and Havana which are owned either by the S. P. Co. or the Morgan Company.

Relations of S. P. to Texas and Louisiana lines.

(193) Mr. Lovett states that for many years, at least since 1897, the Southern Pacific has in connection with the lines of which the stock was owned by the Southern Pacific, a line of steamships ex-

tending from New Orleans to New York. That the S. P. Co. does not itself operate any lines in Louisiana or Texas or east of El Paso. The lines west of El Paso are operated by the S. P. Co. under a lease. The lines in Louisiana and Texas, known as Southern Pacific Lines, are not operated by that company, but practically all of the stock of the corporations owning the railroads is owned by the S. P. Co., but the business is conducted by those corporations in their own names, the Southern Pacific, of course, owning the stock.

San Pedro contract.

Resolution of Aug. 11, 1902, of O. S. L. Executive Committee, approving preliminary contract between Clark, Trustee, and E. H. Harriman, Trustee, of July 9, 1902, relating to San Pedro road. (194) Exhibit 43, Resolution of Executive Committee of Oregon Short Line Company of Aug. 18, 1904, relating to subscription to Southern Pacific preferred stock.

(195) Exhibit 44, Resolution of the Executive Committee of O. S. L., passed Mar. 9, 1905, relating to purchase of O. R. & N. Co. stock. Witness believes that purchase provided for in foregoing resolution was carried out.

Pensions—Authority to borrow money.

(196) Exhibit 45, Pension Rules covering pension system, U. P. Co. taking effect January 1, 1903. (204) Exhibit 46, Amendment to Pension Rules. Resolution of Executive Committee U. P., dated July 26, 1906, (205) empowering Mr. Harriman to borrow money, to pledge the securities of the company as collateral. This resolution was amendatory to one passed on Dec. 31, 1902, the object of it being to permit the Chairman to pledge securities at the same time he executed notes. (206) Original resolution of Dec. 31, 1902, authorizing the Chairman to borrow money, read in evidence.

Traffic headquarters in Chicago.

Resolution of Executive Committee of U. P., May 8, 1901, with reference to the purchase by the Chairman of certain securities from Kuhn, Loeb & Co., and approving the same. (207) Resolution of Executive Committee of U. P. Co., dated June 6, 1901, approving arrangements made by Chairman for the establishment of traffic headquarters of the U. P., S. P., O. S. L. and O. R. & N. Companies in Chicago. Resolution of Executive Committee of U. P., dated Oct. 23, 1902, ratifying action of Chairman in negotiating agreement between U. P., S. P., O. S. L. and O. R. & N. Cos. of the first part and the C. & N. W. of the second part, dated Oct. 22. 1902, covering formation of through lines of transportation via Omaha.

Northwestern contract.

R. S. Lovett, Counsel.

Resolution of Executive Committee of U. P. Co., Mar. 19, 1903, ratifying action of Chairman in borrowing money for the company and loaning money to the S. P., C. & A., Kansas City & Southern, and Union Depot Co. of Denver. (208) Resolution of U. P. Executive Committee, dated Feb. 18, 1904, ratifying Chairman's appointment of R. S. Lovett, Counsel, Union Pacific and Southern Pacific Companies, and allied lines. Resolution of Executive Committee of U. P. Co., June 9, 1904, ratifying action of Chairman

in making lease for offices of Director of Maintenance and Operation in Chicago.

Meeting of Executive Committee Apr. 7, 1905, Chairman submits letter of George J. Gould, April *26*, 1905, in regard to his resignation as director of Harriman Lines. (209) Meeting of Executive Committee, July 20, 1905, letter from J. C. Stubbs submitted in regard to advertising for joint lines. (210) The letter is Exhibit 47. (211) Exhibits 48 to 54, inclusive, are copies of requests for proxies under the stock trust agreement between W. A. Clark and E. H. Harriman, heretofore marked Exhibit 31. (215) Resolution of directors of S. P. Co., June 8, 1904, appointing J. C. Stubbs, Vice-President, headquarters at Chicago, J. Kruttschnitt, Vice-Pres't, with headquarters at Chicago.

J. C. Stubbs and J. Kruttschnitt, Vice Pres'ts.

(216) Meeting of Executive Committee of O. S. L., Mar. 31, 1903, ratifying sale of 300,000 shares of S. P. stock at 57½. There was no previous resolution on the part of the Board, stockholders or the Executive Committee of the O. S. L. for sale of that stock. Stock was bought back on Nov. 12, 1903. Meeting of directors of O. S. L., Nov. 12, 1903, ratifies action of Chairman in repurchasing this stock.

Sale and repurchase of 300,000 shares S. P. stock.

(217) Exhibit 55, letter from William Rockefeller to Mr. Harriman, dated Nov. 5, 1903, in regard to purchase of 300,000 shares of S. P. stock. (218) Witness remembers delivering the stock and getting the check. It was bought back the following November. Resolution of Executive Committee, O. S. L., Mar. 26, 1903. Chairman reports purchase of two steamships from Atlantic Transport Co. for $2,200,000.00 each. Action of Chairman ratified. Meeting of Executive Committee, O. S. L., Apr. 6, 1903, execution of proxies on stock owned by company ratified. (219) Action of Executive Committee of S. P. Co. June 30, 1901, ratifying establishment of traffic headquarters at Chicago in charge of J. C. Stubbs. Letter of Mr. Harriman to Mr. Hays, President, S. P. Co. with respect thereto, dated June 18, 1901. Meeting of Executive Committee, S. P. Co., July 18, 1901, report of Mr. Tweed, Chairman of Board, in regard to correspondence between himself and President Hays in relation to the appointment of officers by the President, etc. Action of the chairman of the board of directors approved. (220) Witness is under impression that eastern officers were unable to agree with Mr. Hays as to the organization in San Francisco. Mr. Tweed was then Chairman of the Board,and Mr. Harriman, Chairman of the Executive Committee.

Disagreement with Pres't Hays.

Meeting of Executive Committee S. P. Co., Nov. 27, 1901, fixing duties of Wm. Mahl, Comptroller, and providing for appointment of Assistant Comptroller. H. S. Bradt, appointed to fill the position. Erastus Young appointed General Auditor. (221) Meeting of Executive Committee, S. P. Co., June 9, 1904, ratifying lease of floor space for the office of Mr. Kruttschnitt in Chicago. Meeting of Executive Committee, S. P. Co., Mar. 1, 1906, ratifying

Wm. Mahl, Comptroller.

Chairman's action in regard to advertising. Meeting of July 23, 1906, authorizing purchase of the Coos Bay, Roseberg and Eastern R. R. & Navigation Co.

(222) Meeting of Executive Committee, S. P. Co., Oct. 25, 1906, chairman submitted letter from Mr. Stubbs in regard to advertising. Expenditure approved. Meeting of Board of Directors, U. P. Co., Jan'y 7, 1904, proposed amendment of Section 1, Article 6, of By-Laws of U. P. R. R. Co., relating to duties of the President, and authorizing offices of President and Chairman of Executive Committee to be held by the same person. Amendment adopted by directors on April 11, 1905. (223) Meeting of Aug. 15, 1906, of U. P. Co. in relation to semi-annual dividends of $5.00 per share on common stock and statement with reference to deferring announcement.

U. P. 5 per cent semi-annual dividend.

(224) Meeting of the Executive Committee, U. P. Co., Aug. 16, 1906, resolution in respect to dividends. S. P. Co. Directors' meeting Aug. 15, 1906, resolution in regard to dividends. (225) Statement of chairman in regard to deferring announcement of dividend. Directors present at meeting of Aug. 15, 1906. (226) Directors present at board meeting of U. P. Co. of Aug. 15, 1906. Testimony as to notice usually given of a meeting of directors. Meeting of Executive Committee of S. P. Co., Aug. 16, 1906, authorizing Secretary to notify Secretary of New York Stock Exchange on the 17th of the declaration of dividends, etc.

(227) Meetings of Executive Committee usually fixed by adjournment, occasionally by call, but always by notice. Actual notice of meetings is all that is required by by-laws. (228) Meeting of Executive Committee of U. P. Co., Dec. 13, 1906. Action of Chairman in terminating contracts with the Armour Car Lines, organization of Pacific Fruit Express Co. and purchase of 6,000 refrigerator cars, ratified and approved. (229) Meeting of Executive Committee of U. P., Dec. 13, 1906, action of Chairman in regard to organization of the Equipment Association approved.

Termination Armour contract—Pac. Fruit Exp.

(230) WILLIAM MAHL.

Mahl.

Testimony given before Interstate Commerce Commission, Jan. 4th, 1907, in the city of New York.

Comptroller, U. P. R. R. Co., So. Pac. Co., O. S. L. and O. R. & N. Co. (231) Pacific Mail S. S. Co.; no connection with the Occidental & Oriental S. S. Co. or any other steamship line. As Comptroller of U. P. jurisdiction extends over matters in New York office, payment of monies, keeping of accounts of monies received and disbursements. Includes monies received from sales of stocks and bonds. Disbursements relating to same matters. Same testimony applies to other companies of which he is Comptroller so far as they are made in New York. Mr. Young, General Auditor, reports a summary of the operations of the companies he is general auditor of. Mr. Young has entire jurisdic-

Comptroller, Harriman Lines.

Jurisdiction.

tion of the Accounting Department. Each of the four companies has an auditor of its own.

S. P. controls majority stock Pac. Mail S. S. Co.

(232) Out of $20,000,000.00 capital stock of the Pacific Mail the S. P. Co. controls $10,010,000.00, a fraction over half. Southern Pacific owns steamship line between New York, Galveston and New Orleans. U. P. owns the steamers "Aragonia" and "Numantia." U. P. has stock in the O. & O. Co. (233) The O. R. & N. Co. is a river line and owns no steamships. (234) Exhibits 56 and 57 being statements showing common and preferred capital stock of Union Pacific R. R. Co. authorized, issued and outstanding Dec. 31, 1906, and also showing purposes for which stock was issued or was to be issued.

O. S. L. dividend.

(235) O. S. L. this fall declared a dividend of 50 per cent, the accumulation for a number of years. That was a surplus from transportation operation, not from the sale of securities. Witness receives reports direct from the officers of the Texas and New Orleans Railroad, not from Mr. Young,—and the Pacific Mail. There is an auditor of the Pacific Mail in San Francisco, and he reports to Mr. Young. He also sends reports to witness. His name is Railton.

Auditors who report to witness.

(236) Mr. W. C. Parker is Auditor of steamers running from New York to Galveston, with office in New York, and makes reports to witness and also to Mr. Young. O. & O. S. S. Co. sent monthly financial statements to witness. Mr. Sterling is Auditor of O. R. & N. at Portland. Sends reports to witness once a month. C. J. McNitt is Auditor of O. S. L. at Salt Lake. He sends statements to witness and reports directly to Mr. Young. Witness also gets reports from Mr. Young in regard to Union Pacific.

Salary expense apportioned.

(237) The salaries of Traffic Director, Director of Purchases, Secretary and Comptroller, are paid in New York. Expenses of office of Director of Purchases is apportioned among the different companies in proportion to the number of locomotives and cars owned by them; that includes the S. P., U. P., O. S. L., and O. R. & N. Expenses of transfer office allotted actually to the various companies as near as can be ascertained. Salaries and expenses in New York, including salaries of J. C. Stubbs, E. O. McCormick, P. C. Stohr, and H. B. Thrall, allotted on basis of gross transportation receipts.

(238) Witness was employed by Mr. Harriman. (239) In apportioning salaries, usual custom among railroads generally is followed. Witness thinks that the salaries of other employees than himself, where they were common all over the system, were apportioned through Mr. Young, or rather upon conference with the latter, or following the practice which was followed out on the line in similar instances. In making these divisions separate charges are made against the steamship lines. (240) One or the other of the companies in the first instance pays these various salaries, and then a charge is made against the other companies for their proportions.

(241) In making up statement for use of Board prior to declaration of 5 per cent semi-annual dividend, there were included the operations of the railroad as well as the income from investments. The statement does not show the money which might be made by buying stocks or bonds at a certain figure and selling them afterwards at a higher figure, but only the dividends or interest received. (242) Mr. Lovett states that if any profits on the sale of securities were included, they will appear from the statement, and that the statement will be produced; that as a matter of fact it shows only the income from transportation business and the income from investments.

Statement used as basis for 5 per cent dividend.

(243) Dividends on stock of the O. S. L. or O. R. & N. go into the treasury of the U. P., and are used to pay the dividends of that company. (244) Testimony as to statement showing profits on investments in securities. (245) As the securities have not all been disposed of, there would be no statement showing the profit and loss on the transaction, as it is impossible to tell what the remaining securities would be sold for.

Disposition of O. S. L. and O. R. & N. dividends.

(246) Exhibit 5—Mahl,—Statement showing holdings of Portland and Asiatic S. S. Co. stock; 993 shares in the name of E. H. Harriman, Chairman, one share each in the names of seven other persons.

(247) Exhibit 6—Mahl,—Statement showing names of persons in whom there is registered the Southern Pacific common and preferred stock that belongs to the O. S. L., aggregating 900,000 shares of common and 180,000 shares of preferred. Exhibits 5 and 6,—Mahl,—are marked Exhibits 58 and 59. (248) All the foregoing stock is under a mortgage of the O. S. L., the Equitable Trust Co., Trustee. (249) Names other stocks under the same mortgage, issued to secure $100,000,000.00 of bonds. Part of the said bond issue was used to retire the $82,000,000.00 of participating bonds outstanding. Exhibit 60, Balance sheet of U. P. R. R. Co. found in annual report of 1906.

Holders of S. P. stock belonging to O. S. L.

(250) The profit and loss balance of this statement does not show profits made in buying and selling stocks and securities. (251) Discusses details of profit and loss account contained in foregoing statement. Exhibit 61,—being statement submitted to the Board of Directors of U. P. at their meeting August 15th, 1906, at the time they voted the 5 per cent dividend. (252) The surplus of $30,317,769.44, shown in the statement is one arising from operation. (253) Discussion of the foregoing statement. (254) Further discussion of the foregoing statement. (255) Further discussion of the statement.

June 30, 1906, the O. S. L. owned $108,000,000.00 of S. P. stock, $90,000,000.00 common and $18,000,000.00 preferred.

Am't of S. P. stock owned by O. S. L.

(256) Exhibit 62,—being a statement of purchase and sale of the Northern Securities Co. stock, and the substituted stock of Northern Pacific and Great Northern. (257) Exhibit 63, Northern Pacific Purchase Money Certificates. (258) Exhibit 64, Meet-

Northern Securities Co. stock.

ing of Board of Directors, U. P. Co., Jan. 31, 1901, at which provision was made for financial requirements. (259) Same.

U. P. and O. S. L. finances and stock sales.

(260) Exhibit 65,—Meeting of Executive Committee, U. P. Co., March 19, 1903.—Chairman submitted a statement showing amounts loaned and amounts borrowed, and the action of the Chairman was approved. (261) Exhibit 66, being a statement of the dates and amounts received from sale of U. P. First Lien Convertible 4 per cent Gold Bonds. (262) Same. (263) Exhibit 67, being condensed statement of operations of U. P. System, five months ending Nov. 30, 1901. (264) Exhibit 68, Statement of stocks deposited March 9, 1905, with Equitable Trust Co. under Collateral Trust Mortgage of O. S. L. (264) Exhibit 69, condensed statement of operations of O. S. L. from July 1, 1897, to June 30, 1906. (265) Exhibit 70, statement showing issue and sale of 4 per cent and participating bonds of O. S. L. Exhibit 71, statement showing sale of 4 per cent refunding bonds of the O. S. L. (266) Exhibit 72, showing operating surplus at the time the $100,000,000.00 stock issue was authorized, showing resources from Feb. 28, 1901, when stock issue was authorized, to June 30, 1901, and how applied. (267) Same. The amendment to resolution authorizing Mr. Harriman to borrow money, and in addition thereto to pledge collateral, was not passed at Mr. Harriman's solicitation, or with his knowledge. It was done at the request of witness, because certain banks wanted the chairman to have that authority.

Reason for resolution authorizing Mr. Harriman to pledge collateral.

(268) Similar resolution was passed by the U. P., S. P. and O. S. L to meet the situation arising in connection with the ordinary financial transactions of the company. A similar resolution of the S. P. Co. at the time Mr. Huntington was president was passed, viz. Jan. 26, 1900. (269) Such resolutions are customary. Monthly statements of the earnings of railroads of Pacific Companies are sent to the stockholders. The S. P. Co. for some months before the making of that dividend furnished no monthly statements.

Cornish.

(270) WM. D. CORNISH.

Testimony given before Interstate Commerce Commission, Jan. 4th, 1907, in the city of New York.

Vice Pres't, Harriman Lines.

Vice President U. P., O. S. L., O. R. & N. and S. P. Companies, and a director of the San Pedro Co. A director of all the companies mentioned. Prior to acquisition of stock of the S. P. Co., the U. P. controlled by stock ownership both the O. S. L. and O. R. & N. Companies. In a general way the lines of the O. S. L. extend from Granger on the east to Huntington on the west and from Salt Lake on the south, north to Silver Bow. It also owned and controlled the various lines south of Salt Lake, and southwest.

How lines are operated.

(271) The O. S. L. or U. P. prior to acquisition of S. P. stock in 1901 controlled the Navigation Co. Since that time the U. P. got substantially all the stock of both companies. The separate

companies operate their own property. Mr. Bancroft operates all of the Short Line, and that part of the U. P. west of Green River. Manager of the O. R. & N. operates that road and the lines of the S. P. in Oregon north of Ashland.

S S. Lines.

(272) S. P. owns a slight majority of the stock of the Pacific Mail, but witness thinks that S. P. owns no stock of O. & O. S. S. Co. Pacific Mail operates steamers from San Francisco to Japan and China. They stop on some trips at the Sandwich Islands. They operate from San Francisco to Panama. The stock of the Portland and Asiatic belongs to the Navigation Co. Its ships run from Portland to the Orient. U. P. has a through line of railway and steamships through its stock ownership from Council Bluffs and Kansas City to ports in the Orient via Portland. S. P. has a through line of transportation from New York via S. P. and San Francisco to the Orient by steamship and rail through its control of the Pacific Mail.

Controversy with San Pedro Co.

(273) Senator Clark undertook construction of the San Pedro road in 1901. The San Pedro Co. under present organization was operating a small piece of road in California. Another corporation started a controversy in regard to a grade in Nevada with the Short Line. It was a company the San Pedro controlled. That controversy went into court. The Short Line won and it was permitted to hold the grade theretofore constructed by it. The Short Line had projected a road substantially along the same line through Nevada as far as Calientes, that the San Pedro afterwards built on, about 40 miles being through a canyon. There was not 200 feet right of way for each of the two railroads, but there was room in it for more than one railroad. There were five tunnels on the route, and there was a contest for the location. There was another route over the hills.

Settlement of controversy.

(274) Testifies as to details of the settlement of the controversy. The contract of settlement contemplated a line from Salt Lake to Los Angeles and to San Pedro and Pasadena. W. A. Clark is President of the San Pedro Line, W. H. Bancroft is Vice-President. (275) J. Ross Clark is a brother of Senator Clark, and he is Second Vice-President. R. E. Wells is General Manager. Mr. Wells came from the Santa Fe. Directors of the San Pedro Line are Senator W. A. Clark, J. Ross Clark and E. H. Harriman.

Directors elected in 1906 were W. H. Bancroft, H. I. Bettis, W. D. Cornish, E. H. Harriman and W. R. Kelly. Testimony as to the relation of these directors to the U. P. (276) W. G. Kerckhoff is a citizen of Los Angeles, not connected with the S. P. or U. P.; R. C. Kerns, of St. Louis; Thomas Kerns, of Salt Lake; T. F. Miller, of Los Angeles; W. H. Comstock, Secretary of the company.

Pac. Exp. Co.

The Pacific Express Co. operates over the Gould Lines and the U. P. Lines. U. P. owns 40 per cent, Wabash 20 per cent, Mo. Pac. 40 per cent, S. P. owns none. Mar. 23, 1901, U. P. was authorized to issue one hundred millions of common stock. About that time $100,000,000.00 of convertible bonds were issued by the

U. P. convertible bonds.

U. P. The bonds were convertible into the common stock, and they have been so converted with the exception of $500,000.00.

Acquisition of N. P. stock by U. P.

(277) About that time the U. P. acquired a majority of the stock, preferred and common, of the Northern Pacific. The $100,000,000.00 of convertible bonds was not issued primarily to enable the U. P. to buy such stocks. It was not the real purpose. The money all went into the treasury, and money to buy the stocks must have been taken out of the treasury, but witness' recollection is that it was not issued primarily for that purpose. Witness states that the Northern Pacific purchase had nothing to do with the issue of the bonds. It was something that came a little later.

Purpose of U. P. bonds.

(278) According to the circular relating to the issue of Union Pacific stock and bonds above referred to forty millions of bonds were to be used to purchase S. P. stock.

(279) Company heavily in debt on account of purchases of road and betterments. They had not been financed, and the purchase of the S. P. being in contemplation the $100,000,000.00 bond issue and corresponding issue of stocks was authorized for those purposes. Exhibit 73, circular dated Feb. 13, 1901, relating to First Lien Convertible 4 Per Cent. Gold Bonds.

Completion of San Pedro.

(281) The San Pedro Line was completed about May, 1905. Distance from Salt Lake to Los Angeles about 780 miles. It is less than from Salt Lake to San Francisco.

Traffic agreement between S. P. and San Pedro.

(282) Refers to provision in traffic agreement between San Pedro and S. P. Companies, covering rates for local business which might be the subject of competition between those two companies. The territorial region contemplated is all in Southern California below Mojave, practically confined to the lines from San Pedro, Los Angeles, and Pasadena, and then from there over to San Bernardino. That is the practical interpretation which witness has always given to that clause. Reasons for this interpretation.

(283) Same.

Santa Fe runs over S. P. Lines from Mojave to Needles. San Pedro leases trackage from the Santa Fe, from a point between Colton and San Bernardino, over to Daggett. Mr. Kellogg urges that all the business over the San Pedro from Los Angeles to Salt Lake is local. Witness calls it through. Moreover the traffic contract between the San Pedro and S. P. Cos. refers to local business that is competitive, and the S. P. Co. has no business to Salt Lake.

Thorne.

(284) W. V. S. THORNE.

Testimony given before Interstate Commerce Commission, Jan. 4th, 1907, in the city of New York.

Director of purchases, Harriman lines.

Residence New York City. Director of Purchases of U. P., O. S. L., O. R. & N., and S. P. Purchases locomotives, cars, rails, bridges and other material which the companies use in large quantities, and where it is advantageous to make an agreement direct with the manufacturer, where the companies can concentrate their business with one manufacturer. There are local purchasing

agents for the U. P., O. S. L., O. R. & N., S. P. and Morgan's Co.; Pacific Mail Steamship Co. not under his jurisdiction. He sometimes reserves the option to obtain quantities for the Pacific Mail S. S. Co., which that company can take advantage of if it desires.

Distribution of equipment and supplies.

(285) Contracts for supplies usually made in name of Union Pacific. Later they are distributed among the various lines as directed by Mr. Kruttschnitt. (286) For instance, witness will give an order for 250 locomotives. When they are completed, or a substantial number completed, Mr. Kruttschnitt determines how many he will send to one line or another, and then he makes up, signing on behalf of the Southern Pacific or Union Pacific, as the case may be, a requisition for so many locomotives. These requisitions are sent to Mr. Harriman, who is Chairman of Executive Committee of all the lines, and they are voted on by the Executive Committee of the particular line to which the requisition is referred. Other supplies are handled in substantially the same way.

Estimates.

(287) The requirements of the different lines are made out by Mr. Kruttschnitt. Witness is notified of these estimates, and contracts are made accordingly. As to small articles, such as car wheels, car couplers, axles, etc., witness contracts with manufacturer for all that may be needed for any part of system, and then notifies local purchasing agents, who call on the manufacturer for deliveries as needed. (288) Purchases of lumber are made by the local purchasing agent. Witness appointed Purchasing Agent by Mr. Harriman. Appointed for the various lines at the same time. His position was created after acquisition of Southern Pacific stock by Union Pacific. Has his office in New York. Gets his pay check from the Treasurer of the Union Pacific, but does not know how his salary is distributed between the various companies.

(290) J. C. STUBBS.

Stubbs.

Testimony given before Interstate Commerce Commission, January 9th, 1907, in the city of Chicago.

Traffic director, Harriman lines.

Witness is Traffic Director of Union Pacific R. R. Co., Oregon Short Line R. R. Co., Oregon Railroad & Navigation Co., and Southern Pacific Co. Not of Pacific Mail. His jurisdiction extends over the Morgan Lines from New York. (291) Jurisdiction does not include Texas Lines, except as to traffic passing entirely through the state. Witness was formerly Vice-President in charge of traffic of Southern Pacific System. Until his death, Mr. Huntington was the head of the Southern Pacific System. After his death Mr. Hayes was elected President. Mr. Huntington during his life, and his estate after his death, from 1870 until the sale of the stock to the Union Pacific, dominated the Southern Pacific System. That system then included the rail lines from Portland through San Francisco to New Orleans and the line from San Francisco to Ogden; also the steamship lines from New Orleans and Galveston to New York.

S. P. system.

Relations of S. P. and U. P. to Pac. Mail and other S. S. lines.

(292) Witness understood that at the time of Mr. Huntington's death the Southern Pacific Company, or the people that controlled the Southern Pacific Company, held a majority of the stock of the Pacific Mail Steamship Company. That line had boats running from San Francisco to the Orient and to Panama and coast-wise in connection with the Panama Railroad. It controlled with the Union Pacific, the Occidental and Oriental S. S. Co., which was a line that operated between San Francisco and Asiatic ports. Understanding of witness is that the stock of that company was equally divided between the individuals controlling the Southern Pacific, and the Union Pacific Company, but could not be accurate as to that. The Union Pacific during those days owned a line of railroad from Council Bluffs to Denver, Cheyenne, Ogden and Portland. Understands that they operated a line of steamships between San Francisco and Portland, and that they had various steamboat lines on the Willamette and Columbia Rivers. They established, or there was established, a line of steamships between Portland and Oriental ports, first, he thought by outside parties.

Portland and Asiatic S. S. Co.

(293) "Q. Dodwell people? A. Dodwell people, but I don't know but what another man intervened later. However, at the time I went there the Portland and Asiatic Steamship Company was organized and controlled by the Oregon Railroad and Navigation. Q. At the time you went there—you mean the time you became connected with the Union Pacific? A. Yes sir. Q. And prior to that time either private interests owned a line in connection with the Oregon Railroad and Navigation Company, or the Oregon Railroad and Navigation Company owned the Portland and Asiatic Steamship Line, which operated to Asiatic ports? A. I think so."

Lines owned by U. P.

The Oregon Railroad and Navigation Company was a part of the Union Pacific and controlled by it. The Union Pacific owned the stock and controlled in that way the Short Line and the Oregon Railroad and Navigation Company. In connection with those lines from Portland, there was a steamship line running to San Francisco and a steamship line running from Portland to Asiatic ports. The Southern Pacific had a rail line from Portland to San Francisco.

Prior to March, 1901, witness was the vice-president in charge of traffic of the Southern Pacific System and familiar with its business for many years.

Sunset territory

(294) From a line somewhat east of Pittsburgh, Buffalo and Wheeling, business from the Atlantic coast to Pacific coast points moved via the Morgan Line and Southern Pacific R. R., (Sunset Route). No tariffs via that route were published between Pittsburgh and Pacific coast points. Business also moved that way from above points to the Orient, but not from the Orient to Atlantic seaboard points. Business from Pacific coast points moved that way to Atlantic seaboard points, but not, witness thought, from as far north as Portland, though some hops moved that way from the Willamette Valley.

(295) Business moved westward for Portland via that line in small quantities, but not for Seattle and Tacoma. The rates from that eastern territory are the same via the Morgan Line and the Sunset Route as they are via the all rail lines on substantially all traffic. On business west of Pittsburg and the territory between there and the Missouri River, the rates are the same via New Orleans and Texas points over the Southern Pacific as they are via Ogden or other gateways to the Pacific coast. Rates same via different routes.

(296) Above statement true as to Omaha and Kansas City via El Paso to California points. Witness thought the same true as to passenger tourist business; as to freight rates, thinks rates from Missouri River points are the same by either route; from New Orleans north and from Missouri River points are the same, from Kansas City north. Galveston and Houston are practically the same as Kansas City. Chicago a little higher. In a large measure the rates to California are blanket from nearly all this eastern territory.

(297) Foregoing statement he thought would have to be modified with respect to the southeastern territory. St. Paul is on the Missouri River basis. New York has always had substantially the same rate to California points as other points east of the Mississippi River, because of the sea competition, which fixes the rate.

(298) Rate fixed by sea competition via all lines. (299) Witness described the building up of transcontinental freight business. Contracts made with merchants for all their business at a rate a little higher than the average water rate. The Morgan Line and Southern Pacific Company were an important factor in competition for through business. Witness represented Southern Pacific in traffic meetings, but was not opposed by Union Pacific as to the basis of rates west of New York. Rates fixed by sea competition.

(300) Union Pacific and Southern Pacific were not sharp competitors. "Q. Well it was a competitor for that business? A. It was seeking that business but it was a connection of the Southern Pacific. Q. It was a competitor with the Southern Pacific for that business? A. It was a part of the line that was competing for that." (301) Testified as to general agents of S. P. Co. prior to 1901. (302) "Q. Well now your men were at that time actively engaged in soliciting business for your line alone were they not? A. The Southern Pacific? Q. Yes. A. That was part of their business. Q. That was part of their business? A. Yes. (303) Q. Trying to get all they could? A. Yes for all its line. Don't forget it had a line from Ogden west." U. P. a connection of the S. P.

(303) Witness became Traffic Director of the U. P. July 1, 1901. (304) So far as traffic matters are concerned, S. P. does not control Texas lines. Witness has no more control of Texas lines than if S. P. did not own their stock. Controlled traffic relating to through business simply because of his jurisdiction over both ends of the road. Did not make many changes in the system of the two roads at the time witness organized his traffic department. Texas lines not controlled by S. P.

Consolidation of agencies.

(305) Consolidated the agencies in Chicago, St. Louis, Pittsburg and Cincinnati. Mr. Neimyer is General Western Agent, and has charge of Chicago, and witness thought that Cincinnati, Pittsburg and Detroit agencies reported to him. (306) Neimyer's territory extends as far east as Pittsburgh, as far north as Detroit, and as far south as Ohio River, but witness thought not west of the Mississippi River.

Control of routing.

Witness thought there was no traffic, or, at least, very little, that Neimyer could route at his pleasure, either by the Sunset or Ogden route. "The connection which originates the traffic, dominates and controls the routing of it." Neimyer could not route any business at all important in amount. (307) The object in having a freight agent and solicitors is to work with the other lines and get traffic from them. Agents solicit freight to be routed over Harriman lines as against Santa Fe and Northern Pacific, and their influence is good, but is not conclusive, and they cannot control routing of freight as against the influence of the originating lines. They are "watchers and solicitors of the originating line, keeping up our connection with them."

U. P. and S. P. never were competing.

(308) There is competition between lines from the east for the Pacific Coast trade, and our agents assist in that competition as against other lines, competitors of the Southern Pacific. Mr. Neimyer, as between the Southern and Union Pacific, is competing for one as against the other to-day as much as he ever did. The Union and Southern Pacific never were competing. He has practically always worked exclusively for the Ogden route. Witness not sure about agent at Pittsburg.

(309) Now there is but one agent for the Union and Southern Pacific at Pittsburg. "If he found that the lines leading from Pittsburg to New Orleans were working a certain line of traffic, he would help that line. On the contrary, if he found they were working it direct via Chicago or St. Louis over the U. P., he would work that line." He would simply do what the two agents would have done had there been separate agencies. Northern Pacific is competing with the Union and Southern Pacific.

In many cases to the interest of S. P. to route traffic via Ogden.

(310) I would not say that the Union and Southern Pacific joint agents were competing with themselves, for the two roads do not compete, because the U. P. is a connection of the S. P., and in many cases it is to the interest of the S. P. that the business move via Ogden, because it would get a larger net out of the rate. There may be some exceptions to that, with respect to the Pittsburg territory and territory west. As to Atlantic seaboard territory, where the competition is most rife, the conditions are just as they always were. There are separate agents at New York, at Boston, at Philadelphia, and witness thought at Baltimore, which work their territory just as independently as they ever did.

(311) Witness thought there could not possibly be said to be a competition between the Union and Southern Pacific for California business; that there never had been such competition, because the former and the latter were connections. (312) "You might draw the Union Pacific agency out of New York, I think, to-day, and I think it would not affect the volume of business which the Union Pacific gets with respect to this trans-continental traffic."

Could not possibly be competition between S. P. and U. P. for California business.

(312-313) Agencies necessary not to compete for business, but as means of communication with connecting lines and for advertising purposes. (313) Necessity for separate agencies has passed away by reason of changed condition. *In New York City, Union and Southern Pacific had a joint agency at one time prior to the purchase of stock of the latter by the former. This was many years before 1901.* (314-316) Describes division of authority of officers and agents of Harriman lines.

Purpose of agencies.

(317) The Navigation Company in connection with the Doddwell line and the Southern Pacific Company and its line, competed for trans-Pacific business. "The Union Pacific participates in both lines, don't forget that." (Note: When witness made this statement he doubtless had in mind the proposition that the Union Pacific was a partner of the Southern Pacific, so to speak, in the O. & O. Steamship Co.)

Trans-Pacific business

(318-319) Exhibit 74, list of joint agents of the Union and Southern Pacific.

(320) Competition between Union and Southern Pacific, before 1901 and now, will not be evidenced by difference in rates. Witness would not permit Southern Pacific to cut rate in order to take freight away from Union Pacific line, but would permit it now as much as he ever would. Would not permit the cutting of rates to take business from any other company. Does not recall ever having cut rates to and from California for purpose of taking business away from U. P. and other lines. (321) If such cuts were made, it has passed out of witness' mind, and must have been more than 15 or 20 years ago. Witness meant S. P. never initiated the cut. In 1886 there was a war of rates instituted by the Santa Fe. and that involved all the lines to California by the Southern and U. P. routes. Since 1886 the rates have been equal by all roads, and measurably maintained.

Would not permit rate cutting.

(322) Witness thought that in 1903 or 1904 there had been a general advance of 12½ per cent. attempted on all trans-continental lines, but that they could not be maintained. Advance was attempted on account of increased expenses, and otherwise no advance in rates had been made since 1901. A reduction has recently been made in the rates to Utah common points, which was very material and witness thinks some reductions have been made with respect to Idaho points; points east of Huntington on the O. S. L. (323) Witness believes the rates to Montana common points have also been reduced on the U. P. and other lines of road also. Attention of wit-

Utah and Idaho rate reductions.

Rate per ton per mile.

ness is called to reduction in rate per ton per mile on U. P. from .95 of a cent in 1896 to .92 of a cent in 1906. Witness states that it does not necessarily follow from this that rates have not been reduced much. "There might be a change in the movement of the traffic that would work a slight difference in the average percentage. * * * * Any material reduction on a considerable volume of traffic for a considerable period during the year would manifest itself in the average rate per ton per mile * * * and yet, month by month, you will find on different commodities changes in rates in the rate per ton per mile, both advances and reductions which are not the result of any change whatsoever in the rates, but a change in the direction or length of the haul, the average length of the haul." Attention is called to the increase in the earnings per mile of road. (324) Witness thinks rates reasonable. Not only this, but knows that competition is just as keen to-day on the question of rates between the S. P. and U. P. as it ever was.

Rates reasonable.

Traffic relations between U. P. and S. P.

(325) There never was competition to any considerable extent. The U. P. was a connection of the S. P., and had no authority, no right, and could not in any way reduce the rates, except secretly, and witness had no knowledge of its having done so in connection with the S. P. U. P. could not reduce its proportional rate without every one of its rivals, the Santa Fe, the "Q," the Rock Island, the Missouri Pacific, and the Rio Grande, doing the same thing.

N. P. and S. P.

(326) There is some competition between the Northern Pacific and the S. P. for San Francisco business, in the same sense that there is with the U. P. Northern Pacific connects with S. P. at Portland, and they interchange traffic. Witness thought that the Northern Pacific also published through rates in connection with Navigation Company's steamship lines from Portland down, and also from Seattle, but whatever business they carry in connection with the steamship line is infinitesimal.

California—Competing lines.

The Great Northern, Northern Pacific, U. P., Central Pacific, the Santa Fe and Sunset routes are all measurably competitors for California business. Just as much competition as there ever was, except such difference as is caused by the law requiring 30 days' notice of a change of rate. A combination in ownership between Northern Pacific and Great Northern would not affect competition in rates for California business. (327) Giving witness traffic direction, in addition to Harriman lines, of Santa Fe, Great Northern and Northern Pacific, would not affect existing competition under present conditions.

Rate reductions.

Rates have come to a condition of equilibrium, and the most effective influence on rates is the needs of the traffic. "That is the development of it, and that is manifested to the carrier generally through the reports of its agents coming in contact with the shippers, producers, and merchants, or by direct intervention, or petition, or showing on the part of the merchants or producers, and when that showing is made, of course, there is an

attitude of resistance on the part of the carrier, but sooner or later,—but more often sooner than later,—the carriers recognize in some measure the demands of the petitioner and the rates are reduced, but instead of being reduced by the individual carrier, they are usually reduced by the whole bunch, at once, that is, I mean by all the carriers."

Merger did not materially affect D. & R. G.

(328) Acquisition of Southern by Union Pacific, witness did not think materially affected Rio Grande, nor made necessary the construction of the Western Pacific to San Francisco. For the last four years the S. P. at Ogden has given the Rio Grande as large a per cent. of business it had to offer, as the Rio Grande has given the S. P. Rio Grande gave all it had to offer, and S. P. returned an equivalent in tonnage. That is true also as to passengers. According to the custom governing interchange between connecting lines, the Rio Grande has not a thing to complain of. There has been great increase in tonnage, moving both ways over Union and Southern Pacific since 1901, but little increase in tonnage delivered by Rio Grande to S. P., and vice versa. (329) S. P. has worked preferentially with U. P. as to uncontrolled business, but witness did not think anything S. P. has done could have worked that result.

Differential rates via water and rail routes to Colorado and Texas.

Witness thought that rates from Atlantic seaboard and points east of that line near Pittsburg, via the South Atlantic and Gulf ports to Colorado and Texas, were less than by all rail. Business by Sunset route is in competition with lines running from New York and Pittsburg to Colorado. U. P. works business that way in connection with the Savannah route, taking it at Kansas City. There is a measure of competition, but it would not necessarily follow, because the Union Pacific can make a line via Galveston as well as the other way. Competes to-day precisely as it always has done.

Competitive relations unchanged.

One road would not increase rates unless competitors did so.

(330) One road would not increase its rate, unless its competitor did. (331) Increases referred to as occurring in 1903 have been published by all trans-continental lines at the same time. Lines confer as to what rate shall be, but they are not compelled or coerced to abide by the rates, but one line would not increase a rate, unless satisfied that the others would make a like increase, although there might be no assurance that they would do so. (332) Witness did not remember ever having advanced the rate without feeling pretty certain that competitors would follow, but thought there had been cases of reductions in which he had reason to believe that his competitors would rather that he had not done it. That is what he called competition.

Commercial and industrial conditions influence rates.

(333) If the same interest dominated all the competing lines, witness thought the rate would be diminished gradually, just as gradually as though present conditions continued. Commercial and industrial conditions are what influence rates.

As to the reduction of rates, when railroads have reached the point where they maintain and declare dividends to the extent

Lean years.

of 10 or 12 or 15 per cent a year witness states: "It would be well to remember the lean years that the stockholders of those roads have gone through, years when they didn't get any dividend at all; and when you do that and make the average, I think you will find so far as the roads that I have any connection with are concerned, that the average interest on the investment has been very small compared with what is commonly made by commercial enterprises." Under present conditions witness testified that 10 per cent is not excessive.

Under present conditions 10 per cent not excessive.

C. P. and S. P.

(334) "The Central Pacific was the original line operated by the Central Pacific Railway Company. That ran from Ogden to Sacramento and from Sacramento to San Francisco. The Southern Pacific Railroad was constructed by the same people. The Southern Pacific Railroad was built to Yuma on the Colorado River, and the Southern Pacific railroad of Arizona was built across to Arizona; and the Southern Pacific of New Mexico was built across the state of New Mexico to El Paso, or to the Rio Grande river just opposite El Paso.

"Well, those lines, those Southern Pacific lines were built by the promoters and constructors, and practically the owners of the Central Pacific; and the Central Pacific continued to operate them until some time along in 1885, when the Southern Pacific Company of Kentucky, the holding company, was organized, and took over all the stocks of both companies. That is my understanding of it. Of course, I am not an authority on those things, but that is my understanding.

Unity between S. P. and C. P.

"The CHAIRMAN: That is just the point I wanted to determine, that there was a unity of interest at all times between the line from San Francisco east as far as Ogden, and the line subsequently built from San Francisco south that again forms a part of the southern route. WITNESS: Yes sir; practically the same men built them. The CHAIRMAN: And when the holding company under the laws of Kentucky was organized, it acquired both of them at about the same time? WITNESS: Yes sir."

Rate stability.

(335) Testimony as to the effect of the Interstate Commerce Act in restraining illegal practices, and especially with respect to bringing about stability of rates by requiring thirty days' notice before rates can be changed.

Effect of common control.

(336) Witness does not think common control by J. J. Hill of Northern Pacific and Great Northern wipes out competition between them. Hill has got to employ officers and traffic officials; each official has his reputation, his record, to make. He is going to use his influence to build up his line against the other line. and Mr. Hill cannot help that. If he takes that spirit out of the official he destroys his value, and he might as well turn his business over to a hundred dollar clerk.

U. P. dominated by connections.

(337) The U. P. as a middle link in the through line would have to be pretty much what its connections desired. There has never been any serious attempt made to take trans-continental business

to San Francisco via Portland, and the steamship line from there to San Francisco. The U. P. would have a longer haul and a considerably larger proportion of the through rate by interchanging its traffic with the Central Pacific at Ogden than by interchanging with the Short Line at Granger, 130 miles further east. The use of the Ogden line would open up to the U. P. all the Pacific coast points, and interior California points, whereas the other route would lead only to San Francisco.

Never been serious attempt to carry trans-continental business to San Francisco via Portland.

(338) Moreover, if it worked the Portland route it would antagonize the S. P., and if the S. P. were an independent line it would be master of the situation by routing all of its business over the Denver & Rio Grande. It would not have to change its rates or to do anything unlawful. The U. P. could not retaliate without cutting its rates to Portland, and that would hurt it as much as it did the S. P.

(339) If the S. P. were an independent line, it would be essential to the welfare of the U. P. to operate the Ogden route for San Francisco business. The U. P. has always taken that view of it. It seemed to the witness a preposterous notion, to be hardly worthy of a serious answer, that it would be at all to the interest or profitable to the U. P., or even the Navigation Company, to work business via Portland and the sea, as against the Ogden route or the Navigation Company's connection at Portland with the S. P. line.

Not to interest of U. P. to use Portland route as against Ogden route.

(340) The Portland & Asiatic was established by the Navigation Company to take the wheat produced along its line to the Orient. The old Doddwell line had never been profitable. This was the occasion for organizing and continuing the Portland & Asiatic line. All other traffic that it handles through Portland is merely incidental. These steamships took very little trans-continental traffic. The sailings were infrequent. They couldn't guarantee a monthly service, while from Puget Sound and San Francisco there were several lines that gave bi-weekly and sometimes oftener service. All the space on the P. & A. was at times demanded by offerings of flour and local cargo, and the trans-continental traffic shut out. The inward tonnage they worked and got all that they could, making the same rates as were made by Puget Sound.

Portland and Asiatic was established to take care of the wheat produced along O. R. & N. All other traffic is incidental.

(341) "Q. Now the whole situation, Mr. Stubbs—would you ever think of trying to establish a steamship line at Portland to endeavor to compete with trans-continental or Oriental traffic with Puget Sound? A. No sir, as I say, the sole reason, the foundation reason, for the establishment of that line was to take care of the wheat and flour traffic. That is a matter of public knowledge."

Would never think of establishing steamship line at Portland to compete for Oriental traffic.

Some wheat goes south to San Francisco, and a portion is reshipped to South America, but witness does not think that it is in very large volume. The wheat production of California is diminishing rapidly. There are independent steamers and also schooners from Portland to San Francisco.

Relations of O. R. & N. and S. P.

(342) In answer to question what witness meant by testifying in Graham case that Navigation Company and S. P. lines were diametrically opposed to each other and competing vigorously, he replied: S. P. takes business into Southern Oregon, and I think even to Portland, and possibly out of Portland for eastern points. The steamship lines between the Orient and San Francisco, the Orient and Portland, and the Orient and Puget Sound, all compete for the traffic from the Orient to all points in the United States. The Navigation Company, Short Line and U. P. are the connecting links with one of those steamship lines, and, therefore, a competitor of the S. P. so far as the business goes, but it doesn't amount to anything.

Kruttschnitt.

(343) JULIUS KRUTTSCHNITT.

Testimony given before the Interstate Commerce Commission, January 10th, 1907, in the city of Chicago.

Director of Maintenance and Operation of Harriman lines.

Prior to 1901 witness was Vice-President of the Southern Pacific Railway, in charge of operation. Headquarters were in San Francisco. Became an official of the Union Pacific the first of April, 1904. Since then has been Director of Maintenance and Operation of the Southern Pacific Lines and of the Union Pacific System, taking in the Oregon Railroad and Navigation Company and the Oregon Short Line. His headquarters are in Chicago. Has charge of the maintenance and operation of the property.

His subordinates.

(344) Mr. Scott is Assistant Director of Maintenance and Operation. His jurisdiction is co-extensive with that of witness. The operating officials who report to witness are the General Managers of the Union Pacific, Oregon Short Line and Oregon Railroad and Navigation Company and Southern Pacific Company. Mr. Mohler is General Manager of the Union Pacific. His jurisdiction extends from Omaha and Kansas City to Denver and Green River. Green River is about 176 or 180 miles east of Ogden. Balance of the Union Pacific from Green River to Ogden is under the charge of Mr. Bancroft. He is Vice-President and General Manager of the Oregon Short Line and General Manager of that part of the Union Pacific from Green River to Ogden and of the Southern Pacific from Ogden to Sparks, Nevada. Sparks is 555 or 560 miles west of Ogden.

(345) Mr. J. P. O'Brien is Vice-President and General Manager of the Oregon Railroad and Navigation Company. He has charge also of the lines of the Southern Pacific in Oregon north of Ashland. Ashland is about 30 miles north of the state line and about 430 miles south of Portland. Mr. E. E. Calvin is Vice-President and General Manager of the Pacific System of the Southern Pacific Company. His jurisdiction extends from Ashland on the north to El Paso on the south and east, and to Sparks, Nevada, on the east.

No jurisdiction over Texas lines.

(346) The lines in Texas are in charge of their respective presidents. Witness has no jurisdiction over them. Mr. Fay is

General Manager of the lines in Louisiana. He reports to witness. Mr. Thorne, Purchasing Agent, buys equipment for all the systems over which witness has jurisdiction. The requisitions of all the lines except the Texas Lines are made on witness. He approves them and sends them to the President, who has the purchases made. Mr. Lovett is President of some of the Texas Lines, and Mr. Harriman of some of the others, and they frequently correspond with witness, asking his opinion about matters connected with the Texas Lines. Purchases.

(347) The engines for the Texas Lines come out of the common stock ordered for the system. "Q. They take your opinion as to how much money should be expended on the Texas Lines, and where it should be expended? A. I expect you would have to ask them about it. I don't know whether they do or not. Q. Well, they ask your opinion, then? A. Yes, sir." Estimates for improvements and betterments of the lines under jurisdiction of witness during the year are made up by the General Managers first, and then they are submitted to and passed on by witness, with the exception of the Texas Lines. Texas lines—expenditures.

(348) Has no official connection with the Texas Lines. In the appointment of the various officials under the General Manager, excluding the Texas Lines, witness has a supervisory authority. The General Manager appoints General Superintendents, subject to approval of witness. They would hardly submit for his consideration any one below the grade of Division Superintendent. Official appointments.

(349) Mr. Bancroft has a General Superintendent and an Assistant General Superintendent, who report to him and are subject to his orders. The Division Superintendents on all the lines report to the General Superintendent. The only steamship line witness is connected with is the Morgan Line. He has general charge of its maintenance and operation. Mr. Schwerin has charge of the Portland and Asiatic Steamship Company. He does not report to witness. He also has charge of the Portland and San Francisco Line. Officers of steamship lines.

(350) Mr. Schwerin has charge of the Pacific Mail Lines. He reports direct to Mr. Harriman. Witness received his appointment and directions from Mr. Harriman. "Q. Did he (Harriman) map out this plan of having the Pacific System divided up into divisions and under the control of operating officials, irrespective of the mileage owned by each line? A. If you mean whether he prescribed the mileage under each General Manager, yes. Now, as to the limits of the divisions and the jurisdiction of the officials under them, no. Q. You did that? A. Yes, I did that. Q. Did you talk that over with Mr. Harriman? A. In a very general way only."

(351) E. O. McCORMICK. McCormick.

Testimony given before Interstate Commerce Commission, January 10th, 1907, in the city of Chicago.

Ass't. Traffic Director, Harriman lines.

Witness is Assistant Traffic Director of the Pacific System under Mr. Stubbs. Prior thereto was Passenger Traffic Manager of the Southern Pacific, with headquarters at San Francisco, from May, 1899, until April, 1904. He had exclusive charge of all the passenger business of the Southern Pacific during that time. His jurisdiction included the through business to New Orleans and locally on the Pacific coast. Did not have charge of the passenger business of the steamship lines. Prior to 1901 there were no common passenger officials between the Union Pacific and the Southern Pacific above the rank of General Passenger Agent. Witness was appointed Assistant Traffic Director of the Pacific Line in April, 1904.

(352) Since then either Mr. Stubbs or witness have had supervisory charge of the passenger business on all the lines. Local passenger agents of the various divisions report to the General Passenger Agents periodically. Mr. Lomax has charge of Union Pacific passenger business. He reports to witness' office. Mr. Burleigh has charge of the passenger business within Mr. Bancroft's jurisdiction. His headquarters are at Salt Lake. Mr. McMurray has charge of the passenger business within the jurisdiction of the General Manager of the Oregon Railroad and Navigation Company. He reports to witness' office. Mr. Fee has charge of the passenger business on the Southern Pacific Lines to El Paso on the south, to Ashland and to Sparks, and on the through business to Ogden. He reports to witness' office.

His subordinates.

(353) Mr. Batters, General Passenger Agent, with headquarters at New Orleans, has charge of the Louisiana Lines. He reports in a way to witness' office. Witness has no jurisdiction over the Texas Lines, except through business to and from New Orleans, by consent of Mr. Dunlap, who is the chief traffic official of the Texas Lines. If a through rate were made he signifies his assent to be a participant in that through rate. Witness sometimes represents the Texas Lines at traffic meetings, by request, when not convenient for the officials of those lines to attend. It is done very rarely.

Passenger traffic to and from California.

(354) Generally speaking, the travel is toward California in the early winter and back in the spring, but there is more or less winter tourist business all winter long, both ways, and more or less tourist business the year round, so that it compels the Southern Pacific to be a participant in the all year round trip rate, which is unusual in other territory, which rate is open alike to every road in the country. The rates on passenger business for all the territory east of the Missouri River to California and return by all the lines are practically the same. Some routes are slightly higher than others, but on account of the situation of the two rate making points in California, the Southern Pacific has what you might call a free rate for 482 miles between Los Angeles and San Francisco. It gets nothing for a portion of its route. It must make the same rate to San Francisco it makes to Los Angeles—

Rates.

and then the Southern Pacific opens its road to every connection for diverse routes; it does not demand that they send it back and forth over one line, but it is open to everybody in that way.

"Q. And the Union Pacific does the same thing? A. The Union Pacific does the same thing. The Santa Fe Company does the same. Q. So that the passenger business from the eastern territory, east of the Missouri River, can go to and from all California points at practically the same rate? A. At practically the same rate; and by reason of the consent of the Southern Pacific road, with practically the same conditions as instanced now by the Milwaukee & St. Paul, and the Northwestern. The Chicago, Milwaukee & St. Paul operate through car service with the Southern Pacific via Omaha to Denver and to California, and in addition to that the Milwaukee and St. Paul are permitted to operate through car service by way of Kansas City, turning it over there to the Missouri Pacific road, and then to the D. & R. G., and it is taken again by the Southern Pacific at Ogden; and the Northwestern operate a through service. The Rock Island operate a through service by way of El Paso, etc."

Connections which have through car service over S. P. to California.

(355) There is also a through service with the Northwestern and the Union Pacific and the San Pedro. "Q. Now, the lines extending from Chicago to California, connecting at El Paso; for instance, the Rock Island, they run a through service with the Southern Pacific? A. It is afforded the same facilities, as well as the Texas and Pacific, which is a part of the Gould System, officered over by Mr. Jeffrey. And each line also is afforded through service by way of Ogden to such an extent that the Southern Pacific has not a single train over its road that Mr. Jeffrey's line has not through cars on; no train. We even handle them on the Overland Limited now."

Rates on winter tourist business from St. Paul and Minneapolis through Kansas City and southwest connecting with the Southern Pacific to California, are the same as by the Union Pacific. There are tourist cars from St. Paul and Minneapolis out over the Southern Pacific and via Kansas City and the Santa Fe and the other lines to California. Have also had through cars from St. Paul via El Paso. "Q. Two years ago, for instance, the Chicago Great Western operated that way? A. They never closed those gateways to anyone."

S. P. never closed its gateways to anyone.

A passenger can at will select any of the lines, the S. P., the U. P., the Rio Grande, and the Santa Fe, and those lines have through service for the same rates. If a passenger goes by St. Paul and Portland, and over what is called the Shasta route of the S. P., and back, there is an arbitrary charge for that 778 miles between Portland and San Francisco, a higher rate than if he went direct. (356) The difference would be about $15 for the round trip, and has been in existence all the time. There has been no material change for 25 years.

All the lines have through service at same rates.

The rate over the U. P. and Navigation Line to Portland and

around to San Francisco is greater by the arbitrary on account of the Shasta route by reason of the excess haul of 778 miles. It has always existed. Witness did not intend to say that passenger rates to California had not changed for 25 years, but the way of applying the rates had not changed materially. There had been a through colonists' rate as low as $25, now ordinarily $33, the lowest through rates in the world. (357) A round trip to the coast since becoming $110 has always been less than two cents a mile, a very low rate. The lowest rates in the world exist in California itself. The S. P. did not get two cents a mile for some of the local business, and rarely three cents a mile; while the rate between Philadelphia and New York is three cents, and between Chicago and Buffalo is three cents a mile.

Low rates to California.

Colonists' business now in the hands of United States officials at Ellis Island, and not much competition on that business now. The S. P. has always opened its line to its connections in a most peculiar manner; even when it was the only line to the Coast, its divisions via both Ogden and the Sunset routes were practically on a mileage basis, as they are today.

S. P. divisions practically on mileage basis.

(358-359) In referring to the divisions with connecting lines, witness explains that they were fairly liberal "because they were on a mileage basis. If you run up to the connection of a road and you have the use of that road beyond that point on a mileage basis, it is just as good as if you had your own road. You couldn't do it any better; you escape the maintenance of that road and you gain the benefit of it." Describes the way in which expense of advertising is allotted between the different lines and appropriations therefor made. Local passenger rates lower now than ten years ago, because recently witness' lines in Utah, Wyoming, California, Arizona and New Mexico reduced their rates. The facilities were better and the traffic was larger, and they were reduced from five cents to four cents locally.

Mileage basis good as ownership.

Local passenger rates lower.

One way through passenger rates and the round trip tourist rates during the last 15 years have been so greatly reduced by reason of these many round trip convention rates, that the aggregate rates for the last 15 years for through business have probably not been two-thirds as high as they were before. (360) Witness did not think that the through rate from the River to California on one way tickets had been reduced in that period. Rates are freely open to all connections.

U. P. policy unchanged.

Prior to 1901 the U. P. operated its California passenger business over the S. P. from Ogden. There has been no change in that respect since that time. "Q. Has there been any change in the policy respecting the interchange of business, joint passenger business and joint passenger rates with connecting lines since 1901? A. None that I know of. They were free and open to all connections in 1901 as they are today. Q. And prior to 1901? A. And prior to 1901, even when the Southern Pacific was the only line into California." In the rate war between the Atchison and S. P. prior to

Rate war.

1901, the U. P. was on the S. P.'s side. It could not consistent with its interests take any other position.

(361) J. A. MUNROE.

Munroe.

Testimony given before Interstate Commerce Commission, Jan. 10, 1907, in the city of Chicago.

Freight Traffic Manager of U. P. lines east of Green River for last two or three years. Prior to that Freight Traffic Manager of the U. P., with jurisdiction as far west as Ogden. Lost jurisdiction over lines west of Green River two or three years ago, partially, but not entirely. Mr. Reeves as General Freight Agent of Oregon Short Line has jurisdiction locally over U. P. line, subject to my approval. Mr. Reeves has jurisdiction over S. P. as far west as Sparks, and over U. P. as far east as Green River, and over the Short Line. Witness has been Freight Traffic Manager of the Union Pacific since the organization of the present company, February 1, 1898. Was also Freight Traffic Manager during the Receivership back in 1893, and has been associated with the Traffic Department since as far back as 1882. (362) Has reported to Mr. Stubbs since July 1, 1901. Prior to that reported to Mr. Burt, President of the Union Pacific.

Freight Traffic Manager, U. P.

(363) It was the custom of witness to represent Union Pacific at freight meetings with other roads for many years. Had nothing to do with the pool of the trans-continental lines. His knowledge about it was very superficial. In the rate meetings referred to he represented no one but the Union Pacific. The Southern Pacific was separately represented. Prior to the Receivership of the Union Pacific witness represented the line from Granger to Portland also.

Rate meetings.

(364) There has been no material change in the representation at meetings since Mr. Stubbs' appointment. Each company has had its representative at the meetings. "We always endeavor to have direct representation of the Union Pacific at each of those trans-continental meetings." In attending these meetings, was under the direction and supervision of Mr. Stubbs. There has been no change in witness' relation to these conferences since Mr. Stubbs' jurisdiction was extended over the Union Pacific. Witness has attended as many of the rate meetings since Mr. Stubbs' appointment as he did before.

(365) Since the jurisdiction of Mr. Stubbs was extended over the Union Pacific, excluding the San Pedro line, no change has been made in the movement of freight as to business moved by way of Ogden and other business by way of Granger and Huntington. Prior to the receivership when witness' jurisdiction extended over the line to Portland, over the O. S. L. and O. R. & N., the U. P. moved its transcontinental business just as it does now. No considerable amount of traffic for San Francisco or other California points ever moved by way of Portland, and then by steamer. The U. P. has never considered that a practicable and feasible route as against the connection with the Central Pacific.

Portland route to San Francisco not practicable.

"Q. Why? A. Because we have always felt it would always cost us more to route San Francisco traffic via Portland, that we would lose more than we would make by it. The line is unnatural in this, that when you arrive at Portland, you are about as far from San Francisco as you are at Ogden. Again, San Francisco is the only point on the Pacific Ocean from which the boats from Portland, or at which boats from Portland touch. There are in California a number of points in common with San Francisco, to which a very large and handsome tonnage is attached, and we always felt that our possible gain by using the Portland route for San Francisco business would be much more than offset in value to the Union Pacific by the resultant action. There was a large business eastbound—I am giving you the thoughts that occurred to me at the time. If I am too long about it stop me.

Reasons why Portland route to San Francisco is not practicable.

(366) "Q. No, I wish you to make it as full as possible. A. There were at that time about 8,000 carloads of perishable fruit at points substantially local to the Southern Pacific, the routing of which to the Missouri River we satisfied ourselves they could control, and we had hard enough work to hold our share of it anyway. We did not wish to add to our burdens and we felt that the line by way of Portland was not on a parity in service with the line via Ogden; that we would have to have a differential to San Francisco to do any business and the bad effects of the differential would cost us more than the business which we would gain by the Portland route would represent. To illustrate, we have never felt that it would be wise to accord to San Francisco a lower rate via Portland and water than we accorded Portland direct for the all rail service. We did not care to advocate what we thought, an unnatural freight rate basis of adjustment by charging the Portland man for less service more than we charged the San Francisco man for the greater, when both competed more or less in the territory intermediate as between Portland on the north and San Francisco on the south. Those are some of the reasons which actuated us not to open the Portland line for business."

An attempt to open that Portland line even by a reduced rate to San Francisco would be met by the Central Pacific. And the same relative facilities would continue. As to the volume of traffic, the interchange with the Central Pacific at Ogden, and the amount of revenue derived from that are very much larger than the volume and the amount that under any conceivable practicable conditions the U. P. could hope to get by way of Portland.

Small amount of Oriental traffic via Portland.

Oriental traffic, so far as the U. P. is concerned, has always been left in the hands of its western connection serving the port of San Francisco. A small amount of Oriental traffic is moved by way of Portland, limited by reason of there being only monthly sailings.

Asiatic business via San Francisco.

(367) Sailings from San Francisco average one every ten days, and there have been at times nine first-class ships in that service. On business for Asiatic ports from San Francisco, witness has worked the Pacific Mail, Oriental and Occidental, and the Japanese

lines. Asiatic traffic always worked by way of San Francisco, except as witness has already stated, to a limited extent by Portland. The amount by Portland is and has always been very small. The rates from Southern California points to the east via the San Pedro are uniform with the rates via the Southern Pacific and Sacramento. Union Pacific is getting some increased business now by having a shorter line in connection with the San Pedro. The distance from Ogden to Los Angeles via Sacramento and the Southern Pacific is substantially 1,100 miles, whereas it is a few hundred miles shorter via Salt Lake; about 300 miles. The strongest competitor of the Union Pacific for that business is the Atchison line via Albuquerque and the longer line via Sacramento has ruled the Union Pacific out of a large amount of business in the past, because it could not equal the service of the Atchison road. With the San Pedro line the Union Pacific is better fixed and can duplicate it.

Atchison strongest competitor of U. P. on So. California business.

(368) The divisions with the Central Pacific were satisfactory to the Union Pacific.

(369) Does not think that the possession by the Union Pacific of the line to San Francisco via Portland was a strong weapon in the hands of the Union Pacific to prevent the Southern Pacific from making an unfair demand as to divisions. Does not think that the possession of that route by the Union Pacific would make it possible for that company to prevent the Southern Pacific from materially advancing their percentages of the through rates for the service west of Ogden.

Portland route not a strong weapon for U. P.

It would not protect U. P. against demands for unfair divisions.

(370) Attention of witness is called to the Sunset line from New York to San Francisco, which operates in competition with all rail lines between the same points, and this question is asked: "Q. Now, with that object lesson in front of you, don't you think that a good active working of that line via Portland and boats to San Francisco would have made it impossible from motives of self-interest alone for the Southern Pacific to have demanded an unfair division of the through rate as against the Union Pacific? A. No. Q. You are still of the same opinion, are you? A. I am."

(371) P. & A. carries chiefly local traffic to the Orient, consisting largely of flour. Their inward tonnage, consisting notably of tea and rice, curios and silk occasionally, is scattered all the way along from Portland east, and is handled over the U. P. lines. That has been true for ten years or so of the traffic carried by the P. & A. or its predecessors. There is just the same competition now that there was prior to 1901 between the S. P. and the U. P. with the Short Line and Navigation Company to Portland. (372) Witness thinks U. P.'s westbound takings of trans-continental trade would be five to ten per cent. more than they were ten years ago. (373) Sunset line never regarded as a competitor on Chicago business. (374) Witness does not recollect an average of one communication a month to a Sunset man. "They are just as separate and distinct from us as the Atchison road is."

Same competition obtains as prior to 1901.

Ill. Cent. via New Orleans not a competitor of Ogden route.

Witness does not think Illinois Central through New Orleans could ever compete with the Ogden route. When you get from Chicago to New Orleans, you are farther from San Francisco than when you started. The lines from Kansas City to El Paso are much more a competitor. Traffic moves that way, and U. P. recognizes that competition as active. As to Chicago business, the Union Pacific on the one hand, and the lines from Chicago to El Paso and the Southern Pacific from there on, are competing lines. From territory on a line about the Ohio River, both routes would naturally be competing. Anything south of the Ohio River would get a better service via New Orleans than via Omaha, and anything that originates north of there would go via Omaha. Cincinnati is about on the dividing line. (375) Occasionally business north of that line has moved via El Paso and business south via Ogden. "Q. And Pittsburg would be pretty strongly competitive territory then, wouldn't it, as it is right on that line? A. Pittsburg is very strongly competitive. Q. As between the Southern Pacific and the Union Pacific? A. As between all the gateways." East of Kansas City to the Atlantic seaboard, to a limited extent, the territory south of the Ohio River is competitive, and the territory north of the Ohio River naturally moves by the northern gateways. Most of those places move on parallels, but not always. The lines from Chicago that take business between California and El Paso are the Rock Island system in connection with the El Paso & Southwestern. Then the lines radiate from El Paso; the Texas Pacific with their various connections via such points as Texarkana, Iron Mountain Fort Worth and the M. K. & T. When these lines competing by way of El Paso get that business, they deliver it to the S. P. The Atchison has its own line from Chicago to California

Gateways for business originating north and south of Ohio river.

U. P. cannot make California rate without consent of S. P.

The U. P. cannot make a rate to California without the consent of the S P. The Portland business that is in competition between the Navigation Co. and the S. P. is very small.

(376) In any contest in which the Portland route might be used as a club against the S. P., the U. P. would get the worst of it, the latter's loss and suffering would be many times greater.

Hahn.

(377) HENRY HAHN.

Testimony given before Interstate Commerce Commission, Jan. 24th, 1907, in the city of Portland, Oregon.

A Portland shipper.

Wholesale grocery merchant at Portland, connected with Wadhams & Co. for sixteen years. Also has interest at Prineville, Crook County, Oregon. Goods shipped to him from the east prior to 1901 came over the U. P., the S. P., the Northern Pacific and the Great Northern, and prior to that date his firm was solicited for shipment of goods from the east by the different lines mentioned.

(378) At the present time no competition between the Navigation Company and the S. P. Co. so far as is apparent to the witness. The U. P. and S. P. are represented by a single solicitor.

(378) E. NEWBEGIN.

Newbegin.

Testimony given before Interstate Commerce Commission, Jan. 24th, 1907, in the city of Portland, Oregon.

Portland. Agricultural implements.

(379) Connected with R. M. Wade & Co., dealers in agricultural implements, Portland, Oregon. Has lived in Portland eight years.

Routing of his business.

(380) Prior to 1901 most of witness' shipments from the east had been routed via Ogden and Sacramento. Witness thought the stuff was routed over Rio Grande, Colorado Midland and S. P. Goods came from Missouri, Indiana, Illinois, New Jersey, Pennsylvania, Michigan and Minnesota. At the present time witness ships over U. P. and Navigation Company, and partly by Northern lines. Is no longer solicited by agents of S. P.

Sacramento gateway closed.

(381) Witness did not mean to say that Ogden gateway was closed to the Denver & Rio Grande via Huntington, but that the gateway was closed for bringing cars via Sacramento. He cannot ship cars via Ogden and Sacramento to Portland,—trans-continental freight.

(383) Shipments via the Great Northern and Northern Pacific to the Willamette Valley are not satisfactory. Witness always routes over U. P. U. P. gives better service. Claims for damages against the U. P. or the Navigation Company are more readily settled than against the S. P. or Great Northern.

U. P. the preferred route.

(384) Shipments via the Union Pacific are a matter of preference, not of necessity; "we usually pay the freight."

(386) The bulk of witness' business comes in over the U. P. to Portland.

(387) T. D. HONEYMAN.

Honeyman.

Testimony given before Interstate Commerce Commission, Jan. 24th, 1907, in the city of Portland, Oregon.

Portland. Hardware.

Wholesale and retail hardware at Portland for thirty years. Brought goods from the Atlantic seaboard and the interior states. Prior to 1901 there was active competition between the Navigation Company, the S. P. and the Northern Pacific for shipments from the east, and witness received shipments over the Sunset route, the Nav. Co., the Northern Pacific, and the Great Northern, and also the Sacramento route.

Routing of his business.

(388) Shipments could then, and now also, be made by way of Panama, thence by the boats of the Nav. Co. There were and still are lines of boats around the Horn to San Francisco, and witness shipped great quantities by that route. At the present time there are the following lines competing for Portland business: The American Hawaiian line, the Panama line, the Northern Pacific, the Great Northern, the U. P. and the Sunset.

(389) The rates being the same as the northern lines, it is not to witness' advantage to ship via the Sunset route, because too circuitous. Goods which the witness might bring by the Sunset route he would bring by the ocean route instead, by the Panama or Ameri-

can Hawaiian line. Shipments by last two lines are large, and witness moved everything possible by ocean.

Plenty of routes besides Harriman lines.

(390) Chicago freight is routed by various middle west routes, and comes into Portland over the Northern Pacific, Great Northern or Union. Great Northern comes in over the Navigation Co. from Spokane, and witness routes quite a little business that way. All have their solicitors. Witness has plenty of ways to get in goods, besides the Harriman lines. Routes most of his own goods, with the exception of some stuff that is controlled by the larger corporations, who insist on making their own deliveries, U. S. Steel Company, for instance.

(391) The Sunset route used to make low rates into San Francisco, forced by steamer conditions to that point, and witness used to take advantage of them by adding the steamer or rail local from San Francisco to Portland.

(392) Rates were established by the railroads to meet water competition. There was a time when nearly everything moved into Portland at less than published tariffs.

Hall.

(393) O. O. HALL.

Testimony given before Interstate Commerce Commission, Jan. 24th, 1907, in the city of Portland, Oregon.

Portland. Hardware.

Employed to look after freight shipments of Honeyman Hardware Co., at Portland, Oregon. Formerly employed by Navigation Co. Frequently received visits from freight solicitors, but not so much as in the past. "I shut them off a little." Solicitors for Harriman lines simply solicit freight for those lines, without specifying whether Sunset or Sacramento route. Witness ships a good deal of stuff over the Navigation Co. Freight coming from north Lake ports (Superior and Duluth) would come over the Great Northern and Northern Pacific, and from Chicago and Milwaukee ports it would move by some of the Iowa lines to Omaha.

Routing of his business.

(394) Sometimes freight moves Duluth to Omaha by the C., St. P. M. & O.

Witness was solicited by Northern Pacific and Great Northern, but not by Canadian Pacific. Also by the freight agents of all the Iowa roads.

Freight coming by the Great Northern reaches Portland over the Navigation Company from Spokane.

The witness, not the Harriman lines, routes the freight, and routes it by the Nav. Co., not by Sacramento.

Gill.

(395) J. K. GILL.

Testimony given before Interstate Commerce Commission, Jan. 24th, 1907, in the city of Portland, Oregon.

Portland. Stationery and Books.

Has lived in Portland 35 years. Engaged in business of wholesale and retail stationery and books. Prior to the consolidation of the U. P. and S. P., witness said they shipped "generally by the Union Pacific and the O. R. & N., and sometimes by the—well,

we used all the lines, but mainly the O. R. & N. and Northern Pacific."

(396) Infrequently shipped over the Sunset Route, but other lines were more direct. Occasionally solicited to ship by Sunset route. Are frequently solicited by the lines of the middle west, east of Omaha. Not solicited so much by the Great Northern and Northern Pacific. Routing of his business.

Witness has always been a heavy ocean shipper, by the Panama route until the American Hawaiian line gave better service, and formerly by sailing vessels. Witness still an ocean shipper. Heavy stuff from Atlantic seaboard comes in largely by ocean. Most of his stock originates in New England and New York, and if it does not come by water, it comes mainly by U. P. and O. R. & N.

(397) He now ships a larger proportion of rail freight by the O. R. & N. than he formerly did, but that has not been a diversion from the Sunset route. Witness could still ship that way.

In the old days the route chosen was not so much due to the solicitation of agents as to the question of rates. Sometimes a personal element would enter in, and he would give a shipment to a man for personal reasons.

The question of freight congestion was an incident that could not be forseen.

(398) W. A. MONTGOMERY. Montgomery.

Tesimony given before Interstate Commerce Commission, Jan. 24th, 1907, in the city of Portland, Oregon.

Connected with same stationery business as the foregoing witness at Portland. Testimony substantially the same as foregoing witness. (399) Water shipments made nearly altogether by American Hawaiian Line. The American Hawaiian gives a net rate from Portland into New York. Witness doesn't know how the shipment comes up from San Francisco, but thinks it comes by the Navigation Co. Does not recall freight in any case coming by rail from San Francisco. Purchases made in California sometimes come from San Francisco by boat; sometimes by rail. Portland. Stationery and Books.

(400) O. R. & N. steamboat lines between Portland and San Francisco, together with the Hawaiian line, operate in opposition to all the railroads in the country. Witness did not know what the rates over the O. R. & N. steamboats were, these being paid by the American Hawaiian line.

Not solicited as much as formerly, and used O. R. & N. because of the less time consumed. Would almost have to use that line in preference to the Sunset or Sacramento route.

(401) Would not use the Sacramento route even if the Harriman people insisted on it.

Witness familiar with the route practically since 1901, and is free to ship any way he wants to. Knows of no limitation upon manner in which he can route goods, or of any railroad restrictions of any kind. No limitations on routing.

Ehrman.

(401) EDWARD EHRMAN.

Testimony given before Interstate Commerce Commission, Jan. 24th, 1907, in the city of Portland, Oregon.

Portland. Wholesale Grocer.

Has lived in Portland as wholesale grocer 20 years. (402) Purchases goods from Atlantic seaboard and middle states. Formerly solicited by both S. P. and Nav. Co. They no longer solicit against each other. Ships over the U. P., S. P., Great Northern and Northern Pacific. Goods over the S. P. mostly originate in the south, in Texas, Louisiana, and California. Goods from San Francisco come up both by boat and rail.

(403) There is another regular line of boats between San Francisco and Portland, besides the San Francisco and Portland line, the latter being formely called the O. R. & N. Formerly shipped goods from the east by the Sunset route, but only to a limited extent. Does not care to ship that way, though he can do so.

No railroad restrictions on routing as he pleases.

(404) In addition to regular lines between San Francisco and Portland, there are a number of tramp boats. Can route his freight any way he pleases. Knows of no railroad restrictions.

Routing by the Sunset Route in the old days might have been due to personal solicitation.

McCusker.

(404) THOMAS McCUSKER.

Testimony given before Interstate Commerce Commission, Jan. 24th, 1907, in the city of Portland, Oregon.

Portland. Former S. P. solicitor.

Has lived in Portland 18 years. (405) Since December 1st in the real estate business. Prior to that for sixteen years with the S. P., and about a year ago with the Harriman lines as Asst. Gen. Agent of the Nav., U. P., and S. P. Companies. Was Contracting Freight Agent of the S. P. road during a part of the 16 years. First handled claims and did office work. Was Contracting Freight Agent about 13 or 14 years. As such his duty was to solicit freight for S. P., both via the Sunset and the Ogden and Sacramento routes. In soliciting via the Ogden route worked in connection with the Missouri Pacific, Rock Island, Burlington, and Rio Grande, as well as the U. P. Considered the U. P. and Nav. Co. the S. P.'s strongest competitors into Portland. Solicited for all classes of goods, from all points east, the Atlantic seaboard, Chicago and Pittsburg territory, and Missouri River territory. Also solicited shipments out of Portland to points competitive with Nav. and U. P. Co.

Solicited both via Sunset and Ogden routes.

Hops, prunes, hides.

(405-406) "Q. State what classes of commodities were shipped out of here in competition with the Southern line? A. Hops and prunes, hides, and I don't know about the lumber shipments; that is so far as the Union Pacific was concerned. * * * I don't believe that we solicited the lumber in those days in competition; in fact, I know we did not via Ogden." Large quantities

of hops were produced principally in Willamette Valley, 90 per cent of the Oregon hops and Washington hops grown are within that valley.

Hops shipped chiefly Sunset.

Large quantities of hops shipped chiefly over Sunset. The U. P. and Nav. Co. competed for that business and was the strongest competitor. They got hops into Portland from the Willamette Valley off the boats of the Nav. Co., and of the Oregon City Transportation Company, and frequently the S. P. lines. The shipments originating in that valley also solicited by Northern Pacific, Great Northern, all lines. In average year hops ran from 75,000 to 100,000 bales. A large average car would not exceed 15,000 pounds, and the bales weigh from 180 to 200 pounds.

Willamette river boats.

(407) The Nav. boats on the Willamette, when the water permitted, ran as far up as Corvallis, about 90 miles by rail from Portland. Frequently water not sufficient for boats to get there. Always went as far as Dayton.

Willamette River is in center of hop district, and hop district is tributary to river boats; also to rail line of S. P.

Routing of hops.

(408) Hop business solicited both by S. P. and O. R. & N. When they came in by latter's boats to Portland, witness didn't remember their going on to San Francisco by boat. Went east by O. R. & N., the Northern or Southern Pacific. Sometimes when soliciting for S. P., witness routed hops east by Sacramento, and from Ogden via the Rio Grande, the Burlington, Missouri Pacific, and U. P. Lines east of Ogden had soliciting agents in hop district.

(409) As soliciting agent of the S. P., witness tried to get Atlantic seaboard business via the Sunset, so as to get a long haul.

Routed Chicago business via Ogden.

Chicago business he routed via Ogden and Sacramento. Considerable freight moved that way. The same rates were in effect to Portland via Ogden as via all the other lines. Prior to consolidation, Southern Pacific worked with all the lines entering Ogden.

(410-411) Describes changes in freight officials after consolidation.

Changes after 1901.

(412) Some little time after the consolidation, agents were told to solicit seaboard business via the Sunset, and other business, where the local to New York would be too great, via the U. P. Reason given for the change was that business should be distributed to give the most revenue for least service. Did not solicit freight via Sacramento. That gateway closed by withdrawing the rates.

(413) Prior to consolidation witness knew of no lumber being shipped out of Portland into the Rocky Mountain territory over the S. P.

Wool.

Willamette Valley wool S. P. competed for strongly via the Sunset.

(414) Live stock did not move to the east via the S. P.

Rates now same over all lines.

Years ago there was competition between all the lines regarding rates. That condition was different in 1900, and in recent years rates have been the same via all lines.

(415) So far as witness knew, the conditions as to tariff were just the same at the time the consolidation took place as they are to-day. The cut rates possibly existed up to 1901. It frequently happened that the western lines did not cut rates, but that the trunk line, or Missouri River lines, did.

No fruit moved via S. P. from So. Oregon.

(416) No fruits were handled via S. P. from Southern Oregon, the charge for refrigerator cars being more by that line. No fruit moved by either Sunset or Sacramento. Possibly a little may have gone by Sacramento, but not much.

(417) After the consolidation the S. P. worked solely with the U. P., and not indiscriminately with other lines, and the U. P. and S. P. did not attempt to take business from each other.

Traffic—Portland to San Francisco.

Regarding Portland to San Francisco business, witness as agent of the S. P., solicited for and obtained occasionally hides, also box shooks. These commodities witness thought were also carried by boats of the O. R. & N. Lumber went down by schooner.

Hides.

(418) Hides to the east moved both via the Sunset and the rail lines. S. P. didn't get much of that, although it was solicited. Didn't solicit paper from the paper mills for the Sunset because it is out at Oregon City and up the river.

Traffic from Cincinnati common points.

(419) From Cincinnati common points, witness solicited freight via New Orleans and Sunset, and, when he could not get it that way, via Ogden and Sacramento. Considerable business came by those routes,—whiskey, merchandise of different classes, canned goods and vehicles. After the consolidation the instructions were to solicit it via Omaha.

(420) Witness didn't know how much farther it was to Ogden by Sacramento route than by Nav. Co., but the mountain haul takes about two days longer. Witness thought it was a matter of 680 miles from Portland to Sacramento, and it was possibly as far from Sacramento to Ogden as from Portland to Ogden.

Lochman.

(421) LOUIS LOCHMAN.

Testimony given before Interstate Commerce Commission Jan. 24th, 1907, in the city of Portland, Oregon.

Salem. Hop business.

Has been in hop business at Salem 15 years. Prior to 1901 solicited by both S. P. and Nav. Co., but not now. Shipped hops over the S. P., U. P., and Denver & Rio Grande. Never shipped via Sacramento. Shipped over the Nav., Short Line, and Denver & Rio Grande. Hops came to Portland from Salem by the S. P. and by Nav. Co.'s boats. Boats quit running two or three years ago. Another line of boats, however, is running, over which witness ships.

Routing of his business.

(422) Hops that witness shipped by boat to Portland have nearly all gone east by the Rio Grande and its connecting lines from Denver east. Has had no success in attempting to route cars directly from Salem by Rio Grande. In order to ship that way it was necessary to secure Rio Grande cars. Otherwise to go by

U. P. or S. P. Southern Pacific Sunset cars went Sunset; Union Pacific went over Union Pacific. "Q. At the present time you can ship either on the Southern Pacific or Union Pacific in any car that happens to be in the yards, can't you? A. Yes sir. Q. But if you want to consign anything over the Rio Grande you must procure a Rio Grande car? A. Yes sir." By reason of that fact has been unable to make shipments over the Rio Grande. Rio Grande man is about the only one soliciting hops at Salem, except the agent for the S. P. and U. P. Since 1901, up to about a year ago have sent large quantities of hops by Sunset, but no longer does so.

Rio Grande cars.

(423) Shipments now go by all-rail via Omaha, or else Rio Grande line, where shipped by boat. In old days of competition witness could ship hops in transit to any point north of Eugene; for instance, to Salem, and consolidate them there, or could ship to Portland without paying local freight, and consolidate there and get free storage. All that now done away with. Formerly got 30 to 60 days free storage on the S. P. dock at New York.

Consolidation of hop shipments.

(424) Dayton is about 25 miles from Portland. Competition between S. P. and Nav. Co. stopped about 1901. Nav. Co. boats run as far as Dayton, and the other line farther up, about 100 miles, as far as Corvallis. The latter are very good boats, taking from six to ten carloads of hops at a shipment.

River lines

(425) Other line runs to Corvallis when water permits, from about December to June or July—a boat every other day. Just as good service as the Nav. Co. ever gave. Boats on the Willamette River frequently settle on a sandbar or strike a snag. Deep water navigation up there consists of a boat drawing about six or eight inches of water.

(426) The Nav. Co.'s only remaining boat still runs to Dayton. The Great Northern and Northern Pacific for two years or more have not solicited the hop business. The Rio Grande agent still does. Nav. Co. and S. P. helped weigh hops and gave free storage until about August 20, 1906, about the time the Interstate Commerce Act went into effect, while the Northern Pacific and Great Northern had discontinued this practice about two years before. The two latter roads have not solicited witness' business for three, four, or may be five years.

Free weighing and storage until 1906.

(427-428) Have made no shipments this year by Great Northern. Probably shipped four or five cars by boat to the Northern Pacific. Could get Denver & Rio Grande cars at Portland, but not at Salem, (and hence could ship by boat from Salem via the D. & R. G.).

(428) FLETCHER LINN.

Linn.

Testimony given before Interstate Commerce Commission, Jan. 25th, 1907, in the city of Portland, Oregon.

Manager, Oregon Furniture Mfg. Co. at Portland. (429) Never had much solicitation for California business. Shipped

Portland. Furniture.

principally by rail, not very much by boat. Rates about the same, and witness shipped altogether by rail. More convenient. Rate by boat now taken by measurement on furniture, and is much higher than by rail. Four times the rate by rail.

Rail and boat rates.

(430) Rail rates were not changed since the change made in boat rates. Change in boat rates has affected witness' business, because he can no longer get service to get goods out, that is, for carload business. Has to ship it now in less than carload lots. There are other lines of steamers to San Francisco, besides Nav. Co., and the raise in rates on furniture was common to all. The change took place four or five months ago, certainly more than three months ago.

Car shortage.

(431) Before the steamer rates went up witness was unable to ship to San Francisco in carload lots. No one told him he couldn't ship in carload lots, but he simply cannot get the cars. There is a car shortage. Witness is on the west side of the river, and does not have access to the terminal grounds, and there are few cars on this side of the river. People on the other side, he thought, got more cars. Car has to go about 80 miles, round trip, to reach his factory from terminal. There has also been a congestion of traffic on the S. P., principally at Oakland and San Francisco. Witness' factory on S. P. (433) Witness stated he had not asked for any cars at the terminal grounds.

Breyman.

(434) OTTO BREYMAN.

Testimony given before Interstate Commerce Commission, Jan. 25th, 1907, in the city of Portland, Oregon.

Portland. Saddlery goods.

About fifteen years a manufacturer of saddlery goods at Portland. Imported his leather from California, and hardware, hames and other things from Atlantic seaboard largely. Prior to 1901 shipped largely by boat. About five years ago shipped leather largely by boat; now by rail altogether. (434) "We have no steamer service." That has been the case several years. It was worse this last year. (435) Brings some goods from Atlantic seaboard by American Hawaiian Lines, trans-shipped by boat at San Francisco. Apart from that, has given up trying to ship by boat from San Francisco on account of the poor service. Rates by the Nav. Co.'s boats were formerly 25 cents a hundred, including insurance; by rail it is now 31 cents. Would ship from the east by water if there was adequate steamer service between San Francisco and Portland, but on account of the poor service shipped by rail.

(436) Never shipped by water to any great extent, because the freight was handled in bad shape. Doesn't ship in sufficient quantities to justify carload rates. Many years ago patronized Sunset route, but not to any extent. Shipped shoe dressing that way which he wished to keep from freezing, and does now. Never ships by the Sacramento route. The Southern Pacific doesn't solicit his business as against the O. R. & N. any more.

(436) GEORGE H. KELLY.

Kelly.

Testimony given before Interstate Commerce Commission, Jan. 25th, 1907, in the city of Portland, Oregon.

Eugene, Oregon. Lumber.

(437) Twenty-one years in the lumber business (10 years at Eugene). His firm is the Booth-Kelly Lumber Co. They operate four mills in Lane County. All of them located on the Southern Pacific. The nearest mill is 120 miles from Portland and the farthest about 145 miles. When running full time, mills cut about 100,000,000 feet per annum. Ship practically all over the United States, except a little part of New England and the South. Eight or nine years ago a mining timber rate of $16 per thousand feet to Arizona was withdrawn.

Tie rates.

(438) This was prior to 1901. Railroad ties to San Francisco or a bay point take a rate of $5 a ton, while a piece double that length, or any other length, would go for $3.10. The distinction was made in Interstate Commodity Tariff No. 7, about two years ago, witness thought.

Cannot deliver ties in San Francisco.

(439) A tie is about the lowest grade forest product except a mining timber. It is very easily transported, and does not require a special kind of car. Witness cannot make deliveries of any ties in San Francisco, or in territory where the Western Pacific are trying to buy ties. Previous to 1901 everything that he shipped went south via Sacramento and Ogden, and since that time all goes north via Portland and Ogden. Rates via Sacramento withdrawn. This was on shipments to Colorado or any of the interior mountain country. Previous to 1901 witness did not ship anything east of Denver, but after the amalgamation of U. P. and S. P., the rates were extended on through to Chicago via Portland, but they never had that rate via Sacramento.

Changes and extensions of rates eliminated some markets, but gave him more territory.

(440) Before the Harriman people got the Union Pacific, witness shipped everything into Southern Utah, Colorado, California, Arizona and New Mexico; that was his sole market. After the consolidation he began to ship east and to go clear to the seaboard. "Q. And you mean by that you made up what you lost in the California and Arizona markets by creating a new market east? A. Yes, very much more in quantity of output. Our output is very much more than it was then, and some years it is a very much better market. We prefer the California market to any other, but still our shipments to the east have increased. In 1903 we shipped about 30 per cent of our cut east—in 1904 I should say 30 per cent—in 1905 40 per cent, and in 1906, 60 per cent went east via Portland. Commissioner Lane: You have not been embarrassed then by the changes affected in 1901? Witness: No; while we have in a measure lost some territory, we have gained more territory."

Output greatly increased.

(441) Since 1901 output has increased about 35,000,000 feet. Formerly his output was 25,000,000 and of this, eighty per cent.

went to California, divided 20 per cent. to the S. P., as company material, and 60 per cent to California for commercial uses.

(442) Old rate of $3.10 a ton to bay points for 700 miles over the Siskiyou Mountains is less than a half cent a ton a mile.

Car shortage.

Witness had a good car service, except in 1903 and this year. Cannot get a car for anything now, except for railroad business; not for commercial business either north or south. If you deal with a railroad you don't always get plenty of cars, but you stand a lot better chance.

(443) Witness has same rates as Portland, though his mills are 120 to 140 miles farther. Prior to 1901 seldom got anything east of Denver, and, if he did, had to absorb a differential. Since 1901 can ship to any states in the east.

Rates have stimulated business.

(445) There has been no adjustment in rates to keep witness out of business, but rather to increase it. Only places where witness has lost territory have been between Sacramento and Ogden, and in Arizona. Rates there increased about eight years ago. Prior to 1901, in routing cars to Colorado by S. P. via Sacramento, it moved from Ogden over the D. & R. G., occasionally by the Midland, now by the U. P. (446) Has just received notice that a new tariff will go into effect, making $5 a minimum rate to any California point.

Tie rates.

(448) Witness knew that there were steam schooners operating from the mills at the mouth of the Columbia River, Gray's Harbor and South Bend, which carried ties to San Francisco. Schooner rates about $9.50 a thousand feet; (449) about $5.70 a ton; and for a great many years the rail rate from Portland on ties has been $5, while witness only paid $3.10. At the same time, witness had the same rates east as the Portland mills, while having this advantage to California Bay points.

(450-451) Cannot get cars to points south of Ashland, even for Company material, due to the congestion of the lines down there. (452) The $3.10 rate was supposed to just equal the Portland water rate at the time it was made.

Meyer.

(452) J. F. MEYER.

Testimony given before Interstate Commerce Commission, Jan. 25th, 1907, in the city of Portland, Oregon.

Portland. Car service agent.

(453) Since July 1, 1904, Car Service Agent of Navigation Company and Southern Pacific Company at Portland. Jurisdiction on S. P. to Ashland, near the boundary line of Oregon. Has charge of distribution of cars in a general way. For ten years prior to July 1, 1904, Car Service Agent of the Nav. Co.'s line. S. P. had a separate agent.

Rules for routing foreign cars.

(454) If witness furnished shippers a Milwaukee car, and the load is east of Council Bluffs, then it would be routed over the Milwaukee. That is the general rule, whether the car comes in empty or loaded. That is common in railroad law, and has been in

effect all the time. If the car comes in loaded, it may be sent back by a different route. If it comes in empty, it has to be sent back to the same gateway that it came. Pooling of cars has had an advantageous effect. It makes freer movement.

(455) When witness wishes cars, and has no cars of his own, he makes demands on his immediate connection, namely, the Oregon Short Line. Reports to Mr. O'Brien, the General Manager, from time to time, that he is not getting cars, and Mr. O'Brien will correspond with Mr. Bancroft and Mr. Kruttschnitt.

(456) Witness lets his cars go to the Northern Pacific when he is in shape to do so. Northern Pacific owes him at Portland something like 800 or 1,000 cars. (457) If a shipper desires to route to the east over the Northern Pacific from Portland, in case the Northern Pacific is not there to send a car, witness doesn't generally send one, but does when the car is routed east over the O. R. & N. and U. P. All of the Harriman lines move almost in any direction. Equipment of any of these lines is at home on any part of the associated lines. There is no restriction upon the use of his equipment for movement over the Rio Grande from Ogden, except if he has a congestion, he naturally loads them for the business of the Harriman lines. Witness tries to equalize the delivery and interchange of cars at the different junction points.

Use of his equipment by foreign lines.

(458) Lets his own cars go off his lines freely, except in times of congestion. (459) Witness' policy is to keep Harriman cars on Harriman lines. (459-460) Statement to dispatchers, agents and conductors, directing them not to load cars for material shipment for Gould roads. (460) Witness said he misunderstood instructions in sending circular, and it was withdrawn a few days after issue. (461) Circulars in regard to the loading of cars for interchange of business with the Rio Grande.

(463-464) Pretty much all the mills in this territory had orders for material for use on the Rio Grande, Rio Grande Western, and Western Pacific before the circular was issued. Do not ordinarily give preference to shipments of material for Harriman lines as against commercial shipments. As testified by Mr. Kelly, do give preference to car material shipments going to Chicago. That is a little out of the ordinary of railroad material.

(465) There is no preference in distribution of cars between the various Harriman lines. Has no system of car apportionment here. Distribute cars according to the demands put in by shippers. Has had a good deal of trouble this year with car shortage. Remembers no case, except materials for refrigerator cars, where the railroad gave him the preference over commercial shipments. (466) In the distribution of cars, treat the Harriman lines as one system. (467) Treating Harriman lines as one system obviated the necessity for returning empties and facilitated business. (468) Up to August 29, 1906, a rate of one-half cent a ton per mile on Company material, that is, material for Denver & Rio Grande, and other railroad material, existed. No such rate since that time.

In distribution of cars, Harriman lines treated as one system.

(469) On that date, August 29, Harriman lines allowed Denver & Rio Grande, Denver & Rio Grande Western, and Denver Pacific material to move in any kind of car, exactly the same as commercial shipments. Prior to that time they applied to Denver & Rio Grande to send empty cars to load with their Company material, but they had been unable to furnish the cars. They owed the Harriman lines cars. His deliveries were in excess of receipts, and he thought it was time for them to hustle up a few cars of their own. If witness sent out the ordinary quota of cars, without getting a return of empties from the east, in about a month the road would be without a car.

D. & R. G. owed cars to Harriman lines.

N. P. owes 800 cars.

(470) Northern Pacific owes Harriman lines about 800 cars. (471) There is free interchange of cars with other lines, except where they begin to get very much in witness' debt, or when Harriman lines get very much in their debt. Then the free interchange stops until the car question is evened up.

Jenkins.

(474) R. H. JENKINS.

Testimony given before Interstate Commerce Commission, Jan. 25th, 1907, in the city of Portland, Oregon.

Portland. Clerk for N. P.

Since the first of last September, Chief Clerk in the freight office of the Northern Pacific at Portland. Prior to that, a year with Northwestern Improvement Company, and prior to that with the Navigation Company as Freight Solicitor, and also the Chief Clerk in the General Agent's office. Was Freight Solicitor from about 1898 up to about two years and a half ago. Until two years and a half ago Nav. Co. and S. P. Co. had separate solicitors. Witness thought not since that time. After 1901 tried to get Atlantic seaboard business to move over the Sunset route, otherwise by the U. P., and if shipments originated west of the Atlantic seaboard the order of preference of the two roads was reversed.

(475) Ogden gateway was closed to shipments by way of Sacramento, witness thought, about 1902.

McBride.

(475) W. C. McBRIDE.

Testimony given before Interstate Commerce Commission, Jan. 25th, 1907, in the city of Portland, Oregon.

Portland. Gen. Agent D. & R. G.

General Agent, Denver & Rio Grande, at Portland since 1902. (See page 478.) Employed by that Company ten or twelve years. (476) In 1900 witness secured about 320 carloads of hops from the Willamette Valley, 280 of which went by Sacramento and Ogden, and 40 by Portland, the Nav. Co. and Short Line. In 1902 witness secured less than 30 carloads of hops from same territory, which moved out by the Nav. Co. and Short Line. Witness' business from the Willamette Valley is nothing to what it was prior to 1901. Solicits from that territory as actively as before. From Ashland north business moves via Portland. Thinks the distance between Ashland and Portland about 340 miles. Portland to

Witness' business from Willamette Valley not as great as prior to 1901.

Ogden by S. P. route, witness thinks about 1,350 miles, by Nav. Co. and Short Line about 890 miles. The bulk of the hops grown in the Willamette Valley comes from the vicinity of Salem, 53 miles from Portland, so that by new route S. P. secures 53 miles to Ogden, instead of 1,300 miles, as formerly.

Sacramento route closed in 1902.

(477) Sacramento route closed in 1902. Circular with regard thereto set forth. (478) Solicits lumber shipments in the Willamette Valley. Adverse influence of Harriman lines makes his lumber traffic from that territory very light. Adverse influence exerted by agents through local favors. Furnishing of cars to move traffic over witness' lines at certain times is restricted, but not often.

Furnishing of cars not often restricted.

Hops.

(479) Hops usually moved to the Atlantic seaboard by Sunset. Moved that way more or less every year. Less this year than prior. Bulk this year have gone by Nav. Co. Seventy-five per cent of the hops that witness moves come into Portland by boat. These shipments are consigned to various points through the east—to New York, and some to London. After leaving witness' lines at Denver or Colorado Springs go east by Rock Island. Application of rates over S. P. lines south of Portland; apply east of Colorado common points via U. P. and Rock Island only. (481) Witness thought that in 1905 Mr. Miller's figures of about 10,000 tons delivered to the Short Line and then to the Nav. Co. by his road, and 110,000 tons the other way, was about correct. Certainly the east-bound movement is very much heavier than the west-bound.

Navigation route much shorter and better than Sacramento route.

(482) Navigation route much shorter than Sacramento route, about 450 miles, and the service better, probably two days difference. The former practically a water level, with the exception of the Blue Mountains, and the latter is over the Siskiyou and Sierra Nevada Mountains. The rates are the same as they are by the Sacramento gateway, and the witness still has joint rates, through bills of lading, and through loadings from Portland and points in the Willamette Valley. "Q. Would you say that this route via Ogden and Huntington is a better or worse route than the route via Sacramento? A. I would say that it was a better route. Q. And it has been open to you during all this period of time? A. Yes sir. Q. And freely? A. Yes sir. Q. For any business you could get out over it? (483) A. Yes sir. Commissioner Lane: You have not been embarrassed in getting business here by the difficulties of the Sacramento gateway? A. Not particularly by the closing of the Sacramento gateway, no sir." He has been embarrassed by the influence of the O. R. & N. on mill men and people of that kind. Witness thinks the same reason prevails in the Willamette Valley. "Q. But other than this adverse influence of rival agents, the transportation facilities which have been given you whenever you got the business, have not been impaired or hampered in any way whatsoever? A. No sir, after we have secured it, and it is in transit, it moves freely."

Transportation facilities afforded witness have not been impaired.

Miller.

(484) R. D. MILLER.

Testimony given before Interstate Commerce Commission, Jan. 25th, 1907, in the city of Portland, Oregon.

Portland. Gen. Fr't. Ag't., O. R. & N.

General Freight Agent, Navigation and S. P. Companies at Portland. (485) On carload shipments of hops from Salem to Portland, 50 miles, S. P. Co. gets twenty cents per hundred pounds. The through rate from Salem to Chicago is $1.50. (486) The through rate on hops to New York City also $1.50. When hops moved to Chicago by way of Sacramento, the S. P. got approximately sixty cents per hundred from Salem to Ogden. Also the same amount on shipments from Portland to Chicago or New York via Sacramento. (487) Witness not responsible for closing Sacramento gateway, and doesn't know who ordered it closed. Prior to closing, business was solicited by representatives of the U. P., and also of the S. P., to move via Portland. In witness' opinion, it was more profitable to the S. P. to have business go by the Nav. Co., rather than by Sacramento.

Divisions on hop traffic.

(488) It would be, of course, more advantageous for S. P. to get the haul to Portland than to have the hops go by boat. They didn't go by boat, however, to any considerable extent. (489-490) Rate on hops to Portland by S. P. or by Navigation boats, twenty cents. Portion of through rate on to Ogden, either by Nav. Co. or Sacramento, sixty cents, which, after absorbing the twenty-cent local, leaves forty cents from Portland to Ogden. Witness testified that this forty cents left carrying line a profit. The twenty cent rate into Portland was as remunerative to the S. P. as the sixty cent rate to Ogden. This was his opinion, though he thought the forty cent portion from Portland to Ogden allowed the carrier some profit.

Rates on hops.

(491) Rates from Salem to Portland are relatively low, by reason of water competition. Many of the hops originate south of Salem, where the revenue to Portland is several times as great. (492) Where hops moved into Portland by independent river line, and then over the Nav. Co., instead of from Portland over the S. P., witness thought that the S. P., though losing their earnings on the business, was not prejudiced, because it more than made up that loss in other directions, as the result of the business moving from its rail points via Portland. (493) If witness was solely an officer of the S. P. line, he would not necessarily be interested in getting traffic only for the S. P. Since the consolidation, an arrangement was made by which the S. P. on traffic other than lumber moving via Portland, received forty per cent. of west of the Missouri River portion of the through rate, subject to its local rate as its maximum.

Movement of hops by independent river line.

(495) On lumber, witness' recollection was, S. P. received 25 per cent. of the west of the Missouri River portion, subject to its local rates as its maximum. Those arrangements were made in 1902 or the latter part of 1901. The hop business for the Atlantic

seaboard is divided about equally between the Sunset and the Portland route. The shippers make the division. Sometimes the shipper's request for one route or the other is refused, because of the car supply. (496) The hop business for the Atlantic seaboard and Europe is solicited for the Sunset route. Failing in effort to get it that way, it goes via Portland.

Shippers make division of traffic.

As an officer of the O. R. & N., witness thought it would be a good thing to have the seaboard business go via Sunset, provided the business for all other territories moved via Portland. He stated that the seaboard business had been apportioned to the Sunset route, and business for other territories to the U. P. route. Witness said the conditions were highly competitive. He didn't mean as between the S. P. and the O. R. & N.—that there were other competitors in the field.

(497) There is competition in this sense, that all business can move by either route, and the shipper decides which way he will consign it. Witness endeavored to control consignment by solicitation. In years gone by hops moved to the Atlantic seaboard either way.

Competition.

(498) Witness thought that since 1901 the movement to the seaboard via Portland had been somewhat in excess of previous years, due to adverse car conditions on the Sunset route. Otherwise substantially the same. Both routes are free to shippers. Companies do not retard shipments either way. There are through routes over the Great Northern via Portland and Spokane, also the Northern Pacific via Wallula.

Both routes free to shippers.

(499) There are many agents in this territory soliciting for the Rio Grande lines, the Rock Island, the Burlington, the Northwestern, the Milwaukee, the Illinois Central, and the Chicago Great Western. Working the Willamette Valley as far south as Ashland for all classes of business. The roads represented by these agents are connections of the U. P. at Omaha. The business goes via Portland and Huntington, and witness is anxious to please these connections. They are competitors of the Sunset route, and are trying to get business to move via Huntington.

Freight solicitors.

(500) Most of it has moved via Portland this year. The route from Portland to Ogden via Sacramento is 600 or 700 miles farther than by Huntington. It is 682 miles from Portland to Sacramento, 700 from there to Ogden. From Ogden to Portland via Huntington, 885.

(501) It is a cheap haul, down grade, from Willamette Valley to Portland. The Sacramento route never took a large proportion of the business from the Willamette Valley. Harriman lines still engaged in business with the Denver & Rio Grande, but that line only furnished 9,000 tons last year.

Harriman lines and D. & R. G.

(502) Harriman lines delivered them 110,000 tons. Distance from Portland to New York by Sunset Gulf route, 5,000 miles. From New York to Portland via Missouri River route, 3,200 miles.

From Chicago to New Orleans via S. P. and Ill. Central, 4,300 miles. The closing of the Sacramento route simply involved the choice as to how the freight was moved from Portland to Ogden. After reaching Ogden just as free to move over any of the connecting lines as before.

Rate adjustment favorable to Portland jobber.

(503) The jobbing point for Willamette Valley is Portland. The rate adjustment is such that Portland sells San Francisco and California products to the exclusion of San Francisco jobbers. The rate from San Francisco to Ashland would be the rate from San Francisco to Portland plus the rate from Portland to Ashland. The water competition from San Francisco to Portland reduces the rate. The boats go up the Willamette from Portland as far as Corvallis.

(505-506) Witness was glad to have freight move over Nav. Co. from Portland. Did not represent the Sunset route as an agent. Sunset route begins at San Francisco. Only represented S. P. lines to Ashland. Thinks it to the public's interest to have traffic move over line of least resistance.

United States v. Union Pacific Railroad Company, et al.

DEFENDANTS' ABSTRACT OF TESTIMONY.

TESTIMONY FOR COMPLAINANT.

VOLUME II.

NEW YORK CITY, JANUARY 5, 1909.

(507) A. H. PAYSON.

Payson.

Testimony given before Interstate Commerce Commission, Jan. 29th, 1907, in the city of San Francisco.

Assistant to the President of the Santa Fe for four years, and resides at San Mateo, Cal. Prior to that time was employed by the Santa Fe. Duties largely confined to the acquisition of terminals about San Francisco Bay. Nothing whatever to do with traffic. (508) One of the incorporators of the Northwestern Pacific Railroad Company. Prior to the incorporation of the Northwestern Pacific, the Santa Fe had railroad lines to the North and West of San Francisco—a line running from Arcata, which is nine miles north of Eureka, through Eureka to a point on the Eel River, about 43 or 44 miles in length. (509) Witness thinks it was built four or five years ago. Already built when acquired by the Santa Fe. This line had a physical connection at the south with a logging road up the Mad River. Traffic over the road mostly lumber, with some dairy products. Transport logs to the mills and lumber to the landings near Eureka. (510) From the landings it goes to San Francisco, Australia and China. Frequent steamers between Eureka and San Francisco. Sailing vessels of small size to Australia. No regular boat line. When the Santa Fe acquired its stock the corporation that owned the bulk of this railroad line was the Eel River & Eureka Railroad; the balance of the railroad was the property of small corporations then owned by the same parties.

San Mateo, Cal. Ass't. to Pres't of Santa Fe.

Lines in Northwestern California.

(511) The logging road is a separate company, and belongs to some lumber company. Thinks they call it the Arcata and Mad River. "Q. So that the Santa Fe's holdings are this line of road, about 51 miles of road—something like that? A. Yes sir. Q. With the connections at Eureka and the other landings that you have mentioned? A. Yes sir." This property was practically under the charge of witness. The Santa Fe also owned another road that went into the Northwestern Pacific, the Fort Bragg &

Arcata and Mad River

Fort Bragg and Southeastern.

Southeastern; starts from the coast at the Port of Albion, and runs about 23 miles southerly and easterly. Albion is, I should say, nearly 200 miles from Eureka, further south. (512) Albion is about 80 miles from San Francisco, perhaps more, nearly 100 miles, so that this line of road commences nearly 100 miles from San Francisco, and runs southeasterly toward that city. The Santa Fe acquired the road from the lumber interests that own the Albion mill.

(512) The Santa Fe purchased that line as the nucleus of a feeder to tap the Mendocino timber country and be tributary to San Francisco. At the time of the purchase of the Fort Bragg & Southeastern, Sante Fe did not know whether they would use it as part of a through line from San Francisco to Humboldt Bay, or whether it could be used only as a feeder for such a through line. Subsequent surveys determined that it could be used only as a feeder. The line in the north, the Arcata line, was to be part of a through line to San Francisco. (513) Nothing but logs for the Albion mills move over the Fort Bragg & Southeastern. That line, together with the aggregation which witness described about Humboldt Bay, were the only lines of the Santa Fe that went into the Northwestern Pacific. S. P. lines that went into the Northwestern Pacific were the North Shore, running from Sausalito to a point called Cazadero, up just north of the Russian River, with a branch to the Town of San Rafael. Sausalito is on the other side of the Bay from San Francisco, about six miles by water. The road is about 80 miles in length. (514) Any connection between this line and the Fort Bragg & Southeastern would be a practical impossibility on account of the mountainous country. Another road that went into the Northwestern Pacific is the San Francisco & North Pacific Coast, afterwards called the California Northwestern, about 137 or 140 miles in length. The latter runs up the Sonoma Valley, a valley parallel to the coast, but entirely separated from the North Shore topographically; also from the Fort Bragg & Southeastern.

Constituent lines of Northwestern Pacific.

(515) The other Southern Pacific line is the Eureka & Klamath, running from Arcata towards Trinidad, on the coast. It is not yet quite completed to the coast, and reaches no port, except that of Eureka, over the line formerly owned by the Santa Fe. There is also a branch that leaves Arcata and goes around on the spit which separates Eureka from the sea, at which point it meets ships. It is practically a lumbering road exclusively, bringing logs to the mill on Humboldt Bay, with supplies for the logging camps, going out. The Eureka & Klamath is 25 or 35 miles in length.

Eureka & Klamath.

(516) The Northwestern Pacific acquired these roads, and it proposed, as witness understood, to build the connecting link between the present northerly end of the California Northwestern and the southerly end of what was the San Francisco Northwestern. In other words, it proposed to connect the Southern Pacific proper-

Connecting link of Northwestern Pacific.

ties on the south with the properties formerly of the Atchison on the north. The California Northwestern is the Southern Pacific line; the San Francisco Northwestern, the Atchison line. The California Northwestern included the North Shore, and that other road up the Sonoma Valley, belonging to the S. P. The Santa Fe intended to extend down toward the Bay of San Francisco. Instead of that, consolidated the two roads, and the intention now is that the road that extends up through Willits shall meet the witness' road at Humboldt Bay. (517) The San Francisco Northwestern was the name that the Santa Fe gave to those small properties which it got into a single corporation up around Humboldt Bay. By the Northwestern Pacific arrangement a joint line was substituted for the proposed line that the Atchison had intended to build alone. (518) If the Atchison had built, it was their intention, if practicable, to build into an entirely different territory from the S. P. lines. There is nothing to feed a railway between the present northern end of the S. P. property and the redwood timber around Humboldt Bay, a distance of about 110 miles. That is a stock country. (519) Hasn't heard of any other railroad projected into that region. Atchison operates no steamships. The Fort Bragg & Southeastern has a contract with Albion Steamship Company to bring lumber to San Francisco. It is not billed through, but simply delivered to the Steamship Company at Albion, the latter carrying it to San Francisco, from which point it has an outlet over the Santa Fe or S. P. (520) That is the only steamship contract of which witness has any knowledge. Witness has nothing to do with that part of the business. Has nothing to do with any of the Santa Fe Lines, except these northern properties. There is a line from Bakersfield to Mojave, that is used jointly by the S. P. and the Santa Fe, about 70 miles, owned and operated by the S. P., the Santa Fe paying a rental.

The San Francisco Northwestern.

Albion S. S. Co.

(521) It would be possible to build a line from Oregon, southward, without using the line owned by the Northwestern Pacific. The line could follow the coast most of the way. It would be difficult, but possible. The Northwestern Pacific has the easiest means of access from the north to the San Francisco Bay. (522) The terminals of the Santa Fe around the Bay of San Francisco are owned exclusively by it. (523) There is a joint ownership with the S. P. of the stock yards out there in the Potrero, but otherwise the S. P. has no interest in any of the Santa Fe property in San Francisco or Oakland. The Atchison also leases from the S. P. Co. a line from the Needles to Mojave. This is used exclusively by the Atchison. There is also a small road from Bakersfield to the Sunset oil fields, built jointly by the S. P. and Atchison, owned jointly, but alternately operated; an oil road exclusively.

Possible line from Oregon, along coast.

(524) The line to Sunset is about 20 miles in length. With the exception of the Clark line, the Atchison and S. P. are the only eastern rail connections to California. The Northwestern

California rail connections.

Pacific has the most practical route of access from the north. Witness understood that there are plans for an independent line from San Diego and east, over what is known as the Spreckels' line, running east from San Diego over to Yuma. (525) Witness doesn't know whether it is contemplated to build that line eastward out of California, or not. At the time of the Northwestern consolidation, witness did not think any other road was trying to enter that territory. Arrangement with the S. P. was made to save expense. It is a difficult country, both for construction and maintenance. There was not enough in it to make it worth while to build two parallel roads. Both the S. P. and Atchison had made surveys and were planning to build, and both abandoned the idea of building independent parallel lines. (526) Atchison had not definitely located its line, but knew in a general way where it was going to build, if forced to build an independent line.

Arrangement with the S. P. was made to save expense.

(527) The S. P. is building at right angles to the coast, at Coos Bay. Lines sold by the Atchison to the Northwestern Pacific were wholly in the State of California, and had no connection with any lines extending out of that State. Their only outlet was by boat. The S. P. lines that went into the Northwestern Pacific were also entirely in the State of California. (528) The Atchison and S. P. lines which were consolidated into the Northwestern Pacific were not at the time of the merger competing in any sense. When the links necessary to connect them are completed, the effect will be to give those lines an outlet to California and the east. If the S. P. had completed its line to a connection with the Atchison lines, instead of a consolidation, practically the same arrangement might have been effected by ordinary trackage contracts, just as at Mojave. (529) There is very little business between the two ends of the proposed line. If you go 20 miles south of Humboldt Bay, there is very little timber from there down to Willits, the end of the S. P. properties on the north.

Lines sold to Northwestern Pacific located wholly in California.

Consolidated lines were not competing.

After reading into the record the testimony of Mr. Payson given before the Interstate Commerce Commission in the city of San Francisco, complainant offered in evidence at the hearing in New York City on Tuesday, January 5, 1909, the following exhibits in connection with Mr. Payson's testimony: (530-533) Agreement between S. P. Co. and Atchison Co. relating to various railways in northwestern California, dated December 7, 1906. (534-538) Agreement, dated December 7, 1906, between S. P., the Atchison, and the Northwestern Pacific Railway Company. (539-542) Agreement, dated March 12, 1907, between the S. P., the Atchison, and the Northwestern Pacific, giving the right to prevent default under mortgages. (542-553) Agreement, dated March 30, 1907, between the S. P., the Atchison, The Farmers' Loan & Trust Co. Trust agreement relating to stock of the Northwestern Pacific R. R. Co.

Agreements between S. P. and Santa Fe in relation to lines in Northwestern California.

(553) JOHN D. SPRECKELS.

Spreckels.

Testimony given before Interstate Commerce Commission, January 29, 1907, in the city of San Francisco, Cal.

Has lived in San Francisco many years, and is president of John D. Spreckels & Brothers Company. San Francisco.

(554) Railroad of the Coos Bay, Roseburg & Eastern R. R. & Navigation Co., which witness' Company sold to the S. P. Co., is about 29 miles long. One terminus of the road is at Myrtle Point, passing through Marshfield on Coos Bay, (555) and runs out into a timber country and into the coal fields. There is also an agricultural country tributary to it, the products of which are marketed over this railroad and in that Company's steamships down to San Francisco. The principal product is coal, however. Some lumber. The ships owned by the company are the "Breakwater" and the "Czarina," the former carrying 48 passengers and 600 tons, the latter, a collier, carrying about 1,400 tons. (555) When the "Czarina" couldn't get a sufficient cargo at Coos Bay, she would run up to Portland, and carry a cargo from Portland to San Francisco. (556) Carried coal out of Coos Bay, and general merchandise on return trip. (557) There is another regular steamer running from San Francisco to Coos Bay, but no other outlet. Coos Bay, Roseburg and Eastern R. R. and Nav. Co.

(558) Negotiations for the sale of the line to S. P. were conducted through Mr. James Smith. Witness thought the negotiations were on behalf of the S. P., because prior to Mr. Collis P. Huntington's death he had been looking into the acquisition of the road. The S. P. wished to overcome the grades on the Shasta Mountains, rather than haul the wheat as they did up to Portland, and then bring it down by steamer. They could cut off about 300 miles up and 300 back, by going into Coos Bay. The trade was concluded at the time of the earthquake. (560) S. P. is now operating both the road and the ships. The transfer to the S. P. was made by selling the stock and bonds. The bonds were never issued. Property cost witness considerably over a million dollars. The operation of the boats was not profitable. There was more profit in the railroad. (561) The traffic was small. Witness understood that the S. P. contemplated building a road that would practically be an extension of his road. Witness had not found the operation of the coal mines profitable. Witness had surveys made looking to extending the road from Myrtle Point to Roseburg, so as to connect with the S. P. Turned these surveys over to Mr. Huntington at the time of negotiations. Sale to S. P.

(562) The S. P. now has entire outlet into San Francisco from Oregon. The Spreckels road was built 10 or 15 years ago. Witness sold rails to Mr. Graham, who built the road, and had to take it over, because Graham could not pay for them. The nearest point of that road to the S. P. was about 69 miles. (563) The only outlet for the Coos Bay country was by boat. The S. P. never competed in that. Never got in there at all. Never handled freight S. P. not a competitor.

or passengers from the territory served by witness' road. (564) As soon as the S. P. got its line through to Coos Bay, supposes there would have been competition between witness' boats and the trains of the S. P. Witness' boats did not have enough business, as it was. (565) Coal bunkers on the Howard Street wharf in San Francisco went with this trade.

Shotwell.

(565) W. J. SHOTWELL.

Testimony given before Interstate Commerce Commission, January 30, 1907, in the city of San Francisco, Cal.

San Francisco. Gen. Ag't., D. & R. G.

For 14 years has represented the Denver & Rio Grande and other through lines, at San Francisco, as General Agent. (566) Not doing as heavy business as prior to 1901. Prior to that time considered the agents of the S. P. neutral. Their attitude has since gradually changed. The business controlled by the S. P. agents is almost invariably routed either by the U. P. or the Sunset. (567) Witness thought the S. P. agents were now indifferent as to whether freight went by Ogden or the Sunset route.

Bissell.

(567) WILLIAM A. BISSELL.

Testimony given before Interstate Commerce Commission, January 30, 1907, in the city of San Francisco, Cal.

San Francisco. Ass't. Traffic Manager, Santa Fe.

Assistant Traffic Manager of the Atchison System at San Francisco. (568) The chief representative of the Traffic Dept. on the Pacific Coast.

(570) As a general proposition, the fruit traffic out of Southern California is divided up about the same as it was four or five years ago. There has been no change in the last two years. Doesn't think that Atchison has made any effort to get fruit traffic that originates on S. P. lines. Most effort has been made to get cars back fast enough to take care of the fruit that was offered. There

No arrangement with S. P. in regard to getting traffic from territory of each other.

is no arrangement between Atchison and S. P. by which each refrains from endeavoring to get business of that character originating on the line of the other. There was such an arrangement. The business is so located down there that it naturally divides itself about equally between the two companies, and the Atchison has all it can do to get its equipment back to take care of its own fruit. (571) The routing of most of that fruit is controlled by the location of the packing houses.

(572) If the Atchison was short of business, witness thought they would solicit business originating on the S. P. lines. Witness

Division of orange traffic.

didn't know whether arrangement testified to by Mr. Stubbs at Chicago on January 8, 1902, to the effect that there was an understanding between the two companies that the orange traffic should be about equally divided, still existed. (573) Witness thought S. P. in the early part of the season routed oranges via El Paso, and later, as the weather moderated, via Ogden. From El Paso they are taken to Chicago by the Rock Island or Texas Pacific,

witness thought. At all events, they don't go over the Santa Fe. (574-575) It has taken every effort that the Santa Fe could put forth to take care of the orange business for the past two years. The Santa Fe endeavors to maintain a schedule time on shipments of oranges to Chicago of eight days. Witness did not remember having any talk with Mr. Stubbs about the schedule time on trains from Southern California to Chicago so as to equalize the service on both roads. (575) The traffic managers never had any consultation with reference to the rates to be put in effect by the San Pedro.

California & Oriental S. S. Co. a failure.

(576) The Atchison gave up the line running from San Diego to the Orient, the California & Oriental Steamship Company, because it was a failure. Was never consulted by any official of the Pacific Mail in regard to withdrawing it. Quit the San Diego line about a year after the Atchison rail reached San Francisco. (577) An arrangement was made that the Atchison was to have certain space on the Pacific Mail steamers leaving port, and were to receive 25 per cent. of their inbound cargoes. (578) That traffic is unloaded from the ships to the tracks of the S. P. and switched over to the Atchison. The Atchison was entitled to furnish a certain amount of Pacific Mail tonnage. If they furnished less, the Pacific Mail took what was supplied. When the Atchison had more tonnage than the boats cared to take, then they held it for the next boat. No matter whether the Atchison filled this space or not, the Pacific Mail agreed to give them 25 per cent. of the inbound traffic. (579) No railroad company solicits inbound Oriental business. The competition is over in the east between the Pacific Mail, the Suez route and the tramp steamers, and the other lines here, the Puget Sound lines. Most of the traffic that the Atchison received from the Pacific Mail went either to Chicago or New York.

Agreement only where special equipment is required.

(580-581) With the exception of the oranges and the Oriental traffic, witness knew of no other arrangement for division with the S. P. Arrangement as to oranges includes all citrus fruits, nothing else. The only business that can be held to be included in what you could call an arrangement is business for which special equipment is required. (582) The area in Southern California devoted to the production of oranges is approximately equally distributed between the two initial lines. The oranges are collected in packing houses, some of which are local to one line and some to the other. Outside of the general policy that prevails, that one road will not try to get oranges out of the packing houses of another, there is nothing between the two companies in the nature of a contract or bargain that they should not do those things. Witness is at entire liberty tomorrow or the next day to go upon the rails of the Southern Pacific and scalp oranges local to their packing houses if he so wishes, so far as being limited by any agreement with the Southern Pacific. (583) Each road has its solicitors in the field, and tries to influence the growers to patronize their respective packing houses. Packing houses are usually built by associations,

and whenever one is going to be put up, the Atchison tries the best it knows how to get it on its line.

Calvin.

(584) E. E. CALVIN.

Testimony given before Interstate Commerce Commission, January 31, 1907, in the city of San Francisco, Cal.

San Francisco. Vice Pres't. and Gen. Manager, S. P.

Vice-President and General Manager of S. P. System, with jurisdiction north to Ashland, east to Sparks, and southeast to the Rio Grande, about three miles this side of El Paso, the Texas boundary line. Has no jurisdiction over any part of the Short Line or Navigation Company. (587) Mr. Richardson, Superintendent of Transportation of the Southern Pacific, has charge of the distribution of cars on that railroad. He reports to witness. In the handling of cars he treats the Southern Pacific, Union Pacific, Short Line, and O. R. & N. as Company cars as distinguished from outside cars. That policy was adopted two years ago by general agreement of all the General Managers of all those lines. The meeting was held in Mr. Kruttschnitt's office. The orders came from Mr. Kruttschnitt. (588) There is a sort of car clearing house in Mr. Kruttschnitt's office at Chicago, that keeps track of the mileage of the cars, but not of the distribution of them. (589) Testimony as to the handling of equipment on the Harriman lines.

Car clearing house.

Jones.

(590) H. A. JONES.

Testimony given before Interstate Commerce Commission, January 31, 1907, in the city of San Francisco, Cal.

San Francisco. Freight Traffic Manager, S. P.

Witness is Freight Traffic Manager of the Southern Pacific Company's operated lines. Has occupied that position since September 1, 1906. He succeeded Mr. Sproule. (591) Was formerly Traffic Manager of the G. H. & S. A. Railroad in Texas, a part of the Southern Pacific System. Operated by themselves. Mr. J. C. Stubbs is his superior officer. Territory embraced within his jurisdiction is from the Rio Grande to San Francisco, San Francisco to Portland, San Francisco to Ogden. Mr. Miller of Portland is the General Freight Agent of the Southern Pacific lines in Oregon, and reports to witness.

No competition out of Portland between O. R. & N. and S. P.

(592) "Q. Is there any competition in business out of Portland between the company with which you are affiliated, and in connection with business concerning which Mr. Miller reports to you and the traffic over the O. R. & N.? A. No sir." Does not know whether there formerly was or not. No business is moved from the east to Portland by way of Sacramento that witness knows of that comes through the Ogden gateway. Mr. G. W. Luce is the subordinate of witness on all of the Southern Pacific lines except those east of Sparks and north of Ashland, while Mr. Reeves is witness' subordinate on the lines east of Sparks.

(593) "Q. It appears by the testimony here that from time to time rates are increased or lowered between here and Portland. Under whose authority is that done, under whose immediate direction is that done? A. Well, in fixing rates, we have a basis that the rate clerk has adopted for that, a basis—either a differential, higher or lower than certain rates, or a mileage basis, or a rate to the terminal and a rate back. In a change of rates, if a line were to change a rate to-day the rate clerk would naturally change his rate, unless he had instructions otherwise. That is how rates are generally made." If a change in the boat rate between San Francisco and Portland were made, the natural result would be to have the rail rate changed also, unless the rate clerk had orders otherwise. (596-598) A railroad might discriminate against ties, because it wanted the ties for its own use, and also make a different rate in order to make it more expensive for another line to get the ties. Subject further discussed. (599) Often consulted competitors about rates, but not always. (601) Has had no consultation with Santa Fe officials with reference to the movement or division of traffic.

Rate changes.

(601) J. ROSS CLARK.

Clark.

Testimony given before Interstate Commerce Commission, February 7, 1907, in the city of Los Angeles, Cal.

Director and Second Vice-President of the San Pedro road. Has resided in Los Angeles since 1892. (602) Previously interested in banking, mining, etc., in Montana, and the manufacture of beet sugar at Los Angeles. San Pedro incorporated March, 1901. Prior to that time, from 1900, witness was interested in the Los Angeles Terminal Railway, running from Los Angeles to three points, namely, East San Pedro, Pasadena and Glendale, with a mileage of about fifty miles. The main line ran from Los Angeles to San Pedro, a distance of 27 miles. (603) The Company had land holdings at San Pedro of about 1,500 acres on the east side of the inner harbor, and owned a considerable harbor frontage, about fifty per cent. of the entire frontage on the inner harbor. Witness didn't know what percentage of the total frontage the S. P. owned. Witness and his brother, Senator W. A. Clark, bought a half interest in the Terminal Co., which at that time was owned by St. Louis people, about July, 1900.

Los Angeles. 2nd Vice Pres't., San Pedro.

Properties owned prior to organization of San Pedro.

(604) It was the following year that the Clarks definitely determined to make something more than a local proposition out of the Terminal Company, and build the Salt Lake line. In this enterprise, the same St. Louis people were interested with the Clarks. Kearns, of Salt Lake, joined them. Started surveys very soon after incorporating San Pedro Company. The first thing done was to reconstruct the line between Los Angeles and San Pedro. (605) First surveys made from Hobart Junction to the east and soon after surveyors put in the field in Utah, from Salt Lake west. Witness

Building of San Pedro line

doesn't think that the surveys were ever made clear through. Ran a line from Salt Lake to Lynn Junction, about 116 miles west. Skipped quite a piece of territory, and went down to Meadow Valley Wash, a canyon in the State of Nevada. A survey was made through that canyon, where we had considerable trouble with opponents, namely, the Oregon Short Line. There was an old grade from Uvada to Caliente, 42 miles, partly through the canyon, and a partially constructed grade from Caliente to Pioche. (606) They were built about 1889 or 1890, and connected with the Utah and Pacific at Uvada. The latter ran from Milford to the Utah state line. The grades had been sold for taxes, and the San Pedro people thought abandoned. We bought up tax title in one case, but in subsequent litigation we were defeated. Next surveyed from Caliente west, through the continuation of the Meadow Valley Wash, which is rather a rough canyon, and had trouble again with the O. S. L., or its subsidiary, the Utah, Nevada & California Company. Trouble was in getting maps approved in U. S. Land Office. There was more litigation, but the matter was never finally judicially determined. (607) This canyon was the only practicable route from Salt Lake to Los Angeles. If the Oregon Short Line had been able to control that canyon, witness didn't think his line would ever have been built.

O. S. L. grade.

Defeated in tax litigation.

Canyon only practicable route.

(608-609) The Utah, Nevada & California R. R. Co. were on the ground and made their surveys first. The surveying crews of the Oregon Short Line came into the canyon probably two or three weeks before the Clark people. The latter's intention to build a line had, however, been a matter of public notoriety for some months before that. The Clark-Harriman contract of July 9, 1902, was the result of negotiations lasting six or eight months, at least. At the time of making the contract, the line from San Pedro to Riverside was just about completed, and the Clarks had made a survey from Riverside on, and the surveyors were out on the desert. California Improvement Company was a holding corporation, of Illinois, and was controlled by the St. Louis people. It held the stock of the Terminal Company. Senator Clark and associates at the time of making the contract held seventy per cent. of the California Improvement Company's stock; remainder held by St. Louis people.

O. S. L. surveying crews on the ground first.

Contract of July 9, 1902.

Auxiliary companies.

(610) The Empire Construction Company was a Utah corporation, whose stock was held by practically the same people. Organized to build the San Pedro road. The Los Angeles Terminal Land Co. was a corporation that owned the terminals for the Salt Lake road at East San Pedro. Its stock was held by the California Improvement Company.

(611) All the holdings of the Terminal Company and the Land Company were transferred to the Salt Lake road. It was intended that the eastern terminal should be at Salt Lake City. The Clarks expected when road was completed to interchange freight

at Salt Lake with the O. S. L. and Denver & Rio Grande. In the negotiations for the contract, witness thought Mr. Stubbs and Judge Cornish represented Harriman interests. (613) San Pedro uses S. P. track from Riverside Junction to Colton, and Santa Fe track from Colton to Daggett. Construction of its own line there abandoned as a matter of economy. An expensive country to build through. (616) Witness thought provision of contract limiting right to invade Short Line territory probably suggested by Harriman people. Senator Clark owned a controlling interest in the San Pedro at the time of making the contract.

Mr. Stubbs and Judge Cornish represented Harriman interests.

(617) Witness thought suggestion of inserting reciprocal provision about invading territory of San Pedro Company came from Clark people. (619) At the time the last contracts were made, in June, 1903, the San Pedro road was not entirely completed. Work was being done beyond Daggett, and from Caliente west. At Caliente the road connected with the lines of the Utah Short Line that had been acquired under the joint deal. The old line was constructed down to that point. (621) The provision as to local traffic in Southern California let the San Pedro into that territory, and gave them access by interchange to 300 additional miles of railroad of the S. P. Co. The San Pedro Company could have gotten in there only at enormous expense, and after delay, while the S. P. lines were already constructed. The contract provisions applied only to local traffic, that is, traffic picked up at a Southern California point and laid down in the same state. (627) Witness didn't think there would have been any road built through the canyon unless this arrangement had been entered into between the conflicting interests there. One was in about as good position to fight as the other.

Operating arrangements between S. P. and San Pedro.

(628) The Meadow Valley Wash is probably 100 miles in length. In some places there is a broad valley, and in a few the Wash is narrowed down to a pass for a short distance. If both lines had been built through the canyon, they would have to cross each other about 26 times in not a great many miles. Those were the difficulties that were carefully considered. (629) It was a possible, but not a practicable thing, for both lines to have been built. (630) The Harriman people bought the Utah & Pacific, a 75-mile line, and built 45 miles down to Caliente as fast as they could, and provided a lot of material for further construction. They did this as soon as it was noised around that the Clarks were going to build the San Pedro. They had a portion constructed, and then they extended their lines from Uvada to Caliente, about 42 miles.

Two lines through Meadow Valley Wash impracticable.

(631) The Oregon Short Line and Utah Northern Railway Company owned a line extending southwardly from Salt Lake through Milford to the Utah state line, and a grade from there on through to the Meadow Valley Wash about 40 miles. After the foreclosure of the old mortgage of the company first named, the new Oregon Short Line Company bought it in, and they made an

O. S. L. grade.

arrangement by which the Utah & Pacific Co. acquired the right to build and operate the line from Milford to Uvada, and took an option from that Company to take over the property at their pleasure. This was in about 1898. It was in 1898 that the Utah & Pacific built their little line, and in 1900 the Short Line took it over. The first announcement of the possibility of building the San Pedro line was early in 1901. The forty-mile extension, however, was not begun until March, 1901. The first contract between Harriman and Clark was July, 1902. (632) The Harriman people surveyed their line across the Santa Fe about Ludlow, and connected with the S. P. at some point beyond Banning. Ludlow is 200 miles from Los Angeles. After leaving Las Vegas, about 1,250 miles west of Caliente, the two lines separated, the Clarks' running in a northwesterly direction, and the Harriman line pretty nearly west.

Utah & Pacific.

(633) It was here stipulated between the parties as follows:

STIPULATION.

Stipulation as to through rates in connection with steamship lines.

The S. P. Co. and the Navigation Co. made no through rates in connection with the lines of boats across the Pacific, except with the Portland & Asiatic, the Pacific Mail, the Toyo Kisen Kaisha, and the Occidental & Oriental, all lines mentioned in the testimony as managed by Mr. Schwerin. Any other lines of boats bringing in traffic terminating at San Francisco have to pay the San Francisco rate to the east, in addition to the steamship rate across the Pacific. The foregoing is true both of incoming and outgoing business. The interchange is covered by published through tariffs, and it is only with the steamship companies with whom through tariffs are published that business is interchanged upon an arrangement for a division of through rates.

D. & R. G. and San Pedro competition.

(635) The Denver & Rio Grande is the San Pedro's only competitor in western Utah. They compete as far south as Provo on their main line, about 40 miles from Salt Lake City, and also have a branch running down to Marysville, witness thought, about 125 miles southwest of Provo. They have another competitive line in the Tintic district.

(637) The San Pedro south from Lynn, all the way down as far as Milford, and as far as Provo, is competitive with the Rio Grande on wool and live stock. The two lines are about fifty miles apart, with a mountain range between. (639) The Harriman-Clark contract gave the San Pedro preference on Southern California business. This was the witness' understanding and the practice, notwithstanding the provision of Section 4, that nothing in the contract should be construed as limiting the rights or privileges or practices of the U. P. or Short Line in respect to interchange of traffic with each other and with the S. P. Co.

(642) Witness thought Section 4 of the contract was put in to secure the San Francisco business to the S. P. (643) San Pedro has a total mileage (including branches) of 1,000 miles, about half of which is in Utah.

Mileage of San Pedro.

(644) "COMMISSIONER LANE: Has there been any question arising, has any question arisen between your Company and the Union Pacific as to any rates in Utah? WITNESS: Not to my knowledge." (645) Mr. F. A. Wann (formerly of the Alton) has charge of the Traffic Department of the San Pedro road. He was employed by the brother of witness, Senator W. A. Clark. The Executive Committee was consulted about his appointment. (646) The General Manager of the San Pedro reports to a Committee consisting of Mr. Bancroft, the First Vice-President, and the witness. San Pedro was completed through about May, 1905. (647) The first train was run on the first of May, 1905. Prior to that the line had been under construction and had been operated on the two ends. No trains were operated from the west beyond Riverside until the line had been opened through.

San Pedro Committee.

(648-649) The line to Riverside was finished sometime in 1903. Largest traffic item out of Southern California is citrus fruit. San Pedro and Southern Pacific rate by way of Sacramento on citrus fruit is the same, although the San Pedro is 500 miles shorter. San Pedro uses coal on engines from Salt Lake City, even up to Las Vegas. Now, however, are dropping back to Caliente. Get coal off the Denver & Rio Grande, from the Utah Fuel Company. Have no coal on San Pedro line. Get oil from California. The oil at Los Angeles is delivered from local oil fields, and what is used beyond Daggett is delivered there by the Santa Fe. (650) Had no arrangement with the Harriman lines as to equipment. Have a three-year contract with the Armour Company covering 3,000 refrigerator cars. (651) San Pedro has no understanding with the S. P. that the latter will not take citrus fruit around by Sacramento. Witness doesn't know whether they take it that way or not. (652) No agreement by which this territory is in any way divided up as to the handling of fruit. Carry fruit in competition with the S. P. and Santa Fe. Rate over the three lines to Missouri River points is the same.

San Pedro rate on citrus fruits and S. P. rate via Sacramento, the same.

No fruit traffic agreement with S. P.

(653-654) San Pedro, when opened, reduced rates between Los Angeles and Utah common points, and vice versa, quite materially, but not on through business. The San Pedro can and does reduce rates on its line, in so far as it controls the rates, without the consent of any of its competitors. That would apply to Colorado points. The bulk of the citrus fruit goes to Missouri River and east. The Santa Fe is a competitor to those points and to Colorado common points, as well as the S. P.. The difference in distance from Los Angeles to Missouri River common points over the San Pedro and U. P. as compared with the Santa Fe is about 40 miles. Taking the San Pedro, the Denver & Rio Grande to Missouri River points and to Colorado common points, and to Chicago and the east, as compared with the Santa Fe, the latter is about 150 miles shorter. Neither Mr. Bancroft nor witness knows very much about what changes the San Pedro makes in rates, unless it is something very special. Mr. Wann attends to such matters with-

San Pedro reduced rates.

Mr. Wells makes rates.

out consulting the Executive Committee. (655) Mr. Wells, of the San Pedro, makes the rates. Mr. Stubbs has nothing to do with it. (661) The grades over the Sacramento route are much heavier than over the San Pedro, and the weather conditions over the latter are better.

(663) Some of the fruit and vegetable business carried by the San Pedro originates on the S. P. and some on its own line. There are about 12 packing houses on the San Pedro line for citrus fruit. (664) Witness thought that was about five per cent. (665) Rolling stock of Harriman lines not at home on San Pedro line. There are no steamship connections at San Pedro, except the coastwise steamers. (666) One Oriental tramp ship came in a few months ago, the only one witness knew of. San Pedro line participates in no trans-Pacific traffic. San Pedro line opened before really ready for business, and fruit trains at first made slow time. Later went through to Chicago in connection with the U. P. or Rio Grande in 5½ or 6 days. This schedule was abandoned, because expensive and dangerous. (668-669) Witness doesn't know the present schedule to Chicago. Rates from Los Angeles to Utah common points much reduced since construction of San Pedro road.

No steamship connections at San Pedro.

S. P. first reduced rates to Utah common points.

(670) S. P. reduced the rates first. The San Pedro had to follow, if they were to get any business. Physical conditions practically compelled the S. P. to retire from Utah so far as class business is concerned. The S. P. has reduced rates on commodities, but not on classes. (671) From Utah common points to Los Angeles, the S. P. compete with the San Pedro, but their line is 500 miles longer and their rates higher. Not energetic competitor. No understanding with the Harriman lines that the San Pedro is to do that business. Doesn't intend to reinstate the six-day citrus fruit service to Chicago. Too expensive.

San Pedro directors.

(672) Complainant's Exhibit 79 (Clark). Members of the Board of Directors San Pedro, July 1, 1903: W. A. Clark, J. Ross Clark, R. C. Kerens, Thomas Kearns, T. E. Gibbon, Reed Smoot, W. S. McCormick, E. W. Clark, R. W. Smith, F. K. Rule, E. O. Leech, T. F. Miller.

Gibbon.

(673) T. E. GIBBON.

Testimony given before Interstate Commerce Commission, February 8, 1907, in the city of Los Angeles.

Los Angeles. Former Gen. Counsel, San Pedro.

An attorney, who has lived in Los Angeles since 1888. Conducted the legal work of organizing the San Pedro. Its 3rd Vice-President and General Counsel at the time of organization, and up to first of December of last year. Also organized the Terminal Company, in 1891, and was the only Vice-President of that Company, and its ranking executive officer, as the President, Mr. George B. Leighton, Jr., lived in St. Louis. Mr. R. C. Kerens, of St. Louis, had the largest interest; Mr. George E. Leighton the second largest. The latter had been one of the Government Directors of the old U. P. None of the others were connected with the Harri-

man properties. (674-676) Describes lines of the Terminal Company, and ownership of the harbor frontage at San Pedro. S. P. had 3,000 feet, the rest was held by Terminal Company interest, a lumber company, and the Pacific Coast Steamship Company. (676) Pacific Coast Steamship Company is the only regular line of freight and passenger steamers that reaches the harbor of San Pedro. There are other lines of lumber steamers and lumber schooners, both steam and sail. (677) The Pacific Coast Steamship Company's boats ply from San Diego to San Francisco and beyond, witness thought. The Pacific Mail does not touch there. There is no trans-Pacific line there.

Harbor frontage at San Pedro.

(678) Various contracts were made for the construction of the San Pedro road.

(680) "Q. Now, Mr. Gibbon, are you able to testify from your recollection as to the extent of work that was done in laying out the line of your company, prior to the time of this contract of July 9, 1902, between Mr. Clark and Mr. Harriman? A. No sir. What I would say about that would be of the most general character. I could say that we had laid out our line in Southern California, and a good deal of it had been built, I think. It had not been completed, I am quite sure. We had done some surveying and had acquired some rights of way in Nevada, and I am quite sure there had been surveying done in Utah. But to what extent that went you would have to learn from the departments charged with that particular work."

Work done prior to contract of July 9, 1902.

(681) After the organization of the company, interviews were had with gentlemen representing connecting lines with the idea of learning what connections might be made for the company, etc. Witness personally had some interviews with General Palmer of the Rio Grande on this subject. Witness knew of no definite plans at that time which contemplated a division of ownership between his people and the Union Pacific, "but it may have been contemplated by any of the individuals—of course, I do not know as to that." Nothing of that kind was talked over. A good many years before the San Pedro undertook the construction of its line, a subsidiary company of the Union Pacific had undertaken the extension of the lines of that company through Nevada, with the idea of eventually going to Southern California. They had constructed a track to the Nevada-California state line and were preparing to operate it.

U. P.'s proposed line to Los Angeles.

(682) "Just a moment there, Mr. Gibbon. Can you tell me when that track was laid? A. No sir, I cannot, but it was not very long either way from the time that our Los Angeles Terminal Railway Company was organized, because that company was organized at that time with the understanding with the then management of the Southern Pacific that it should become the terminal at San Pedro of a—I mean the Union Pacific—of the Union Pacific line. Q. That was before my friend Judge Kelly piloted the Union Pacific through the receivership proceedings? A. It was

about that time that this line was constructed that I am speaking of now, leading down into Nevada and from the California-Nevada state line for some distance a roadbed had been constructed and a number of tunnels had been made." That grading was done and those tunnels constructed about the year 1890 or 1891. The grade was lying there unoccupied when the San Pedro people undertook the building of their road.

Old grade.

Conflict between O. S. L. and San Pedro.

The Oregon Short Line Company, or an auxiliary company called the Utah, Nevada and Colorado Railroad Company, undertook to occupy that grade. It became a race as to who should become possessed of it and these tunnels, and also the right of way which had previously been surveyed, (683) by the subsidiary company of the Union Pacific interests, some 10 or 11 years ago. The name of that old company was the Oregon Short Line & San Francisco Railway Company. This activity on the part of the Oregon Short Line did not take place until after the San Pedro had been organized and it was a matter of public notoriety that they proposed to build to Salt Lake. That right of way had been sold for taxes. We secured the tax title, to give us some right over it. Then the Oregon Short Line, or their subsidiary companies secured what rights remained, if any, in the company that originally located the right of way through Meadow Valley Wash. We secured some right of way from private parties. In fact, either side secured anything in the nature of legal rights that would give them any claim upon that strategic position. We were in there with our construction forces, and they went in there with theirs. We came very near to having some bloodshed, and there were some clashes that might have been very serious. Finally, each side got into court and got the other tied up on injunctions, and it seemed that each one had reached a point where neither could do any work there or accomplish anything. "COMMISSIONER LANE: At that time, Mr. Gibbon, how many miles of road did you have built down from Salt Lake City? WITNESS: None. COMMISSIONER LANE: And from Los Angeles towards Salt Lake City, how much did you have built? WITNESS: We were building the line towards Riverside at that time, sir—the San Pedro Company. COMMISSIONER LANE: How many miles did the Oregon Short Line have from Salt Lake City down towards the Meadow Valley Wash? WITNESS: Oh, I suppose, main line and branches, nearly 500 miles."

(684) No line had been constructed by the San Pedro at that time outside the State of California. At the trial of one of the injunction suits witness and Judge Kelly were chatting about the case "and I suggested to him that if we succeeded in securing a prior right through this Meadow Valley Wash, I was perfectly willing to admit that, under the United States law with reference to the occupancy of canyons or valleys of that kind, gorges, that they could force a way through there, and that I believed he would concede that if his people succeeded in getting the prior right we

could force a way through, the only thing being that the road that had the prior right would probably be crossed so many times by the other road going through that it would make it very difficult and dangerous for each side to operate through there; and assuming that they wanted to build, and, knowing as I did, that we wanted to build, it seemed to me, from a sensible point of view, that we had better try to get our people together and put through a joint corps of engineers to work in the building of the lines and getting the best possible location for two lines, so as to avoid a multiplicity of crossings, which, in a very treacherous place like that, would naturally be for one line to take a definite location and the other line to take what was left. We agreed that we would recommend that to our respective lines, and we did so, and there was a kind of protocol drawn up which took the form finally of a written stipulation, which was filed in the United States Court at Carson City, Nevada, where these cases were pending, as I recall now, which provided for the entrance in this Meadow Valley Wash of a joint surveying party who were to locate the two lines, and that joint surveying party did enter upon their work. Just how far it was prosecuted, I don't remember, but I know they did a considerable amount of surveying and location work, and located the two lines through there, or did a great deal of work in that direction. Pending, however, the final conclusion of that work and the vesting of the title in each of the contesting companies' interests, the arrangement was made which resulted finally in the joining of the two interests in the building of the one line of road."

Agreement for joint survey.

(685) At that time witness thought it was still the intention of his people to build a line through to Salt Lake. "Q. And so far as you are advised, or were advised at the time, it was claimed by the other interests that they were going to build a line through? A. Yes sir; and we were led to believe from various things we saw that they meant to do it. Q. And it would have resulted if you had not made this arrangement of an amicable passage through this canyon, and there had been no amalgamation—it would have resulted, in that event, in two lines of road through? A. Yes sir; it would have resulted in two lines of road. That is correct. And through a country that could not maintain one. Q. So far as the local business of the line is concerned? A. So far as the local business of the line is concerned it could not maintain one; no sir." Witness expected that the through business would be the San Pedro's main dependence, and at the time the scheme of building the road was inaugurated it expected to have through business from the eastern lines, the Rio Grande Western and the U. P.

Traffic could not maintain even one road.

Witness does not know what individual made the suggestion which led to the contract of July 9, 1902. He thought it was an outgrowth, undoubtedly, of the negotiations with reference to running the two lines through the Valley, "because, as the parties in interest met and talked over the thing, so far as my knowledge served me, and I was very intimately connected with that matter at

that time, it was a sort of mutual coming together of the minds of both sets of people, both interests; that they would better serve the interests of each by joining and building one line of road than to go on and build two lines, as they were doing." That was an absolutely unanimous feeling on the part of his people.

(686) In discussing the matter among themselves it became apparent that under existing conditions it would be necessary to choose between Union Pacific and Rio Grande interests in the making of connections, and it was concluded that the Union Pacific had more to offer than the other route. Mr. Gould in the meantime had purchased the Rio Grande Western and had control of that line as well as of the Rio Grande proper. The legal work upon the Clark-Harriman contract was done by Judge Kelly and witness. (687) They were working upon it for several months. From the time the truce was agreed upon and the engineers put in the field jointly and until July 9, 1902, negotiations were pending more or less during that time leading up to this agreement. The details of the contract were worked out largely by Mr. Ross Clark on one side and Judge Cornish on the other. Mr. Stubbs was there too. Then there was a reference to Senator Clark and Mr. Harriman when points were reached which required the decision of principals.

Negotiations for settlement.

(688) "Q. At the time you were inaugurating the road and building the line to Riverside was it contemplated that you would build this line through from Riverside to a point beyond El Cajon Pass? A. When we first began? Q. Yes. A. Yes, it was contemplated as a possibility although we had, I believe, among ourselves, discussed the possibility of negotiating trackage arrangements with the Santa Fe for the very obvious reason, of course, that a track over such a place as that is like a bridge, really, in railroading, and there is no— Q. No local traffic? A. No local traffic, no; and it would seem a pity to multiply companies, to build two lines where one might serve. Whether our head, the head of our Company, Senator Clark, or Mr. Ross Clark, his representative, had approached the Santa Fe Company with reference to that, or not, I don't know. But I know that the possibility of making that arrangement was discussed among ourselves."

Trackage arrangements with Santa Fe.

(689) Attention of witness is called to Article III of the contract of June 18, 1903. Witness represented the San Pedro Company when that contract was drafted. The last sentence of the article referring to changes made necessary in order to meet the rates, charges, classifications or tariffs of any other company or competing line of railroad, etc., was suggested by witness. "I think I suggested the addition of those words, for this reason: The whole article, it will be noted, provides for, and the preceding article, article II, to which it refers, provides for local rates. I will say that the word 'local' in railroading is used sometimes in a double sense; sometimes it is 'local' as to the system—local traffic; and at other times local traffic is given a territorial significance.

Article 3 of contract of June 18, 1903.

The term 'local traffic' or 'local freight' whatever it is, I affirm had a territorial significance here and was intended to refer to Southern California traffic. When this article was suggested Article III, providing for these rates remaining stationary, you know, without a change, etc., I suggested the adding of this phrase for the reason that, as we all know, sometimes local freight, that is, the rate, what is a local rate, may become complicated with an interstate rate by a shipment in a given locality becoming an interstate shipment; I wanted our company to be in the position, if that should ever arise at any time, not to be forced by this stipulation as to rates to in any way violate a law. Of course, it might never arise. But there are times, of course, when local rates become complicated with interstate rates, as I say, and then I wanted the company to have a clear and full right to so act with reference to those rates as not to become a violator of law in any way—in other words, to protect itself. That is why that clause was added." "Local freight"

(690) The clause above referred to originated with Mr. Gibbon as representing the San Pedro. "Q. What is there in that article that causes you to refer to California business? A. * * * Article II reads: 'In partial consideration of the said covenants and agreements of the said Southern Company contained in Article I hereof, said San Pedro Company hereby covenants and agrees with said Southern Pacific Company that it will, upon the execution of this agreement, adopt, print, publish and put in force at all points upon its leased, owned or operated railroad, for the handling of local business thereon, the lawful rates, tariffs, classifications, and charges used by said Southern Company for the handling of any local business which may be the subject of competition between them.' Of course, the preceding parts of the contract and the physical facts were such as to make that necessarily confined to traffic in Southern California, because there is the only place where those conditions arose to which it could or did apply." Local business.

(691) "Q. You say that a rate from Los Angeles to Salt Lake City is not local to the San Pedro line? A. Yes sir, but I am telling you also that the word 'local' here is used in a territorial sense. Q. You say so, but I am asking you if there is anything in the contract that says so? A. There is this that indicates it very strongly. Section 1, the beginning of the contract, says: 'The said Southern Pacific Company undertakes and agrees to and with said San Pedro Company that it will interchange freight traffic in Southern California with said Pedro Company, to and from points south of the parallel of Mojave, California, in like manner and upon as favorable terms and conditions as said Southern Company at the same time interchanges traffic with the Southern California Railway Company, and that in the movement of such traffic, or the charge therefor, under similar circumstances and conditions, it will not discriminate in any respect in favor of any connecting line to the prejudice or disadvantage of said San Pedro Company;

but this shall not be construed as forbidding or restraining the said Southern Company from favoring its own lines as against the San Pedro lines, that is to say, lines of railroad owned, operated or controlled by said Southern Company. Section 2. The Southern Company, in respect of the traffic mentioned in Section 1 of this article, will join with said San Pedro Company and with said Oregon Short Line Railroad Company and said Union Pacific Railroad Company in forming through lines of freight service, and in through rates therefor upon agreed divisions of through rates for such service equal to the facilities, service and terms accorded by it to said Southern California Company on like kind of traffic. Article 2. In partial consideration of the said covenants and agreements of the said Southern Company contained in Article 1 hereof, said San Pedro Company hereby covenants and agrees with said Southern Company that it will upon the execution of this agreement, adopt, print, publish, and put in force at all points upon its leased, owned, or operated railroad, for the handling of local business (692) thereon, the lawful rates, tariffs, classifications, and charges, and so forth. You will notice that at the conclusion of Article 1 it reads to the Southern California Company purely and simply. Q. That is the consideration for the agreement in the other article? A. Yes. If the contract did not make it perfectly plain that that was all intended to make it refer to California, then it was the fault of the lawyers who drew it, because it was the intent of the parties. Mr. DUNNE: Was that the intent of the parties? WITNESS: Sir? Mr. DUNNE: You say that was the intent of the parties? WITNESS: Yes, sir, unquestionably. Nothing else was considered, for a moment."

Local business.

(692-693) There was no California statute similar to the Sherman Anti-Trust Law, and that provision of the contract was not inimical to any statute in California.

(693) This local traffic at the time the contract was made was the subject of a competitive struggle between the Santa Fe and the S. P. (694) This condition was not changed, to the witness' knowledge, while he was connected with the San Pedro. There was no arrangement between the three roads by which the competition between the Santa Fe and S. P. was affected. The Clark interests felt that in making the agreement with the S. P., a company whose lines ramify through all Southern California, it would make it possible to get the traffic from this locality without the necessity of building branch lines as feeders. (695) It is a fact, a result from the operation of competing roads, that rates will, generally speaking, be equalized. One road meets the rates of the other. Witness thought that on the kind of business originating in Southern California the service is quite as prime a factor as rates. Important that the traffic go east as soon as possible.

No arrangement by which competition between S. P. and Santa Fe was affected.

The physical superiority of the line between Los Angeles and Salt Lake would necessarily command for it a very large proportion of the traffic originating at the former point, not-

withstanding the interest of the U. P. in the San Pedro line. If there is actual competition on the part of the Santa Fe, the San Pedro route to Salt Lake City furnishes a link in the only road that can compete with that road in handling expeditiously the citrus fruit traffic, with a possible exception of the S. P. through El Paso. By the El Paso gateway the Harriman lines get 700 miles, by the San Pedro route the entire length of the U. P. and their half interest in the 800 miles of the San Pedro. (697) Witness doesn't think it would have been better to have had competition existing not only with the Santa Fe, but also with the Harriman lines. He stated that he certainly doubted the possibility of maintaining in a serviceable condition a line of railroad from Los Angeles to Salt Lake, built and operated as that road would have been built and operated, if it had had the competition of another line practically parallel, which would have had all the business of the U. P. San Pedro at the present time has joint through rates over the Denver & Rio Grande, just the same as over the U. P.

(698) The public had no evidence that it was necessary for the Harriman people to have a direct line from Salt Lake to California until the Clark line was projected. (699) On the citrus fruit business from Southern California you cannot make as good time over the Denver & Rio Grande with their heavy grades as you can over the U. P., with grades eliminated to a great extent. (700) The amount of freight handled on the respective lines would not cut much figure, because the citrus fruit business was run on a preferential schedule. Witness thought the schedule was lengthened now because congested on account of the impossibility of getting motive power. It was a question whether the road had motive power enough to move citrus fruit. It was very difficult to get even enough to move passenger traffic. (700-709) Purpose of Section 6 of contract between Short Line, U. P. and San Pedro, Miller's Exhibit 41, discussed.

(709) R. E. WELLS.

Wells.

Testimony given before Interstate Commerce Commission, February 8, 1907, in the city of Los Angeles.

Los Angeles. Gen. Manager, Salt Lake road.

For six years General Manager of the Salt Lake road. Has resided at Los Angeles for six years, except for two years, when he was in Salt Lake. (710) When he first became General Manager there was nothing but the old Terminal Line. It carried lumber chiefly, bringing it in from San Pedro to Los Angeles. Fruit was moved over the Glendale Branch, and turned over either to the S. P. or Santa Fe at Los Angeles. Moved to Salt Lake in 1903, just before the San Pedro took over the Oregon Short Line's road south of Salt Lake. Up to July, 1903, the lines in Utah were operated by the Short Line. (712) Mr. Wann acted for San Pedro in matters relating to division of rates between that line and Union Pacific.

No equipment agreement.

(714-715) No arrangement between the Harriman lines and the San Pedro with reference to loaning or leasing cars to each other. During construction and reconstruction work on San Pedro line, it lent some large wheel engines to the Harriman lines in return for a different type more suitable for construction purposes. Nothing of kind since road completed. Sometimes use the equipment of the Harriman lines, the same as they do that of other lines, on a per diem. (715-716) Present equipment of the road described somewhat in detail. (717) In the statement of number of cars San Pedro handled last year and this year, the word "local" is used to describe shipments to points west of the Missouri River. That is a generally accepted use of the term in the vicinity of Los Angeles. (718) In the year ending October 31, 1906, 2,330 carloads of fruit moved over the San Pedro. Total shipments over all three lines was about 25,000 carloads for the same period.

(719) Percentage of fruit cars delivered by the Atchison to the San Pedro for through shipment changed from 40 or 45 per cent. last year to 10 per cent. this year. Witness could not explain the reason for change. Vegetable business largely increased because it was solicited both by San Pedro solicitors and by Mr. Munroe, Freight Traffic Manager of the U. P. Mr. McCormick, the Asst. Traffic Manager of the Harriman lines, was with him. (721) Vegetable traffic was delivered to the San Pedro off the tracks of the S. P., 1,100 cars from November 1, 1906, to February 3, 1907. Celery, which constitutes the bulk of the business, comes from about forty miles south of Los Angeles. (722) Taking the San Pedro line, about 80 or 90 per cent. of the fruit cars are returned empty. An attempt is made to return them loaded. When they come back loaded, they contain merchandise and packing house products. Over the San Pedro the greater part of the tonnage moves east, so that the equipment must return empty.

Return of empty equipment.

6½-day trains.

(723) Armour cars are paid for by the mile. (724) Trains were run to Chicago in six or six and a half days. The San Pedro turned the trains over to the Rio Grande at Provo and Salt Lake. By the Rio Grande they were delivered to the Burlington. (725) This was in January, 1906. The S. P. and the Santa Fe protested against these six-day trains, but they were not taken off in deference to their requests. "We ran it to the end of the chapter, as long as our road was in condition to run it." They were not run long after the protests.

(726) The fast trains ran during January and February. The protests were made about the time the first train reached Chicago. Six-day trains have not been started up again, because the bad times on the San Pedro road are not yet over. (727) San Pedro has to fight for business, and there is the liveliest competition for every pound it gets. Their solicitors work against the S. P. and Santa Fe. There is a U. P. solicitor at Los Angeles, who solicits for the San Pedro continually as against the S. P. and Santa Fe. San Pedro is not now in a worse physical condition than when it

San Pedro has to fight for business.

ran the fast trains. (728) Fast trains not run now because San Pedro has less available motive power. In other words, less out of the shops. (729) Complainant's Exhibit 80, table showing carloads of citrus fruit handled during season of 1905-6 and 1906-7, respectively, by the three competing roads.

(730) THOMAS H. PHILLIPS.

Phillips.

Testimony given before Interstate Commerce Commission, February 8, 1907, in city of Los Angeles.

Los Angeles. Traffic Manager, California Citrus Union.

Traffic Manager of the California Citrus Union and of the Earl Fruit Company. His shipments comprise about twenty per cent of the Southern California output. Ships over all three roads. The California Citrus Union shipped about 175 cars over the San Pedro. Takes about 12½ days to Chicago by the San Pedro, and 13 days by the Santa Fe. Last year they made on the S. P. via El Paso and the Rock Island, six days to Kansas City, and 7½ to Chicago. There were some that took longer, but they made that time pretty regularly for quite a long while. Do not move fruit shipments to the east by way of Sacramento now. (731) Everything that goes by northern gateway goes San Pedro. The Citrus Union is an exception to the other packers, in that more of their warehouses are on the S. P. tracks than on any other tracks. The fruits that go by the Salt Lake route are from the packing houses on the San Pedro and S. P. The rate from here to Chicago and eastern points on oranges is $1.25 per hundred pounds, 90 cents a box. On lemons, $1 per hundred pounds. Prior to becoming Traffic Manager of the Citrus Union, witness was in the railroad business 22 years, with the U. P. 13 years, the Nav. Co. 4 years, the Canadian Pacific one year, the C. M. & St. Paul one year, and the S. P. about four years—in the Traffic Dept. Don't know why there should be a lower rate on lemons than on oranges. Has been in all seasons, and is called an emergency rate. Lemons are harder to carry than oranges, because they are more perishable.

California fruit shipments.

(732) Lemons were being imported from Sicily. Several years ago they were largely imported, but the California lemon is now getting the upper hand. I judge that is the reason this emergency rate was made. Witness has not been able to obtain sufficient cars this year to get fruit to market. Between 2,000 and 3,000 cars short at present. Have had most difficulty with the S. P. Less with the Santa Fe and Salt Lake. Less difficulty with the Santa Fe than the others. (733) The result of the shortage is a very great loss. By reason of car shortages have had to haul by team from packing houses on the S. P. to the Santa Fe and vice versa. Representatives of the S. P. have not made any objection this season to oranges going over the San Pedro. Last year they did. Heretofore witness shipped practically all fruit via El Paso, because the best service was that way until the present season. Mr. Graham, the S. P. agent, called on witness this year, and stated that after March 1st he expected to get business the same as before.

Shortage of cars.

El Paso route.

(734) One train over the San Pedro made as low time as 5½ days to Chicago. After the decision of the routing case by the Supreme Court, the service seemed to drop off. It may have been coincidence. (735-736) Witness is sending shipments by El Paso now. Ships two days in the week by the S. P., El Paso and the Rock Island, two days in the week by the S. P., Texas & Pacific, and M. K. & T., and two days in the week by the San Pedro. Bulk of the business would go by El Paso, but on account of the abnormal car conditions at present, witness was routing wherever he could get cars. Twice as much would normally go by El Paso. Witness has 49 packing houses on the S. P., 42 on the Santa Fe, and three on the San Pedro. S. P. notified witness until further notice not to pick oranges. That was a question of car supply.

Woodford.

(736) B. A. WOODFORD.

Testimony given before Interstate Commerce Commission, February 8, 1907, in the city of Los Angeles.

Los Angeles. Gen. Manager, California &c Fruit Exchange.

Routing of fruit traffic.

General Manager of the California Fruit Growers Exchange. Has resided in Southern California eighteen years, and engaged in the shipping of fruit for thirteen years. Shipped about 47 per cent. of the fruit crop last year. Thinks he will ship more this year. Ships over all the lines. The location of the packing houses largely divides the shipments; not always. Shipments to Seattle or Portland, although on the Santa Fe, would go over the S. P.; also if the Santa Fe had larger quantities of fruit than they had facilities for. (737) Very seldom anything that originates on the S. P. goes by the Santa Fe. Has four or five packing houses on the Santa Fe out of probably about 80 houses. Last year thinks that the San Pedro had about ten per cent., and the Santa Fe and S. P. each about 45 per cent. of the entire Southern California fruit business. Shipments over the Salt Lake road originated on all three lines. Since Mr. Monroe was at Los Angeles, soliciting for the Salt Lake and U. P., witness has shipped very little that way. His shipments have gone largely by the Santa Fe and El Paso, because of climatic conditions. Doesn't begin to move fruit through the Ogden gateway until the 1st of March. Thinks about 60 per cent. of the fruit that is packed in warehouses originates on the Santa Fe.

Rates.

(738) Freight rates on oranges have been the same about twenty years. Has been increased 2-70 by reason of change from 70 to 72 pounds in the size of boxes. That change occurred seven or eight years ago. Rate on lemons was given as a protective tariff to encourage the industry. Witness, as a grower, thought the orange rate too high. (739) Celery rate to Cleveland, Ohio, is $1.08 per hundred, and the center of distribution of his citrus fruits is somewhat west of Cleveland, and the flat rate all over that country is $1.25. Celery moves entirely under ice, and a few of the oranges move under ventilation, without ice. This year the shipments via El Paso reach Chicago about the ninth day from loading;

recently, via the Santa Fe, about eleven days. (740) Very few oranges from the S. P. packing houses move over the Santa Fe, but the reverse is frequently true.

(741) EDWARD H. HARRIMAN.

Harriman.

Testimony given before Interstate Commerce Commission, February 25, 1907, in the city of New York.

New York. Head of Harriman lines.

President of Union Pacific Railroad; Chairman of its Executive Committee; President of the Southern Pacific Company, Oregon Short Line and the Navigation Company; Chairman of the Executive Committee of the Southern Pacific. Took the last named position shortly after Union Pacific acquired Southern Pacific stock. Has acted as Chairman of the Executive Committee since that time, and as President since retirement of Mr. Hayes.

Purpose of U. P. convertible bond issue.

"Q. So that we may not duplicate things that have been put in before, I will ask you in a general way, if about January, 1901, or during the winter of 1901, the Union Pacific Railroad Company issued or provided for the issue of $100,000,000.00 of convertible bonds for the purpose of acquiring stocks in other railway companies? A. Well, I don't think that is hardly the way to put it. We issued $100,000,000.00 of convertible bonds primarily to pay for the Southern Pacific which had been purchased first, not generally to purchase the securities of other railroads."

$40,000,000.00 of these bonds were sold to Kuhn, Loeb and Company, to pay for the first 750,000 shares of the stock of the Southern Pacific. About $61,000,000.00 of these bonds were used to buy Northern Pacific stock. Has no doubt that the other $27,000,000.00 invested in Northern Pacific stock, was furnished by the Oregon Short Line.

O. S. L. participating and refunding bonds.

(742) That $100,000,000.00 of bonds has practically all been converted into Union Pacific common stock. Oregon Short Line, about July, 1902, authorized an issue of $100,000,000.00 of participating bonds, and in 1905 issued its refunding bonds to take up the participating bonds. $100,000,000.00 of the refunding bonds were authorized. (743) $45,000,000.00 of the refunding bonds were sold to the public. The balance, $55,000,000.00, is owned by the Union Pacific. There is about $127,000,000.00 of either stocks or bonds in existence somewhere, the proceeds of which were used to pay for Southern Pacific and Northern Pacific. After that the Short Line bought $15,000,000.00 par value of the Southern Pacific, in addition to its $75,000,000.00.

Advances for improvement of S. P.

(744) After that it bought $18,000,000.00 of preferred stock, issued pro rata to stockholders. When we bought the Southern Pacific, we advanced to it, to improve its property, about $18,000,000.00 or $20,000,000.00. That was repaid by the Southern Pacific when it issued its preferred stock. Whether we issued these refunding bonds to advance that money to the Southern Pacific, or not, witness could not tell. (745) $40,000,000.00 of convertible bonds were used to pay for Southern Pacific stock; the other $60,-

000,000.00 were held for the purposes of the corporation. It was not specifically issued to pay for Northern Pacific and Southern Pacific. We had not in mind the question of the purchase of stock in other railway companies. We had in mind simply the purpose of acquiring Southern Pacific stock and afterwards of acquiring Northern Pacific stock.

Cost of stocks.

(746-747) Harriman Exhibit No. 2, being Statement dated February 13, 1907, showing dates of stocks purchased since last annual report, June 30th, 1906, to date, and amounts paid therefor. From this exhibit it appears that the cost to Union Pacific and Short Line Companies of stocks acquired since July 1st, 1906, amounts to approximately $131,000,000.00.

N. P. stock purchase.

(748) As the result of Northern Pacific purchases, Union Pacific had $82,000,000.00 of Northern Pacific securities stock at cost of about $79,000,000.00. Were forced to take for that, Northern Pacific and Great Northern stock. At that time the stocks so forced upon Union Pacific were worth in the market about $100,000,000.00. In the meantime had subscribed to three millions of Great Northern stock offered to stockholders, making total investment in Northern lines of about $82,000,000.00. Stocks returned were worth in the market about $100,000,000.00. Held those stocks until they were worth from $145,000,000.00 to $150,000,000.00. Sold part of it for $116,000,000.00. "We re-invested that in securities listed here other than Baltimore and Ohio, at a cost of about $85,000,000.00. We have on hand remaining in the treasury of the Union Pacific, or the Oregon Short Line, Northern Pacific and Great Northern stock at the present market value of about $30,000,000.00. So that would make, with $116,000,000.00 of the value sold and with that we have on hand, about $146,000,000.00. The Baltimore and Ohio stock purchase has not to be paid for until March and September. * * Now, the difference between the cost of the other stocks, $85,000,000.00, and the $116,000,000.00, already realized, is about $31,000,000.00. The stock of the Great Northern and the Northern Pacific we still have on hand. If sold at the present prices, would make that $61,000,000.00 received in excess of the amount already invested and paid for. * *

Investment stocks.

B. & O. stock purchase.

(749) "We have to pay for Baltimore and Ohio $45,000,000.00. * * So that the proceeds of the Northern Pacific and the Great Northern would realize something like $17,000,000.00 in excess of the cost of all the securities purchased; and the income from those securities instead of being as it was in the case of the Great Northern and Northern Pacific, about three million and a quarter or three million and a half, will approximate six million and a half dollars. So that if we had held Great Northern and Northern Pacific we would have an investment realizing less than three million and a half dollars, and the market value would have been reduced very much more than the eleven or ten million which you refer to as the difference between the market price of the securities and the market price of the Great Northern and Northern Pacific."

If Northern Pacific and Great Northern maintain their present market price, witness estimates the profits in that at about $61,000,000.00. "We had this investment in securities. The one hundred million of stock was issued for the purpose of paying for those investments. We realized on those investments to the best advantage we could and re-invested in the securities which we thought were of the highest class and the most interest to the Union Pacific." It is a question of income. It is not always a question of capital or a question of value.

Profits on stock investments.

(750) Southern Pacific stock was purchased for the purpose of getting a dominating interest in the Southern Pacific Company. Mr. C. P. Huntington, who was the President of the Southern Pacific Company, died about six months prior to the purchase of Southern Pacific stock by the Union Pacific. Prior to his death, Mr. Huntington for many years had been in control of the Southern Pacific road. Did not buy a majority of the stock, as he presumed that the amount purchased would control the property as well as a majority of the stock. It was a dominating interest, and there was a very large outside interest as copartners. (751) Witness helped carry on negotiations for the purchase of the S. P. stock, but did not make the arrangement for the purchase. Witness did not think that all this stock was purchased from the Huntington estate. Testimony as to the 300,000 shares of Southern Pacific sold to Mr. William Rockefeller, March 30th, 1903, and repurchased November 12th, 1903. (752) Reasons for sale to Mr. Rockefeller.

Purpose of purchasing S. P. stock.

Sale of stock to Mr. Wm. Rockefeller.

(753-754) Same. (755) July 10, 1906, the .Oregon Short Line purchased $10,000,000.00 par value, Santa Fe Stock. Object was to invest some of the money that we had. Had arranged for representation on the Atchison Board. Had an interview with Mr. Ripley about obtaining a representation during 1904. (756) Had interviews with Morawetz and Ripley, mostly Morawetz. Substance of the interviews was, we were to establish a better relationship between all the railroads; that we should deal more frankly with each other, and not operate our lines to destroy each other, but to develop the territory served by each—even offered Mr. Morawetz a position on the Executive Committee of the Southern Pacific. They concluded to give certain individuals who were interested in the Union Pacific representation on the Atchison Board. To that end Mr. Rogers and Mr. Frick were elected. (757) Did not state to Mr. Ripley the amount of Santa Fe stock that witness and his associates had acquired. It had been acquired a long time before. Since acquiring of Santa Fe stock by these individuals, the Union Pacific or the Short Line as a Company had acquired $10,000,000.00 of this stock "as an investment, pure and simple, in the preferred stock."

Object in acquiring Santa Fe stock.

It was bought of Kuhn, Loeb & Company. (759) In interview with Mr. Ripley "I said myself and some of my associates had large interests in the Atchison Road, and there ought to be somebody in there who would properly represent not only our stock, but the

stockholders of the Atchison road, to the end that we might have a better understanding, and a franker dealing between our corporations, if you like. In other words, I had a common interest, I might say—an interest in Union Pacific and an interest in Atchison myself." (760) Messrs. Rogers and Frick were also prominent directors of Union Pacific. Their personality would make them prominent wherever they were.

They would represent the interest of the stockholders of the Company for which they were at the time acting, in case questions of conflict between the two companies arose. These two directors had nothing to do with the joint ownership of lines in Northern California, which was subsequently effected. (761) There never was any competition in the territory occupied by these joint lines. "The Santa Fe had interests up in Mendocino County, some 150 miles north of the terminus of the California and Northwestern road, which was owned by the Southern Pacific Company, and it was not a question of construction of parallel lines so much as it was a question of traffic or trackage arrangements between the lines north of the terminus of the California and Northwestern, and that road itself, whether a joint ownership was not better than a traffic or trackage alliance."

Joint ownership of lines in northern California.

San Pedro Railroad built jointly by Union Pacific and Mr. Clark, and is under their joint control. (762) Construction of San Pedro. Manner in which rates are fixed. (763) The $100,000,000.00 of convertible bonds were issued on the basis of the credit of the Union Pacific, "and it might have jeopardized the dividends on the Union Pacific stock itself. That is, we subrogated the stock to the bonds. If the Northern Pacific and the Southern Pacific had made no returns from their stock, no dividends, the income of the Union Pacific would have had to be used to pay the interest on those bonds, and to that extent it would have had to be deducted from the amount available to pay dividends on its stock." (764) Southern Pacific not a competing line, but a connecting line. "Q. You object to the word competing? A. I do, absolutely." Discussion as to the credit of the Union Pacific being based on its earnings. "If we had not had the power to buy the Southern Pacific with the credit of the Union Pacific, the territory of the Southern Pacific would have been ten years behind what it is now. (765) If we had acquired the Northern Pacific, the Northern Pacific territory would have been ten years ahead of what it is now." Discussion as to the necessity of a law permitting railroads to make traffic contracts between themselves under proper regulations.

San Pedro.

S. P. and U. P. connecting—not competing lines.

Advisability of traffic agreements.

(766) "The acquisition of the Southern Pacific by the Union Pacific, and the credit of the Union Pacific at that time enabled the Union Pacific to lend the Southern Pacific $20,000,000.00, or thereabouts, quickly, and make the improvements quickly. * * (767) These connections were made because of the benefit there would be in the connections themselves. The purpose was not to control the

rates of other competitors. "It was to enable us to go into the territory, that would enable us to open territory tributary to the Union Pacific and the Southern Pacific. For instance, in the Northern Pacific, if we had obtained control of the Northern Pacific, as we ought to, we would have opened the whole Washington and Oregon territory to the 15,000 or 16,000 miles of the Southern and Union Pacific, which we are now shut out of, and we have no joint rates—we are shut out of it absolutely, and the section served by those lines is shut off from direct communication and interchange of business with most of the territory north of the Columbia River."

To acquire more business.

Referring to his previous statement that the Northern Pacific Railroad would be ten years ahead of its present condition if he had got control of it, witness said:

(768) "I believe that the territory—that is, the rest of the country—the territory tributary to other railroads would have been opened to the use—for intercommunication I might say, to the territory served by the Northern Pacific. I believe the improvements on the Northern Pacific would have been more drastic, that their equipment and motive power would have been increased more rapidly, and I believe, more intelligently. * * * I am told now that the Northern Pacific has got—is unable to move the traffic tributary to it, and that a large part of its motive power— excuse me, not a large part of its motive power, but a considerable part of its motive power is out of service, because of not being in proper condition. Q. Well, there is a good deal of blockade of freight all over the country, isn't there? * * * A. I have no doubt there is some freight congestion. * * * Q. Then I judge if you think the Union Pacific has been better managed—and I have no doubt it has been well managed—that it has given better service and at better rates. A. No, I will say this, that it has developed its lines quicker, and to better advantage than the other lines north of it or south of it.

N. P. improvements would have been more drastic.

* * * The traffic of the Union Pacific and the Southern Pacific is more diversified than the lines north or between them; in other words, the commodities carried by the Union Pacific are of a higher class than those carried by the Northern Pacific or the Great Northern. The figures I have in my mind now—I don't remember about the Northern Pacific, but I believe that nearly 75 per cent. of the traffic on the Great Northern is either the products of the mines or lumber, the products of the forest, and only a little over fifty per cent. of the commodities of the Union Pacific are of the same character; therefore, if the rate on the Union Pacific, the average rate is being computed, that ought to be taken into consideration."

U. P. and S. P. traffic more diversified.

(769) Discussion as to rate per ton per mile on Union Pacific Railroad. "Through 1900 and 1901, they were over a cent a ton a mile and 1.5 cents, and in 1906, .924 cent. Q. But they were higher in 1903 and 1904 than they were in 1906, were they not? A. Yes, they were higher in 1902, 1903 and 1904 than they were in 1906. You have 2,900 miles; I don't know what this refers to.

Rate per ton per mile on U. P.

There is only 1,800 miles in 1896, 1897 and 1898, and then it increases to 2,900 miles and 3,000 miles from 1900 on, so that you are including some of the Short Line with it. Q. I am not including the Short Line or the Oregon Navigation Company. A. Yes, but you take 1899, the rate on the Union Pacific, as you have it here for 2,848 miles, was 1.16 cents. Q. Yes. A. And in 1906, it was .924 cent. Q. Yes. A. In other words, it was reduced from more than a cent a ton a mile to less than a cent a ton a mile." The rate had increased after 1896. "Well, you can makes figures appear any way you please, but in 1899 is the year you begin with 2,800 miles of road; compare that (770) with 1906 and it shows about fifteen per cent. higher in 1899 than in 1906. That may have changed also by the commodities carried, whether they were a higher class of commodity, or a low class of commodity." The inclusion of branch lines in the statistics would account for the difference in the rate per ton per mile, as the rates on branch lines are higher than on the main line. Discussion as to the rate per ton per mile on the Southern Pacific. In 1901, the rate was .932 of a cent. "The next year they went to .925 of a cent. * * The next year they went to .888, and the next year to .898, and then the next year they went up to over a cent, and the next year it was 1.10 cents. Now there are additions there, a couple of hundred miles of road added to it; those are probably branch lines. You cannot tell whether that was because of the increase in high-class commodities. We have had a very large increase in the shipment of fast trains carrying fruit. * * * Those are matters which you have got to consider; you have got to take in the class of business that one road does in comparing it with either former years, or with the traffic of other roads."

Rate per ton per mile on S. P.

(771) "Q. Now, is it not a fact that the Union Pacific, controlling the Southern Pacific, the same management, the same control, the same traffic official, president, boards of directors, the same stock ownership to the extent of forty-five per cent. of it, that all inducement to competition has been taken away, and the rates have been increased? A. I think not." Consolidation or joint ownership in the same interest does not necessarily tend to stiffen the rates or put them up.

U. P. control of S. P. has not destroyed competition.

(772) Discussion as to the rate per ton per mile on various railroads. If the Union Pacific could have some of the lumber carried by the Northern Pacific, that they cannot carry themselves, the Union Pacific would show an average rate much less than it does now. The Northern Pacific is "carrying more lumber on long hauls, from Washington to the markets in the Eastern States or Middle States, I might say, and if we could get some of that traffic which we hope to get and would have gotten if we had obtained control of the Northern Pacific, we would have opened our territory to those products and the rates on those would have been materially less than the higher class traffic we now carry, and to

Rate per ton per mile on various railroads.

that extent the average rate per ton per mile on the Union Pacific would have been reduced."

Witness does not believe that the rates on products of the farm on the Northern Pacific or Great Northern are less than they are on the Union Pacific. "Comr. Lane. Why cannot you get some of that Puget Sound Lumber? Witness. Because we have no lines running there. Comr. Lane. Why can't you make a joint rate with the Northern Pacific? Witness. Because they won't do it. Comr. Lane. Why can't you require it? Witness. That is the question I would like to have decided. Comr. Lane. There is power in the Commission to make a joint route and joint rate. (773) Witness. You might take it up, and I am quite interested, if the Commission have it on their minds, to open up the line as fast as possible, but they have closed the gateway in every instance. Comr. Lane. We found that the Sacramento gateway was closed from Portland around to Sacramento. Witness. Yes. Nobody would have ever thought any business would have been done at Sacramento around by the way of Portland. Comr. Lane. Well, there was some competitive business. Witness. It would not amount to anything, it would not have been a flea bite. Q. Take the Canadian Pacific. A. There you have got it again; you are in a different territory. What are the grain rates on the Canadian Pacific for like distances as compared with the Union Pacific? Q. I don't know. A. What are the conditions on the Canadian Pacific as compared with the Union Pacific? What do they have to pay for fuel and labor? Everything else is in a very different condition from any railroad in the United States. If we could have the same control of our management that the Canadian Pacific have, and the same cost for material and labor, I think we could probably operate our lines for less cost and less charge. Q. Well, will you name some transcontinental line which you consider a fair comparison with the Union Pacific on the question of rates? A. I do not believe there is one. Q. You think they are entitled to higher rates than any of them? A. No, I do not. I think they are charging the same rates, and possibly less, for like commodities.

Puget Sound gateway.

Sacramento gateway.

Canadian Pacific.

Rates on U. P. same or less than on other lines.

"Q. Is it not a fact that the Southern Pacific, and Santa Fe, and Union Pacific traffic is largely the same class? A. Not exactly the same. Q. Not exactly the same, but it is largely the same class? A. The Atchison has developed a very large business on lumber and coal on their eastern lines, more than we have, and more than the Southern Pacific has, but you will find that we charge no higher rate for the movement of the products of California to the markets in the East than the Atchison does. You will find we charge no higher for like commodities at any local points than the Atchison does, or Northern Pacific, or Great Northern. Q. Your rate per ton per mile is higher on your system than any one of them, and yours is the only one that has not been decreased; therefore I want to know whether it was due to superior management or whether it was— A. You have got in there, which is also

Classes of traffic.

U. P. rates no higher than Atchison, N. P. or G. N. rates.

shown by the Union Pacific, the fact that we have a lot of branch lines, and the rate on the branch line service is higher than on the main line. Q. I have not included it on the Southern Pacific. (774) A. The Southern Pacific has not so many branch lines; it has a higher class of traffic than the Atchison or any other transcontinental lines other than the Union Pacific.

"Mr. Lovett. In that connection, they both have a very much larger business? Witness. Yes, and their rates on their local business are relatively of the same parity with local rates on any other line. They could not be any higher, and possibly because we have developed more local business, our rates may be lower; I don't know; it may be our local rates as compared with local rates on other lines are lower, and that is the reason we have developed more local traffic."

Steamships Mongolia and Manchuria.

With regard to the ownership of the steamships Mongolia and Manchuria, witness said that the ships were taken in his name for the purpose of convenience when negotiations were made for their purchase, and that the rental for them was paid to the O. S. L. "They were partly completed, and Mr. Schwerin came to me with the statement that if the Pacific Mail was to take title to those ships, that I would have to give a personal guarantee. Now, I did not think that I was called upon to give a personal guarantee, and another thing, the Pacific Mail was largely in debt then for vessels already constructed, and so I decided to take the ships in my own name in order to hasten the closing of the negotiations and the changes in the boats which had to be made; they were partly constructed, and they had to be changed to suit our trade. They have always been held in the interest of the Oregon Short Line; the annual reports of the Oregon Short Line show their ownership and show the rental which was received for them." (775) Testimony as to the manner in which the rental for these ships was fixed. The ships were purchased without specific authority from the Short Line, but the matter was subsequently approved by that company's executive committee. Witness never had any personal interest in those ships. Inquiries as to the construction of a line into Portland by the Northern Pacific and Great Northern roads, known as the North Bank Route. (776) Same. The Northern Pacific and Great Northern, as far as they can, are obstructing witness in building from Portland up to Puget Sound, and also up the Columbia River; and witness is obstructing them in getting into Portland whenever he can. Witness' idea is not that one company shall keep out of the other's territory. "We shall do everything we can to develop territory adjacent to our lines, and so much so that where it is necessary we may join together."

Their rental.

Obstructions to Seattle line by N. P. and G. N.

"Q. It is in pursuance of that benevolent idea that you are endeavoring to prevent those lines getting into Portland? A. No; I object; it is a business purpose, pure and simple, to save unnecessary investment of capital. A double track line from Portland to Seattle and Tacoma could do four or five times the business that two single track roads would do, at a less cost. The public is in-

terested to that extent, that this business shall be conducted on lines at the least cost, and therefore eventually at the less charge. (777). Q. Then I will repeat my question: Is it in pursuance of this view of yours as to good sound policy in railroading, that you are endeavoring to prevent your rivals spending money to get into Portland? A. No. I think that is probably a sort of business arrangement we all have, to give us some consideration, in our attempt to reach Puget Sound territory. Q. That is the reason for it, is it, and up to this time it has been a matter of litigation? A. Yes; but we proceeded all right. I think we have come to a conclusion recently whereby we have got our terminals at Seattle and Tacoma—I don't know but we have at Portland. Q. And did the conclusion also include their going on there building the North Bank? A. That is very small, hardly worth considering."

Inquiries as to decrease in the ratio of operating expenses to gross earnings on the Union Pacific. (778) Same. Further inquiries as to the ratio per ton per mile on the Union Pacific. (779) Inquiries as to increase in transcontinental tariff. Witness states that the tariffs on all railroads from the Atlantic coast line to the Pacific are alike on all commodities. There are reasons why rates should have been increased. "In the first place, the Union Pacific and Southern Pacific have expended over $250,000,000.00 in new improvements on their lines, and the extensions and the acquisitions of terminals. * * * The management of the Union Pacific and Southern Pacific have not given their time to buying securities or selling securities. The purchase of securities was only incident—since the 1st of July—was only incident to the forced acquisition of Northern Pacific, of Great Northern, (780) and the rise in their market value that made it advisable and necessary for us to change that investment into other things. * * *

Justification of rate increase.

Purchase of securities only an incident to the forced acquisition of Northern Pacific.

"Since we have acquired these properties we have expended in improvements, additions, and extensions, over $250,000,000.00 that has been expended in the acquisition of terminal properties, the construction of sidetracks, passing tracks, second tracks, reduction of grades, straightening of lines, elimination of curvature thereby, the purchase of equipment. The allied lines, Union Pacific and Southern Pacific, have purchased in that time over 50,000 freight cars, purchased nearly 1,200 passenger cars; they have purchased over 1,500 locomotives of higher capacity than former locomotives; they have rerailed about 7,500 miles of railroad, putting in over a million tons of rails of heavier weight—80 or 90 pounds to the yard; they have put in automatic block signals, safety signals upon 3,200 miles—more than any other railroad in the world, and they have got under construction, authorized and under construction, 1,500 miles more. Now, all these expenditures have to be given a great deal of thought and a great deal of time, and it does not leave much of the time of the management to the purpose of going into what you have been terming this buying and selling of securities. The result of their expenditures, largely made in the employ-

Expenditures for betterments on Harriman lines.

Results of expenditures.

ment of labor, purchase of material in sections of the country tributary to our own lines, has increased the volume of business in that territory, has employed labor, distributed money in that territory and increased the volume of business, which has largely added to the earnings of the allied lines, enabled the better conduct of the properties, has enabled the movement of larger traffic, quicker development of the territory, and therefore a less percentage of cost in moving the traffic than it would have been if the lines had been left approximately in the same condition that they were when we got them. Now, I will give you a little illustration here. The first thing that was done on the Union Pacific—the very first move made on the Union Pacific, on the lines between Cheyenne and Ogden, that was the mountain division, and if you had taken the trouble to read this little paper it will show—you have been brought up in a prairie country where everything is level. The important matter was for us to consider how we could get the best line through the Rocky Mountains, as a protective measure, as much as anything else, so that we could operate it to advantage and at the least cost, and permit more business to go over it. In the first place we altered—the whole thing I think was about 480 miles—and out of that 480 miles we rebuilt about half of it, practically went over 50 per cent. of (781) the whole line. We saved in distance about 30 miles out of the whole.

Shortening of line.

Reduction of grades and elimination of curves. 22 circles taken out.

"The maximum grade on the old line varied from 97.68 feet to the mile—75.3-72.22-68.6. On the reconstruction the grade was reduced to 43.3—that is our mountain grade. The maximum curvature was reduced from five to six degrees, from 1 to 1½ and 3 and 4 degrees. The total angle of degrees of the old line was over 11,000. On the new line was a little over 4,000. There was a saving of nearly 7,000 angles—degrees of angles, or that would be really 22 circles; that is, the trains were saved going around 22 times in making that distance. I think that is about all. That is the first thing that we did. Those improvements, which cost all these millions of dollars, have enabled us to develop a larger traffic, permit a greater traffic to go over those lines, and to reduce the percentage of the cost of operation.

U. P.-S. P. improvements excel all others.

"Q. Well, now, Mr. Harriman, that condition, to a greater or less extent, has been going on, or that change, rather, on all of the American railroads. A. No, sir, it has not; not to that extent. Q. Haven't every one of them spent millions in improvements? A. They are now, but they have not done it as quick as we did. Q. Didn't they commence to spend them immediately after the panic of 1896? A. Not so drastic. Q. The Pennsylvania? A. The Pennsylvania has, but if it had begun in 1896 with the drastic expenditures it is now making, it would not have suffered as it has in the last four or five years. Q. Did not the St. Paul and Northwestern? A. Not to such an extent. Q. The Northern Pacific and the Atchison? A. No, they have veneered. Q. No other railroads have improved as the Union Pacific has? A. No, sir; not one in

the country. Q. None has been managed as well? A. I do not say that. I say none of them have had the enormous expenditure put on them."

(782) Witness thinks that under the reorganization plan of the Union Pacific $5,000,000.00 of cash were provided for betterments, and something over $10,000,000.00 in bonds set aside for the same purpose. The Pullman equipment was sold for about a million and a half of dollars and the proceeds invested in freight cars. A contract was made with the Pullman Company to supply that equipment themselves. The proceeds of the sales of lands and everything that could be gathered together in any way have been put into the improvements on the property.

Reorganization plans for betterments.

(783) "Q. Now, in addition to that— A. Whatever we have taken out of earnings we put into the property when we could have distributed it to the stockholders." Discussion as to the propriety of reducing rates on the Union Pacific. Witness states that there is very drastic competition in his territory. From 1893 or 1894 to 1898, 70 per cent. of the capital invested in railroads was paying no dividends, and it would be quite consistent that a 10 per cent. dividend should be distributed over an average of twenty years, from a railroad that had not received anything for ten years, and perhaps for five or six or eight years, received a fair compensation. (784) The Union Pacific does not pay 10 per cent. dividends from traffic. Its income was derived from traffic and from investments.

Earnings put in road.

70 per cent of capital invested in railroads paid no dividends from 1893 to 1898.

Discussion as to the statement of the net earnings of the Union Pacific, submitted to its Board of Directors in connection with the dividend declared on the 15th of August, 1906. Witness states that "every railroad has to have more than its actual earnings from which to pay a dividend. That is, it has to have something more. It can not distribute exactly what its net earnings are. If it did, it would soon go bankrupt. It has to have a surplus with which to maintain and improve its property and to provide a margin on which it can base a credit in case it has to borrow money in case of some extraordinary emergency. The old method of distributing whatever earnings they have is what (785) largely led to the bankruptcy or trouble of many of the lines."

Necessity of surplus.

The 10 per cent. dividend could not have been paid from the earnings of the road itself. 6 per cent. from that source was justified and 4 per cent. came from earnings other than traffic. (786) Witness thinks that "the Union Pacific stockholders are entitled to receive ten per cent. or fifteen per cent., if they can do it legitimately and properly, and give proper service to the territory reached by it or adjacent to it, and do it at no greater charge than that to similar territory in any other part of the country, and give better service than in any other part of the country. Q. Do you think the— A. I think the service rendered has something to do with the charge made. Q. That is, you think the service of the Union Pacific entitles it to a higher rate for hauling freight than the same

4 per cent of U. P. dividend came from earnings other than traffic.

U. P. does not get higher rates than other roads.

freight would be hauled for by other roads? A. It does not get a higher rate for hauling the same freight under relative conditions on other roads. Maybe it received lower rates. Now, if it has put itself in a condition where it can conduct that same traffic at less cost than other roads, it is entitled to the difference. If it sacrificed dividends, if it waited for dividends, it is entitled to receive them in the end. Q. I am trying to find out whether— A. You are trying to find out whether we ought not to reduce our rates on the Union Pacific? Q. Yes, sir. A. And if we did reduce our rates on the Union Pacific, it would create such a scamper all over this country, that you would not hear the end of it. Just as long as you can keep some of those lines solvent, (787) the Union Pacific will continue to earn all the money it is earning now. If you are going to throw some of them into bankruptcy and create chaos, you may reduce our earnings."

(789) Witness describes in detail how the 5 per cent. semi-annual dividend was declared, three per cent. from receipts from traffic and two per cent. from receipts from other sources. (790) Same. (791) "The total net earnings of money of our railroads do not exceed 5 or 6 per cent. on the total amount of capital invested." The return to the stockholders, in the case of many railroad companies, is due to the saving that is made by obtaining part of their capital by issuing low interest bearing bonds. The expenditures that have been made on the Union Pacific have increased so much in value that it could not be replaced there for anything like its capitalization. (792-794) Inquiries as to semi-annual dividend declared by the Southern Pacific on August 15, 1906.

U. P. not over-capitalized.

Increased rates to meet increased cost of labor and material.

(798) Witness thinks that all the transcontinental roads through a joint agency, that is who published their rate, made increases on a large number of commodities, both east and west, to meet conditions arising because of increased cost of labor and material, and increased cost of operation. Witness states his opinion as to amount railroad should be allowed to earn. (799-801) Same subject. (802-804) Combination of railroads and government regulation discussed.

Time when stocks paid assessments instead of dividends.

"From 1894, or from the panic of 1893 until 1898, I think you will find that about 70 per cent. of the securities of the railroads of this country were without dividends. * * * In 1898, if you will remember, it was just at the time in 1897 and 1898, when all these bankrupt properties were being reorganized and paying assessments instead of dividends. You talk about 10 per cent. dividend on the Union Pacific. When I took hold of the Union Pacific, we were just paying 10 per cent. assessment on our stock."

Morton.

(805) PAUL MORTON.

New York. Formerly Vice President, Santa Fe, in charge of traffic.

Lives in New York City. President, Equitable Insurance Company. In railroad business from 1872 to 1904. Was clerk, chief clerk, and assistant general freight agent of the C. B. & Q. with headquarters at Chicago; general passenger agent, general freight

agent, and afterwards, commencing in December, 1896, Vice-President, of the Atchison, Topeka & Santa Fe, and from that time until 1904 was head of its Traffic Department. (806) Is now a Director in the Atchison road. From 1890 to 1896 Vice-President of the Colorado Fuel Company, then being on the opposite side of the traffic question, as a shipper. Denver was the western point reached by the Burlington while witness was an officer of that company. Trans-continental traffic moved by way of Denver over the Burlington; also via Omaha. If it went the latter way, it was delivered to the U. P. If to Denver, it was delivered to the D. & R. G. Up to 1901, the roads running to Omaha, delivering to the U. P., were the Burlington, the Northwestern, the Rock Island, the Chicago, Milwaukee & St. Paul, the Wabash, the Missouri Pacific, and either then or subsequently, the Illinois Central. (807) A very large proportion of the traffic that reached Omaha went west over the U. P. Some of it may have gone on west to Denver, and then over the D. & R. G. When witness went with road the Atchison's eastern terminus was at Chicago, and its western at San Diego. Its westernmost station on the road to San Francisco was Mojave, about sixty odd miles east of Bakersfield, which is on the other side of the Tehachapi Mountains. At Mojave it connected with the S. P. for San Francisco and other points.

Transcontinental routes.

(808) Between 1897 and 1899 Atchison bought the San Francisco & San Joaquin Valley Railroad, running from Bakersfield to Point Richmond on San Francisco Bay, and made a contract with the S. P. for the joint use of its road over the Tehachapi Pass; a fifteen-year contract, witness thought; about 68 miles. In addition to the trans-continental lines already mentioned by witness there were, prior to 1901, the Northern Pacific, Great Northern and Canadian Pacific. They were all more or less in competition with each other. The line from Omaha to San Francisco, composed of the Union Pacific and Central Pacific was in competition with the Santa Fe, and on some but not all business was also in competition with the Sunset Route of the Southern Pacific. The competitive business was from this section of the country (New York). That competition extended as far west as Pittsburg, Cincinnati, and possibly in some instances as far as Chicago.

Completion of Santa Fe road to San Francisco.

Transcontinental competition.

Prior to 1901 the following routes to the Pacific Coast used a part of the Sunset line of the Southern Pacific (809), The Louisville & Nashville, the Queen & Crescent, the Illinois Central, and other lines reaching New Orleans. At El Paso connections were made with the Southern Pacific by the Texas & Pacific. Does not think the Rock Island was finished to El Paso at that time. The Atchison had a road down to Deming, which made a connection with the Southern Pacific at that point. The Rock Island built into El Paso before witness left the railroad service in 1896. The route made up of the Rock Island and the Southern Pacific engaged in trans-continental traffic. It was competitive with these other lines. The Rock Island also connected with the Union Pa-

Connections of Sunset line.

The competition was east of Ogden and El Paso.

The S. P. dominated the situation.

cific at Omaha, and with the D. & R. G. at Pueblo. "The competition generally considered among railroad men was east of Ogden and El Paso. The situation was to a very large degree dominated by the Southern Pacific. They controlled the rate making power to a very large degree, and all of these lines which published California rates did so under the general guidance and advice of the Southern Pacific Company, which was a connection of them all except the Atchison to Southern California." In the spring of 1901 the Union Pacific and the Southern Pacific were both competitors and connections.

Rates.

(810) The rates by the Sunset Route and via Ogden were supposed to be the same. At first there was a differential of ten per cent. less over the Sunset. On goods originating from Pittsburg east to the seaboard, the charge for the haul to New York was absorbed. The Morgan Line of steamers as far as Galveston was a competitor with the U. P. so far as securing business for Colorado was concerned. The competition was really east of the trunk lines, what are called the Iowa trunk lines, east of Missouri (River). The competition up to Galveston was competitive with lines east of the Missouri River. Business from Omaha into Colorado went by the Burlington or U. P.; from Galveston, by various lines. It might have been handled by the Atchison, which has a direct line from Galveston to Denver; or it might have been handled in connection with the M. K. & T. and the Colorado Southern; or in connection with the I. & G. N. and the Chicago, Rock Island & Pacific. Some of the traffic to Colorado formerly went by New Orleans.

Colorado traffic.

(811) From New Orleans it may have gone Southern Pacific up to some junction point in Texas with the Colorado Southern, or it may have gone by the Illinois Central to Kansas City, and west from there over the Union Pacific, the Burlington, the Rock Island or the Atchison. "Q. Take the territory west of Pittsburg, or take say Pittsburg common points and Cincinnati common points; what different ways would that traffic move to the coast? A. There were a great many routes by which it could have gone. From Pittsburg it could have gone via Chicago; it could have gone from there via St. Paul or via Council Bluffs or Omaha or via Denver or via Kansas City or via El Paso, or it could have gone south via New Orleans, and gone west from there; or it could have gone through St. Louis and out that way. There were a great many gateways for it to travel and through which traffic could have found an outlet. * * * It could have gone down the river to New Orleans and could have gone west from there, or it could have gone by rail." The U. P. didn't use the S. P. to get into Colorado. (812) As to that business, they were competitors. The Canadian Pacific was at one time an active competitor for business for San Francisco from all eastern portions of the U. S., and operated on a differential rate. Witness thought ten per cent. Took it to Vancouver, and from there by boat to San Francisco. Witness

Many different routes for traffic from Pittsburg to coast.

Canadian Pacific.

thought Northern Pacific had done a little business by boat communication with San Francisco. Business has been handled by the northern lines via boat connection with San Francisco; in very small amounts, however. Witness remembered one shipment of rails moving from Chicago by the Illinois Central to New Orleans, the Sunset route to San Francisco. (813) When the Santa Fe ended at Mojave and reached San Francisco over the lines of the Southern Pacific, witness considered that the Santa Fe was in active competition with the Southern Pacific and with the Union Pacific for trans-continental business. Divisions of the rates between the roads reaching the Pacific coast through the Ogden gateway were made soon after completion in the early seventies.

Rate divisions.

(814) As witness remembered, by the Chicago gateway, it was 22 per cent. east of Chicago, 78 per cent. to be divided west of Chicago, with a deduction for the Omaha bridge toll, which was an arbitrary, and may be some terminal charge at San Francisco. After that the lines east of Council Bluffs received 15 per cent. of the balance. Then there was another subdivision west of Omaha between the U. P. and the Central Pacific. Prior to 1901 the fruit traffic from Southern California moved over the Southern Pacific, which controlled the line via Ogden and the line via El Paso, and also over the Atchison road, which had its own line. All the lines east of Ogden and west of Chicago had soliciting agents out there endeavoring to secure the routing of traffic by way of Ogden. Prior to 1901 the Southern Pacific and Union Pacific maintained soliciting agents in the various large cities in the east. The function of a soliciting agent was to look after the welfare of that railroad, represent it and try to secure as much business for it as possible at the tariff rates, and in every way to be the agent of the company. The work included personal solicitation, settlements of claims, etc. All the transcontinental lines maintain offices in New York for that purpose now.

Soliciting agents.

(815) Panama Line, of which the Pacific Mail formed a part, was in 1901, a factor in the trans-continental traffic. Prior to 1901 there was emigrant passenger business from New York for the Pacific Ocean and intermediate regions that was competitive between the different lines. It was quite a large business. All the western lines participated in it,—the same ones that witness mentioned as having competed for freight business. The rates over the various lines to Colorado from here [New York] were identical.

Panama line.

(816) There was no competition in rates, but the competition was in service, and in attracting people's attention to the various lines. The business competitive between the Sunset route or the S. P., and its rail connections at New Orleans or Texas points, and thence to the coast on the one hand and the Union Pacific line on the other hand was large. Competition was chiefly east of Ogden. Witness always considered in Atchison's California business, Pacific coast business, that the connections of the U. P. and S. P. were more difficult to deal with as competitors than those lines proper. The Atchison's difficulties were with the connections of

No competition in rates.

U. P. competitors.

the S. P. more than the S. P. itself. One of these connections was the Union Pacific. "The Union Pacific had the D. & R. G. to compete with—its nearest competitor; then it had on the south the Texas & Pacific and the Rock Island from El Paso; and when it got as far as Denver it had the Burlington and the Missouri Pacific." New York common points means the points which take the New York rate, that is, one hundred per cent of the New York rate.

Purchase by Santa Fe of line to San Francisco.

(817) First connection with the Atchison road was in January, 1896. Then became Vice-President in charge of traffic. The western terminus of Atchison then at San Diego. It got this line to Mojave in 1897, '98 or '99. Atchison interchanged business there with the Southern Pacific before that. About 1898 purchased San Francisco & San Joaquin Valley R. R., which was finished from Stockton to Bakersfield, and Atchison completed it to Point Richmond on San Francisco Bay. At the same time made arrangements for the use of the S. P. line from Mojave to Bakersfield. Line to Point Richmond opened for transportation about May, 1899. (818) Prior to that time had no method of doing business to San Francisco, except in connection with the S. P. There was no other company, except the S. P., operating a line on the Pacific coast south of Portland while witness was Vice-President of the Atchison. "Q. The only competition for traffic to the Pacific coast south of Portland was between the Southern Pacific and the Atchison, and their connections, wasn't it? A. Yes, that is right. * * * Q. In the competition between the Sunset route of the Southern Pacific (and by that I mean the route via New Orleans and El Paso) and the Union Pacific, that you have testified about, do you not include among the lines engaging in that competition the lines east of the Missouri River? A. Only as connections."

Competition south of Portland.

Competition was chiefly east of Ogden and El Paso.

(819) With reference to Ogden and Sunset routes, witness said the traffic competed for was large. Does not think he said the competition was large. Competition chiefly east of Ogden and El Paso, and much more intense between the connections of the S. P. than with the S. P. so far as the Atchison's experience was concerned. Leaving out of consideration any possible line by way of Portland, it would be impossible for the U. P. to compete for any California business, except in connection with the S. P. "Q. No rate could be made lawful by any line, except the Atchison, to San Francisco, without the consent of the Southern Pacific Company? Mr. SEVERANCE: You mean all rail rates. Mr. LOVETT: I mean rail rates. (820) A. No; the rates actually were in the hands of the Southern Pacific Railroad. Q. It always controlled the rates to California except as against the Atchison, did it not, Mr. Morton? A. Yes sir. Q. And that was because it owned the line from Ogden or operated the line from Ogden to California points, and the Sunset route being the only line outside of the Atchison? A. They controlled the situation. They had the matter in their own hands. Q. Isn't it true, Mr. Morton, with

S. P. always controlled the rates to California except as against the Atchison.

respect to business to and from the Pacific coast and the Orient, the Union Pacific was absolutely without any rate-making power unless it be by way of Portland? A. Yes sir. * * * Q. So that there never was a time so long as you were connected with the Atchison when a railroad rate could be made to or from California by the Union Pacific or any other railroad company, except the Atchison, without the consent of the Southern Pacific? A. That is right. Any other published rate. Q. That is what I mean —an open, lawful rate. That the concurrence of the Southern Pacific— A. Was essential. (821) Q.—Was essential in any lawful rate that was made during that whole time, except by the Atchison? A. Yes sir."

The concurrence of the S. P. was essential.

(821) When the Burlington took traffic to Denver and delivered it to the D. & R. G., the latter could not send it to the Pacific coast, except by delivering it to the S. P. at Ogden. So with the Missouri Pacific or any other line. The traffic which witness said was large in volume and was competed for by the Southern Pacific and Union Pacific was the traffic that would move by way of Ogden and over the line of which the Southern Pacific was a part, on the one hand, and the Sunset Route of the Southern Pacific on the other. The concurrence of the Southern Pacific in the rates on which that traffic would move, at a lawful rate, was necessary. Doesn't think the U. P. ever made much of an attempt to carry traffic from the east to San Francisco by Portland. That route never bothered the Atchison any. If the U. P. got traffic to San Francisco that way, they could not get it into the interior of California either by using the S. P. or Atchison, and the route never was an important factor in the rate situation. Canadian Pacific tried to get traffic to San Francisco in the nineties. (822) There was an arbitration as to whether the Canadian Pacific should have a differential, and it was decided that there should be none. As a result, the Canadian Pacific practically withdrew. Doesn't think there was any profit in the business to the Canadian Pacific. The published rates by all the lines was the same. That is the general rule. No rates were ever published to the Pacific coast without first receiving the sanction of the S. P. and the Atchison, since the latter was a through line. They are generally regarded as the rate-making power so far as that territory is concerned. That is true today. Doesn't know of any change in the situation since 1901. The rates by the northern route are, of course, taken into consideration.

All the traffic going via El Paso or Ogden went over the S. P.

Portland route never an important factor.

S. P. and Atchison were the rate making power.

(823) The lines east of the Missouri River were soliciting transcontinental business during witness' connection with the Atchison, both in the eastern territory and on the Pacific Coast, and the Union Pacific, the D. & R. G., the Burlington, and even the trunk lines between Chicago and the Atlantic Seaboard were soliciting that business. The business was being solicited by all the lines between Chicago and the Missouri River, the Wabash, the Missouri Pacific, the Rock Island, the Illinois Central, the North-

The lines which were soliciting transcontinental business.

western, the St. Paul; they were the connections which witness stated he always found to be the most difficult factor. The Southern Pacific and Union Pacific might have differences among themselves in rate meetings as to the division of through rates, even though they were merely connecting lines. When such differences occur it does not necessarily follow that the lines are competitive. It may be that they are merely connecting lines. Divisions of through rates are always reached by agreement. This is a matter of negotiation.

Colorado traffic.

With reference to business to points in Colorado (824) witness assumed that it might have gone via Southern Pacific out as far as Houston, but does not think much of it moved that way. Thinks it went Texas & Pacific, although that business has all been transferred now to Galveston. Does not think much of it goes from New Orleans. The Texas Pacific was the short line to Colorado points—shorter than the Southern Pacific. Southern Pacific steamships first went to Galveston along about 1900. If the Colorado business was carried to New Orleans then the natural line for it to move over would be the Texas & Pacific to Fort Worth, then over the Fort Worth and Denver to Colorado points, or it might be turned over by the Texas & Pacific to some other line. Thinks the M. K. & T. handled some of it. Knows that the Rock Island handled some. They were all factors in the settlement of the matter. Does not think that the Southern Pacific ever had much to do with it. If the traffic moved from Galveston it could be handled by the Gulf, Colorado & Santa Fe or the M. K. & T. or the International Great Northern and their connections, or the Houston & Texas Central, controlled by the Southern Pacific. The Southern Pacific has never controlled any line into Colorado. The line that it controls from the Gulf does not extend north of Denison, Texas, or Fort Worth, Texas. The business from New Orleans to Colorado points could move very naturally to Kansas City and then over the Union Pacific, but witness did not know whether any moved that way or not. To move business that way from Galveston would be taking it out of its way.

(825) The traffic could be taken by the M. K. & T. to either Kansas City or Junction City, Kansas, and there turned over to the Union Pacific. There are several other lines by which the traffic could move to Kansas City and be interchanged with the Union Pacific there. The Union Pacific received as much compensation for hauling this traffic through the Kansas City gateway as it did through the Omaha gateway.

(826) When the rates are the same, the competition is in service and other things. Witness doesn't remember if U. P. ever took traffic to San Francisco via Portland. (827) The Morgan line of steamers were a factor in the Colorado business, but had to take care of the Mallory Line, their competitors. Witness has

an indistinct recollection of a pool on trans-continental business, and the U. P. was scrambling on one side and the S. P. on the other, but only as connections.

(828) In traffic meetings the U. P. and Sunset routes frequently competed with each other. Also competed through their soliciting and commercial agencies. Witness thinks they are now competing here in New York. Never was much competition in Chicago. Competed to some extent at Pittsburg. Also through the central states territory. Competition was largely between the connections of the U. P. and S. P.

Competition was largely between the connections of U. P. and S. P.

(829) Rates were changed by the Atchison and S. P. without the consent of the U. P. The latter was never much of a factor in making the through rate. Entirely dominated by the wishes of the S. P. as to both east and west bound business. Thinks divisions have remained substantially the same for thirty years, since the U. P. and S. P. were completed. Remembers trans-continental traffic meetings at which the U. P. was not represented.

U. P. never much of a factor in making through rates.

(830) One of the methods of securing business in the old days was by cutting rates without the knowledge of the other railroads. It was participated in by all the railroads doing business. That was done by railroads even where they had connections, where they would give up a part of their own division, part of the full rate. That was done by connections without expecting the roads controlling the situation to give up anything. "Q. And in that kind of competition it was possible for the Sunset Route to compete against the Union Pacific without the Southern Pacific figuring with the Union? A. Well, the Sunset Route occupied the same relations to all of the connections of the Ogden Line, the Central Pacific Line, that the Atchison did to the lines running west from Chicago. They had a line of their own through to New York. The Atchison had a line of its own through to Chicago, and with perfect good faith on the part of the Southern Pacific the connections east of Ogden might vary the rates, and the connections east of Ogden, including the connections east of Chicago, might vary the rates so far as the Sunset Line was concerned. To some extent it was a disadvantage to have a through line and not have wicked partners. Q. Yes, that is right. And the Union Pacific could vary its proportion of the through rate in order to get the business? That is what I mean? A. I mean not particularly the Union Pacific. I mean all of them." That competition was contrary to law. (831) That was in the old days when they were all doing something to get business in a manner which was not permitted by legal methods. The scramble for business east of Ogden all helped the S. P. in the end. In pooling arrangements for a division of the traffic or the revenue of the pool, contentions might arise between connecting as well as competing lines, the connecting lines fighting over the division. The S. P. owning its own line from

Rate cutting.

New York to California points, would naturally favor the route by which it could get the entire revenue as against that where it received only a portion. Any contention that the Union Pacific might have made in the traffic associations for a share of that traffic as against the Southern Pacific (832) would not be as against the Sunset Route but in connection with the route from Ogden to San Francisco, which was its only outlet to the Pacific. If the U. P. had attempted to use the Portland route to San Francisco as a club against the S. P., to force a larger division between it and the Central Pacific, the S. P. would have been in a much better position to retaliate by diverting its traffic to other lines as against the U. P. The U. P. thought that this course would be suicidal. The Atchison could have formed a line from San Francisco by San Diego and water, but never saw fit to do so. Never thought there was anything in it. The vast volume of traffic of the U. P. to the Pacific coast always has been and must necessarily be interchanged with the S. P. at Ogden, rather than by way of Portland. A large proportion of the east bound business in California consists of oranges, which could not be sent that way. The U. P., except the Portland route, has no way of getting to the Pacific coast without the S. P., while the latter could move its traffic either way without using the U. P. With regard to competition by service, the service over the Ogden route is much better than it was prior to 1901.

Vast volume of U. P. business for coast must be interchanged with S. P. at Ogden.

U. P., S. P. and Santa Fe improved.

(833) The service over all the lines hasn't improved, but the S. P., U. P. and Santa Fe have been particularly improved. The rates to the Pacific coast have been much affected by the clipper ships around the Horn at times, and also more or less by the Panama route. The Tehuantepec route opened since witness' railroad experience closed. Witness' prior testimony as to rate-making referred only to overland railroads. One reason why the matter was left to the Atchison and S. P. officials was that they were on the ground, and kept in touch with competition from everywhere. (834) Referring to witness' testimony, that it would be suicidal for the U. P. to endeavor to work business by Portland, Mr. Severance asked if it would not be a suicidal matter for the S. P. to make such extreme demands in the way of divisions as to force traffic in other directions, to which the witness replied: "I think their interests are mutual, are identical." Such extreme demands on the part of the S. P. would have the effect of throwing business to the Atchison and other lines. Shippers do not know about and are not interested in divisions of rates between railroads.

Hawley.

(835) EDWIN HAWLEY.

New York. Formerly Gen. Eastern Agent of S. P.

Lives in New York. Has for 42 years been engaged in railroad business in New York. Has been connected with the Chicago, Rock Island & Pacific, the Erie, the Ohio & Mississippi, the Chicago, Milwaukee & St. Paul, the Chicago & Northwestern, the Chicago, Burlington & Quincy, and the S. P. Now President of

the Iowa Central and the Minneapolis & St. Louis. Became connected with the S. P. February, 1883, as General Eastern Agent in charge of both freight and passenger traffic east of Mississippi River. Immediately prior to that time was the pool agent of the Milwaukee & St. Paul, and the Rock Island, the Northwestern and the Burlington. The "California Fast Freight Line" was the trade mark. The business of the California freight lines from New York went over any of the trunk lines in connection with the lines I have mentioned. That is, the trunk lines from here to Chicago, then the trunk lines witness has mentioned from Chicago to Council Bluffs, thence by Union and Central Pacific.

(836) Morgan Line established shortly after witness became connected with S. P., and was from the first run in connection with the S. P. Sunset route. Transcontinental lines west of the Missouri River competing for business to the Pacific coast were the U. P. the Atchison, the Texas & Pacific, the S. P., the Northern Pacific, the Great Northern, and the Canadian Pacific. Witness, when General Eastern Agent of the S. P., endeavored to move freight from New York common points via New Orleans, and as to business originating in Pittsburg or Cincinnati territory via New Orleans in connection with all rail lines. U. P.'s eastern agencies worked in competition with witness; also the Santa Fe and the other lines. (837) To a much smaller degree competition between the U. P. and Sunset route at times extended as far north as Portland. Sunset route handled to Oregon points, dry goods, high class freight; not in considerable quantities, however. Traffic moving to New York from Portland and common points consisted more particularly of hops, which came both over the U. P. and S. P. Rates on all rail lines and Sunset route were the same. There may have been exceptions, periodically on certain commodities. Class rates were the same. Canadian Pacific had a differential, which was terminated by arbitration.

Transcontinental lines west of Missouri River.

Business routed via New Orleans.

Hops.

(838) Witness worked business to Colorado common points and Utah common points, via the Morgan Line to New Orleans, thence over the H. & T. C. and the Colorado Southern; also at times in connection with the Rock Island. The H. & T. C. delivered to the S. P. Ran from Houston to Fort Worth. Reached Houston from New Orleans over the Morgan's Louisiana & Texas Railroad and Steamship Line. Rates to Utah common points not the same as to Colorado common points. S. P. rates to Colorado common points lower than all rail rates. As to that business S. P. competed with the U. P. (839) In reaching these Colorado points, U. P. didn't use the S. P. lines. Was also in competition with U. P. in reaching Utah common points. The latter didn't use the S. P. rails to reach those points, but at times the S. P. used the U. P. rails. Most of the traffic was routed by the S. P. over the Denver & Rio Grande, and the Rio Grande Western. This competition existed up to the time witness left the S. P. service. After 1901, U. P. and S. P. agencies pretty generally consolidated,

Colorado and Utah business.

except those at New York. Witness opposed the consolidation there. Consolidation eliminated competition to a very great extent.

(840) When rates are maintained, personal solicitation and correspondence are the methods usually adopted to secure business. The S. P. and U. P. actually competed for first class and emigrant passenger business to the coast. Sunset route's percentage of trans-continental business out of New York and common points up to Jan. 1, 1901, varied from 85 to 40 per cent. Witness thought Sunset route carried at one time as high as 50 per cent. of all the business originating in what is termed the "seaboard territory." (841) Seaboard territory included points east of Buffalo and Pittsburg. S. P. absorbed the charge to the coast. Covered generally all of New England. Thinks Norfolk was the southerly point. There were a few points east of Pittsburg which took Pittsburg rates. Sunset route didn't compete for that business via New York, but did by way of New Orleans for iron and steel products generally. Pittsburg business took the same rates via rail to New Orleans and on to the coast as it did via Omaha. There was a group of points, both east and west of Pittsburg, that reached the Pacific coast either by Cincinnati or Chicago. The rates were the same. Traffic could go either by Omaha or by New Orleans and Texas common points, on the same tariff. (842) That was competed for by the U. P. and S. P. Thinks competition extended as far west as the Mississippi River. The territory in Tennessee and Alabama, the southeastern territory, was competitive in the same way, between the same lines, at the same rates.

S. P. absorbed the charge.

(843) U. P., Omaha to Ogden, 1,003 miles; S. P., Ogden to San Francisco, 850. U. P. only worked the Ogden San Francisco route for Pacific coast business, and could not lawfully make a rate to or from California without the consent of the S. P. Witness, when connected with the S. P., endeavored to solicit business by the Sunset route, because the S. P. would get more revenue out of it that way. Atchison didn't compete much with the S. P. for Northern California business until they acquired the San Joaquin Valley road, but they did for Southern California. They were the only companies that had lines extending from the Pacific coast easterly as far as Ogden and El Paso. (844) The trunk lines to Chicago and the Missouri and Mississippi Rivers were struggling for business as against the Sunset route, and had to deliver the business either to the Atchion, S. P., or Texas & Pacific. In the latter case, it was delivered at El Paso to the S. P. Whoever got it, it had to be delivered eventually to the S. P. or Atchison. U. P. never worked Portland route on California business to any considerable extent. It is an impractical route in point of time, and could not distribute business in California without paying local rates. Moreover, the S. P. would have retaliated by diverting business at Ogden. The Sunset route to Portland was about 1,500 miles longer than the U. P. and O. S. L.

U. P. could not make rate without consent of S. P.

(845) About 5,000 miles one way, and 3,300 the other. Don't think the Sunset ever carried as much as three per cent. of the Portland business. Doesn't think the Canadian Pacific carried business to California for any great period. It tried to force recognition as a differential line, and failed. The disadvantage in point of time was too great. Witness understands S. P. still absorbs the rates from the seaboard territory to the same extent as before the acquisition by the U. P. (846) U. P. has practically no power to make transcontinental rates, independent of S. P. Merely a connecting line. Witness never attempted to move any of the business west of Pittsburg by way of the Morgan Line. Never moved any traffic from Pittsburg or the territory west, to Portland, by rail to New Orleans, thence over the S. P. The business to Colorado points moving by the Morgan Line to New Orleans went over the S. P. lines to Fort Worth, Texas (847) and thence over what was formerly the U. P., Denver & Gulf, to Denver. The latter line was controlled by the U. P. when witness first became connected with the S. P. Remained in its control until the receivership in 1893. During witness' connection with the S. P., the Morgan Line ran a boat in the cotton season to Galveston; one, and occasionally two, steamers a week. Since witness' connection ceased, a regular line is operated to that point. During the whole time, the Mallory Line was carrying business to Galveston for Colorado common points, and its principal connection was the Atchison system. The Atchison, which owned the line at that time from Chicago to Colorado—Pueblo—worked that same business by way of its Gulf Line.

Portland business not via Sunset.

Can. Pac. differential.

Morgan and Mallory S. S. lines.

(848) The M. K. & T. and the Gulf lines carry some of the business from Galveston to Colorado. Some of the Colorado business from Galveston was delivered to the U. P. at Kansas City. The Mallory Line worked all those connections. The U. P. joined the S. P. in divisions on Gulf business from Denver to Utah points. The interest of the U. P. in the Colorado and Utah business moving all rail from the seaboard was only for the carriage from the Missouri River to final destination. Business originating in territory west of Pittsburg and going all rail to New Orleans, was worked on through rates, and the concurrence of the lines from those points to New York and New Orleans was necessary. The line originating the traffic would naturally move it the way they get more revenue, if possible, but they didn't generally control.

Colorado and Utah business.

(849) The S. P. generally controlled. The initial lines would control only from local points. Their influence would naturally be thrown towards sending it by the route over which they secured most revenue. Witness never attempted to compete for Colorado and Utah business originating west of Pittsburgh, by way of New Orleans, either by rail or by the Morgan Line. The running of ships to Galveston, while witness was a traffic official of the S. P., was a very irregular service, only periodical, and only a trifling amount of Colorado business was ever carried that way. For Colorado business via New Orleans, the Morgan Line only had through

Business originating west of Pittsburg.

rates over the S. P. (850) Prior to receivership, the U. P. owned the line afterwards called the Colorado Southern, but not after the Receivers were discharged. For several years prior to the purchase of the S. P., the U. P. had not owned the Colorado Southern. Trans-continental rates were made at conferences at which all the roads were represented. All the lines through to the Coast were considered as factors.

Transcontinental rates made at conferences.

(851) It was because of the competition of these lines that rates through to the coast were cheaper than to intermediate points. Distance by steamer New York to New Orleans, 1,800 miles, and to Galveston 2,000 miles, but on a pro-rate basis the water line is taken at three miles for one of rail, which would reduce the distance from New York to New Orleans to 600 miles, New Orleans to San Francisco, rail, 2,495 miles. Distance New York to Chicago 900 miles; from there to Omaha, 500; thence to Portland 1,800 miles; in all 3,200 miles to Portland.

Distances.

(852-853) From Portland to San Francisco by rail about 700 miles. Consequently, the line to San Francisco via Portland and thence via water is a little shorter than the Sunset route to San Francisco. Witness thought it would not be impossible in case of active competition to route San Francisco traffic via Portland.

The Canadian Pacific, for ten per cent. less, carried shipments to San Francisco by Vancouver, but only to the one point. In view of the fact that U. P. could carry freight via Portland to San Francisco, that fact might have been used in fixing rates to the coast, but witness doesn't think it was a factor. Boats could have been put in to San Diego, and connected with the Santa Fe from Portland. For years the O. R. & N. operated a line of boats between Portland and San Francisco, competitive with the S. P. Witness didn't think the Great Northern had ever attempted to take business for San Francisco via Puget Sound, and thence by water. Thought at one time the Northern Pacific had attempted to take business via Puget Sound, but it was "merely a flurry;" didn't amount to anything. The Southern Pacific, with two or three sailings a week from New York to New Orleans and Galveston, could load whole trains at once on its dock and rush freight through to San Francisco, but the all-rail lines receiving business in broken lots and irregular quantities, are unable to give anything like the service by rail and boat from Puget Sound or Portland, but what has greater influence is that the entire S. P. line is under one control, and there is no divided responsibility in the settlement of claims, and matters of that sort.

Portland-San Francisco route, not a factor.

(854) Doesn't think the U. P. could secure any considerable amount of business for San Francisco via Portland. Thinks if the Northern Pacific, Great Northern or Canadian Pacific, or U. P., could make any profit by competing with the S. P. on San Francisco business by the use of boats down the Pacific coast, they would do so. The fact that they don't try is very satisfactory evidence that they couldn't make money by that course. From New

N. P., G. N., Can. Pac. and U. P. cannot compete with S. P. by use of boat line.

York to Denver by the Gulf is 3,500 miles, by the all-rail lines it is about 1,900. On equality of rates much business would not have moved by the longer route. There was a lower rate on Denver business via the Gulf than by all rail.

(855) The business that moved on the differentials compared to the whole business was very small. There would have been practically none on equality of rates. Since the consolidation, during witness' connection with the S. P., both the agencies in New York were actively soliciting business. Witness had no knowledge of any change. Boston and Philadelphia are the same. (856) Consolidation of S. P. and U. P. agencies due to the common management and economy. Thinks Northern Pacific shared in the old pool as applied to California business, but couldn't say positively. If the Northern Pacific did, the U. P., Short Line, and Nav. Co. did of course. Has no distinct recollection. Couldn't say whether the Northern Pacific had any interest in pool or not. Old pool ceased to exist certainly prior to 1890.

(857-862) HARRY C. BLYE.

Blye.

General Agent of the Trunk Line Association, in New York City, for thirty years. Witness promised to supply statement showing division of business originating from shippers in New York City and destined for the Pacific coast, as between the Morgan Line and the rail lines. The S. P. stopped reporting to witness in 1901 or 1902. Thinks reports were made pursuant to agreement, and if there was a good way out of it, were not furnished at all.

New York. Gen. Ag't., Trunk Line Ass'n.

(862) FRANK W. WHITE.

White.

Employed in the Division of Rates and Transportation, of the Auditor's Office, of the Interstate Commerce Commission. Complainant's Exhibits 81-A to 81-K were prepared in witness' office, and were examined by him in connection with the tariffs, after they were prepared. 81-A is a statement showing class and commodity rates from points east of Missouri River to California terminals from June, 1887, in connection with the other exhibits, up to the present time. (863) "New York common points" are points in a general way east of Buffalo and Pittsburg down as far as just east of Bristol, Tenn. All territory east of there and north of the Norfolk & Western from Bristol to Norfolk. California terminals in a general way are San Francisco, Sacramento, Stockton, Los Angeles, Marysville and San Jose. Portland is a Pacific coast terminal. (864) Pacific coast terminals are points that are adjacent to the Pacific coast. Not what you might call inland points; in fact all of the big cities on the coast. They extend from National City, or San Diego, to Vancouver. Complainant's Exhibit 81-A shows the rates from New York common points, Pittsburg-Buffalo common points, Cincinnati-Detroit common points, Chicago common points, Mississippi River common points and

Employee I. C. C.

Rate statements.

Missouri River common points to what are known as the California terminal, including also Portland, perhaps East Portland. Generally speaking, the rates are the same from all these eastern points to the California points, including Portland, by all lines, rail and the rail and water lines, by the Gulf. This is true except as to a few commodities. In the exhibit the commodities selected are representative commodities.

Eastbound rates.

(865) Exhibit 81-B is a statement showing the east bound rates from the same terminals to the same eastern points. 81-C, 81-D and 81-E are statements showing the rates to and from Colorado common points, both all rail and sea and rail, the latter including both the Morgan and Mallory Lines. Exhibit 81-F is a statement showing some few commodities in addition to those shown in 81-A. Exhibits 81-A to F, inclusive, were made up in October, 1908. Exhibits 81-G, H, I, J and K bring the east and west bound rates shown by 81-A to 81-F, inclusive, down to the present time. These exhibits offered in evidence.

Class and commodity rates.

(866) Exhibit 81-A, Statement showing class and commodity rates in effect June 24, 1897, to date, from and to various points named. (868) Exhibit 81-B, Statement showing class and commodity rates from Jan. 10, 1898, to date, from and to various points named. (870) Exhibit 81-C, Statement showing class rates, all-rail, from Colorado common points to New York, Jan. 1, 1898, to date. (872) Exhibit 81-D, Statement showing class rates, from Colorado common points via Gulf routes to New York, May 12, 1897, to date. (873) Exhibit 81-E, erroneously entitled "Footnotes to complainant's Exhibit 81-D," see post p. 3378. (875) Exhibit 81-F, Statement showing commodity rates from various points named to California terminals supplementary to statement showing class and commodity rates from New York, etc., to Pacific coast terminals, as per statement No. 1519. (877) Exhibit 81-G, Comparative statement showing changes in eastbound transcontinental freight rates, taking effect Jan. 1, 1909. (878) Exhibit 81-H, Comparative statement showing changes in westbound transcontinental freight rates, taking effect Jan. 1, 1909. (879) Exhibit 81-I, Continuation of 81-H. (880) Exhibit 81-J, Comparative statement showing changes in class and commodity rates from San Francisco, Cal., to Portland, Ore., Feb. 10, 1898, to July 1, 1908. (881) Exhibit 81-K, Comparative statement showing changes in class and commodity rates from Portland, Ore., to San Francisco, Cal., Feb. 10, 1898, to July 1, 1908.

Passenger fares.

(882) Exhibits 82-A to 82-L, inclusive, offered in evidence, and are statements showing first and second class passenger fares from eastern points and points as far west as Pueblo, to San Francico, Los Angeles and Portland.

Exhibit 82-A, Statement showing first and second class passenger fares from and to points named. Exhibit 82-B, Statement showing first and second class passenger fares from and to points

named (continued from complainant's Exhibit 82-A). Exhibit 82-C, Statement showing first and second class passenger fares from and to points named (continued from complainant's Exhibit 82-B). Exhibit 82-D, Rates from Puget Sound points to New York, Harrisburg, Pittsburg, Cincinnati, St. Louis, Chicago, Kansas City, Omaha, Denver, Colorado Springs and Pueblo via various routes. Exhibit 82-E, Statement showing first and second class passenger fares from and to points named. Exhibit 82-F, Class rates from St. Louis, Chicago, Kansas City, Omaha, Denver, Colorado Springs and Pueblo, to Los Angeles, San Francisco, and Portland via various routes. Exhibit 82-G, Passenger rates from New York to Los Angeles, San Francisco, Portland, and Puget Sound points, etc. Exhibit 82-H, Passenger rates from New York to San Francisco, Los Angeles, Portland and Puget Sound points via different routes. Exhibit 82-I, Passenger rates from Harrisburg, Pa., to Los Angeles, San Francisco, and Portland, etc., via various routes. Exhibit 82-J, Passenger rates from Harrisburg, Pa., to San Francisco, Los Angeles, Portland, and Puget Sound via certain routes. Exhibit 82-K, Passenger rates from Pittsburg, Pa., to San Francisco, Los Angeles, Portland and Puget Sound points via certain routes. Exhibit 82-L, List of rate sheets from which passenger rates are quoted. (884-887) Exhibit 83 is a statement showing the difference in rates between the Mallory and Morgan Lines on the one hand, and the all-rail lines on the other, from New York to Pacific coast terminals, from January, 1900, to the present time. The class rates are the same, and generally the commodities rates are also, but this exhibit shows the exceptions. Offered in evidence.

Tariff changes.

(887-90) Exhibit 84 continues 83 down to the present time, and shows the changes made by the tariff which took effect January 1, 1909. Referring to Exhibit 83, on January 18, 1900, there were approximately 65 items on which the rates were less by the Mallory and Morgan Lines than by the all-rail lines. Since 1901, as shown by Exhibit 84, there are about 20. That is, out of many hundred items.

(890) The tariffs show the same rates east of the Missouri River by all lines to the Pacific coast, including New Orleans as a Mississippi River point, so that freight from New Orleans could move by the U. P. to California terminal points. (890-899C) Exhibits 85 to 96 are tariffs naming rates from foreign ports by steamship lines to New Orleans, thence via the U. P. and connections to Pacific coast terminal points. Offered in evidence.

Joint freight tariffs.

Exhibit 85, Joint freight tariff, Illinois Central R. R. Co. and Union Pacific R. R. Co., from Hamburg, Germany, to Seattle, Wash., on 25 cases earthenware.

(892) Exhibit 86, Joint freight tariff, Illinois Central R. R. Co. and Union Pacific R. R. Co., from Antwerp, Belgium, to San Francisco, on 100 cases champagne.

(893) Exhibit 87, Joint freight tariff, Illinois Central R. R. Co., from Bordeaux, France, to San Francisco, on 50 cases wine.

(894) Exhibit 88, Joint freight tariff, Illinois Central R. R. Co. and Union Pacific R. R. Co., from Antwerp, Belgium, to San Francisco, on 180 cases mineral water and 580 cases of window glass.

(895) Exhibit 89, Joint freight tariff, Illinois Central R. R. Co. and Union Pacific R. R. Co., from Antwerp, Belgium, to San Francisco, on 238 cases mineral water.

(896) Exhibit 90, Joint freight tariff, Illinois Central R. R. Co., Union Pacific R. R. Co., and Oregon Short Line R. R. Co., from Antwerp, Belgium, to Pueblo, Denver, San Francisco, Salt Lake City, on cases of window glass, crockery, toys.

(897) Exhibit 91, Joint tariff, Illinois Central R. R. Co., Union Pacific R. R. Co., and Southern Railway Co., from Antwerp, Belgium, to Oakland and San Francisco, on cases of wash blue and window glass.

(898) Exhibit 92, Joint freight tariff, Illinois Central R. R., Union Pacific R. R., and Southern Pacific R. R. companies, from Hamburg, Germany, to San Francisco, on 400 bundles rattan.

(899) Exhibit 93, Joint freight tariff, Illinois Central R. R. Co., Union Pacific R. R. Co., and San Pedro, Los Angeles and Salt Lake R. R. Co., from Hamburg, Germany, to San Francisco, on 400 bundles of rattan.

International tariffs.

(899-A) Exhibit 94, Tariff, Illinois Central R. R. Co. and Union Pacific R. R. Co., from London, England, to Salt Lake City, Denver, San Francisco, on certain packages of beer and tea.

(899-B) Exhibit 95, Joint freight tariff, Illinois Central R. R. Co. and other railroads named from Progreso, Yucatan, to San Francisco, Portland, Seattle, and Tacoma, on sisal, ixtle, or istle.

(899-C) Exhibit 96, Joint freight tariff, Illinois Central R. R. and other railroads named from Progreso, Yucatan, to San Francisco, Portland, Seattle, and Tacoma, on sisal, ixtle, or istle.

(899-D) Exhibit 97 is a map showing what is included in New York common points, Pittsburg and Buffalo common points, Cincinnati and Detroit common points, Chicago common points, Mississippi River common points, and Missouri River common points.

Rates the same by all lines.

It is not unusual for rates between the same points by all lines to be the same. The rates have to be approximately alike, where the railroads furnish anything like equal service. During the same time, the rates between New York and Chicago were the same, except the so-called differential lines. During the summer, of course, there are lower rates by the lake, but by the all rail lines, standard lines, the rates are the same.

(900) The same is true of all rail lines between New York and St. Louis, as far as witness knows. Rates between New York and all Missouri River points are made on a combination of the river and are the same by all-rail lines. Witness would not consider that the circumstance that the rates are the same via the all-rail lines from the Atlantic seaboard to the Pacific coast, and by the

Sunset and the Mallory Line and its connections, at all exceptional, or significant. He is not a traffic man, and therefore not able to give testimony on that point. The result of these statements with respect to rates from New York and common points to the Pacific coast would not appear to be in any respect exceptional. As far as witness knew, from the Atlantic seaboard to all Mississippi and Missouri River crossings, to Colorado points, Utah points, Montana points, and indeed universally, as a rule, under the Interstate Commerce Act, where rates are filed under the Interstate Commerce Act, the rates are the same via all lines except when agreed differentials are shown by the tariffs.

(900) CHARLES WHITNEY THROCKMORTON.

Throckmorton.

Lives in Morristown, New Jersey. Has been a stock broker since March, 1905, doing business at 346 Broadway, New York. (901) Was employed by the S. P. in March, 1892, in its freight office at New York City, in various capacities, beginning as a boy in the Claim Dept., and for seven years prior to 1904 was in the Soliciting Dept. Tried to get freight by personal solicitation and correspondence, principally the former. Called upon shippers and connecting lines. Freight witness sought originated all over the country. Solicited both east and westbound freight. Wherever witness found a shipment, he tried to get it. There was no limit. Good soliciting agents take care of the shipper's business as much as they can; they explain the movement of the freight, give him the best routes and rates, and keep him posted as to any changes in rates; also trace freight and take care of his claims. Witness has always regarded a solicitor as practically the agent of the shipper.

New York. Formerly with S.P.

Solicitation of freight.

(902) Mr. Hawley was witness' chief. Recalls the time that the Union Pacific purchased the stock of the Southern Pacific. Previous to that time in soliciting freight, he endeavored to route it to the Pacific coast by the Morgan Line and the Sunset Route via New Orleans, until the Galveston Line was put on, and then via Galveston. From territory west of Pittsburg endeavored to route it all-rail Sunset through New Orleans. After 1901 no new instructions were given witness with reference to the way he should work the freight, but he tried to get the business for the line he was really employed by. Regarded the S. P. as his road. Believed there were some general rate divisions shown, showing the amount that accrued to the lines west of Omaha and the lines west of New Orleans. They were practically the same—the amount of revenue accruing. (903) That is, the U. P. and S. P. together received about the same revenue that the S. P. did from New Orleans. No instructions or requests were given to witness with reference to routing traffic by the Ogden route. Regarded that as "a second route," because the S. P. participated in it. U. P. had a soliciting agency, and witness was in very active competition with them. To the best of witness' recollection, the Morgan Line got about sixty per cent. of the business out of New York for the Pacific coast.

After 1901 no new instructions given.

While witness was soliciting agent, both before and after 1901, thinks the percentage was about the same, except for variations that were caused by different conditions. Thinks the Sunset route held its own pretty well.

Activity of freight solicitors.

(904) S. P. had five solicitors in New York City. Had no traveling freight agents out of New York. Merchandise, dry goods, machinery, etc., moved by the Sunset to Portland. Witness always tried to get all the business he could to Portland, or any other business on the Pacific coast that his line could handle. As eastbound freight, witness solicited dried fruit, canned goods, and all the stuff that moved from California and Oregon; also canned salmon from Portland, and apples from the Willamette Valley. (905) Fairly successful in getting business from that section. Thinks all the lines that ran into Portland were equally strong as competitors of the Sunset route. The traffic from New York to Colorado was about the same thing—general dry goods, machinery, and everything of that character. It was spasmodic, but to Utah more steady than to Colorado. Still, the latter was a pretty good business. Witness thought that the Morgan Line to Galveston was put on before the Spanish War in 1897.

(906) (Mr. Spence said Mr. Hawley was right, that it was put on in 1903, after the latter left in 1902.) (907) If it could possibly be handled via New Orleans, witness tried to get freight that way during the whole period he was connected with the Company. If he located a car in the territory north of the Ohio River and Ohio River points, and west of Pittsburg and Buffalo, and could get the routing here, he got it. If not, he notified the S. P. agent in Chicago to go after it. Witness understood the latter's effort was always to work business north of the Ohio River by the Ogden route. That would be the natural route for it to move; better time and everything. (908) That was true prior to 1901, as well as subsequently. U. P.'s traffic to and from Pacific coast, except at Portland, interchanged entirely with the S. P. at Ogden. Under the Interstate Commerce Act couldn't make rates to and from California without concurrence of S. P. The S. P.'s share of the Portland business was comparatively small. There was a difference of 1,500 miles in favor of the all-rail line.

S. P. agent at Chicago works business north of Ohio River via Ogden.

Same competition between U. P. and S. P. as before 1901.

(909) The same competition between the S. P. and U. P. continued after 1901. Witness was just as strenuous in efforts to get business for the Sunset route. Didn't notice any difference in U. P. agency. If anything, there was rather increased activity. U. P. solicited just as aggressively against the Sunset. U. P. practically at the mercy of the S. P. with respect to California and Pacific coast business south of Portland. Merely an intermediate carrier, without any rate-making power respecting trans-continental business.

U. P. and Pacific coast business.

(910) U. P. dependent on S. P. for business originating on the Pacific coast south of Portland. That was not true of westbound business. They had to give it to the S. P., in either case. Witness

wouldn't say that the business to Colorado points in this territory was generally small in value. It would all be comparative. "We carried quite a good deal of it." It was a small part of the tonnage of the Morgan Line, as compared with the business for Texas or the Pacific coast, or for Louisiana. Not able to say it was "very small." Doesn't know the exact tonnage. Moved spasmodically.

All-rail shipments for Colorado.

(911) On all-rail shipments for Colorado, the principal haul, in matter of distance, would be over the lines east of the Missouri River. West of Chicago or the Missouri River, the traffic could go via the U. P., the Atchison, the Rock Island, the Missouri Pacific, or the Burlington. The consignor or consignee controls the routing of shipments very largely, and if the U. P.'s soliciting agent could induce him to route his car by the U. P., the S. P. had nothing to do with it, except haul it from Ogden to San Francisco. Prior to 1901 witness, in soliciting via Ogden as secondary route, worked with every line, but principally with the U. P. Sometimes worked with the Rio Grande. (912) Business moved by Panama, and also through the Straits of Magellan. Distance is not controlling. The time and rate control.

Never routed San Francisco business via Portland.

(913) Witness never routed any traffic over the U. P. boat line from Portland to San Francisco. Doesn't know of any traffic going that way. Remembers cars going from Portland over the Sunset. Remembers the last lot of stuff he lost—a lot of apples. Wouldn't let the Sunset handle them; objected to the handling. That was in 1900 and something. (914) The all-rail was the easiest route for it to move. "Made the best time, in the handling." Does not recall any change after 1901 in the matter of movement of traffic to and from Portland. Solicited Portland business just as actively after 1901 as before. Portland business Sunset able to control as compared with total Portland business by all-rail lines was small. Whenever witness said that the S. P. and U. P. were competing, he meant that the Sunset route competed with the Ogden route, of which the S. P. also formed a part.

When he could not get business via Sunset, sent it via Ogden.

(915) The two lines are connecting lines at Ogden, but they were also competitors to control the business. All the cars that the Morgan Line office—the S. P. offices could control, it tried to control and route. It gave the office more credit, the more tonnage it could get, whether via the Sunset or the all-rail route. When witness could not get the business via the Sunset route, he sent it via Ogden. (916) Witness thinks the U. P. and Central Pacific were both connecting and competing lines. The former certainly had to deliver traffic to the S. P.—and they were competing in the fact that the S. P. wanted to control all the business they could over these lines, and sought to get the business and route it. The S. P. got every pound of freight destined to the Pacific coast that the U. P. took to Ogden. Witness didn't mean that if the U. P. got control of a car of freight that was going to the Gulf over the S. P. Line from Ogden, the latter would still try to avoid taking that car; not that car, but

future cars. Meant what he had said a number of times, that he worked all business he could by way of New Orleans.

Colorado-Utah business.

(917) Doesn't think the trans-continental business handled by the Texas & Pacific via El Paso amounted to very much. Practically all the Colorado and Utah business moving by the Gulf now goes through Galveston. What the Morgan Line gets goes up on the H. & T. C., and from the Mallory Line by various roads. The Atchison is the natural connection. The Atchison also has a line reaching the same points from Chicago, and works that business by the Gulf, too, in connection with the Mallory Line. The M. K. & T. does also. Doesn't think the M. K. & T. would take it to Kansas City. That would be a roundabout way.

(918) Doesn't think the Texas & Pacific used to engage in that business to Colorado. Doesn't know as to that. Never routed a car that way. Doesn't think shippers are interested in a division of rates between carriers. Both the work of the U. P. agents and of those of its connecting lines east of the Missouri River are a potential factor in securing business for the former from this territory for Pacific coast points. The initial lines work against the Morgan Line. The U. P. gets a larger percentage of business from the connecting lines than from the solicitation of their own men. Very much larger. Witness is not speaking from knowledge, but as a matter of opinion. Very important for soliciting agents to cultivate their connecting lines. (919) With rates at an equality it is more important than cultivating shippers. Business is exchanged more or less as a matter of reciprocity. (920) If U. P. delivered a car to the S. P. to haul it to the Pacific coast, the S. P. would have a good deal more to do than simply to haul it there, namely, to make the rates under which that car moved. The Union Pacific could not get it there except at rates agreed to with the Southern Pacific.

U. P. gets more business from connections than from solicitation of agents.

U. P. could not get freight to coast except at rates agreed to by S. P.

Chumasero.

(920) JOHN F. CHUMASERO.

Charge of traffic for Royal Baking Powder Co.

Since March, 1901, had charge of traffic of Royal Baking Powder Company; also one of the departments. Prior to that time general clerk in one of the departments. (921) Ships to Pacific coast points from main factory in Brooklyn. Has the largest business of that kind in the country going to Pacific coast. Ships carloads to the coast. From 1901 on, traffic has been solicited by agents of the S. P., U. P., Santa Fe, Northern Pacific, Great Northern, Canadian Pacific—all of them. Rates are the same. No attempt at cutting rates. Main factor is the service; length of time, care in handling the goods, and the personality of the soliciting agent. Ships by all roads to the coast. To California chiefly by Morgan Line or Santa Fe.

Routing of his traffic.

(922) To Portland generally by Northern Pacific, Great Northern and Oregon Short Line. Has no rule. Ships to the Orient entirely by Suez. Doesn't ship to Portland by the S. P. Too long

and roundabout a way; too much handling. Not actively solicited for Pacific coast traffic by all the lines out of New York. Witness would say that the solicitation was confined to trans-continental agents. In a general way, for example, the New York Central want all the business they can get, but witness was not specifically solicited by them for California business, or any Pacific coast business. If they hear that witness has a car moving, they come around and try to get it. Solicited right along by both U. P. and S. P. agents. No change in that respect in recent years. They are still competing.

(923) FRANK B. MESICK.

Mesick.

Resides at Deal Beach, New Jersey. His place of business is 401 Broadway, New York. General Eastern Freight Agent of the Rock Island since 1882. In the railroad business nearly 37 years. Agrees with Mr. Throckmorton's testimony as to the general duties performed by soliciting agents. All work along the same line. The Rock Island's eastern terminus is at Chicago. (924) Its western terminus at El Paso and Denver. Also reaches Omaha. Built into El Paso about seven years ago. Prior thereto Rock Island's only route on trans-continental business was by Denver or Omaha. At that time worked with the U. P. and D. & R. G., dependent on whether traffic carried to Omaha or Denver. Rock Island gets the entire haul to Denver, and witness takes it that way when he considers it to the Company's interest. If cases arise where it seems to be to the Rock Island's interest to work the U. P. via Omaha, witness works that way, ignoring the long haul and getting the haul from Chicago to Omaha. In working the trans-continental business with the U. P., witness worked with the latter's agents, if necessary, or independently of them, with the shippers. At times worked with the agents of the U. P. to secure shipments. Were then competing with the Sunset route, the Atchison, and the Denver & Rio Grande, that is, on California business, and on the northern coast business were competing with the Great Northern and Northern Pacific.

New York. Eastern Fr't Ag't., of R. I.

Routing of traffic.

(925) On trans-continental business also competing with the Burlington and the Missouri Pacific, the Chicago, Milwaukee & St. Paul, Chicago & Northwestern, and the Illinois Central. Sent business to California by way of El Paso, over the S. P. If destined to Southern California, competing against the Sunset and the Atchison; in fact, any line running up to Denver, connecting with the San Pedro, as well as the U. P. and S. P. In competing with the Sunset, competes with that portion of the line east of El Paso. (926) Has noticed no change in the activity of the U. P. and S. P. solicitors here in New York. The Rock Island handles business by the Gulf from the Atlantic seaboard to Colorado and Utah points, both through New Orleans and Galveston, and if witness cannot get business by way of Chicago, takes it by the Gulf—any

way he can get it. Prefers the route that offers the most revenue. Has an active route by the Old Dominion Line to Birmingham, Ala.

(928) The U. P. is one of the Rock Island's competitors to Colorado common points, whether traffic comes by the Morgan Line or by Chicago. It is a competitor more from the Missouri River. The U. P. does not compete with the Rock Island east of the Missouri River.

Allen.

(928) LOUIS M. ALLEN.

Freight Agent N. Y. Central.

Residence Westwood, New Jersey. Employed by the New York Central since 1888, as clerk, soliciting agent, division freight agent, assistant general eastern agent, commercial agent, general eastern freight agent. (929) Was once connected with the Merchants' Despatch Transportation Company, one of the New York Central fast freight lines, and with the Associated Roads of Virginia and Carolina. Has been railroading since 1868; always in the traffic department. Trans-continental business originating on the Central moves to the coast over any line from Chicago, St. Louis, Cincinnati or Louisville.

(930) Speaking of the trans-continental lines as distinguished from those east of the Missouri River, the former, beginning with the Great Northern on the north, the S. P. Sunset route on the south, have been competing here and endeavoring to get business to the coast. All maintain separate agencies. The agents of connecting lines work together more by way of reciprocity than anything else. "If one has a carload, why, he will swap it off with anybody else that has got a carload, if it is possible; that is, all the conditions being equal." Thinks some years ago business was routed by way of Portland and the steamship line down to San Francisco. That was at a time when there was pretty strong competition, or something of that sort. (931) Sometimes the consignor or consignee would route the shipment, and sometimes they would leave it to the soliciting agent to route beyond his own line. Witness works through the consignees in New York, in order to secure eastbound traffic from the coast. "We work on informaiton that we obtain, sending it sometimes to our representatives on the Pacific coast, and other times we work through the representatives of the trans-continental lines." If witness found that a car or a trainload of stuff was coming east and was routed over the Union Pacific from Portland or San Francisco, he would see the agent of the Union Pacific road and ask the latter to route it over the New York Central. That would be an occasion for some of the swapping or reciprocity he had spoken of. That sort of transaction was of very frequent occurrence. It is customary to respect the shipper's wishes as to routing. Reciprocity spoken of applies to unrouted traffic.

Reciprocity of solicitors.

Portland route.

(932) Doesn't think any trans-continental traffic goes to Puget Sound and then south. Remembers the Canadian Pacific's attempt to force a differential. Principal traffic that New York Central controls for Pacific coast goes by the U. P. via Ogden. "Q. The

fact that these intermediate carriers have agents also soliciting does not indicate that they are competing with everybody else who is soliciting, does it? A. Well, it means that we had to work with them. We often had to work with them for business that they controlled or business that they influenced. (933) The Chicago, Milwaukee & St. Paul and the Chicago & Northwestern have soliciting agents in New York. They work also for trans-continental traffic. They are not witness' competitors. They are connecting lines. The Union Pacific in having soliciting agents here works for the trans-continental traffic, and it is not a competitor of those lines for that traffic. New York Central's active competitors for trans-continental traffic are every line leading out of New York, including the Sunset Route. The U. P. is not a competitor. It is a connection. (934) Would not say definitely that any traffic moved by Portland and thence by water south. Only an indistinct recollection. "Q. Did you ever attempt to route any that way? A. I would not like to say that I did."

Had to work with other agents who controlled business.

United States v. Union Pacific Railroad Company, et al.

DEFENDANTS' ABSTRACT OF TESTIMONY.

TESTIMONY FOR COMPLAINANT.

VOLUME III.

NEW YORK CITY, JANUARY 7, 1909.

Smith.

(935) GEORGE T. SMITH.

Jersey City. Gen. Ag't., Pennsylvania.

Resides in Jersey City. Seven and a half years General Agent of the Pennsylvania Railroad. For ten years previous to that, commercial agent of the same Company. Left the service of the railroad January 1, 1909. (936) For trans-continental business to California points, the S. P., U. P. and Santa Fe were competitors. U. P. and S. P. competed for business to the coast. Mr. Hawley routed his business by the Sunset. Business from New York to Portland moved over the O. S. L., Northern Pacific and Great Northern; at one time over the S. P. Witness had a memory of the S. P. competing for Portland business. Doesn't know how much S. P. did. Recalled business going to Portland, and thence by boat to San Francisco about twenty years ago, resulting from the effort of the Northern Pacific to overcome the influence of the S. P. in using boats from San Francisco up.

Business to San Francisco via Portland.

Transcontinental lines.

(937) Very active competition existed prior to 1901 between trans-continental lines for trans-continental business. This traffic to Colorado and Utah common points must have been important. In referring to the Southern Pacific, the Santa Fe and the Union Pacific as trans-continental lines competing for San Francisco traffic, he had in mind that they were the only terminal lines. Union Pacific is a terminal line in connection with the Central Pacific. The Union Pacific never controlled the Central Pacific. The Union Pacific runs from Omaha to Ogden. (938) The U. P. itself is not a terminal line for California business. For the last fifteen years the Burlington has had its own lines from Chicago to Denver, and is actively engaged with the other lines in trans-continental business. The Rock Island has also had a line for about fifteen years between the same points. It has also had a line from Chicago to El Paso. Witness would say that it participated in trans-continental business over those lines.

(939) Witness doesn't remember doing any business with the Rock Island by El Paso, but did by Denver, Missouri Pacific has a line from St. Louis to Denver. There were a great many other lines engaged in trans-continental business. Didn't mean to say that three lines first mentioned were the only three companies that were engaged in trans-continental business west of the Missouri River. The D. & R. G. also engages in trans-continental business. As to the lines east of the Missouri River, practically every line east and west competed for this business. The principal ones were the New York Central, Erie, Pennsylvania, B. & O., (940) Lehigh Valley, C. & O., and N. & W. A great deal of trans-continental business originated on the Pennsylvania, and if controlled by its employes, the traffic moved the longest haul, to St. Louis or Chicago. There are about 1,000 miles from the eastern terminus of the Pennsylvania to St. Louis, and a little less, but almost the same distance to Chicago. About the same distance by practically all the principal trunk lines. There are several lines between Chicago and St. Louis (Missouri River) engaged in the same business, the Northwestern, the St. Paul, and the Illinois Central. West of the Missouri River the traffic would go over one of the Iowa lines, the St. Paul, the Northwestern or the Burlington.

Every line east and west of the river competed for transcontinental business.

(941) West of the Missouri River the bulk of the traffic moved by the U. P. and D. & R. G. as against the S. P. The great bulk of the Pennsylvania's trans-continental traffic went to Chicago rather than to St. Louis. If it went over the U. P. or D. & R. G., in either case, it was delivered to the Central Pacific, which was the only outlet for those lines. Moved under joint rates participated in by each line. Competition between the S. P. and U. P. was between the Sunset and the Ogden routes. Of the latter, the Central Pacific formed a part. C. P. operated by S. P. for a great many years. Pennsylvania could send traffic to California by way of the Atchison from Chicago. (942) West of Chicago the Pennsylvania didn't care which way the freight went. It was a freight solicitor's matter. One solicitor paid his debts to another.

Bulk of Pennsylvania business went via Chicago rather than St. Louis.

(943) Witness thought it was twenty years ago that the Northern Pacific took trans-continental business for San Francisco via Portland. Wasn't sure it was Portland and not Puget Sound. Witness' recollection was distinctly in connection with the Northern Pacific, and he assumed the Pacific coast port was Portland. Northern Pacific has to go by way of Tacoma to reach Portland, and would reach Puget Sound before Portland. Never heard of any movement by U. P. to Portland, thence to San Francisco. The Atchison has been a very active competitor for California business, its line extending as far east as Chicago. (944) Never knew of any traffic moving from points west of Pittsburg to New York, and thence over the Morgan Line. The Morgan Line absorbed the rate on traffic from points east of Pittsburg to New York. Didn't know of any movements from New York to California

N. P. and San Francisco.

points over the Northern Pacific or Great Northern, not by boats from Puget Sound, but all-rail.

Utah and Colorado business.

(945) Knew of movements to Portland by those lines, all-rail, also lake and rail. Other lines participating in the Utah and Colorado business from the Atlantic seaboard were the Savannah Line, the Mallory Line, and their rail connections at Savannah and Galveston, the Chesapeake & Ohio, and the N. & W., which is the Old Dominion Line. No change in that condition in recent years. Competition has gone on since 1901, as well as before. U. P. and S. P. both solicited business actively. Both competing lines. Means by that, that the U. P. is a part of the rail lines that engaged in competition for business against the Sunset route. The agents of the S. P. were endeavoring to route business over their line to the coast, and the agents of the U. P. over theirs.

Blye.

(946) HARRY C. BLYE, Recalled.

Statistics of traffic from New York to Pacific coast.

Exhibit 98 made up by witness covers all traffic destined to Pacific coast points, not simply California points, but to the North Pacific Coast points as well. "Under California is included all traffic destined to British Columbia, California, Idaho west of and including Kuna, Nevada, Oregon, Washington and all Trans-Pacific Traffic." It does not include the business that reaches the coast over the Canadian Pacific. "California traffic in our office, for our statistics, includes all the traffic that goes to the points mentioned, whichever route it goes. If any trunk line out of New York carried California traffic, or what we call California traffic, to Chicago, or if it carried a shipment consigned to a connection with the Canadian Pacific at Minneapolis, and that was destined to Vancouver, it would go into our report just the same as if it took a shipment for the Empire of Japan, or for China, or for Australia, or for Honolulu; that would be California traffic." It includes all traffic moving out of New York over all trunk lines going across the Pacific Ocean whether it goes in Canadian Pacific ships or American ships. (947) Exhibit 98 will be better understood by remembering that the object of the statistics was, in the first place, to show how much the rail lines carried of California traffic, in distinction to what the S. P. and the Cromwell and the Mallory Line got out of New York. The statistics begin in 1883 and run down to March, 1902. That is when the S. P. stopped reporting.

(948) Information from which Exhibit 98 was made up is furnished by the trunk lines by impression copies of the waybills. Fifty or sixty clerks employed in witness' office. Thinks forty clerks are working in the department where those reports are made up. When the waybills came in, they were analyzed, the traffic picked out and recorded in different books. In 1883, 1884 and 1885 there were about 300 clerks in the office, dissecting waybills and finding the destination of traffic. From the books of records, reports were made up from time to time, and sent to the parties

in interest, including the S. P. Co. (949) Shortly after the reports are made up, the waybills are destroyed.

(951) Exhibit 98 offered in evidence, and objected to "not on account that it is not a correct record of the figures as reported to Mr. Blye by the railroads and steamship companies, but otherwise they object to it as hearsay." Exhibit 98, Statement covering California traffic from New York City via Trunk Lines and Gulf Lines from June, 1883, to March 21, 1902. (952) All the lines sent in waybills, and the agent who made up the records certified that these included all the traffic. Morgan Line sent in waybills till November 17, 1893. After that merely a letter stating their tonnage. (953) Report includes shipments out of the port of New York, that includes Brooklyn, Staten Island, Jersey City, Hoboken, and all the railroad terminals around New York. "Lighterage limits" covers it.

(955) In answer to the question, what lines of transportation were there from 1896 to 1907, over which the trunk lines could get this traffic to the Pacific coast, witness replied: "A shipment might leave New York—we will take one road, for illustration. If a shipment went out for San Francisco, and had to go by the New York Central road, the New York Central road would probably carry it to Chicago. At Chicago it might give it to the Atchison or, the Rock Island, or the Burlington, or the Northwestern, or the Milwaukee & St. Paul. If it was going to the North Pacific coast, it could be sent up to Minneapolis or St. Paul, to go over the Great Northern or the Northern Pacific, or it could be sent to Omaha and given to the U. P. to take it over the O. S. L. If it was going to San Francisco, it would probably have been consigned by some line to Omaha, and given to the U. P. and delivered to the Central Pacific, and taken into San Francisco, because that was the most direct route and the ordinary route. Somebody, for experiment, if he felt like it, might give it to the Illinois Central to carry down to New Orleans, and give it to the S. P.—he might do that if he was reasonably crazy, but he wouldn't try it very often." Routing of shipments.

(956) All-rail shipments by these trunk lines for any point on the Pacific coast south of Portland had to go either by the Atchison or S. P. to destination. It is about 1,000 miles from New York to Chicago, and 500 miles to Omaha; 1,000 miles from Omaha to Ogden, and 800 miles from Ogden to San Francisco. That figures up about 3,300 miles. Witness thought the post office distance was 3,200 miles. (957) It is about the same distance from Portland to San Francisco as from Ogden to San Francisco. (958) U. P. has a line from Kansas City west to Denver, and then connecting with the main line at Cheyenne, and the U. P. carried trans-continental traffic either through Kansas City or Omaha. (959) Western termini of the Pennsylvania system are St. Louis and Chicago. Witness thought the Pa. R. R. system would call their line a line to Chicago. Doesn't know whether the Pa. R. R. system proper runs to St. Louis or not. They run through trains.

(960) Doesn't know whether the Pa. takes trans-continental traffic by way of St. Louis or not. Best recollection is that it is routed to Chicago. If they took it to St. Louis, it would move westerly over the U. P. by way of Kansas City. The Burlington, Chicago & Northwestern, and other connections of the U. P., had solicitors in New York for that business. Chicago & Northwestern is not a competitor, a connection. Burlington is a lawful competitor for Denver business, and from Denver on in connection with the D. & R. G. Traffic might move over the Burlington to Ogden, without touching the U. P. at all, and does move that way.

All roads solicit business.

(961) The Burlington has a line to Denver, and the same is true of the Rock Island. They have soliciting agents here, and so have the Missouri Pacific. Every railroad between Chicago and the Missouri River is represented in New York, trying to get trans-continental business, and all those roads, to get business to or from California, must deliver it either to the Atchison or the S. P. Might do that without touching the U. P. at all. If the S. P. was indifferent, the U. P. would have to solicit this business in competition with the other lines west of the Missouri River. When witness was handling waybills, never saw any freight billed through to the Pacific coast. Never saw anything billed west of the Mississippi River. (962) Witness didn't mean bills of lading. Meant waybills, which generally show the traffic up to Chicago or the Mississippi River, and show the final destination, of course. In case of through billing, it sometimes shows the rate beyond the terminus of the billing. Witness never heard the expression "hundred per cent. route" in connection with the Sunset, or any other line.

Taylor.

(963) S. FREDERICK TAYLOR.

Vice Pres't. Borden's Condensed Milk Co.

Since 1902 Vice-President of Borden's Condensed Milk Company. From 1887 to 1902 Secretary and in charge of Traffic Dept. Had considerable trans-continental and Oriental shipments. (964) The following companies were soliciting business to California points: Santa Fe, S. P., N. P., Great Northern, Can. Pac., and all their eastern connections, among whom was the U. P. Never shipped by the Sunset route, though solicited to do so. Once, for advertising purposes, sent out a special train.

Routing of his business.

(965) It moved over the U. P. and S. P., as all Frisco business had been doing for some time. It was the Company's established custom to divide this business according to terminal territory, the route reaching there more directly. Southern California business went by the Santa Fe. Frisco business almost entirely U. P.-S. P.; Portland business by the O. S. L.; Seattle, Great Northern; Tacoma, Northern Pacific; and British Columbia, Canadian Pacific. Exceptions were rare. Never shipped to California by way of Portland. Most of the shipments for the Pacific coast originated in Illinois and Wisconsin. The S. P. actively solicited that business by way of Ogden. The U. P. did also. Was solicited by all the lines. whether they reached the coast or not. So much so that witness

paid little attention to solicitation, because he had his schedule made out as to how he was going to ship.

(966) Actively solicited by the Northwestern, St. Paul, Burlington, Rock Island, Missouri Pacific, and all of the lines having any share in that character of traffic. Oriental business moved via the Suez up to 1889, and then trans-Pacific arrangement was made with the Canadian Pacific. The American lines carried none of that business until about 1892. It is now mostly going by the Canadian Pacific, because of the withdrawal of through rates on the American lines, but prior to that it was divided, according to convenient sailings and facilities offered, between the Northern Pacific, S. P., U. P., Great Northern, and Canadian Pacific.

(968) LAURENT C. DEMING.

Deming.

Assistant Secretary of the Atchison. Witness identifies the following exhibits which are introduced in connection with his testimony: Exhibit 99, Proceedings, meeting of directors Atchison, Topeka and Santa Fe Ry. Co., New York, Feb. 8, 1905, at which Frick and Rogers were elected directors. (969) Exhibit 100, Proceedings, annual stockholders' meeting of Atchison, Topeka and Santa Fe Ry. Co., Topeka, Kansas, Oct. 26, 1905. (970) Exhibit 101, Proceedings, annual stockholders' meeting, Atchison, Topeka and Santa Fe Ry. Co., Topeka, Kansas, Oct. 22, 1908. Exhibit 102, Proceedings, board of directors' meeting, Atchison, Topeka and Santa Fe Ry. Co., Dec. 5, 1906, relating to Northwestern Pacific agreements. (972) Exhibit 103, Proceedings, board of directors' meeting, Atchison, Topeka and Santa Fe Ry. Co., Dec. 5, 1906, relating to Exhibits 104 to 106. (974) Exhibit 104, Agreement between Atchison, Topeka and Santa Fe Ry. Co. and the Southern Pacific Co. with respect to the sale of Phoenix and Eastern Ry. and Joint track agreements, Dec. 7, 1906. (980) Exhibit 105, Agreement between Southern Pacific R. R. Co., Phoenix and Eastern Ry. Co., and Southern Pacific Co., and Atchison, Topeka and Santa Fe Ry. Co., granting to Atchison, trackage rights between Phoenix and Deming. (997) Exhibit No. 106, Agreement between Atchison, Topeka and Santa Fe Ry. Co., Arizona and California Ry. Co., Santa Fe, Prescott and Phoenix Ry. Co. and Southern Pacific Co., granting to Southern Pacific Co. trackage rights between Phoenix and Mojave.

Ass't. Sec'y., Atchison Co.

Various agreements between Santa Fe and S. P.

(1014) FRANK M. MURPHY.

Murphy.

Exhibit 107, Map of U. P. and S. P. systems, 1908. (1015) Witness has lived for thirty years in Prescott, Arizona. In 1893 was elected President of the Santa Fe, Prescott and Phoenix, running from Ash Fork on the line of the Santa Fe Pacific to Phoenix, Arizona. The Santa Fe Pacific is a part of the main trans-continental line of the Atchison, Topeka & Santa Fe, running through to Los Angeles, San Francisco and San Diego. (1016) The

Prescott, Ariz. Pres't., Santa Fe, Prescott and Phoenix.

Atchison now owns the stock of the Santa Fe, Prescott & Phoenix road (hereinafter called the Prescott), and has since 1901. It is operated as a separate company, and witness is still President. It is about 195 miles long. The Maricopa & Phoenix, a branch of the S. P., also reaches Phoenix. It is not a part of the main line of the S. P. It is about 34 miles down to Maricopa on the main line of the S. P. Through trains or sleepers are not run from Phoenix to Los Angeles. Freight from the east and west is handled by the S. P. into Phoenix over this little line. The Phoenix & Eastern also runs into Phoenix.

Phoenix and Eastern.

(1017) It runs from Phoenix to a point on the Gila River, known as Dudleyville or Winkleman, at junction of the San Pedro and Gila Rivers. Witness incorporated the Phoenix & Eastern in 1901. Preliminary surveys made in 1901, from Phoenix to Benson. Benson is on the S. P. The Sonora Railroad runs from Benson to Guaymas. It is now an S. P. line. Purchased by the S. P. somewhere about 1896. The El Paso and Southwestern also terminates at Benson. The latter road runs from Benson to El Paso and into New Mexico. Doesn't think that is an S. P. road. It is controlled by the Phelps Dodge Mining interests, Copper Queen interests. That mine is located in Bisbee. The El Paso and Southwestern reaches Bisbee. No other road there. The Copper Queen smelter is at Douglas.

El Paso and Southwestern.

(1018) Douglas is 20 or 25 miles from Bisbee, and is on the El Paso and Southwestern. There are a good many other mines at Bisbee. It has a population of about 17,000 people. The Calumet & Arizona smelter is also at Douglas. In addition to the El Paso & Southwestern, the Atchison, the S. P., the T. P., and the Rock Island run into El Paso. At Benson the El Paso & Southwestern connects only with the S. P. to the west. Only 96 miles of the Phoenix & Eastern were ever constructed. After witness projected the line, he sold it to the Atchison, and built the road in the interests of that Company. (1019) By Exhibit 104 the Phoenix & Eastern sold to the S. P. In addition to building the 96 miles, witness thought he had the right of way secured for the entire distance to Benson. Some of it was donated, and portions of it were purchased. From the terminus of the line, as constructed, to Benson, is about 85 or 88 miles. Before the Atchison had anything to do with it, witness on behalf of the Phoenix & Eastern made a favorable arrangement with the El Paso and Southwestern as to an exchange of traffic. They wanted the Western outlet. The arrangement was in the shape of a letter.

Right of way for Phoenix & Eastern to Benson.

(1020) Witness also surveyed a line to Lordsburg, New Mexico, just over the Arizona line, and practically to Deming. Lordsburg is on the S. P. about sixty miles west of Deming. Lordsburg is 180 or 185 miles from the present terminus of the Phoenix & Eastern. Commenced the construction of the P. & E. February, 1902. Completed to its present terminus in the Fall 1904. It is an easy country to build a railroad in.

Survey to Lordsburg.

(1021) The kind of road we were going to build would cost about $20,000 a mile. The kind of country to be built through in getting east to Deming was very rough, canyony country. A portion of it was very good, but there was some very heavy work. The heavy work in the Gila Canyon covered 12 or 15 miles. There is no railroad through there. The line referred to in the S. P.-Atchison contracts as running west from the Prescott road leaves the main line of the latter at a point about six miles north of the town of Wickenburg, south of Prescott and north of Phoenix, and about 110 miles of it has been constructed west from Wickenburg. Quite a large bridge had been built over the Colorado River at a cost of six or seven hundred thousand dollars. The prospective terminus of the road is at Bengal, on the Atchison main line. Finished the bridge June, 1908. Line to Deming. Line from Wickenburg to Bengal.

(1022) Looks to see the road completed at a reasonably early day. There were no grades on the line of more than six-tenths of one per cent., other than a few miles about half way between the point where it leaves the Prescott road and the Colorado River, and there is a little double maximum there for a very short distance. The Phoenix & Eastern is a water grade line, and would average not to exceed six-tenths of one per cent. From its present terminus through to Deming, the proposed line would have about the same grade. From Phoenix to the point on the Prescott road where this new line to the west branches off, there is a very little strip in which some changes would have to be made to bring it down to probably three-fourths of one per cent., but that covers only a few miles. The whole line was laid out on the basis of getting a six-tenths of one per cent. line practically clear through to connection with the Santa Fe. The Santa Fe from Deming has a line to El Paso, then up the Rio Grande River to Albuquerque, and on east over the Glorieta Mountains, and so on; and now they have through Trinidad; and they also have their Belen cut-off that comes in some thirty miles south of Albuquerque. The main line of the Atchison runs from Chicago to Kansas City, and westerly through Kansas and Southwestern Colorado, thence over the Raton Pass and the Glorieta Pass, on through Albuquerque, and crosses the Colorado River at the Needles. There are two mountain divides. You go over the Raton Pass, the Glorieta Pass, and also what is called the Continental Divide. That is west of Albuquerque. There is a good deal of climbing around Flagstaff. Grades. Low grade line. Route of Santa Fe.

(1023) The cut-off witness referred to takes off from the road that runs to Deming. The main line goes through Albuquerque, and the line to Deming runs from there down the Rio Grande to El Paso, and on to Deming, and about 30 miles south of there is this Belen cut-off. It comes in from Kansas, and crosses this Rio Grande road division, and picks up the Atchison again out in New Mexico. Goes south of Albuquerque, leaving it out altogether. The cut-off is also a low grade line. It was built to avoid those

heavy mountain climbs. All the way from Chicago to Deming, the Atchison does not have to climb over a mountain, that is, not what the witness would term mountains. The distance from the Needles to Bengal, where it is proposed to connect up this line that is under construction, is about 90 miles.

(1024) From Needles they climb out of the river-bottom and go over a divide, which the new line avoids by going from Parker. If the P. & E. had been constructed on up to Deming, the Atchison's line from Chicago to California by way of the Belen cut-off and Deming, through Phoenix, Parker and Bengal, would have been low grade all the way, with the exception of their little drop off in California down to San Bernardino, which they could not overcome. They strike the present through line east of that, some distance east of Barstow. The new low grade line to the junction at Bengal would be 125 or 150 miles longer than the present line, but would be far superior, as a line over which to move through traffic. In witness' judgment it would be the best low grade line to the Pacific coast.

Low grade line via Deming.

(1025) In building the line east from Phoenix, witness had a good deal of difficulty. Was interfered with by an organization known as the Arizona Eastern Railroad Company, owned by the S. P. At about the time the survey through the canyon to Deming was completed, the Arizona Eastern was incorporated, and very much to witness' surprise he found a whole lot of graders had been shipped in across the country, that were put up on the side of the mountain above him, and blasted rock down on his work, taking possession of his right of way. Witness enjoined them, and there was a rough and tumble fight, until the grand wind-up was that witness' rights were sustained in the Supreme Court, and he was left in peaceful possession of the road as far as Dudleyville. In the meantime, other parties had appropriated the canyon above, and did a lot of work up in there, and while witness was occupying that position, the agreement between the Atchison and S. P. was made, and the road was turned over to S. P. The litigation lasted a good part of a year. The deal was made in New York. Doesn't know of his own knowledge why the road was turned over to the S. P. Doesn't know whether the Santa Fe got tired of fighting or not.

Trouble in building P. & E.

Injunction suit.

Agreement between S. P. and Santa Fe.

(1026) S. P. had its own entrance into Phoenix before they bought the P. & E. They had that little short line of 30 miles. There is a good deal of advantage in possessing the P. & E. It enables the owner to control very large valuable territory. The Santa Fe are working pretty hard for business in that country. A person unacquainted with the P. & E. territory, would not think it a very inviting country from a business or traffic standpoint, or any other point.

(1027) Witness says beyond question it is one of the most important sections of Arizona, either agriculturally or for minerals. As to the towns that it runs through, Tempe is an agricultural town about nine miles from Phoenix. Mesa is another, a very growing

Important section of Arizona.

town. From there the road leaves to go out to the Roosevelt Dam. The dam was projected about three years ago. It is about sixty miles from Mesa to the Junction of Tonto Creek and Salt River. The latter stream flows through Phoenix. Agriculture principally carried on by irrigation. Through the irrigation of the Roosevelt Dam, it was expected to bring under irrigation 250,000 to 300,000 acres.

(1028) Everything is raised there that is grown in a semi-tropical country, oranges, olives, figs, dates, pears and peaches. A very desirable country for stock raising purposes. Alfalfa is a great product of the valley. A diversion dam is being built about 50 miles down the valley from the Roosevelt Dam. (1029) The diversion dam is 18 or 20 miles from Phoenix, and is practically completed. In an irrigation project of that kind, water is distributed through main and lateral canals. Between 200,000 and 300,000 acres will be put under irrigation by that scheme. There is a large amount of mines being opened up. Some of them have been done beyond where the line has been built. The shortest route into Southern Arizona from Los Angeles at present is over the S. P. Phoenix is locally the great wholesaling town of that region.

Products.

(1030) Los Angeles is a wholesale distributing center. Arizona does a great deal of business with the east—with Chicago, New York, Kansas City and St. Louis. When the new line is completed up to Bengal, it will be the most direct route into Phoenix, but there will be a little difference in distance. The distance into Benson, and thence to Bisbee and Douglas by the Santa Fe line, if it had been continued down to Benson, would have been considerably longer than the S. P. The latter would also have had the better grade, barring one point about Benson. It is possible to get a better alignment and better grade that way into El Paso than by the present line of the S. P., but it would be longer; that is, by the Santa Fe in connection with the El Paso & Southwestern. Doesn't think the Atchison would ever use that as a through line, the line by Parker and Benson, on to El Paso. They would use the Deming line.

Benefits of new lines.

(1031) Witness thought the P. & E. one of the most important connections the Atchison could possibly have. Witness understood that the reason for surrendering it was that it penetrated S. P. territory, and it was something the Atchison had better give up. Other reasons for the sale were the general relationship between the Companies. (1032) Exhibit 104 contains a statement that such sale shall be completed simultaneously with the execution of a certain Trust Agreement between the Southern Pacific, the Atchison Company, and the Farmers' Loan and Trust Company, which refers to the amalgamation of the Santa Fe and Southern Pacific lines in northern California. Witness thought that the latter matter also influenced the Atchison to sell the P. & E. The Rock Island runs through trains from Chicago into California over the S. P., connecting with the S. P. at El Paso. Doesn't think the T. & P. run any through trains to California. They do to El Paso.

P. & E. an important Santa Fe connection.

Northern California lines included in settlement.

(1033) If the Santa Fe had retained the P. & E., and built the link of 80 miles to Benson, these lines would have had another route from El Paso over the El Paso & Southwestern on into California. With the exception of the S. P., Phoenix has no outlet to Gulf ports, unless they go up over the main line of the Atchison, and then come back over the Prescott & Phoenix, a very roundabout route. (1034) If the Atchison had retained the P. & E., Phoenix would have had connection at El Paso with all those Eastern roads. The Rock Island train is turned over to the S. P. at El Paso. The Rock Island has no running rights over the S. P. The Rock Island crosses the Atchison north of El Paso in New Mexico, and could run over the Santa Fe, if they wanted to. If they climbed over the mountains that way, they would have a short line. Witness marks upon Exhibit 107 (being a map of the Santa Fe System), what he describes as the low grade line between Chicago and California. It is marked in red ink and unconstructed portion is indicated by cross marks. He was told that it was unnecessary to mark any constructed line, but replied that he had already marked part of it. (1035) "Q. I want you to mark in red ink the unconstructed portions, and then describe the other afterwards."

Low grade line indicated on map.

If the Atchison had retained the P. & E., and constructed certain unconstructed lines, they would have had a low grade line from Chicago to California, not taking into account their getting down off the mountain east of San Bernardino—a good low grade from Chicago to Bengal, Cal., 125 to 150 miles longer, however. Via the Atchison from Chicago, you can go to Kansas City, thence via the Belen cut-off about Hutchinson, Kansas, (1036) and from the cut-off on to Deming. From the latter point on it is unconstructed. Since the S. P. has acquired the P. & E., the Atchison is unconstructed clear to Phoenix, but before that there was a gap of about 240 miles. Unless the Atchison people misrepresented facts to witness, they intended to use that new line as a part of the trans-continental line.

Low grade line 125 to 150 miles longer.

(1037) From the line that witness located from Deming, it is about 240 miles to the eastern terminus of the P. & E., practically a water grade all the way, but very heavy construction work. The Santa Fe are beginning to use the Belen cut-off for trans-continental business. Going west it connects with the main line somewhere near Rio Puerco. By main line means Santa Fe Pacific. Albuquerque is left out. The Belen cut-off was constructed in the interest of the present main line of the Atchison, in order to avoid mountain grades, but witness stated that at that time "we were considering this other line, too, and building it." (1038) Witness thought it was intended to extend the Belen cut-off eastwardly to the Pecos Valley line which runs through what is called the Panhandle of Texas, to avoid the high grades. The Atchison were being charged with trespassing on S. P.'s territory, but in building

Belen cut-off.

the low grade trans-continental line they were protecting their own interests.

(1039) Witness thought it would not have been a waste of money to have built the P. & E. exclusively either for trans-continental business or for local business. Thinks it would have been a good proposition for both purposes. No doubt about it. Knows that Atchison reserved trackage rights over the P. & E. at the time of the sale, and that the S. P. agreed to give trackage rights from Bowie or Lordsburg to Deming. (1040) Under the terms of the contract the S. P. is also entitled to trackage over the Atchison lines from Mojave via Bengal to Wickenburg. The line under construction from Bengal to Wickenburg is about 200 miles. If the S. P. should use trackage over the Atchison under the agreements, from Mojave to Phoenix, thence over the P. & E. to Lordsburg, the S. P. line from Mojave to El Paso would be much shortened. The agreements for trackage reserved the right to the Atchison for a through line, probably as good a through line as witness would have built by way of Phoenix to Deming. Also reserved a through short line for the S. P., if the road is ever built.

Trackage rights reserved by S. P. and Santa Fe.

(1041) The construction of the P. & E. was commenced in 1902, and 96 miles of it were built in 1904. Probably 30 or 40 miles additional would connect it up with the S. P. line, which runs northwesterly from Bowie to Globe. To extend it on from its present terminus, to Lordsburg, and connecting there with the S. P., would be about 183 miles. Deming is about 60 miles east of Lordsburg. (1042) Witness considered the S. P. people's opposition very high handed. Sold to the Atchison twice. First in 1902, but they seemed to be afraid it was going to get them into trouble, and a few weeks later they gave it back. First sold the surveys and right of way, and the concessions that he had been able to get. A few weeks after that, when the Atchison found out witness was going to build irrespective of them, they bought it the second time.

Construction of P. & E.

(1043) The Atchison then sold it to witness after 80 or 90 miles, about 96 miles, had been built. Witness built the Prescott road. Commenced construction in about 1890, from Ash Fork on the main line of the Santa Fe. Completed it in the Spring of 1895, a line of about 200 miles. Never had any other railroad experience, except he had built several branches for the Atchison. Thinks the Atchison made a mistake in selling the P. & E. Witness more familiar with the Arizona situation than Morawetz or Ripley. Thinks the Southern Pacific took the Phoenix and Eastern over in 1907. Thinks the contract was closed somewhere along in May that year, and that there was a period of several months prior to the papers being signed up when it was generally understood that some kind of an agreement had been reached. Witness had never been in peaceable possession of the canyon. He was not even in peaceable possession of the line he was contending for. Explains his direct testimony as to being left in peaceable possession

Was never in peaceable possession of canyon.

after the decision of the Supreme Court, as follows: "I will explain what I have reference to. We had some very heavy floods, and some of our embankments were washed away, and the Eastern Arizona had some grading men working up in the canyon, doing a small amount of work, and before we could get down there they moved down and jumped onto some ground we had to move our track on to, so that we were not in a position to locate our (1045) line where we should have located it, and we would have incurred a great deal of expense in putting it back where it was; so we entered into a little temporary arrangement with the Southern Pacific people who had gotten onto that piece of ground that we needed, and we were using their tracks; but the litigation that was in court, as I understand it, had already been settled. But that question remained there—that little bit of a gap that we had to use over their piece of track we were using." Began to use that little piece of track in the spring of 1906, possibly 1907. Hostilities on the ground ceased when he got his road completed to Winkelman. Gives 1906 as the date he mentioned as the one when he secured peaceable possession. The matter was in litigation from 1904 to 1906, his line having been completed to its present terminus in 1904. Witness thought the nearest point of the S. P. from the Roosevelt Dam was about 60 miles. Their branch running up to Mesa is the nearest point they have reached, witness thought. The flow from the Roosevelt Dam is southwesterly toward the S. P.

Portion of P. & E. right of way washed out.

The P. & E. runs south of the dam. The irrigable section extends practically 50 or 60 miles clear to the City of Florence on the Gila. (1046) You wouldn't notice when you cross the Divide between the Gila and the Salt, but would think you were going over a level country. Florence is 25 or 30 miles north of the S. P. The main line of the S. P. is nearer Florence than any branch. The P. & E. goes practically through Florence. Maricopa and Phoenix lies 50 miles west of Florence. Right of way of P. & E. has been obtained from Phoenix to Benson practically. Practically all the work of construction was done after the Atchison acquired the stock.

NEW YORK CITY, MONDAY, JANUARY 11, 1909.

(1406) FRANK MURPHY. Testimony resumed.

The easterly junction of the Belen cut-off and the Atchison is Newton, Kansas. (1047) The Junction is at Texico, on the border of New Mexico and Texas. By using the Belen cut-off the Santa Fe avoids altogether in its trans-continental line the Raton pass and the Glorieta Pass. (1048) Exhibit 108, Map in the Annual Report of the Atchison, showing in a general way its lines. Witness asked to take a pen and mark on the map the proposed line from Dudleyville to Deming, and put crosses over the red ink line just drawn. The black line from Phoenix to Dudleyville was built by the P. & E. Witness asked to indicate on the

map the low-grade trans-continental line that he has testified about, which the Atchison would have had if it had kept the P. & E. Thinks it would have started at Newton, Kansas, then to Texico, N. M., to Belen, crossing Oklahoma and the Northern end of Texas, thence down the Rio Grande to Rincon, and from there to Deming, then over the line marked by witness, and the P. & E. to Phoenix. Description of low grade line.

(1049) It would take up with the Prescott road at Phoenix, and run to a point about six miles north of Wickenburg, and thence almost due west to a crossing of the Colorado River at Parker, and thence to a point on the Santa Fe main line at Bengal. The line from Wickenburg to Bengal is now under construction. Proposed new line is about 150 miles longer, between Chicago and Los Angeles. The figures taken from the Official Railway Guide make the present main line of the Santa Fe from Chicago to Los Angeles. 2,267 miles by way of Ash Fork. (1050) The line witness sketched out would be 2,417 miles. At the time the P. & E. was sold, the S. P. had a parallel road running out of Phoenix to Tempe (their Maricopa line), also a spur line to Mesa, the latter point being 17 miles from Phoenix. Florence is the next town of consequence, after leaving Mesa. The latter part of the work on the P. & E. was construction for heavy engines. On the line from Wickenburg west, light rails (about 62 or 65 pounds) were used, but the bridge is constructed for the handling of the heaviest engines, for through trans-continental business. (1051) Witness, about 1893, incorporated another company to continue the line from Winkelman to Lordsburg. Thought it was called "The Gila River Railroad." The El Paso & Southwestern connects with the Mexican Central at El Paso, the latter running to the City of Mexico. If the Atchison had extended its line through the Gila Canyon to Deming, it would have had to build about 25 miles to get into the mining district around Globe. Main line of Santa Fe. Gila River railroad.

(1052) A great many mines between Dudleyville and Phoenix on the P. & E.; gold, silver, copper and lead, principally copper. Doesn't know of much ore going out of those mines now. Before the Humboldt smelter was closed, before the Atchison sold the P. & E. to the S. P., the ores came to the Atchison on the Prescott road. Went up to Prescott, and then out to the Humboldt smelter. The smelters of the Copper Queen and the Calumet & Arizona Companies are at Douglas. There are large smelters at El Paso, the American Smelting & Refining Company's. (1053) Witness' final maps in Washington were not accepted until 1906. That was the conclusion of the litigation in the Land Office. Completed the road to Winkelman in 1904. Line was turned over to the S. P. in the Spring of 1907. The Maricopa line parallels the P. & E. about nine miles, and the branch to Mesa added about as much more. Mineral resources.

(1054) After you leave Tempe, about nine miles from Phoenix, the Maricopa & Phoenix is at right angles to the P. & E. The Gila River Railroad Company never constructed any railroad.

Mines on P. & E.

(1055) The mines on the P. & E. had just started to ship to the smelter at Humboldt. Had been doing so eight or nine months, when the sale was made and the rates changed. After the purchase, the S. P. was naturally disposed to take the ores to El Paso. (1056) Witness' testimony based on existing conditions, does not in any sense portray the situation from a railroad standpoint. A piece of road was being built, and the people were laying their plans for the development of that section of the country, and were making their calculations upon the direct outlet. They were holding in reserve a lot of important developments, and waiting for the better opportunity that would be afforded when they got their outlet via Benson and Deming. It consisted in the development of mines and the erection of smelting plants.

(1057) About a couple of hundred thousand acres in the Salt River Valley have been under irrigation for a good many years. Their permanent water supply would seem to be secure now. Humboldt is about 250 miles from the mines on the P. & E. Before the sale, the Atchison had no through rates from this locality with the S. P. to El Paso. The conditions now are simply reversed. The S. P. established through rates to the smelters at El Paso and Douglas. (1058) Conditions not as favorable now as before. Witness couldn't speak positively about the exact rates. At the time of the sale of the P. & E., business over it was not heavy. It was in a stage of development.

Through rates.

Hughes.

(1059) GEORGE M. HUGHES.

Brooklyn. Formerly contracting freight ag't., Milwaukee road.

Resides in Brooklyn. President of the New Jersey, Indiana & Illinois Railroad Company, running from South Bend south to connection with the Wabash. Connected with the Erie from 1863 to 1884, and from then until 1894 with the Milwaukee & St. Paul, as contracting agent in New York. When Mr. Hawley was agent of the S. P. here, the trans-continental lines west of the Missouri River were in active competition for Pacific coast business. Witness worked more especially with the U. P. Couldn't work with the S. P., because his road went to Omaha at that time.

(1060) The Northern Pacific, the Canadian Pacific, and the Atchison were also competing with Mr. Hawley. In addition to railroad business, witness is now forwarder of the Singer Mfg. Co. Routes their freight. Their trans-continental freight now moves by the American Hawaiian Line, via Tehuantepec. Very much cheaper than the all-rail lines. Previously routed sewing machines via the Morgan Line. (1061) The American Hawaiian Line runs to Puerto, thence across Mexico to Salina Cruz, and up to San Francisco, and to Portland, and witness thought also to Seattle. Shipped very little by the U. P. to the coast. The rates by the Sunset and U. P. were the same, but the service by the former was better. Less damage from handling. Solicitation not quite as active. The U. P. comes in and wants to know if there is any change, and witness replies: (1062) "Not at present." Prefers

Routing of Singer Sewing Machine business.

the S. P. on account of carload shipments, which seem to be handled better. The road of which witness is president is 12 miles in length. The Singer people ship their Pacific coast trade from Elizabethport. When he spoke of competition between the Southern Pacific and the Union Pacific he meant competition of the Sunset Route on the one hand, and competition made up of the all-rail lines, including the Union Pacific from Omaha to Ogden, and the Southern Pacific from Ogden to the Pacific Coast. (1063) All the roads leading out of New York and Chicago naturally solicited for trans-continental business. Worked to help the U. P. get it as against the Sunset. Worked in order to get it themselves.

(1063) W. J. L. BANHAM.

Banham.

About four years Traffic Manager of the Otis Elevator Company. Previously was with the International Steam Pump Company, in charge of shipping; later as Asst. Traffic Manager. (1064) Was with them five or six years. The Otis Elevator shipments moved to the Pacific coast all-rail. From Missouri River they would ship about equally over the Santa Fe and the U. P. Where there are two or three more lines reaching into a particular town, the time of delivery and the location of freight yard or the delivering point determine the movement. Time is a more important factor with us than anything else. Solicitors work merely through personal solicitation. They might remind the shipper at times that there were certain unpaid freight claims, the payment of which they would obtain.

Traffic Manager Otis Elevator Co.

(1065) Doesn't ship by the Sunset. In transferring electrical apparatus from ship to car percentage of breakage would be enormous. Witness loads the machinery on the car, and has it take the most direct route. The sea air is not good for their shipments. His business is at present solicited by the S. P. all-rail via New Orleans. Only uses that route when there are blockades in the west. Otis Elevator's main shipping plants are at Boston, Springfield, Yonkers, Philadelphia, Rochester, Buffalo, Detroit, Chicago, and Moline. Ship principally to the coast from Yonkers, Chicago and Buffalo. To the North Pacific coast would ship over the Great Northern and Northern Pacific. Also used the U. P. to Portland.

Breakage incident to transfer.

(1066) When witness sees the conditions in Portland are in favor of one line against the other, he uses the former. Does not ship to the Orient. They have not gone in for sky-scrapers yet. Doesn't ship to Portland by the S. P. West of Chicago shipments are divided between the Atchison and the line made up of the S. P., U. P. and connections east. All shipments by way of the U. P. go over the S. P. from Ogden to California, and are solicited both by the S. P. and U. P. All the companies owning any part of the trans-continental lines, the New York Central, etc., solicit business actively. (1067) Southern Pacific agents solicit business by way of the U. P. from Chicago, and Moline. Do also from Buffalo, if they cannot get it via the Sunset. At Chicago the S. P. and U. P.

S. P. agents solicit via U. P. from Chicago and Moline.

agent is the same man. Witness was not an active traffic manager prior to 1901.

Swope.

(1068) CHARLTON A. SWOPE.

New York. Traffic Dep't. L. & N.

Resides in New York City. For five years Eastern Freight Agent of the L. & N. Previous to that for five years Traveling Freight Agent of the same road, and prior to that for thirteen years a clerk in the general offices at Louisville. Secretary of the Traffic Club. Witness came to New York in 1898 and between that time and 1901 there was competition to trans-continental points between the Union Pacific, Southern Pacific, Santa Fe, Northern Pacific and Great Northern. (1069) Witness, while representing the L. & N., to a certain extent, solicited business for trans-continental points in connection with the all-rail route via New Orleans. Witness' territory is east of the Buffalo-Pittsburg line. Endeavored to secure freight from the Cincinnati and Louisville territory and route it via New Orleans, or, in some cases, Memphis and El Paso. L. & N.'s interest entirely with the Sunset route as against the Ogden route. Still continues to do that. The volume of such business via New Orleans is very small. All the trans-continental lines solicit.

Solicited business via New Orleans.

L. & N.'s interest entirely with Sunset.

Number of roads forming links in trans-continental lines.

(1070) Counting all the roads forming links in trans-continental line, there are certainly 50 or 100. Any business for the Pacific coast south of Portland, from Ogden, would go over the S. P. U. P. extends from the Missouri River to Ogden. There are a good many lines over which traffic moves from New York and New England to New Orleans, of which the L. & N. forms a link. Not quite so many available routes, because the trunk lines are more largely interested in the Ogden route, because of their slightly greater haul that way.

(1071) A great many lines east of the Missouri River gateway and comparatively few west. There are many lines east of the Mississippi gateway. Less lines from there to the Missouri River gateway, and still less trans-continental lines from the Missouri River to the coast. (1072) From New Orleans to the Pacific coast there is only one line that has a terminal line. There are others that are connections of the S. P. There is the Texas Pacific through New Orleans to El Paso. Its western terminus is at El Paso, but it connects with the Missouri Pacific. Describes terminal lines reaching the Pacific coast.

Gregory.

(1073) J. ALLEN GREGORY.

New York. Traffic Manager Central Foundry Co.

Resides in New York City. Traffic Manager of the Central Foundry Company. Describes location of foundries. (1074) At present ships to the Pacific coast from plants at Anniston, Ala., and South Pittsburg, Tenn., and Vincennes, Ind. Traffic to California moved over the S. P., Atchison and U. P. Over the S. P. from Anniston, and seldom from South Pittsburg. Over the U. P. from Vincennes and South Pittsburg; and sometimes from Anniston,

and over the Santa Fe from all of them. The rates over the three lines are the same. The U. P. and Atchison and its connections actively solicited. To the North Pacific coast witness ships over the Great Northern, the U. P., and the Northern Pacific. Routing of his traffic

(1075) Shipments from Anniston over the S. P. go via New Orleans. From South Pittsburg shipments sometimes go by the Frisco-Rock Island line to El Paso, but as a rule over the Iron Mountain route and the Missouri Pacific to El Paso. From Anniston over the L. & N. to New Orleans. Some of the Anniston business goes out through the Memphis gateway, Frisco to Kansas City, and thence over the Atchison. Occasionally a car goes through Kansas City over the U. P., then S. P. into San Francsico. Doesn't ship by Chicago. (1076) Has never shipped to Portland by the S. P.

(1076) JACOB SCHIFF.

Schiff.

Witness lives in New York. Is a banker and a partner in the firm of Kuhn, Loeb & Co. Mr. Otto H. Kahn is one of his partners. That firm has been in existence about 40 years. Witness identifies complainants' Exhibit 109, being the plans of reorganization of the Union Pacific. It is offered in evidence and set forth on pages 1077 to 1098. New York. Partner in firm of Kuhn, Loeb & Co.

(1098) Witness was one of the reorganization committee. Kuhn, Loeb & Co. were the bankers of the committee. A reorganization syndicate was organized under the management of Kuhn, Loeb & Co. The present Union Pacific Company took over the properties and commenced business in the beginning of 1898. Witness was a member of the board of directors up to April, 1906. Mr. Kahn was also a member of the board at the same time. Reorganization of U. P.

(1099) Witness recalls the issuance of $100,000,000.00 of convertible bonds of the Union Pacific. They were bought by his house. They were issued to put the company in funds. The first part to the extent of $40,000,000.00 was sold to put the company in funds to pay for its purchase of Southern Pacific stock. The purchase was financed for the Oregon Short Line Railroad Company by the Union Pacific. Witness was asked if at the time the Northern Pacific and the Great Northern purchased the stock of the Chicago, Burlington & Quincy, or prior to the date of its consummation, Mr. Harriman and himself had any conversation with Mr. Hill, or the parties who were negotiating that purchase with reference to securing an interest in the purchase. Witness answered as follows: "As far as I can remember—this is a matter of seven or eight years ago, but as far as I can remember, there were either one or two discussions between Mr. Harriman and Mr. Hill, and I believe I was present at least at one of them, in which the general aspect of the situation was discussed, and in which Mr. Harriman objected to the Burlington & Quincy passing into the hands of (1100) Northern Pacific and Great Northern, and insisted that it should be kept independent. He said that the Union U. P. convertible bonds. Purchase of C. B. & Q. by Hill lines.

Pacific was perfectly satisfied with the position of the Burlington and Quincy as it existed, and he thought it was inadvisable that it should be attached to the two northern corporations, or either of them."

Witness knew that if the purchase was made by the two northern companies that the Union Pacific desired to have an interest in it. So far as witness can remember that conversation was in the spring of 1901. Cannot say whether it was in April or May. Mr. Hill declined the suggestion. Witness recalls that his firm bought a large amount of Northern Pacific stock in the spring of 1901 (1101) and that it was resold to the Union Pacific or the O. S. L. after a very short time. The first purchase of Northern Pacific stock was made by his firm without conversation or conference with anybody. "We only informed Mr. Harriman, after we had started purchasing Northern Pacific stock that we had done so." Finally the Union Pacific had acquired a majority of the outstanding Northern Pacific stock counting the preferred and common stock together. Believes the object of purchasing Northern Pacific stock was to continue, if possible, the statu quo as far as the Burlington and Quincy was concerned—to keep it independent.

Purchase of N. P. stock.

"I think the Union Pacific managers felt that if they controlled the Northern Pacific, which they had no desire to control because it was the Northern Pacific—but if they did control the Northern Pacific, which at that time together with the Great Northern had accomplished the purchase of the Burlington & Quincy, they might still be in a position to enforce independent management of the Burlington & Quincy." (1102) "Q. What interest did the Union Pacific have in what was done with the Burlington? A. While it was to some extent a sharp rival, it was always able to get along with it, but the managers of the Union Pacific did not know, with two new interests coming into that territory, what might become of the Burlington, and what havoc might be played with existing competitive conditions, which were entirely satisfactory."

To enforce independent management of C. B. & Q.

(1104) Witness knows of certain conversations had by Mr. Harriman with Mr. Ripley and Mr. Morawetz in or about the year 1904, with reference to the Santa Fe. Not clear as to whether he was present or not. Thinks he was present at one conversation but not more. The conversation inquired about related to representation which Mr. Harriman and witness and their associates desired to have on the board of directors of the Santa Fe. Witness knew that at that time requests were made upon the Santa Fe people for representation of himself and his associates.

Representation on Santa Fe directory.

(1105) The other gentlemen included as associates were Mr. Wm. Rockefeller, Mr. Henry H. Rogers, Mr. James Stillman. Witness and his associates had been purchasing a large amount of the common stock of the Santa Fe, and under the laws of Kansas were entitled under the cumulative system of voting, to two directors, and wanted them without resorting to cumulative voting. They asked that Mr. Rogers and Mr. Frick be placed on the Santa

Fe Board. Witness does not remember that any other names were suggested. They wanted representation on the board to know that their interests were properly protected.

(1106) Witness states that it is but usual and natural that large stockholders should want to be represented on the board of managers. Witness knew of nobody in the syndicate who was dissatisfied with the Santa Fe method of operation. As far as Kuhn, Loeb & Co. were concerned they purchased Atchison stock because they considered it cheap; and for no other reason. Does not agree with Mr. Harriman's testimony in this respect. Does not remember that the matter of establishing better relations between Union Pacific and the Santa Fe was discussed. It may have been discussed with Mr. Kahn when the witness was not present. "It is probable that in purchasing stocks, different participants had different purposes. As I have already stated, our purpose was to invest in Atchison stock because we considered it very low (1107) in price; and it may have been said, even if I do not remember it now, that it would be an advantage if friendlier relations than existed could be obtained in consequence. That may have been stated. Even if I do not remember it, it may still be a fact that that might have been stated."

Kuhn, Loeb & Co. purchased Atchison because it was very low.

"Q. Mr. Schiff, this stock that you and your associates owned at the time of the discussions about representations on the Atchison board was stock that you gentlemen owned and not stock of the Atchison that the Union Pacific owned; isn't that true? A. That is correct. Q. You were representing the personal interests of yourself and your associates in these discussions. A. That is correct." At the time of the conversation with Mr. Hill about the purchase of the Burlington, that company owned a line extending from Chicago to Omaha where it connected with the Union Pacific. It also owned a line as far westerly as Denver, where it connected with the Union Pacific again. Then it connected with the Union Pacific at other points in Nebraska, Colorado and Wyoming. It was a system that originated a great deal of traffic.

Representation on directory requested because of stock owned personally.

U. P. connections with Burlington.

"Q. One of the effects of the control of the Burlington by the Northern Pacific and Great Northern would have been to divert to those lines as against the Union Pacific Lines—or the tendency would have been to divert to those lines as against the Union Pacific lines—such traffic as originated on the Burlington lines for the Pacific Coast, would it not? (1108) A. I have no doubt that would have been possible." Kuhn, Loeb & Co. never started in to buy control of the Burlington. At the time witness and his associates purchased this Santa Fe stock, that is to say, Mr. Kahn, Mr. Harriman, Mr. William Rockefeller, Mr. Henry H. Rogers and Mr. Stillman, they were all members of the Union Pacific board. Mr. Wm. Rockefeller was not.

Effect of C. B. & Q. control by Hill lines.

(1109) STUYVESANT FISH.

Fish.

Former Pres't. Ill. Cent.

Lives in Putnam County, N. Y. In the railroad business nearly

all his life. Connected with the Illinois Central since 1871. For the last twenty years, down to 1906, as President. It runs from Chicago to New Orleans, from Chicago to Omaha. Reaches St. Louis, Louisville and Memphis. The only points at which the Illinois Central reaches the Missouri River are Sioux City and Omaha. Up to 1901, U. P. and S. P. were competing for Illinois Central business, the former at Omaha, the latter at New Orleans. (1110) Competition between those two railroads covered the whole territory reached by the Illinois Central. Rates were the same, and Illinois Central routed business indifferently, as suited them best. At one time sold passenger tickets which were good to go one way and come back the other.

Competition for Ill. Cent. traffic.

(1111) Witness thought it would be feasible to work San Francisco business via the U. P. to Portland, and then down by boat. Boat lines had considerable effect on rates over the trans-continental rail lines. Witness thought you could generally count the steamboat line, if it didn't exceed five times the length of the rail line, as something that would compete. The business of the Illinois Central from Chicago to New Orleans is a miscellaneous business, diversified. Coal is the largest item. It picks up some business for the coast at intermediate points between Chicago and New Orleans, delivered to it by other lines from the East—Louisville, for instance—but not a great deal of it. (1112) The whole policy of the road was to make no permanent alliances, but to deal with its connections as it thought best in its own interest from time to time. Sent business over the route which would give most revenue. Illinois Central at one point or another connects with all the lines that cross the Missouri River or lie west of the Missouri River and with all the lines extending from Chicago or St. Louis or the Missouri River westwardly.

Effect of boat lines on rates.

(1113) Witness thought there were through rates to the Pacific Coast with all these lines. Illinois Central treated those lines best that treated it best, purely as a selfish policy. (1115) All the various lines forming links in the lines to the Pacific coast were competing for business originating on the Illinois Central. Doesn't know whether any business from the east for San Francisco ever moved by Portland. Not familiar with that branch of the business, and in expressing his opinion didn't testify as an expert with respect to that locality. Had in mind the Sunset route and the Morgan steamers. (1116) "Q. What I want to know is what circumstances you base your opinion that it is a feasible transportation route for the Union Pacific by way of Portland to San Francisco. What are the circumstances on which you base that opinion, if you wish to be understood as expressing a definite opinion on the subject? A. The Union Pacific had their own line of rails, with their affiliations—the east lines controlled by them—up to Portland, and the market is San Francisco, and the sea is open to them, and I understand they had a line of steamers there for some time on that route. Q. And it is upon those circumstances that you base

All lines competed for coast business.

Portland route.

the opinion that that is a feasible route for the Union Pacific, is that correct? A. Yes, sir. Q. You don't know what other circumstances, from a traffic standpoint or otherwise, or a transportation standpoint, may exist that would make that entirely impracticable from a railroad or traffic standpoint, do you, Mr. Fish? A. No, I do not." (1117) Does not think it would be quite as feasible for the Northern Pacific to move traffic from its eastern termini to San Francisco, by way of Tacoma, or Seattle, or Portland, as for the Union Pacific. Portland is 100 miles inland on the Willamette River.

(1118) EDWARD T. JEFFERY.

Jeffery.

Lives in New York, and for 52½ years in the railroad business. Has been connected with the Illinois Central and Denver & Rio Grande. Also director in several other railroad companies. Chairman of the Board of Directors of the Wabash, and President of the Western Pacific. The latter is now under construction from Salt Lake to San Francisco. Began active construction about three years ago. Has been President of the Denver & Rio Grande for 17 years and 4 months. It runs from Denver via Colorado Springs and Pueblo to Salt Lake and Ogden, with numerous branches.

New York. Pres't. D. & R. G.

(1119) Originally it ran to Grand Junction, and there connected with the Rio Grande Western to Salt Lake and Ogden. The control of the latter was acquired about seven years ago, and the two companies consolidated a few months ago. It owns two-thirds of the capital stock of the Western Pacific. On the east of Denver it connects with the Burlington and the U. P., the Missouri Pacific at Pueblo. Also connects with the Rock Island and Atchison at Denver, Colorado Springs and Pueblo. Witness was connected with the Illinois Central 33 years, the last four or five years as General Manager. Before that time General Superintendent and Acting Chief Engineer. The Sunset route competed with the all-rail lines to the coast, including the U. P.

D. & R. G. connections.

(1120) The consolidation of the S. P. and U. P. eliminated the free interchange that there was between the S. P. and D. & R. G. system at Ogden and at Salt Lake "to an extent." The common control has inevitably reduced the interchange of business with the D. & R. G., a competing line. The east-bound business was gradually diverted from the Denver & Rio Grande to the U. P. Some was doubtless taken by the Atchison at San Francisco. The D. & R. G. maintain commercial agencies at San Francisco, Los Angeles and Portland, and since 1901 these agencies have been rather stimulated to greater effort.

Effect of U. P. and S. P. consolidation.

(1121) Tonnage delivered to the D. & R. G. by S. P. less since 1901 than before. The business to the Pacific coast in general has, however, increased. Formerly had considerable business in and out of Portland over the O. S. L. via Salt Lake, and the same over the S. P. It was a somewhat diversified traffic, considerable lumber, some sheep, cattle, wool, fruits, hops, some Oriental traffic. Oriental

Traffic from Portland.

traffic brought by ships to Portland. Sometimes got Oriental traffic by way of San Francisco. Shares very slightly in that now. Gets no cargoes from Portland and the Orient now. S. P. still maintains through rates with the D. & R. G. via Ogden. (1122) The Oregon Short Line maintains through rates with the D. & R. G. only to a limited extent. A number of the divisions of rates have been taken out. Prior to 1901 the Ogden gateway was free and unrestricted. The S. P. and D. & R. G. have substantially the same rates and divisions on California business that they had prior to 1901. The difference is that since 1901 as to unrouted traffic, the S. P. has preferred the U. P. Where D. & R. G. agents on the Pacific coast obtain control of business and route over the S. P. and their lines, the S. P. respects the routing.

Ogden gateway.

Same divisions with S. P.

(1123) The S. P. agents solicit business in connection with the U. P. Those roads work together against the D. & R. G. The construction of the Western Pacific was made necessary by the changed attitude of the S. P. toward the D. & R. G. (1125) Westbound the D. & R. G. gives a very much larger amount of business to the S. P. than east-bound it receives in return. It has no other channel open for its west-bound traffic. East-bound the S. P. has the U. P. and "the excellent facilities that that system possesses." (1126) Since the S. P. formed a part of the all-rail route from Ogden west—eliminating the Sunset route—in either case, the competition which formerly existed was between the U. P. and the D. & R. G. and its eastern connections. Witness thought that was largely so. Would not say wholly so. Entirely so with the S. P. It got the traffic at Ogden, no matter whether the U. P. or D. & R. G. carried it.

Necessity of building Western Pacific.

(1128) The competition for the trans-continental traffic east of Ogden, except such as went by the Sunset route, was between the U. P. and the D. & R. G. and its connections. Traffic from the Atlantic seaboard, and any points west of the Atlantic seaboard, was always competed for by the Morgan Line. (1129) Business that the D. & R. G. formerly received from Portland via the S. P. came by way of Sacramento over two severe mountain ranges. The Sacramento gate is closed, and whatever the D. & R. G. agent is able to get at Portland must come over the Short Line. (1130-1131) Most of the through rates between the D. & R. G. and O. S. L. have been withdrawn, and D. & R. G. does little Portland business. Witness hesitated about saying the competition of the Central Pacific portion of the S. P. was eliminated, because business could go from the east to San Francisco all water, or by the Sunset route and then be carried to California and Nevada points by the S. P., or it might go all rail through Ogden to the same points. By consolidation of U. P. and S. P., witness' ability to compete with U. P. greatly diminished.

Portland business via Sacramento crosses two severe mountain ranges.

NEW YORK, TUESDAY, JAN. 12, 1909, 2 P. M.

(1132) VICTOR MORAWETZ.

Morawetz.

Chairman Executive Com. Atchison road.

In 1895 was a member of the Committee that reorganized the old Atchison system; counsel of that committee. When the new company was organized and took over the properties on January 1, 1896, became a member of the Board of Directors and Executive Committee, and General Counsel. Two years ago (1133) resigned as General Counsel, but continued to act as Chairman until last October, and has since had no official connection with the Company. While Chairman of the Executive Committee was quite familiar with the affairs of the Company, except operating and traffic matters; probably more familiar than any one, with the policy of the Company, so far as it was directed by the Board of Directors.

"In 1901 the Atchison company bought the stock and second mortgage bonds of the Santa Fe, Prescott & Phoenix Railway Company. At that time Mr. Frank Murphy was the president of the company. On account of Mr. Murphy's familiarity with the property and with the territory through which the line runs, and on account of our respect for his ability and his character, he was requested to continue to act as president of the company, and he has so acted until the present day. At that time Mr. Murphy had a project to build an extension from Phoenix to Benson. When we took the property over we did not favor building that line. It did not seem to me that the line would be profitable as an investment; it would be no part of the Atchison through line; traffic could not advantageously be sent via Phoenix over the Santa Fe, Prescott & Phoenix to Ash Fork and then around over our main line. The local business in prospect did not seem to me very attractive. Agricultural business there was none, and there were no developed mines along the line, but merely prospects; and of course mines are proverbially uncertain, and after they are played out there is nothing for a railroad to look forward to. For that reason I was not in favor of spending the capital of the Atchison system for the construction of that line. Mr. Murphy was very enthusiastic about it, and subsequently decided that he would cause the line to be built anyhow. When it became apparent that the line was going to be built, I advised Mr. Ripley that I thought if that line was to be built, we had better build it ourselves; and it was arranged, in substance, that we should build the line as far as Dudleyville. Mr. Ripley was not disposed to go down the San Pedro Valley to Douglas, because—— MR. SEVERANCE. Benson, you mean?

Projected line from Phoenix to Benson.

Did not favor project.

As Murphy intended to build anyhow, thought Santa Fe had better do it.

(1134) "WITNESS. To Benson, I mean—because he did not think it would pay to do so. In the summer of 1902 we concluded that it would be advisable to extend the Atchison system into the territory north of San Francisco Bay and west of the range of mountains which I believe is called the Coast Range. Negotia-

Effort to purchase California & Northwestern.

tions were started by Mr. Ripley with the owners of the stock of the California & Northwestern Railroad Company for the purchase of their stock; but pending those negotiations the stock was sold either to the Southern Pacific or to persons from whom the Southern Pacific subsequently acquired it. Thereupon, in the autumn of 1902, we bought the stock of the Eel River & Eureka Railroad, which was a short line extending out of Eureka, and which I think originally was built merely as a logging road. The traffic of that line was the redwood timber into Eureka, from where it was transported by ship. We bought that line for the purpose of obtaining the redwood traffic, and for the purpose of obtaining a foothold in the territory which, as I have stated, we desired to enter. Sometime in the autumn or winter of 1902 negotiations were begun for the adjustment of the differences existing between the Southern Pacific Company and the Atchison with regard to conditions in Northern California and in Arizona. Mr. Harriman objected quite strenuously to our construction of the Phoenix & Eastern line, because he considered that an invasion of territory properly tributary to the Southern Pacific system. Mr. Harriman desired us to sell to him the constructed part of this Phoenix & Eastern road, and to retire from the territory south of Phoenix. I stated to Mr. Harriman that the settlement of any questions as to Arizona territory, and as to Northern California territory, would have to go together. I was willing to sell the Phoenix & Eastern line, but I wanted to get into the territory in Northern California; and I then formulated the terms upon which I was willing to settle these controversial questions. These terms, in substance, were as follows:

Negotiations for settlement of differences in Northern California and Arizona.

Terms submitted.

That the Southern Pacific Company should give us a half interest —an equal half interest—in all the lines—the California & Northwestern and another line—— * * * the North Shore line, which it had, north of San Francisco Bay, amounting to approximately 400 miles, I think. We would give them a half interest in our Eel River & Eureka line amounting to about 40 miles of main line, and a few branches, amounting to less than 50 miles all together; and that all lines to be constructed in that territory as far up as Oregon, that is, up to the end of Humboldt County, should be open to the Atchison and to the Southern Pacific on equal terms. The idea of establishing a low-grade line between Phoenix and Deming, of which this Phoenix & Eastern line would be a part, was first suggested during these negotiations. I never heard of it, and it was not contemplated until that time; it was certainly not contemplated when the construction of the Phoenix & Eastern line was begun. I was more than willing—was desirous—of making a settlement on the terms which I have stated, (1135) because the Atchison Company had no money at that time for the construction of the proposed line in Northern California, which would have cost approximately twelve millons of dollars, and it had no money for the construction of the new mileage in Arizona.

Never heard of low grade line until then.

Was desirous of making settlement.

"The project of building a low-grade line up the Gila Canyon to Deming was not contemplated by us ever as a project to be immediately carried out, or to be carried out within any specific time. I was never convinced that it would pay us to build that line. It would have cost approximately ten millions of dollars to build the low-grade line between Phoenix and Deming, and it would have cost a million or two millions more to put the line between Deming and Belen in proper order for the carriage of any heavy amount of business. This low-grade line, even after the completion of the proposed cut-off between Wickenburg and Bengal, would have been about 160 miles longer than the present line between Belen and Bengal, and about 175 miles longer than the present line between Albuquerque and Bengal. It would have obviated only the objectionable grades on about 369 miles of our present line. In the winter of 1901 we took up the project of building a low-grade cut-off from Belen to our Pan-Handle Division, to serve as a second transcontinental line. The surveyors were put in the field in the winter of 1901-1902, and the line has since been constructed between Rio Puerco, which is a point west of Albuquerque to Belen, and thence to Texico, where it connects with our present mileage, and very large sums have been spent in reducing grades and curvature on our Pan-Handle line with a view to establishing a better line than the existing one between Chicago and the Pacific Coast.

Low grade line up Gila canyon not feasible.

Belen cut-off.

"Q. By the Pan-Handle line, Mr. Morawetz, you mean the line from Texico through the northern part of Texas and northwestern Oklahoma? A. Yes. I wish to state the the construction of this line had absolutely nothing whatever to do with the proposed or contemplated construction of the cut-off—of the so-called low-grade line between Phoenix and Deming. This Belen cut-off was undertaken before this so-called low-grade line between Phoenix and Deming was ever thought of; and the reasons, if you care to hear them, for the construction of the Belen cut-off were as follows: Our existing line was nearing the limit of its capacity—that is, the traffic of our existing line was reaching the limit of the capacity of that line; and looking ahead, we saw that we should, in the not far distant future, have either to double-track the mountain divisions of our existing line or get another outlet.

Reasons for its construction.

"Q. By the existing line you mean the line through southeastern Colorado by way of Trinidad? A. Yes, over the Raton and Glorieta Mountains. At that time there were rumors and indications that other systems, or at least one other system, contemplated building in the direction of the Rio Grande River; and although we would have preferred to postpone somewhat the construction of the Belen cut-off, we somewhat hastened (1136) our action because the Abo Pass was of great strategic value, and we thought it advisable to occupy that pass. We therefore began the construction of the Belen cut-off from the west and occupied the pass first, and then gradually extended it east. Another reason, and an important reason, for the construction of that line was that we contemplated,

Abo Pass.

Projected line from Texico to Brownwood, Texas.

and the Atchison company still contemplates the construction of a line from Texico in a southeasterly direction to Brownwood, Texas, which, in conjunction with the existing Gulf line of the Atchison company, will give it the shortest, and I am inclined to think, the best, line between San Francisco and the Gulf of Mexico. In connection with this Belen cut-off it was proposed to reduce the grades on the existing line to six-tenths of one per cent. a mile as far west as Winslow. When that construction is completed there will be but 369 miles of road between Bengal and the east which is not a six-tenths grade, except as to one or two pusher grades or doubling grades.

"Mr. Harriman objected strenuously to the terms which I demanded of him, and the contest for the location of the Phoenix & Eastern line, which has been referred to in the testimony, took place because he was unwilling to accept the terms which I demanded. About September, 1904, while this controversy was still going on, I was informed by Mr. Harriman that he and some of his associates in business had purchased about 300,000 shares of Achison stock, and he asked for representation on the Board of Directors. I stated to him that I would never willingly give any representation on the Board of Directors to the Union Pacific Railway or to any rival company. He stated to me that not a share of that stock was owned by the Union Pacific Railway Company or the Southern Pacific Company, but that it had been bought by himself and several gentlemen who were associated with him as a private investment, because they believed in the Atchison property and in the country through which its lines ran. The gentlemen, I may say here, who were associated with Mr. Harriman, were Mr. Rogers and Mr. William Rockefeller, Mr. Stillman, and Mr. Schiff, or his firm, Kuhn, Loeb & Company. I stated to him that I would not be willing to give any of these gentlemen a place on the Board of Directors until the differences existing between the Atchison and the Union Pacific Company had been adjusted; but if those differences were adjusted I would be willing to give to those gentlemen some representation on the Board of Directors in view of their personal holdings, with the understanding that the nominees would be acceptable and satisfactory to my own Board of Directors.

Purchase of Atchison stock.

Private investment.

Representation on directory.

"I further stated that I would not be willing to have any of the executive officers, including himself, on our Board of Directors. There was a little difference of opinion between us on that point. Mr. Harriman and I had discussed the subjects—the general railway policy—on more than one occasion, and he urged that the management of great railway systems—the different great railway systems in the country—should deal with each other openly, fairly, and in a broad spirit of live and let live; and I agreed with him as to that general policy. I (1137) remember telling him that it was my belief that many, if not most, of the abuses in railway management were due to a failure to observe that policy, and to attempts of the officials of rival companies to obtain advantages over the others

through petty methods and sharp practices; but I told him that I did not believe in having the officers of one company upon the Board of Directors of a rival company. He did not agree with me as to that, because he suggested that he should go on the Atchison board, and he offered me a place on the Executive Committee of the Union Pacific or the Southern Pacific (I don't remember which.) At the time of the annual meeting of the stockholders in October, 1904, the differences to which I have referred had not been adjusted; but before I went out to the meeting Mr. Harriman handed me proxies for about 280,000 shares, but with the understanding that I would not use them unless in the meantime we had reached an agreement. The points open at that period of the negotiations were very few. * * * Well, one point was this, as I recall it. He had finally agreed that if the other terms of the settlement were carried out, the Southern Pacific would build a low-grade line between Phoenix and Deming, and give to the Atchison company an option, whenever it wanted, to take trackage rights over that line on very favorable terms—terms which would give us the use of that line for less than half of what it would cost us if we had built it ourselves. But he wanted to hitch on to this grant of trackage right a condition that we would not use the line for traffic to El Paso which there would be exchanged with the Missouri Pacific system or the Mexican Central or the Rock Island. While I did not attach much importance to this condition, because I knew we would never, if we could help it, send business that way, when we contemplated having the best line between the Pacific coast and Galveston, all over our own rails, yet I was not willing to assent to that condition; and therefore, at the annual meeting I did not vote the proxies, but brought them back and handed them to Mr. Harriman. Soon after that he yielded the points in difference, and the terms which I had demanded from the very beginning of the negotiations were agreed to without any modification to the disadvantage of the Atchison system; and thereupon two of the directors of the Atchison company retired, and Mr. Rogers and Mr. H. C. Frick were elected directors, and one of them a member of the Executive Committee.

Annual meeting of 1904.

Trackage rights on low grade line.

Terms agreed to.

"MR. SEVERANCE. Which one? WITNESS. Mr. Rogers. As further explanation, I wish to state that in discussing the question of representation on the Board of Directors, Mr. Harriman and I were quite open with each other. I realized and he realized that the gentlemen whom I have named could, if they had desired, have elected four directors of the Atchison Company—four out of fifteen—because our board is a classified board, (1138) and under the system of cumulative voting one-fourth of the stock represented at a meeting can always elect one director; so that in four years the holders of one-fourth of the amount of stock represented at the meetings could put in four directors. With 300,000 shares to start with, and the proxies which they might obtain, it was evident that they could have elected one director a year—and then kept four directors in office. But I

Minority allowed voice in directory.

pointed out that no good could be obtained, either to the individuals or to the property, by a Board of Directors divided against itself, and that the only sensible course was to act amicably and give fair representation to these large interests, which I suggested should be two." These contracts respecting Northern California matters and the Phoenix & Eastern matter were not formally authorized by the board until December, 1906, but their terms had been substantially settled before Messrs. Rogers and Frick were elected members of the Board of Directors. The actual drafting of the various agreements was a matter between the lawyers altogether.

Agreements as to Northern California and P. & E. matters.

There were seven members on the Executive Committee. "The line between Wickenburg and the Colorado River was started, and part of it built, irrespective of the construction of a low-grade line to Deming. Originally, at the urgent insistence of Mr. Murphy, we consented to the construction of 50 miles of road, easy construction, west of Wickenburg. There were several purposes in view in building that line. One was to obtain the mining traffic which, it was represented to us, would come to us through the construction of that line. Another was that we were anxious to help on the construction of the dam of the Colorado River south of the Needles, and the reclamation of a very large body of land which is contemplated. A further reason was that ultimately this line would give us the best line from the west into the Salt River Valley, and would become an important, valuable link in any trans-continental line which might be established through Phoenix. There was talk at that time of other systems building in from El Paso, and we were desirous of occupying that territory so as to meet any line which might be constructed to Phoenix, and receive the traffic from that line at Phoenix, if possible. No doubt, also, it was considered that if ever we or the Southern Pacific should build its low-grade line between Phoenix and Deming, our line from Phoenix west to Mojave would be a link in the whole trans-continental line established in that way."

Line between Wickenburg and Colorado River.

(1139) Mr. Murphy had nothing to do with the negotiations, and witness didn't think that he ever considered the conditions and needs of the Atchison system as a whole. He was an enthusiastic son of Arizona, and had very high ideas of its possibilities, and was always anxious to spend the Atchison's money in the construction of Arizona lines. Messrs. Frick and Rogers exerted no influence in the Board of Directors, or otherwise, with regard to the Atchison-S. P. contracts. The terms of the contracts were settled before they became Directors. (1140) Witness always found Mr. Frick and Mr. Rogers to be as zealous Atchison directors as any of the Board. "I do not recall that at any time any question was raised as to the interests or desires of the Union Pacific or of the Southern Pacific Company." Mr. Harriman never exerted or undertook to exert, any influence upon witness, or upon the Board of the Atchison, adverse to the Atchison and in favor of the Southern Pacific or Union Pacific interests, and he never was consulted. The owner-

Messrs. Frick and Rogers, zealous Atchison directors.

Mr. Harriman never attempted to exert influence in favor of S. P. and U. P.

ship of $10,000,000.00 of Atchison stock by the Union Pacific has never had the slightest influence in the matter of causing the Union Pacific to control in any way the action of the Atchison.

(1141) There has never been any relaxation in the competition between the Atchison and the U. P. and S. P. Mr. Murphy never to any extent directed or controlled the policy of the Atchison Company. He confined his attention to the Prescott road and the conditions in Arizona. He was never a Director in the Atchison. The construction of the Wickenburg line was commenced, witness thought, in 1903; thought that the construction of the Phoenix & Eastern was begun in 1902. (1142) When the construction of the P. & E. was begun, the idea was to build to Benson. The idea of a line up to Gila Canyon was first brought up at the time of the controversy with the S. P. on account of the Atchison building into what they called their territory. At no time until the sale of the P. & E. was any definite line decided on as the proposed low grade line, if any should be constructed. Atchison's engineers were at work both in the north and south to ascertain what line would be most desirable, and the line which was under consideration at the close of the negotiations was a line through the Arivapa Canyon, which is south of the Gila Canyon. Think they first discussed building a line from Dudleyville to Deming in the winter of 1902-3. It was witness' impression that the Wickenburg line was started about six months afterwards. If witness previously testified differently, it was unintentional.

No relaxation in competition.

Arivapa Canyon.

(1144) Probably informed the right of way was given to the P. & E. in order to get a competing line. Contest as to location of the P. & E. with Harriman took place after witness had formulated his demands, and Mr. Harriman had refused to agree to them. Witness remembered stating to Mr. Harriman that he didn't think such action would facilitate the negotiation. The El Paso and Southwestern is an independent line of the Phelps Dodge people, connecting at El Paso with the Mexican Central and the Texas & Pacific. It has no way of reaching the Pacific coast, except by the S. P. from Benson. It connects with the Atchison at El Paso and at Deming, and through the S. P. it connects with the Atchison at Phoenix, but practically its only outlet is the S. P. The only thing that was left in order to give an outlet and an interchange of business between Arizona and the territory to the west, and along the El Paso & Southwestern and down into Mexico (1145) was the construction of this short line from Benson to Dudleyville, that is, as long as the Atchison owned that road. All the witness remembered was that Mr. Harriman objected to the Atchison constructing this line south of Phoenix, on the ground that this was an invasion of their territory. The territory lying between Benson on the south, and you might say Mesa on the north, except for that little line over by Maricopa, was not served at that time by the S. P., although Mr. Harriman was trying to protect it. The mineral traffic there, however, was traffic between local points and the east, which could not

El Paso & S. W.

Mr. Harriman's objections.

Traffic was local.

be properly served by the Atchison, but which naturally fell into the S. P. system, or to the El Paso & Southwestern. So far as the Atchison was concerned, it was simply a question of a short local haul to deliver to another line to the east, if the Atchison had built on to Benson. There was no business from those points. There were prospects of development, but you cannot operate a copper mine without a railroad, and there was no railroad reaching the mines in the San Pedro Valley. Doesn't think there is a mine there to-day, and if Mr. Murphy testified to the contrary, witness thinks he is mistaken.

(1146) S. P. didn't need the P. & E. line for local purposes any more than the Atchison. Does not doubt that the S. P. bought the line for the reason that was assigned, namely, that they didn't want the Atchison to extend into their territory. That is not another way of stating that they didn't desire competition from any other line in that territory. They didn't want the territory to be occupied by the Atchison, because if there was anything in the territory for a railroad company, they wanted it for themselves.

(1147) If the Atchison had been extended down to Benson, it would have produced competitive conditions, certainly between the country to the east and Phoenix. Mr. Harriman desired to prevent possible future competition through a line that the Atchison might build down to Benson. The Atchison didn't accommodate him in that regard. Witness would have sold that line independently, for cost and interest, because according to his best advices it would not pay for years to come, if at all, and if the Atchison wanted to build a line through there to Deming, they could build it, without having lost in the meantime interest on the investment. There was no thought of selling it until the controversy with the S. P. Co. (1148) Witness still thinks very well of the line from Ash Fork to Phoenix, built by Mr. Murphy. The latter knows the possibilities of the territory much better than anybody in New York that witness knows. Mr. Murphy was very much interested in the Atchison project in Northern California. He occasionally laps over outside of Arizona.

Would have sold P. & E. independently for cost and interest.

(1149) The Atchison has not requested the completion of the construction by the S. P. of the line from Phoenix to Deming under Exhibit 104. Nor does witness think the Atchison will ever ask trackage under that agreement, because he doesn't think it would pay. Thinks it desirable option to have, but doesn't believe it would ever pay the Atchison to haul its trans-continental traffic that way. The Atchison turned over to the S. P. the P. & E., reserving a right which witness regards as of some value. The principal difference in negotiations with Mr. Harriman was that the latter refused to give the Atchison a half interest in the lines north of San Francisco Bay.

Would not pay Atchison to haul its transcontinental traffic via Deming.

(1150) Mr. Harriman considered the trackage contract of more value than witness did. Witness went into the construction of the P. & E. to Dudleyville reluctantly, and was willing to sell at cost and interest, because he didn't believe it would pay. Hasn't yet

Was reluctant about construction of P. & E.

paid operating expenses. Line was built to develop local traffic, and not as a tunnel between two points. Witness not a traffic man, but Mr. Ripley advised that he didn't think the construction on to Benson would have opened up enough traffic to pay for the construction. Mr. Ripley stated to witness that it would be many years, if ever, before the Atchison could afford to build that low grade line. It wouldn't pay. It would have involved an expenditure of more than $15,000,000.

(1151) Atchison has built as far as the Colorado River, including an expensive bridge. Thinks about 96 miles up to Bengal, and it would cost about $2,000,000 to build there. Some day the line will undoubtedly be extended. A line will be built from somewhere about Parker, in a northeasterly direction to Ash Fork, to give the Atchison a second line between that point and Bengal. That will leave only the short piece of line between Ash Fork and Winslow, in order to give practically two lines across.

Parker to Bengal.

(1152-1153) Even if there had not been a panic a year ago last fall, doesn't think the line through to Bengal would have been speedily constructed. The Atchison originally contemplated the purchase of the California & Northwestern, but the S. P. got ahead of it. Atchison wanted a foothold in that country. Some of the mills are inland and some on tidewater. The Atchison has no line of boats there. S. P. is entitled to trackage rights between Phoenix and Mojave, and Atchison is anxious for them to take it, because if they will, the line will be immediately finished. The S. P., if they then took their through business over the line by Wickenburg, would get a much better grade for San Francisco and Northern California (1153) but not for Los Angeles; so that it is a valuable privilege for the S. P. On the other hand, it would relieve the Atchison of half the cost of construction and maintenance. The S. P., of course, are not going to claim the trackage privilege, unless they find it more profitable to pay all that than to use their own line. S. P. didn't ask for it, but witness offered it.

Santa Fe wanted entrance to Northern California.

(1155) Witness didn't think it would now pay to build the line which has been under consideration from some point east of Parker to a point between Prescott and Ash Fork. The increase of the interest charges and of maintenance would far exceed any saving in operation. (1157) Mr. Harriman invited Morawetz into the U. P. Board, because it was a part of his expressed policy that two great railways should deal with each other openly and frankly. Albuquerque is a few miles nearer Chicago than Belen, but the Belen cut-off makes the road to the coast 11 miles shorter. The difference arises because of the cut-off from Belen to the main line west of Albuquerque.

(1158) In Northern Arizona the Atchison has trouble getting water for its engines. Along the southern line down the Gila Canyon they would not have that trouble. The expense is considerable, but is trifling compared to an interest charge of $750,000

per annum and a maintenance charge of an equal amount for the new line. West of the place that the Belen cut-off strikes the main line at present there is some heavy mountain climbing—between Rio Puerco and Winslow, but by expending $1,700,000, a six-tenths of one per cent. grade could be established, leaving stiff grades to be dealt with only between Winslow and the Colorado River. (1159) Witness describes grades. The 369 miles containing heavy grades between Winslow and Bengal would be substantially eliminated if you made this detour around by Deming, but it would add 160 miles. The main line between Wickenburg and the Colorado River has a grade of 1.25, only a short distance.

Grades on Santa Fe.

(1160) At places, the line between Wickenburg and Phoenix is one per cent. or more. (1161) If it had been deemed urgently in the interest of the Atchison Company to build that line down to Benson, it would have been built, but the management didn't think that the advantages of building that line were sufficient to counterbalance the disadvantages. The disadvantages were twofold; one, that the profits of the line were, to say the least, problematical, (1162) and witness didn't think it was good policy to invade the territory of another company, unless it was very profitable to do so. It is barely possible that the time may come when, for the purpose of hauling the business of the Missouri Pacific and Rock Island from El Paso, it may pay the Atchison to exercise its option and take advantage of the trackage contract. Considers it would be ruinous for the Atchison to build that line, at least for many years to come. If, in the future, the growth of business should be so large as to make it profitable, why, the Atchison would build it. There is nothing to prevent it. It could duplicate the line from Phoenix to Dudleyville at far less than it received for that line from the S. P.

Santa Fe may avail itself of trackage contract.

Witness thought it better for the Atchison to build the P. & E., than that it should be an independent line in that territory, and furthermore, there was a certain strategic value possible to that line at a time when other lines coming in from the east were talking about building to California. (1163) Furthermore, he had the glowing accounts of Mr. Murphy as to the mineral possibilities of the territory. The Atchison's attitude indicated that originally they didn't want to build it. One reason why the S. P. wanted to buy the P. & E. was that it had had a project for some time to build a line down the Gila Valley to a connection with its Maricopa line south of Phoenix, without going to Phoenix, and this would have been part of that line, but witness thought the main reason was a desire to keep the Atchison out of that territory. Understood that the S. P. had a project under consideration of building down the Gila Canyon, reaching its line in the vicinity of Lordsburg on the east, and the extension westerly from Phoenix to Yuma, thus shortening its main line. There were rumors that the Missouri Pacific and Rock Island might come in from the east. (1166-1167) Exhibit 110. List of members of the Executive Committee of Atchi-

Strategic value of P. & E.

son from January 6, 1904, to and including election of November 4, 1908.

(1167) JAMES DOUGLAS

Douglas.

Resides at Spuyten Duyvil. President of the El Paso & Southwestern and of the Copper Queen Mine, located at Bisbee. (1168) Bisbee is a mining town of 15,000 people. Douglas is in the Sulphur Spring Valley, 28 miles from Bisbee, and the chief industry there is the smelting of ores that are raised in Bisbee. Of the other companies, the Calumet & Arizona is the largest, and the Superior & Pittsburg next. The output of the Copper Queen is 6,000,000 pounds of metallic copper a month, and that of the C. & A. and S. & P. at present is in the neighborhood of 4,000,000 and 5,000,000 pounds a month. The El Paso and Southwestern connects Bisbee with Douglas. That road, with its branches, is 290 miles in length. It was built by the people who are interested in the Copper Queen, and extends from El Paso into Benson, with a branch up to Bisbee. Except the mines at Bisbee and the smelters at Douglas, very little freight comes to the road except from Clifton, which is a mining region about 120 miles from a place called Hachita, where the El Paso and Southwestern joins the A. & N. M.

President El Paso & S. W.

Its industries and connections.

(1169) The traffic is chiefly mineral, but, of course, a population of about 30,000 people is fed by the El Paso & Southwestern. Moreover, at Douglas the road joins with the Nacozari Railway, running down into Mexico for 70 odd miles, and that yields it a considerable traffic. At El Paso it connects with the S. P., the Mexican Central, the Atchison, the Rock Island and the T. & P., and exchanges traffic with all those lines. Witness is quite familiar with the San Pedro Valley from Benson to Dudleyville. The San Pedro is the only perennial stream between the Rio Grande and the Colorado River. Runs almost the whole way between Benson and Dudleyville. It is a narrow valley, and swept by floods from the mountain ranges on each side. 80 miles from Benson one gets into a highly mineralized country, where the mines have never been developed actively, partially for want of cheap transportation. They are low grade mines, which could be made to pay only under very favorable conditions. By highly mineralized, witness means there is a large territory over which mineral is found, but it does not follow that the mineral is worth anything. Once had charge of a mine close to San Carlos Canyon, 70 miles from the railroad, but it didn't pay.

San Pedro Valley.

(1170) Unless the price of copper is very high, a 70 mile wagon haul is prohibitive. Had negotiations with Murphy, with reference to exchange of traffic or trackage lease. Thought at the time the Phoenix & Eastern was an independent line. (1171-1173) Exhibit 111-A, letter dated August 10, 1901, addressed to Mr. Hutchinson, care of Phelps, Dodge & Co., by F. M. Murphy, initiating the correspondence, and enclosing memorandum of proposed contract. (1174-1176) Exhibit 111-B, is Mr. Hutchinson's reply, dated August 12, 1901. (1177) Exhibit 111-C, letter dated October 23,

Negotiations with Mr. Murphy.

1901, from Douglas to Murphy. Exhibit 111-D, telegram dated November 3, 1901, from Murphy to Douglas. (1178) Exhibit 111-E, letter Murphy to Hutchinson, dated November 9, 1901. (1179) Exhibit 111-F, letter dated November 11, 1901, Hutchinson to Phelps, Dodge & Co. (1180) Exhibit 111-G, letter dated November 14, 1901, Hutchinson to Douglas. (1181) Exhibit 111-H, letter dated March 10, 1902, from Murphy to the El Paso & Southwestern. (1182-1184) Exhibit 111-I, letter dated May 10, 1902, Douglas to Phelps, Dodge & Co., with enclosure. (1184-1187) Exhibit 111-J, Proposed Traffic Agreement drawn up by Mr. Osborn, witness' attorney.

Correspondence with Mr. Murphy.

The following were read into the record: (1187) Letter dated March 18, 1902, from Douglas to Murphy, in reply to Exhibit 111-H. (1188) Letter dated April 8, 1902, from Douglas to Murphy. Letter dated June 23, 1902, from Douglas to Murphy.

(1189) Exhibit 111-K, letter dated June 24, 1902, from Murphy to Douglas. (1190-1191) Exhibit 111-L, letter dated July 14, 1902, Douglas to Murphy. (1192) Exhibit 111-M, letter dated July 19, 1902, from Murphy to Douglas. (1193) Two letters from Douglas to Murphy, both dated July 24, 1902, were read into the record. (1194) Exhibit 111-N, letter dated July 25, 1902, Murphy to Douglas. (1194-1195) Exhibit 111-O, letter dated July 28, 1902, from Murphy to Douglas.

(1195) There was no correspondence later than the correspondence offered in evidence. The most direct outlet for El Paso & Southwestern to California is the S. P. from Benson. The next most direct is the Atchison from Deming. Over the latter route traffic goes up north almost to Albuquerque. It is a long way around, so that most traffic goes over the S. P. Negotiations with Murphy never proceeded beyond the points shown by correspondence. Contract was never consummated. The line promoted by Murphy ran up the San Pedro Valley from Dudleyville to Benson. The river flows north.

Contract never consummated.

(1196) There is a good deal of agriculture in the upper reaches of the valley, but very little twenty miles from Benson. Most is within twenty miles of Benson. The distance over a practical route for a railroad from Benson to Dudleyville would be between 80 and 90 miles. El Paso & Southwestern never deemed it to its interest to construct that line. Witness has considered it, but doesn't know whether it would be profitable, and never seriously thought of building it. Rather have somebody else build it and get the traffic. The line would be a feeder for the El Paso & Southwestern. Witness thought south of Benson there were places where it would be desirable to have the exclusive right of way, especially in the lower reaches of the valley. (1197) Line would not be expensive there, nor would terminals at Benson. Benson has been a stagnant place from the beginning. Doesn't think its population ever exceeded 1,000 people. The S. P. has so much ground at Benson that if any

Never deemed it wise to construct line Benson to Dudleyville.

other railroad wanted to get in and make a connection with the El Paso & Southwestern, it might have trouble. There is substantially only one point where they could very well connect there.

E. P. & S. W. uses S. P. tracks at Benson.

(1198) El Paso & Southwestern uses the S. P. yards at Benson. Has substantially no terminals there at all, because the S. P. owns pretty nearly everything there. The Santa Fe used to come in and their yards were three-quarters of a mile, or nearly a mile, out of Benson. All that territory, too, the S. P. now owns. There is plenty of space north of the S. P. tracks, but to get across those tracks and make connections with the El Paso & Southwestern, and get your yards south of the S. P. tracks, would be a difficult thing. El Paso & Southwestern runs out of Benson to the south. (1199) Building another line to connect with the El Paso & Southwestern at Benson further discussed.

Benson and its environments.

The nearest town to Benson is St. David's, a small Mormon town of 500 or 600 inhabitants. It is on the other side of the river half a mile away. The next is (1200) Fairbank, 18 miles from Benson, with a population of 400 or 500. There is a very scant population in the territory between Benson and Fairbank. The level valley at Benson is about half or three-quarters of a mile wide. Taking in a slope of 100 feet or more, it is a mile or two wide. It would not be impossible, but would be difficult for Murphy's road to get across or under or over the S. P., and make a connection with the El Paso & S. W. at Benson. That is not the reason the El Paso & S. W. never extended north of Benson. Had no particular motive for such an extension. Object in that road was to carry coal and coke to the large smelting interests at Benson.

Mines and smelters.

(1201) Phelps Dodge people interested in mines before becoming interested in the railroad. Have no interest in the C. & A. Have friendly relations, but not interested in the Superior & Pittsburg mine. Are interested in smelters at Douglas. Phelps Dodge interests control the Mexican Railroad to Nacozari. There are some mines between Dudleyville and Benson, naming them. (1202) The Arizona and New Mexico runs from the Junction of the El Paso & S. W. at Hachita, through Lordsburg, up to Clifton, and is owned by a Scotch company that owns some of the most important mines at the latter place. Before the El Paso & S. W. was built into Benson, or even to Fairbank, the Sonora road was built by the Santa Fe, who parted with the line five or six years ago.

Lease of road to Guaymas.

(1203) The existing lease from the Atchison to the S. P., of the New Mexico & Arizona Railroad, running from Benson to Nogales, and thence on to Guaymas, including the Sonora Railroad, was made in 1898. The same instrument covers also the lease of the Southern Pacific's line from Needles to Mojave. S. P. got their maps filed ahead of the El Paso & S. W. in going into El Paso, so that the latter had to open up another gateway into El Paso. The S. P. had a line out of El Paso at the time, but wanted to better their location. (1204) The Copper Queen is the second largest smelter in the country. The Washoe is larger.

Large smelters.

The C. & A. has a smelter at Douglas. Witness thought El Paso had a population of 100,000. El Paso & S. W. got into El Paso, thanks to the decision of the Railroad Commission. Could probably have gotten in, anyhow. The S. P. wanted the former not to cross its tracks at grade, but were unsuccessful.

Rail crossings objectionable.

(1205) Doesn't think the S. P. could prevent the building of a line from Dudleyville to connect with the El Paso & S. W. at Benson, but they could interfere. It is generally the case that one railroad tries to prevent another from crossing its track. The S. P. doesn't act very differently from what the El Paso & S. W. does. Would not want another road to cross its tracks, even though they were not rivals.

Kahn.

(1205) OTTO H. KAHN.

Testimony given before Interstate Commerce Commission in New York on February 27th, 1907.

Member of firm of Kuhn, Loeb & Co.

Lives in Morristown, New Jersey. Is a member of the banking firm of Kuhn, Loeb & Co. Has been about ten years. (1206) The copartners constituting the firm are Jacob H. Schiff, Felix M. Warburg, Paul M. Warburg, Mortimer Schiff, Louis A. Heinsheimer and witness. The firm has been composed of these particular gentlemen for about three years. At the time of the reorganization of the Union Pacific, the firm consisted of Jacob H. Schiff, Abraham Wolf, Felix M. Warburg, Louis A. Heinsheimer, and witness. At the time of the reorganization and prior thereto, the firm of Kuhn, Loeb & Co. were quite largely interested in the Union Pacific. Jacob H. Schiff was a member of the Union Pacific Reorganization Committee. Kuhn, Loeb and Company were bankers to the Committee. Witness was a member of the Executive Committee of the Union Pacific Railroad Company and Mr. Schiff was on the Board, and as far as the details were concerned, witness would be more conversant with them than Mr. Schiff would. This statement refers chiefly to the management of the Union Pacific subsequent to the reorganization.

Largely interested in Union Pacific.

Member Ex. Com. U. P.

Scaling of securities at time of reorganization of U. P.

(1207) In the reorganization of the Union Pacific there was a scaling down of securities of the old company, which it succeeded, and also an enlargement of the securities put out. There was given for the old 6 per cent. bonds, new 4 per cent. bonds and an appropriate proportion of stocks. There was also given for the assessment, which was furnished in cash, preferred stock and new common stock. At the time witness' firm took hold of the Union Pacific it was in the hands of receivers, and had been operated by receivers for several years. The interest on all the old bonds had not been paid during the receivership. There were a number of branch lines of the Union Pacific, which did not participate in the reorganization. Witness believes that the St. Joe and Grand Island was one of them, but is not certain.

(1208) At the time of the reorganization there was issued for the 6 per cent. bonds, new bonds, dollar for dollar, bearing 4 per

cent. interest, and running for a long period of time, and also an amount equal to 50 per cent. of the face of the bonds in preferred stock of the corporation. Reading from the reorganization plan, witness states that for the actual purpose of reorganization there were issued out of a total of $100,000,000.00 of bonds, $51,000,000.00. There was reserved to dispose of equipment obligations and reorganization and corporate uses, $13,000,000.00; the balance was reserved for settlement of the debt to the United States and for extraordinary requirements—in round figures $36,000,000.00. "Q. Those bonds were used, were they not, or the proceeds of them, to settle the debt to the United States? A. I believe not. I believe that quite a considerable amount was turned over to the new company, and was later on sold for its corporate purposes. Q. But you paid the Government in excess of the amount of those bonds, didn't you? A. We did. Q. Well, you finally got out $100,000,000.00 of the bonds of the new company, didn't you? A. But not all at the reorganization. Q. No, but can you tell me how many were not used for the purpose of reorganization, and to pay the Government debt? A. This plan does not show, but I remember that a considerable amount was turned over to the new company, and was sold later on by the new company, for its corporate purposes, equipment, improvement and so on."

Reorganization plan—issue of securities.

The amount may have been $5,000,000.00, or it may have been $10,000,000.00. The new company issued a total of $75,000,000.00 of preferred stock. (1209) There was paid the Government in settlement of its debt a sum in excess of $50,000,000.00. $61,000,000.00 of common stock was also issued. According to the plan of reorganization the common stock was issued in exchange for common stock of the Union Pacific Railway Company, on which assessments of $15 a share were paid under the plan. The subscribers got for the $15 a share the amount of the assessment in new preferred stock at par, and also received par of common stock in common stock of the new company. "Q. So that in a nutshell, the plan of reorganization contemplated the issuance of $100,000,000 of bonds, $75,000,000 of preferred stock, a portion of which was used to pay the common stockholders of the old corporation for their assessment of $15.00 a share, and $61,000,000 of common stock which was exchanged dollar for dollar for the common stock of the bankrupt road? A. That is right."

Payment of Gov't debt.

Distribution of stock and bonds.

The old company had a total funded debt of $140,425,682. The capital stock was $60,868,500—a total of $201,294,882. "Q. As against a total issue of securities by the new company of $236,000,000—an increase of $34,705,818. (1210) A. The comparison is not quite correct, because part of the new capitalization was used later on for additional equipment and other improvements, it was not all used to take up the $201,000,000 of old capitalization." Witness thought bonds and preferred stock together, probably somewheres in the neighborhood of $20,000,000, were not so used, but

Capital account of old and new company.

was not positive. Every share of the common stock of the present Union Pacific, so far as it was issued at the time of the reorganization (viz, $61,000,000), was issued in exchange for common stock of the old road. The preferred stock of the Union Pacific which was then issued, was not issued as a bonus upon the exchange of the bonds of the old corporation for the bonds of the new corporation. "It was issued as a fair trade, refunding a six per cent. bond for a four per cent. bond and for fifty per cent. of preferred stock; in other words, getting an old six per cent. bond—interest at the rate of four per cent. on the new bond, and at the rate of two per cent. on the new preferred stock."

Preferred stock was not issued as a bonus.

(1211) The particular scheme of reorganization which was adopted was the best that at that time it was possible to carry through, and was a fair and reasonable one. The terms were the best possible ones which could be made with the stockholders and the old bondholders. Mr. Schiff and witness continued on the Board until about a year ago. (1212) Witness states that in no case in dealing with the Union Pacific did the profits of Kuhn, Loeb & Co. "exceed a fair and usual banking compensation or commission, and in more than one instance, did we render services to the Union Pacific without any compensation whatever; and about a year ago we reached the conclusion that the Union Pacific—that, firstly, because of great claims upon our own kind, which our own business made upon our time, we were not in a position to give the necessary time and attention to the affairs of the Union Pacific, and being bankers and not railroad men, and the Union Pacific credit and standing being established beyond peradventure, we thought that we would retire from the Board of the Union Pacific, and we did so retire."

Profits of Kuhn, Loeb & Co. never exceeded a fair commission.

Mr. Schiff was a Director of the Great Northern for a time, and witness believes he was also a Director of the Northern Pacific at one time. He is not sure about the latter. Does not remember the exact date, but thinks he was a Director of the Great Northern until 1901. "He had been in the Board of the Great Northern a great many years. I don't know for what reason he went in and I don't know for what reason he left."

(1214) From the time of the reorganization of the Union Pacific down to the present time, witness' bank has been fiscal agent of the Union Pacific and still is. "Q. That is, when they want to sell securities, they sell them through you, and when they want to buy securities, they buy them through you, as a rule? A. Provided that we offer as good or better terms than anybody else." (1215) A very large percentage of the securities purchased by the Union Pacific and a very large percentage of securities sold by the Union Pacific have passed through the hands of Kuhn, Loeb & Co. It is the practice in the case of all large railroad companies to deal with one particular banker.

Fiscal Agent of U. P.

Banking custom.

The negotiations for the acquisition of the Southern Pacific stock were conducted by Kuhn, Loeb & Co. as fiscal agents for the com-

pany and Mr. Harriman. The negotiations were had with Mr. A. G. Huntington and Speyer & Co. They represented a large block of Southern Pacific stock, which controlled the property. "Q. At whose instance did you undertake those negotiations? A. Largely at our own instance and of course in conference with Mr. Harriman. Q. Well, you did not undertake the purchase of those securities as an investment for your house, but you undertook the purchase (1216) with the intention of turning them over to the Union Pacific, didn't you, after conversation with Mr. Harriman? A. If the Union Pacific wanted them, after mature deliberation by its Board. If they did not want them, we would have been perfectly willing to keep and sell them to somebody else, and it would have been very easy to sell them to somebody else. * * *

Purchase of S. P. stock.

(1217) "The understanding with him (Mr. Harriman) was, that so far as he was concerned, we were bound to offer that stock to the Union Pacific at cost, plus a reasonable commission for our services in the matter, which we did. Q. You wrote a communication to the Board, didn't you? A. Yes. Q. In which you said, 'We have purchased 432,700 shares of the Southern Pacific Company of Kentucky, to be paid for as follows: 144,233 shares on February 11th; 268,467 shares on, or at our option, before July 10th, with interest at 4 per cent. per annum from February 11th, all said shares to be deposited with a Trust Company until entire payment is completed. We have further purchased the following shares: 200,000 shares to be paid for on, or at our option before March 4th. 45,000 shares to be paid for, one-half on February 5th, and one-half on February 8th. The average price at which we have made the above purchases, exclusive of interest accruing, is $50.6146 per share.' That is an accurate statement, isn't it? A. Certainly. Q. That is stock you bought from Speyer & Company, and had arranged to buy from Speyer & Company and Mr. Huntington? A. Yes.

Offer to sell S. P. stock to U. P.

"Q. And then you further add: 'In order that your holdings of Southern Pacific stock may aggregate 750,000 shares, we agree to sell to you on March 4, 1901, 72,300 additional shares at the same price, viz: $50.6146 per share, plus interest at the rate of 4 per cent. from February 11, 190—.' From whom did you buy that stock? A. From whom did we buy that stock? We undertook to deliver that stock; we bought it in the market." When witness addressed this communication to the Board he had not then bought that stock. The ruling prices of Southern Pacific stock at that time witness thought was about 49—between 48 and 49.

Offer to sell additional shares.

(1218) "Q. Upon that purchase price, you say you were 'also to be paid by the company $2.50 a share upon said 750,000 shares, of profit to us for the risk assumed in making these purchases?' A. That is right. Q. The risk you assumed was the risk that the Union Pacific Board would not approve of Mr. Harriman's provision relative to the acquirement of this stock, was it? A. No; that was only one of the risks. There was an additional risk. Q.

Risk assumed.

What was it? A. The other risk, to which our attention was called by our counsel, was a legal risk. At that time it was not certain whether the Union Pacific or the Oregon Short Line could legally acquire the Southern Pacific stock. Q. Why? A. Because the Southern Pacific Company was a holding company and not a railroad company, and that defect, if it existed, was later on cured by appropriate legislation, I believe. But that time, that risk existed and was forcibly called to our attention by our counsel, and we were told that we were incurring a very substantial risk in standing in the breach."

S. P. stock was purchased to prevent the U. P. from being shut off at Ogden.

While witness was not an expert on railroad matters, he understood in a general way that the main purpose of the Union Pacific in acquiring the Southern Pacific was to be certain of not being shut off at Ogden from reaching San Francisco. At that time it had become quite apparent that the Southern Pacific would not remain an independent line, and that one or the other of the large systems would buy it, would get control of it. "Reports had come to all of us of negotiations which were being carried (1219) on by other large systems to acquire the Southern Pacific. It was, as I understood it, of vital importance to the Union Pacific not to be shut off at Ogden, and to continue to be able to use the line from Ogden to San Francisco. Naturally I also understood that the north and south lines in California were valuable feeders. I always understood also—as I say, I am not competent to pass on these questions very well. * * *

S. P. never considered a competing line.

"I always understood that the Southern Pacific was bought by the Union Pacific for advantages which it afforded as a connecting line, and it never entered our minds at that time that it could be in any sense considered a competing line. Q. That never entered your head? A. That never entered our heads at the time. Q. You did not think of such a thing as that? A. Never. Q. You did not know that traffic moved to California both ways, both over the Union Pacific and over the Southern Pacific, Sunset Route? A. I was not generally posted on these questions. I only know we bought the Southern Pacific because it was represented to us that it was a necessary supplement to the Union Pacific, and if we did not buy it the Union Pacific would be bottled up at Ogden. Q. The Union Pacific owned the line to Portland. A. The Union Pacific owned the line to Portland, to Northern California, yes.

S. P. was a necessary supplement to U. P.

"Q. So that they could not shut you off from access to the Pacific Ocean? A. But they could have shut us off from access to San Francisco by the Southern Pacific, which we had always used theretofore, I believe. Q. And so, for the sake of getting a line 800 miles long, which you regarded as essential to the Union Pacific, you bought six or seven thousand miles. Is that the idea? A. No; I said the lines in California were doubtless an additional inducement. Q. Was not the Southern Pacific any inducement, the Sunset Route? A. I don't believe it was. I understood at that

The California lines an additional inducement. The Sunset line was not.

time that it was a nuisance. It certainly was not an inducement at that time."

Witness said that "the necessity of acquiring with the Southern Pacific the line which you call the Sunset route was the very opposite to an inducement. The Union Pacific did not buy the Southern Pacific because the Southern Pacific contained that southern line, but it bought it in spite of that. * * * I think if at that time the southern line could have been cut off from the Southern Pacific, it would have been preferable to all of us." Witness thought under the present management that the southern line had been much improved and made valuable.

S. P. was not bought because of its southern line but in spite of it.

The question whether it would be a good thing for the Union Pacific to lop off the Sunset Route never came up, because it was not a practical question. "I want to bring out again that in my mind, and from what I then heard from those more competent to judge than I, the Southern Pacific was acquired because of its connecting features, and not because of that Sunset Route, which at that time was, I believe, not a profitable part of the system."

S. P. acquired because of its connecting features and not because of the Sunset Route.

(1221) The Union Pacific paid Kuhn, Loeb and Co. cash for the Southern Pacific stock. The cash was raised by the issue of convertible bonds, which were sold. At a meeting of the Board of Directors of the Union Pacific of February 20th, 1901, resolutions were adopted accepting the proposition of Kuhn, Loeb and Co., and providing for the issuance of $100,000,000.00 of convertible bonds. $40,000,000.00 of those bonds were offered to the holders of the common and preferred stock of the company for subscription at par. Witness believes that an amount in excess of $25,000,000.00 of these convertible bonds were taken by the stockholders.

Convertible bonds used to purchase S. P. stock.

(1222) In 1902 the Union Pacific bought some more of the Southern Pacific stock, ($15,000,000.00). It was bought from Kuhn, Loeb and Co. The price as shown on the record is 65. It was stock that Kuhn, Loeb & Co. held individually. (1223) "My recollection is that at that time efforts became apparent, which later on crystallized, to form a strong combination against the Union Pacific control of the Southern Pacific, and the Union Pacific directors felt that the holdings of the Union Pacific had better be increased to what Mr. Harriman called yesterday an unquestionable dominating interest. Negotiations were opened with us for the purpose (purchase) of our holdings of stock, and we sold them at the market price of the day."

Reason for purchase of additional S. P. stock.

The Union Pacific also acquired about $78,000,000.00 of Northern Pacific common and preferred stock. The idea of acquiring that stock started with the purchase by the Northern Pacific and Great Northern of the Burlington. That was in March, 1901. The advisability of acquiring Northern Pacific stock was discussed with Mr. Harriman in April.

Purchase by U. P. of N. P. stock.

(1224) "Mr. Harriman and we, in April, 1901, owing to the acquisition by the Northern Pacific and Great Northern of the Bur-

lington, became convinced that it was very desirable that a controlling interest, or at least an influential holding of Northern Pacific, should be concentrated in friendly hands, pending decision of the question. It was not a matter that could be decided in a day or a week, or four weeks, or six weeks, pending the decision of the question of the action, if any, the Union Pacific intended to take in the matter; and it was in pursuance of that idea, and in pursuance of the necessity which we saw for having such a concentrated holding, and knowing also at the same time that the Northern Pacific was a very excellent proposition and was selling at a very cheap price; knowing also, as we did, of certain plans which were on foot for increasing the value of Northern Pacific; being certain that the purchase of Northern Pacific at the then prevailing prices was an advantageous purchase under any circumstances; being perfectly willing to hold the stock for ourselves if the Union Pacific did not want it; in fact, preferring to hold the stock for ourselves if the Union Pacific did not want it, but at the same time feeling morally bound to give the Union Pacific opportunity to buy it from us if they wanted it;—taking all those things into consideration, we started buying Northern Pacific stock.

Reasons for purchase of N. P. stock.

(1225) "In a general way it is quite apparent that it was of great importance and great weight to the Union Pacific to acquire a holding in Northern Pacific, so as to enable it to get its connection into Idaho, Washington and those other states and territories that Mr. Harriman yesterday referred to. I am not prepared to go into detail in explaining its advantages. I would rather have a railroad expert explain that. I considered at the time that the acquisition of the Burlington by the Northern Pacific and the Great Northern, tended, as I understood it, to shut out the Union Pacific from those territories in the Northwest, and we considered that if it were possible for the Union Pacific to have a substantial holding and possibly a controlling holding, in Northern Pacific, the Northern Pacific in its turn having half of the control of the Burlington, it would be a very beneficial thing for the Union Pacific. At the same time we were convinced that the stock was selling far below its real value, and the result has shown that our judgment was correct."

Why N. P. stock should be purchased.

(1226) Mr. Harriman, on the same day, answered witness' letter, and said, among other things: "I beg to acknowledge receipt of your letter of to-day, offering to sell to this Company 100,000 shares of the preferred stock and 150,000 shares of the common stock of the Northern Pacific Railway Company, at 101 per cent. per share of preferred and 102½ per cent. per share of common stock, the latter *ex dividend*—for which books close to-morrow. I have authority from this company to purchase any such stock, and I believe with you that the acquisition of this stock will be of great benefit to this company."

(1227) Witness' attention was called to a letter of the next day, the 16th, in which he stated he was "prepared to make delivery

against payment for the same, which we calculate to be $25,475,000." The stock was turned over and the purchase money paid. Witness' attention was called to a letter of the 29th of April, 1901, written by Kuhn, Loeb & Co. to Mr. Harriman, in which the former offered to sell to the Union Pacific 160,000 shares of preferred, at 102.50 and 120,000 shares of common at 112 per share, that offer to remain open until the next morning.

Shares turned over and money paid.

Additional shares.

"Our method of proceeding was on our own risk and responsibility to go ahead and buy the stock as best we could, feeling certain, as we did, that it (1228) was a most advantageous purchase, in any event, and being perfectly prepared to keep it ourselves if the Union Pacific didn't want it, and preferring to keep it ourselves if the Union Pacific didn't want it, and at the same time feeling morally bound to offer it to the Union Pacific from time to time, as we had a substantial amount, at a very slight increase on the price we had paid, I don't believe in any instance exceeding 2½ per cent. upon the amount we had paid. We offered the stock to the Union Pacific at very much lower prices, taking it all through, than it sold for on the day on which our offers were made. * * *

Prepared to keep N. P. stock if not wanted by U. P.

"Q. But, Mr. Kahn, however strongly you felt that you were getting this stock for much less than its intrinsic value, it had not occurred to Kuhn, Loeb & Co. to get into the market and buy Northern Pacific stock until the time you thought the Union Pacific ought to have it, and after you had had this talk with Mr. Harriman whatever the talk was? A. Oh, no, the value of the Northern Pacific was very much increased by their obtaining control of the Burlington, and we went into the market the moment the Northern Pacific obtained control of the Burlington. Q. That was the latter part of March? A. That was the latter part of March.

Sold stock to U. P. below market price.

Value of N. P. increased by purchase of C. B. & Q.

(1229) Witness' attention was called to another letter of Mr. Harriman, written on that same day, the 29th of April, stating: "The Union Pacific desires to purchase additional shares to the amount of at least 250,000 shares. Mr. Harriman desires to know whether they can be procured from or through yourselves, and upon what terms." In answer to that letter Kuhn, Loeb & Co. offered Mr. Harriman all they had, which was, witness thought, about $16,000,000 of the stock. On the 30th of April, Mr. Harriman wrote Kuhn, Loeb & Co. offering to sell them $25,000,000 face value of the U. P. First Lien Convertible Four Per Cent. Gold Bonds.

Mr. Harriman wishes additional shares N. P. stock.

Offer of sale of U. P. convertible bonds.

No offer was made to the stockholders of the additional $25,000,000 of convertible bonds. There was an agreement in force at that time between the Union Pacific and Kuhn, Loeb & Co., by which they were to have the right to take the additional $60,000,000 at a discount of 5 per cent. "We consider that no more than fair. At the time we took a very great responsibility which you do not appreciate, but which existed and existed to a very great extent. At the time we became responsible for the issue

Right of Kuhn, Loeb & Co. to take balance of convertible bonds.

of the Union Pacific four per cent. convertible bonds, the Union Pacific credit was not yet such as to insure the sale of new bonds on a four per cent. basis at par, and by our efforts we placed those bonds and obtained the money for the company whether it came from the stockholders or from us makes no difference. If the stockholders subscribed it was because we guar- (1231) anteed the security to a certain extent, anyhow. I mean our pressure and our efforts had a great deal to do with the success of that issue, and if we undertook to become responsible for that issue we considered it ourselves perfectly justifiable and the railroad company considered it perfectly justifiable to stipulate that any further issue of those bonds should be offered to us at the same price." Kuhn, Loeb & Co. took the $25,000,000 of convertible bonds offered by Mr. Harriman in his letter of April 30th. The proceeds were used to pay Kuhn, Loeb and Co. for the Northern Pacific stock they were buying.

"Q. Then on the 7th of May Mr. Harriman addresses you another letter, stating that 'the Union Pacific desired to make additional purchases of the stock, common and preferred, of the Northern Pacific Railway Company to an amount up to but not exceeding $24,500,000 par value, in the aggregate of both stocks. On behalf of the Executive Committee and with its authority, I desire you to make purchases for account of the Union Pacific Railroad Company and shall be glad to hear promptly your views as to the prices at which the stock can be obtained so far as you can judge.' A. Yes. Q. Then you answered that letter, stating 'We ourselves own and control 80,000 shares of preferred and 86,000 shares of common (1232) stock of the Northern Pacific Railway Company, and we offer to sell these shares to the Union Pacific Railroad Company at the rate of $109.00 per share of preferred stock, ex-dividend for which books close May 10th, and $131.50 per share of common stock. We must ask you to advise us before four o'clock today, if practicable, whether the company will accept this offer, in order that we may govern ourselves accordingly.' Then you pointed out in a foot note, that the prevailing prices were several points in excess of the prices quoted by you. A. We quoted that the closing price for common stock was 143½ when we offered it at 131½ and the preferred closed at 110 when we offered it at 109. Q. And on the same day, Mr. Harriman, as chairman of the Executive Committee, answered your letter, in which you offered to sell the stock at that price, and he accepts the offer and then gives you additional authority to make additional purchases in the market for account of the Union Pacific Railroad Company of preferred stock in the aggregate a total cash expenditure of $9,200,000, using your discretion as to price and times of purchase, but not to exceed the average rate of $115.00 per share ex-dividend for which books close May 10th. Did you make any purchase under that authority? A. Yes; we purchased some preferred stock and turned it in at cost."

Additional sales of N. P. stock to U. P.

(1233) For a large part of the distance traversed by the Union Pacific, it was an active competitor, with the Burlington. On transcontinental business, the Northern Pacific was a competitor with the Union Pacific. (1234) Kuhn, Loeb & Co. bought that stock and turned it over to the Union Pacific for the purpose of enabling the Union Pacific to control the Northern Pacific and through it to have a half interest in controlling the Burlington. The Northern Pacific stock was sold to the Union Pacific or through the Union Pacific to the Oregon Short Line, the Union Pacific being simply the financial intermediary, because the Oregon Short Line did not have the cash or the means of raising the money, except through the Union Pacific. (1235) "I am not sure in my mind now that the Union Pacific and Northern Pacific, taken by themselves, are competing lines in the meaning of the law. I don't know whether they may or may not be." Witness was advised that the O. S. L. had the right to hold Northern Pacific Stock.

C. B. & Q. and U. P. competitors.

U. P. acted as intermediary for O. S. L.

Not sure N. P. and U. P. are competing lines.

Kuhn, Loeb and Co. sold nearly all of the Northern Pacific stock that was disposed of by the Union Pacific. "It was sold by Kuhn, Loeb and Co. on direct order of the company, for the company, up to some time in, I think it was, June, 1906, when we were no longer directors and a different transaction took place. * * We acted simply as agents of the company in effecting sales to the best of our ability, and I think I may say that we did pretty well, and that we worked off a huge amount of stock practically without depressing the market price, just as I may say we did pretty well in buying the Northern Pacific stock, because we bought about $70,000,000 of it, before anybody had any idea we were doing it. (1236) Later on a large amount of the Great Northern and Northern Pacific was sold through Kuhn, Loeb & Co. This was sold, not pursuant to a single contract but in various blocks, from time to time.

Sold N. P. stock for U. P.

Sale of G. N. and N. P. holdings.

(1237) "Q. Now, this letter (to Mr. Harriman) is dated the 5th of February, 1901, and starts out: 'Referring to our letter of even date herewith we beg to say that in financing an issue of this class of bonds and in thus inviting the (1238) confidence of our clients in the securities, it is of serious concern to us that we assure ourselves (a) that the future financial policy of the Union Pacific,' etc., etc. Then you say 'In the foregoing view we write to say that our undertaking to purchase the $40,000,000 Convertible Bonds of a total authorized issue of $100,000,000, is subject to the following further conditions, namely: 1. That so long as any such issue of bonds are unissued the Railroad Company will, until May 1st, 1906 (unless we otherwise consent) raise such additional capital as it shall from time to time require exclusively by the issue of such Convertible Bonds, namely: The bonds of said issue convertible into the common stock of the Company at par at any time within five years after their respective dates of issue. 2. That we are to have the right and privilege with respect to any additional bonds of said

Purchase of U. P. convertible bonds.

issue which the Union Pacific Railroad Company may decide to sell prior to May 1, 1906, to purchase them at the same price as the initial issue of 40,000,000 of such bonds will net the Company after the payment of the Syndicate commissions and our own. Yours truly, (Signed) KUHN, LOEB & Co.' Why didn't you embody that in your other proposition, if that was a condition? A. I know of no particular reason why. Those letters were framed by counsel, and we simply adopted their form, without giving it any further thought."

Commission on sale of bonds.

(1243) Kuhn, Loeb and Co. received 5 per cent. on the whole $40,000,000 of bonds, which witness states was only fair. "We guaranteed the company that it would get its $40,000,000 for which we received this commission. * * * Out of the 5 per cent. which we received, we gave the syndicate one-half, and one-half we kept for ourselves."

(1244) The company also paid Kuhn, Loeb and Co. the same commission, 5 per cent., on the $60,000,000 of bonds which they guaranteed to furnish,—a 5 per cent. commission for selling $100,000,000 of a new and untried issue of bonds.

Complainant offers in evidence certain testimony given by the same witness before the Interstate Commerce Commission at New York on February 27th, 1907, as an admission as to the effect in dominating or controlling a railroad of the ownership of 30 per cent. of its stock by one individual or corporation. "Q. * * * You considered, did you, when you sold this 105,000 shares, and these other gentlemen sold the 90,000 shares, to the Union Pacific, that that gave the Union Pacific a dominating interest in the Illinois Central? A. I thought it gave them an interest, which, if it wanted to, would practically amount to a dominating interest, yes. Q. What you mean by that is this, considering the fact that at stockholders' meetings of a corporation like the Illinois Central, it is never possible to get a full vote. (1245) A. Yes. Q. And in consideration of the fact that the management can get any proxies, through brokers and others, anyone owning thirty per cent. of the stock as the Union Pacific now does, is in a position to control the election? A. Unless— Q. Under ordinary, normal conditions? A. Well, yes; if he can count upon the entire support or neutral attitude of the remaining seventy per cent., if there is nothing to put that remaining seventy per cent. into an attitude where they will combine against them."

Control of Illinois Central.

PITTSBURG, PA., JAN. 27, 1909.

Johnson.

(1250) C. O. JOHNSON.

Pittsburg. Traffic Manager Heinz Pickle Co.

Resides in Pittsburg. For three years Traffic Manager of the H. G. Heinz Company, pickle manufacturers, at Pittsburg. Mr. Herring, the representative of the U. P. and S. P., solicits business from witness. (1251) He doesn't attempt to solicit for one company as against the other; to route traffic one way or the other. Before coming to Pittsburg witness was Assistant General Freight

Agent of the Chicago Great Western in Chicago and formerly was General Agent and Superintendent of Terminals of the same line at Kansas City, Mo., and previous to that for two and a half years was General Agent of the same road at San Francisco, and prior to that was General Supt. of Pacific Coast Railway Company, running from Port Harford to Los Olivos in California. During the time witness resided in San Francisco, traffic moved from the east into San Francisco over the Canadian Pacific via Vancouver and boat, and also from Tacoma and Seattle over the Pacific Coast Steamship Company's line in connection with the Northern Pacific. Likewise from the south over the Panama route and around Cape Horn, or through the Straits of Magellan. S. P. and U. P. then maintained separate solicitors in San Francisco.

Eastern traffic to San Francisco via Can. Pac. and boats.

(1252) Witness worked with the line via Ogden in order to connect with his line either at Kansas City or St. Joseph. So far as witness knew, the U. P. agency was working that line exclusively. There is now no competition in rates. Freight is now solicited by means of the expediting of shipments, prompt care of the same, tracing in case of delays, advising dates of delivery, and prompt settlement of damage claims. Heinz Co. forwards only all-rail to the California coast. Reason for preferring all-rail is "the question of the breaking of bulk and dispatch." Shipments are principally from Pittsburg. (1253) Shipments move out of Pittsburg over the B. & O. to Chicago, then over various lines from there to Omaha, connecting with the U. P., or, witness sometimes uses the line via Chicago to Kansas City, and gives to the lines there that can deliver to the S. P. at Ogden. Shipments also move out of Pittsburg over the Pennsylvania lines; also the Pittsburg & Lake Erie, in connection with the Lake Shore & Michigan Southern. Never routes by New Orleans on account of time. For Southern California, routes over the S. P. via El Paso. The lines over which traffic goes in reaching the Missouri River have solicitors at Pittsburg. All the above mentioned lines have them.

Uses all rail routes.

(1254) All shipments to California over the U. P. go over the S. P., or to Southern California over the San Pedro. At the time witness lived in San Francisco, the Canadian Pacific was making a fight for the differential via Vancouver to San Francisco. A great deal of dead freight moved that way. (1255) Has known of lots of 400 or 500 cars of tin plate moving via Vancouver. Differential fight was on during the entire two years and a half witness resided in California. An average of 50 or 60 cars a month went that way. The two years and a half witness lived in California would end with 1901, he thought. (1256) It is very important for solicitors to work with connecting lines. Securing the co-operation of the line on which the traffic originates is very important.

Can. Pac. differential.

Solicitors work with connecting lines.

Meant 50 or 60 cars a month moved over the Great Western line in connection with the Canadian Pacific. Traffic was moving over other lines from Chicago to St. Paul in the same way. The lines between St. Paul and Chicago at that time were the C. M. &

Traffic via Can. Pac. and Great Western.

St. P., the C. B. & Q., (1257) the Wisconsin Central, the Iowa Central, in connection with the M. & St. L., the Chicago & Northwestern, and Chicago Great Western. Traffic was delivered at the Minnesota Transfer, to the Soo, which is a Canadian Pacific line. As a rough guess, witness thought the difference in distance from Chicago to San Francisco via Vancouver and via the O. S. L. to Portland was between 400 and 500 miles. The S. P. then had solicitors both for the Sunset route and for the Ogden route, working separately. (1258) Witness thought the difference in distance to San Francisco via the Ogden route and the Vancouver route would be 800 to 1,000 miles, and at equal rates a very small amount of traffic might move over the latter route on account of personal consideration for the solicitor, and because of some question of claim settlement. Witness thought the difference in time five or six days.

Morgan line.

(1259) Witness understood that the Morgan Line route out of New York had been largely used by Pittsburg shippers, and thought (1260) that route was even longer than the Canadian Pacific route. Knows that the facilities for transferring freight at Algiers and New Orleans are very good, and that the Morgan Line is under the same management from New York to destination in California, and in his judgment it was this excellent service that enabled the Sunset route to successfully compete with the all-rail lines at the same rates. (1261) The all-rail lines are actively soliciting freight out of Pittsburg for Pacific coast points. The U. P. and S. P. are not soliciting against each other.

Bihler.

(1261) L. C. BIHLER.

Pittsburg. Traffic Mgr. Carnegie Steel Co.

Resides at Pittsburg. Traffic Manager of the Carnegie Steel Company since January 1, 1904, and before that, (1262) since April 1, 1895, assistant to the former Traffic Manager. Witness ships to the Pacific coast all-rail. There are 29 or 30 plants scattered all the way from Columbus, Ohio, on the west to Donora, Pa., about 40 miles from Pittsburg, on the east and south. There is a blanket rate to the Pacific coast over all-rail lines on all the commodities that witness ships from each of the plants. As far as witness can recall, that has always been the case. Witness' Company's shipments usually went to the principal cities, ranging from Portland and Seattle down to Los Angeles and Southern California.

All-rail blanket rate.

Steel and iron traffic divided.

(1263) Divided their business between all the combination routes into California. Some business to Puget Sound points moves via the Oregon Short Line. In California some went via Iron Mountain, Texas & Pacific, El Paso, the S. P., over the M. K. & T., and T. & P. via El Paso, or via the various roads. There are numerous ones which cross the Rockies, like the Colorado Midland, Denver & Rio Grande, the Salt Lake; some via the Atchison; some via the San Pedro. Delivers to the Atchison at various points; sometimes gave them the long haul, sometimes the tail-end haul, deliver-

ing to them as far west as Pueblo. Remembers that prior to 1901, U. P. and S. P. had separate offices at Pittsburg which were consolidated about 1901. (1264) Doesn't recall that the S. P. solicitors prior to 1901 gave any preference to the New Orleans gateway over the Ogden gateway. Were glad to get it either way. Distinctly remembers that they tried to get it both ways. U. P. tried to get it via Kansas City or Omaha.

S. P. solicitors, prior to 1901, gave no preference to N. O. gateway over Ogden gateway.

(1265) Believes that prior to 1901, the S. P. Co. solicited Oregon business, as also did the U. P. Carnegie Steel Company has no Oriental business. This is carried on by the United States Steel Products Export Company, which routes via the Suez from the Atlantic seaboard. In the past some has moved via the Pacific coast. Business witness had in mind, he thought, moved via Tacoma or Portland, and the steamship line allied to the Great Northern Railway and the Northern Pacific. Thought it was the Japanese line. Believes that traffic was equally divided beween the N. P. and Great Northern. Thinks it was prior to 1901. Doesn't recall any Oriental business through San Francisco. The shipments above referred to went via Portland and Seattle. Thinks some of the steamers loaded at each port.

Oriental business.

(1266) From Pittsburg to Omaha is about 970 miles, and the short line distance to New Orleans about 1,140. To Kansas City about 900 miles. Traffic from Pittsburg territory to either of those connections could be handled by any one of a great number of lines. Roughly speaking, there are 40 or 50 combination routes from Pittsburg to the Pacific coast. All the carriers interested in these routes have solicitors in Pittsburg. All rail business for points south of Portland must go over the S. P., the Atchison, or since 1905, over the San Pedro. (1267) Any California freight shipped over the U. P. must go into California over the S. P. or San Pedro. Witness never routed any freight over the S. P. to Portland, but took the shorter lines. It was not a satisfactory route. Never shipped to California by way of Portland either. In the old days, witness sometimes shipped over the Ogden route, and thence by the S. P. to Oregon. (1268) Freight going via Puget Sound to Portland-California points could not reach the interior without going over the S. P. or the Atchison.

Many combination routes.

Shasta route not a satisfactory one.

(1268) WILLIAM J. BOGERT.

Bogert.

Since the 10th of May, 1908, has lived in Allegheny. Connected with the San Pedro road. Prior to that lived in New York all his life. For 21 years employed by the Chicago & Alton, and (1269) for 23 years before that, the Pennsylvania Road. Was General Eastern Agent of the Alton. Hawley (S. P.) used to endeavor to route traffic by way of New Orleans and Tenbroeck (U. P.) by way of Ogden. They were in competition with each other. (1270) Mr. Herring represents both the U. P. and S. P. at Pittsburg. Witness comes in contact with him and his assistants in the solicitation of business. Asks Herring's assistance, as agent

Allegheny. With San Pedro road.

Neutral between San Pedro and S. P.

of the U. P., in routing business; Herring is quite neutral between the San Pedro and S. P. beyond Ogden and Salt Lake. Herring doesn't try to get business away from witness for the Sunset route.

Solicitors induce by service.

(1271) Solicitation now consists in offering quicker service and prompt settlement of damages. Prior to the construction of the San Pedro, Pacific coast traffic for points south of Portland going over the U. P., had to be delivered to the S. P. (1272) Mr. Herring tries to secure the business either for the U. P. or S. P. by the route that will give them the longest haul. He works the Ogden, the Omaha, the New Orleans, and the El Paso routes. Doesn't try to divert any business from the San Pedro that witness controls. Understands the U. P. owns a half interset in the San Pedro, but they don't help witness at all. There are many lines that have established rates from Pittsburg territory to the Pacific coast. There are a great many lines between Pittsburg and the Missouri and Mississippi Rivers that unite in establishing rates to the Pacific coast, and all these lines have solicitors here at Pittsburg.

Service to Pacific coast improved.

The service to the Pacific coast has been improved since 1900. Competition has forced that. The Atchison is an active competitor for that business.

(1273) Also its connections east of Chicago and the Missouri River. Witness never heard that S. P. was interested in San Pedro. All the railroads east, as well as west, have been bettered since 1901. S. P. has a boat line sailing three or four times a week out of New York.

Boat line traffic.

(1274) The boat line carries traffic destined for the Pacific coast, and also for Colorado and Utah common points. The U. P. only to a slight extent, witness thought, reaches those points in connection with the rail lines to the east. When connected with the Alton, witness handled business into Colorado common points, in connection with the U. P. The U. P. and Alton were then actively soliciting that business. The Alton at that time participated in the carriage of Pacific coast business, as all other lines east of the Missouri and Mississippi Rivers did.

Ewer.

(1274) A. B. EWER.

Pittsburg, Frt. Agt. Fire Brick Co.

Resides in Pittsburg. (1275) General Freight Agent of the Harbison-Walker Refractories Company, manufacturers of fire brick, at Pittsburg. Their products go into the mining countries in the west, where smelters are; not much to California; more around in through the central section of the country, to the big steel mills, and propositions of that sort. Formerly witness was Contracting Freight Agent of the Central States Despatch in Philadelphia. That is controlled by the B. & O. and the P. & R., and their allied interests. That line sent freight all over the United States; Pittsburg and the west; anything based beyond 60 per cent. points. Central States Despatch moved the freight to the coast beyond the Missouri River any way they could get it, and solicited business, if controlled by the consignees, from the western lines; if controlled

by the shippers, from the shippers direct. If the traffic was controlled by the shipper in the east, as between the coast lines, it was a trade off, a question of reciprocity.

(1276) Witness thought he had been with that freight line eight or nine years, and solicited all kinds of traffic. His principal business was what is known as package freight, but he didn't confine himself to that. At that time the S. P. had an agency in Philadelphia, soliciting for the Sunset route. The business that the S. P. tried to take out of Philadelphia for its boat line went to New York either by the Clyde line or all-rail. (1277) Herring called on witness quite regularly. Any business that comes up, Herring generally says he would be glad to get over any of his lines that he can get it. Witness' freight never goes to the coast by boat and rail. He doesn't like to break bulk, and the brick are liable to be chipped in handling. Occasionally ships into Cleveland by rail and Lake. (1278) There are a great many carriers engaged in Pacific coast business between the points of origin and the Missouri River, all of which have solicitors actively working for business, both in connection with the U. P., S. P., and the Atchison. All business for California that goes over the U. P. must also go over the S. P. or San Pedro. When witness was working for the fast freight line in Philadelphia, the S. P. agents were then working the freight by several different routes.

Herring glad to get the business over any of his lines.

All U. P. business for Calif. must go over S. P. or San Pedro.

(1278) JAMES E. HENRY.

Henry.

Resides in Butler Co., Pa. Traffic Manager of the Standard Sanitary Manufacturing Company for a little more than a year. Previously, for a little over two years, in the Traffic Department of the same Company, and formerly worked in a minor position in the Traffic Dept. of the Pressed Steel Car Company, for four years, and for the American Window Glass Company for two years. (1279) Before that, for quite a number of years, was with the Pennsylvania system, as messenger boy, rate clerk, claim clerk, etc. Was also with the B. & O. for about two years, as rate clerk in their commercial freight agent's office. Prior to 1901, witness "judged naturally" the S. P. would take the long haul and route its business via New Orleans, and the U. P. via Kansas City or Omaha. His recollection was that the S. P. at that time solicited Portland business by Sunset route. Witness' California business now routed via the U. P. and S. P., via the Santa Fe, and via the San Pedro route, in connection with different lines leading up to those lines.

Traffic Mgr. Mfg. Co.

(1280) The Portland business to a great extent goes via the Northern Pacific and the Great Northern. Some via the U. P. and O. R. & N. The N. P., Great Northern, Atchison and U. P. each maintain soliciting agencies at Pittsburg. Herring and his assistants solicit freight for both the U. P. and S. P., and never intimate to witness that they have any preference. In summer witness has quite a large movement to North coast points by the lakes. Sends

Freight solicitors at Pittsburg.

it chiefly via Cleveland or Erie, in connection with the Mutual Transit; also the Anchor line; some via Buffalo and the New York Central's boat line in connection with the various rail lines leading west from the Lake terminals. It goes chiefly to Duluth, although occasionally cars are sent via Chicago. From Duluth it goes over either the Northern Pacific or Great Northern, and C., St. P., M. & O. and U. P., and their connections. The C., St. P., M. & O. have a line leading from Duluth to Omaha, connecting there with the U. P. The line last mentioned competed with the other lines for witness' Portland business.

Routing of his traffic.

(1281) Doesn't recall that the American Window Glass Company shipped that way at all. Thinks lake route has a differential as against the all-rail line. Would not get the business unless they did. At least, not on the class of goods witness shipped. He thought there was a differential on all business, but could only testify as to his own. The Standard Sanitary Mfg. Co. has three factories at Pittsburg, north side, at New Brighton, about 30 miles from Pittsburg on the Pennsylvania lines—and at Louisville, Ky. They also had a large factory at Detroit, Mich., but it was closed about a year ago. Manufactures bathroom fixtures. Their advertisement says they are the largest manufacturers in the world, which witness believes to be true. Their shipments go to all parts of the world. Lately it has been moving via Suez. When it went via Pacific coast points, it moved chiefly U. P., although some of it went over the Atchison, and by boat out of San Francisco. Never shipped out of any other Pacific coast points.

Export business.

(1282) Witness' recollection was that the Pacific Mail and the American Hawaiian Line took the traffic out of San Francisco. Do not ship by ocean vessels, if they can avoid it, on account of the liability of damage from handling. Shipments by way of the lake are handled on the decks of the vessels, and do not go into the holds of the ships. At the present time superiority of service is practically the only factor in determining the selection of routes. Has never found any better service to California points than the U. P.-S. P. line. The L. & N., the Illinois Central, the Queen & Crescent, the Southern, all have soliciting agents at Pittsburg, trying to work California business by way of New Orleans, and witness gives them some business that way on account of his friendly feeling towards the representatives here. The Rock Island, Burlington, (1283) Northwestern, the St. Paul, practically all the lines between Pittsburg and the Missouri and Mississippi Rivers have representatives here. South of Portland the U. P.'s only connection with the coast, except the San Pedro, is the S. P. Prior to 1901, the S. P. agent at Pittsburg worked both the route by Ogden and the New Orleans and El Paso routes. Never indicated any decided preference. Worked the traffic any way he could get it, taking the long haul where he could get it, and, if not, taking the other. (1284) Prior to the construction of the San Pedro, the U. P. could never have made a rate to California south of Portland,

Excellency of U. P.-S. P. service.

Solicitors at Pittsburg.

Prior to 1901, S. P. agent at Pittsburg worked New Orleans, Ogden and El Paso routes.

U. P. could not make Calif. rate without consent of S. P.

without the consent of the S. P. The concurrence of the S. P. in that rate was necessary. They could have routed traffic to Portland, and then down by boat. Any concern he was connected with did not route in that way.

Never knew Portland route to be used.

(1285) L. T. FOWLER.

Fowler.

Resides at Pittsburg. Traveling Freight Agent for the Merchants & Miners Transportation Company, an east coast line between Baltimore and Savannah, Norfolk, Newport News, running north to Boston, Providence and Fall River. Also have a line operating from Philadelphia to the same points. Works in connection with the rail lines between Pittsburg and the coast. Solicits all classes of business. Does not participate in any Pacific coast business. Employed by that line in 1894. Prior to that for two years and a half had represented the U. P. at Pittsburg, and for three years before that in Philadelphia. For eighteen years prior to that with the Lehigh Valley as Local Agent, and from that to Chief Clerk of the General Freight Agent. (1286) Competition between the U. P. and S. P. at the time witness represented the U. P. was very strong. When witness got a tip on a shipment, he tried to get it for the U. P., and the S. P. agent then worked with him, because the latter got the haul from Ogden. Naturally the S. P. preferred to take it the other way.

Pittsburg. Agent for an east coast boat line.

(1287) Never knew business to go by the Morgan Line from Pittsburg, but it did from Philadelphia. Competition was very strong there. The freight from Philadelphia to New York sometimes went through the canal and sometimes by rail, the Morgan Line absorbing the haul into N. Y. Never knew the S. P. to solicit business to Portland either by the Sunset or the Ogden route. Doesn't know whether they did for either road from Philadelphia. In 1888 and 1889, when witness was agent for the U. P. at Philadelphia, business moved to a large extent for San Francisco via Portland and the boat line down, and witness actively solicited business that way.

S. P. did not solicit Portland business.

Use of Portland route to San Francisco.

(1288) Succeeded in routing a good deal of business, mostly dry goods, that way. Sunset route was actively soliciting the same traffic. Didn't use the S. P. line at all that way. The witness and the S. P. agent once had a controversy as to whether trolley poles should be classed as iron pipe or not. Witness thought the higher rates should apply, but the S. P. agent differed with him, and in order to get the business he applied the lower rate. (1289) Herring in this case of "competition in reading tariffs," witness thought, was trying to get the business via New Orleans. Personality and service are the principal elements in solicitation. Service includes through cars, close connections, through trains, time. The soliciting agents look up rates for the shippers, which are in some cases complicated. Witness sees no reason why the attitude either of the U. P. or S. P. in the matter of settling claims or treatment of shippers should now be different from what it was formerly.

Service improved by through cars and close connections.

(1290) They have the same inducement to treat the shippers well, because there are many other lines actively competing for California business. The trolley poles finally moved over the B. & O., the Chicago & Northwestern, in connection with the U. P. for 1,000 miles, and the S. P. for 850 miles. Competition was between the Sunset route and the all-rail lines, of which the S. P. was a part. During 1888-9, when witness used the Portland route for San Francisco, that lasted only a few months. It was due to a temporary disturbance. (1291) In 1891-2-3 witness didn't solicit via that route. Never knew any freight to move that way, except during that short period. Just as much competition now for Pacific coast business as there ever was, except in the matter of cutting rates. Didn't mean to say the U. P. and S. P. were competing, but that the lines leading up to the line of the U. P. were competing.

Use of Portland route lasted only a few months.

Just as much competition as ever.

(1292) There is the same competition between the lines leading from here to the Missouri or Mississippi. Witness' line transports business from Pittsburg territory. Loads it on to boats at Baltimore or Philadelphia, and, if going north, transports it to Boston, in competition with all-rail lines. There is a differential because the cost of handling the business on the sea is cheaper. The differential enables witness to compete with the all-rail lines to various coast points. The disturbance that sent freight around by Portland was due to some difficulty about handling traffic at Ogden; a competitive measure on the part of the U. P.

Disturbance that sent freight via Portland.

Intensity of competition not diminished.

(1293) Since 1889 the U. P. never found it to its interest to use the Portland route. The Atchison and its eastern connections, and the U. P. and S. P. and their connections, carry on a competition for Pacific coast traffic as active as it ever was. There has been no relaxation in that competition. (1294) All the intermediate lines are just as effective in their competition to-day as the U. P. ever was. They operate as large a proportion, if not a larger proportion, of the through mileage, as the U. P. did. Except by agreement, the U. P. never had any rate making power to the Pacific coast south of Portland, outside of the boat line. Aside from the elimination of the competition between the U. P. and S. P., the situation on Pacific coast business is about as it was then. That was a competition in which the S. P. and U. P. were connecting lines, and if the S. P. got the business the way it wanted it, it went to New Orleans.

Paar.

(1295) ANDREW PAAR.

Canton, Ohio. Diebold Safe & Lock Co.

Resides at Canton, Ohio. For about 25 years has had charge of the shipping business of the Diebold Safe & Lock Company, Canton, Ohio, about the largest manufacturers of similar articles in the United States. (1296) Ship a good deal to the Pacific coast. The lines employed west of the Missouri and Mississippi Rivers, are the U. P., the S. P., the San Pedro, and the Santa Fe, and for North Pacific points the N. P., G. N., and some traffic by the S. P. A good while ago shipped to California points by way

of New Orleans and the Sunset route. Made a few shipments that way recently, but they were routed by the consignees. Quite a good deal of witness' business is routed by the consignees. Ships by the Hawaiian Line to the coast. Sends that traffic to New York by rail, (1297) thence south by water to Mexico, across Mexico, and up by steamship. The rates by the American Hawaiian Line are lower than all-rail rates. About $1.75 per hundred from Canton to San Francisco all-rail, and about $1.05 by the American Hawaiian route. A good while ago shipped by the Q. & C. to New Orleans, and thence up the Pacific coast by the S. P. Think they made one shipment, partly by rail and water; forgotten exactly how, some time ago, but it was not satisfactory. Witness' goods are highly finished, and they were marred by handling. There are four or five handlings by the American Hawaiian Line; more handlings than shipping to North Pacific coast points, and down by boat. (1298) Prior to 1901, witness remembers shipping to Portland by Ogden over the U. P. and the old Central Pacific route. Most shipments now go Northern Pacific, and some Great Northern and Canadian. Doesn't ship much by the U. P. and Nav. Co. Has no recollection of business moving years ago by rail to Portland, and thence by boat to San Francisco, nor vice versa.

American-Hawaiian Line rates.

Water and rail rates not satisfactory.

Portland-Fri co route not used.

(1299) Prior to 1901 was solicited both by U. P. and S. P. agents. U. P. agent, witness thought, lived in Cleveland, and S. P. man in Cincinnati. The latter tried to move traffic by way of New Orleans, and former by Omaha. Now the U. P. doesn't solicit against the S. P. Mr. Connor and Mr. Hild come to see us now. They represent both lines. Mr. Connor lives in Cincinnati. Likes to have freight move by New Orleans, but does not object to having it go by Omaha. Canton is 100 miles from Pittsburg, and takes the Pittsburg common point rate. (1300) Personality is the large element of solicitation. The agent looks after the shipment, traces it, and advises shipper when it leaves different junction points, that is, when the shipper is in a hurry. Witness is quite often in a hurry. There is no haste in connection with the American Hawaiian shipments. It takes 30 or 50 days that way from Canton to San Francisco; all-rail, from 14 to 20 days. In 1907, at the time of the great congestion of traffic, it took thirty days. Witness is packing his goods differently now, but the difference in rate by the American Hawaiian Line would almost enable the goods to be refinished in San Francisco and save money; have a large store and warehouse in San Francisco; also at Los Angeles and Portland.

(1301) Witness ships via all the rail lines reaching California. Divides the traffic up. There are many rail lines reaching Pacific coast. Ultimately traffic goes over either the Atchison, the S. P., or the San Pedro, but east of those lines there are many connections, all of which have their separate solicitors, and that is also true of the lines reaching New Orleans. Prior to the opening of the San Pedro, all witness' shipments that went over the U. P.

also went over the S. P. in reaching California. (1302) The distance from Canton to Omaha is less than from Canton to New Orleans. Prior to 1901, when the two roads had separate solicitors, the S. P. representative solicited by way of Ogden, if he could not get it by way of New Orleans.

Prior to 1901, S. P. solicited via Ogden if it could not get the business via New Orleans.

Townsend.

(1302) J. F. TOWNSEND.

Pittsburg. Traffic Mgr. Nat. Tube Co.

Resides in Pittsburg, Pa. Traffic Manager of the National Tube Company for nearly ten years. Previously in the railroad business for twenty years, with various companies; The Cleveland, Lorain & Wheeling, the Lake Shore & Michigan Southern, and the Wheeling & Lake Erie. Company manufactures steel pipes. (1303) It is probably the largest concern of the kind in the country. Plants are located in the Pittsburg district, except one at Kewanee, Ill., but all take the same rates to California points. The Illinois plant takes a less rate to the Northern coast. Routes business to the coast from Pittsburg district about twenty different ways. It moves over the five trans-continental lines, namely, S. P., Atchison, Northern Pacific, Great Northern and Canadian Pacific.

Uses 20 different routes.

(1304) Some of it moves over the Union Pacific and Southern Pacific into San Francisco, and some over the U. P., Short Line and Nav. Co. to Portland, but very little. The latter line hasn't been used until recently. Formerly the Northern Pacific and Great Northern were used. Doesn't think he ever moved any freight via New Orleans and the Sunset route. At all events, very little. In the old days the consignee had something to say about routing. Now witness sells delivered, prepaying the freight, and has the routing. Ships to the coast via El Paso. Freight goes over Texas Pacific, Rock Island and various routes to El Paso, and thence via S. P. (1305) In shipping freight to Southern California the trans-continental lines west of the Missouri and Mississippi Rivers, which witness employs, are the Atchison, San Pedro, and to some extent, the S. P. Does not ship much over the U. P. to Southern California. Freight for the San Pedro goes over the various lines leading up to Colorado junctions. Tries to divide it up as fairly as possible among the different lines. San Francisco business moves over the Atchison and S. P., generally. Some of it over the U. P. and S. P. from Ogden. What the U. P. gets does not represent the S. P.'s share of the business, because witness gives the D. & R. G., the Colorado Midland, those Colorado routes, the S. P., Rock Island, Burlington—all of them, a share of the business.

Sunset Route not used.

Divides traffic among different lines.

(1306) When Hawley represented S. P. in New York, there was competition between it and the U. P. for coast business. Witness supposes there is naturally no competition here between the two lines for trans-continental business. In soliciting business the important element is time, service. (1307) S. P. forms a part of the U. P. trans-continental line for California points. All the lines lying east of the Missouri River engaged in trans-continental business as connections of the U. P., Atchison and S. P. Solicita-

Important factor, time, service.

tion is now more active in Pittsburg than it ever was. Over ten agencies established there in last five years.

(1308) U. P. solicits business in connection with other lines besides the S. P. The Rock Island, Missouri Pacific, the Wabash, and various lines reaching down into the southwest, and ultimately to a connection with the Texas & Pacific or S. P. at El Paso, are actively soliciting that business, and there are a great many new smaller lines that have wide-awake fellows looking for business. Various lines actively solicit business by way of New Orleans—the L. & N., Illinois Central, and Q. & C. The result of this solicitation is that witness would naturally give the new routes a chance, and if they made good, give them more. Has never sent business to California by Portland and down by water. No dead freight. All time freight. (1309) No freight has moved that way, to his knowledge. Would lose his job if he sent any that way. In stating that the U. P. solicited trans-continental business in connection with other lines than the S. P., witness had the S. P. in mind. The U. P. solicits also in connection with the San Pedro. U. P. and S. P. now have common soliciting agent at Pittsburg. (1310) Pittsburg district originates more tonnage than any other in U. S.

Never used Portland route to California.

(1310) F. A. OGDEN.

Ogden.

Lives at Crafton, a suburb of Pittsburg, and is general freight agent of Jones & Laughlin Steel Company, and has been general agent for the last 14 or 15 years. Was in their shipping department four or five years prior to that. (1311) Jones & Laughlin largest steel concern in U. S., outside of U. S. Steel Corporation. Their existing plants are located in Pittsburg; manufacture structural steel. Have a fairly large business on the Pacific coast. Shipments to California are divided between the S. P., Atchison and San Pedro, and to North coast points between the Great Northern and Northern Pacific. A car or two, possibly, a year, will go by the U. P. and Nav. Co. to Portland. Part of the business going through Salt Lake and Ogden goes via the U. P. and S. P., and part via the Colorado Midland, part by the D. & R. G. from Denver, using the Rock Island or "Q," or some of those lines up to Denver. Doesn't ship by New Orleans, and doesn't recall but one or two cars during the last year by El Paso.

Pittsburg. With Jones & Laughlin Steel Co.

Routing of his traffic.

(1312) Southern California business moves via the Atchison or the U. P., or the Colorado Midland, or D. & R. G., in connection with the San Pedro. Also sends some, but not much, by the U. P. and S. P. to Los Angeles. Goes via Ogden and Sacramento. Formerly shipped by Sunset route to California points. Stopped eight or nine years ago. Shipped to California by the Canadian Pacific and boat lines during the time of the differential. As witness recalls, he shipped quite a good deal for that day. Now ships a little by the American Hawaiian line. Business that way is increasing. Thought Tehuantepec Railroad line across Mexico about 180 miles. There is a differential that way of nine cents

Tehuantepec route.

a hundred; 71 cents that way; 80 by all-rail. (1313) From New York the American-Hawaiian line takes from 19 to 33 days to the Pacific coast. Shipments from Pittsburg to New York three or four days. A rush shipment sometimes goes through in 36 to 48 hours, so that it is now possible to rush a shipment from Pittsburg to San Francisco by the Tehuantepec route in 21 or 22 days. All-rail usually takes two or three weeks. There is very little difference in the time. Most of the goods are not damaged by handling. Those that may be damaged are sent all-rail. Prior to 1901, U. P. and S. P. had separate agencies in Pittsburg.

Joint, as effective as separate, agencies.

(1314) Knows of no reason why a joint agent of the S. P. and U. P. at Pittsburg should not serve those two companies as effectively as separate agents. (1315) In the trans-continental business, the S. P. can get along very well without the U. P., but the latter could not get along without the former. While there were two agencies, the S. P. agent tried to get business by way of Ogden, when he could not control it by way of New Orleans. Tried to get it either by New Orleans, El Paso or Ogden. Preferred New Orleans, because he got a longer haul. The Texas Pacific and Rock Island are actively soliciting by way of El Paso, and the result of their work inures to the benefit of the S. P. as against the Atchison. The St. Paul, the Northwestern, and various lines reaching the Missouri River, are all actively working for that business, too.

S. P. tried to to get business via New Orleans, El Paso or Ogden.

(1316) And that ultimately inures either to the benefit of the S. P. or Atchison, and of the U. P. also. One soliciting agent could not work the Ogden route against the Sunset route. Witness thought the more agencies in Pittsburg, the better, but so far as his purposes are concerned, two men of equal ability jointly representing the S. P. and U. P., would be as good as two separate representatives. (1317) If the U. P. and S. P. had separate agencies in Pittsburg, witness doesn't think he would give them more business than at present, but it might make a difference in the distribution of traffic as between the Sunset and Ogden routes. The S. P. could demand that they were rightly entitled to some of the long haul freight by way of New Orleans.

Reciprocity in routing.

(1318) Routing freight is getting to be a case of reciprocity. Companies that buy supplies from witness are preferred. The establishment of a separate agency at Pittsburg by the S. P. would not change witness' policy of routing traffic, so far as the S. P. is concerned, not to San Francisco and Northern California points. It all depends upon how much pressure the S. P. put upon him. They buy materials he manufactures, and are entitled to recognition in carrying shipments. (1319) Having a separate agency at Pittsburg would not affect the question of reciprocity. Doesn't really see any objection to having a joint agent. He practically represents one line, and can do what the other two men would have to do. Consulting his own feelings, witness would prefer two agencies, but cannot specify anything they could do if they were here. Thinks Mr. Herring fulfills all requirements.

(1321) His traffic moves to Southern California by San Pedro and S. P. to some extent. Doesn't move by the New Orleans or El Paso gateway to San Francisco. Goes by the Santa Fe, San Pedro and S. P. Does not move anything to Southern California by Sunset route. Formerly shipped via El Paso, but not now. The reason for that is the old question of reciprocity. Lines between Pittsburg and El Paso are not heavy purchasers. Would favor the Illinois Central if he shipped by New Orleans. (1322) Does not now ship over the Can. P. The largest portion of shipments to Japan has gone by Seattle over the Great Northern. Has never shipped anything by San Francisco, except, perhaps, a small box of samples. If the U. P. and S. P. were entirely separate, unless the former became purchasers of the witness, he would eliminate them altogether. (1323) Gives them a share of his business because they make quick time. Hasn't shipped any freight around by New Orleans for from seven to nine years. Reciprocates with the S. P. by giving them freight from the U. P. or D. & R. G. and Colorado Midland, because the time by the western gateway is much better than by New Orleans. Routing of his traffic.

(1324) Only gives freight to the U. P. because of their superior service. Doesn't ship by New Orleans now, because the Harriman lines have a good line by Ogden, and make the time that way. (1325) If Harriman lines purchased more, witness would still ship that way. Doesn't mean to say that if the S. P. would now buy more, he would ship more by way of New Orleans, not the way the situation is now. If the S. P. would come and demand that he ship that way, it would have consideration at his hands. The S. P. could do that to-day, but they are satisfied with shipments by way of Ogden. It is immaterial to the S. P. how he sends it. (1326) The U. P. and S. P. having been amalgamated, witness regards it as immaterial to the S. P. whether the freight is sent by Ogden or New Orleans. Gives freight to U. P. only because of superior service.

(1327) The combined total of the business that witness shipped over the Colorado Midland, the D. & R. G., and the U. P., makes up what he considers a fair share of business for the S. P., but if that road came to him and demanded some business by New Orleans, he would have to give the demand consideration. Whether he would give that route much business, would then have to be determined, but he would rather ship by Ogden, because of the better time. If witness had nothing to consider except the service rendered, he would "give it to the Union Pacific at Omaha always." (1328) Reciprocates S. P.'s purchases by sending by way of Ogden, but not always over the U. P., although witness considered them practically one line. Mr. Hawley worked hard to get the business by way of New Orleans. Mr. Herring tried to get it at any junction point. The former's work was to the disadvantage of the shipper. Witness didn't accede to Hawley's solicitations because in those days the man who knew the manufacturer didn't control the routing. Ogden route preferred.

Lent.

(1328) JOHN F. LENT.

Pittsburg. Traffic manager of industrial concerns.

Resides in Pittsburg, and for four years has been traffic manager for a number of large industries, and two associations of manufacturers, which he named. (1329) Their plants are located at Pittsburg or Pittsburg common points. Previously traffic manager of the Union Steel Company, and prior to that commercial agent of the Pere Marquette system for two or three years, 1899 and 1900, witness thought it was, and prior to that with the Pennsylvania lines, starting with that Company in 1889 as messenger, and filling the different offices to chief clerk in the division freight office. (1330) Before the consolidation, the S. P. seemed to contend for the long haul via New Orleans. Witness didn't know of any competition at that time between the U. P. and S. P. for business to Portland. Movement by the Morgan line was not practical, from a rate standpoint, from the Pittsburg district, but only from points east. Witness doesn't think there was ever a time when the rail rates from Pittsburg to New York were absorbed by the Morgan line.

(1331) All the trans-continental lines had agencies in Pittsburg prior to the consolidation of the U. P. and S. P. Work of solicitation performed by the agents described. No competition between U. P. and S. P. since 1901, so far as witness has observed.

Nails via Portland.

(1332-1333) Remembers eight or nine years ago shipping some nails via Portland, and then down by sea to San Francisco. Has never used the Can. P. route via Vancouver to San Francisco. (1333) Knew of some Oriental business going from Pittsburg by the Pacific coast, as a matter of hearsay. Witness remembered years ago that some business moved to Portland, Oregon, by the Ogden gateway and Central Pacific, but never made shipments that way himself. Has shipped by the Panama route to the Pacific coast, that railroad owning the steamship line from New York to Colon, and from Panama north to San Francisco. The witness didn't know whether the shipment went over the Pacific Mail, or not. Has had shipments that way off and on at long intervals ever since he has been in business. That route has always been open. There is a substantial differential prevailing as compared with the all-rail rates.

Panama route.

(1334) The Tehuantepec line gets a higher rate than the Panama. Their service is better. Witness once sent a shipload around by the Horn. The tariff was less. Has never shipped from Pittsburg over the Morgan line to California points, but has to Texas points. (1335) There are various lines from Pittsburg to the Missouri River and the Rocky Mountains, which, as connections of the S. P. or Atchison, form through routes to the coast, and shipments may be made via New Orleans, El Paso, or Ogden, over the S. P., or via the Atchison. Before the amalgamation, the S. P. agent worked preferentially for the New Orleans route, but if he couldn't get it that way, worked for the Ogden route or the route via El Paso, preferring the route that afforded him the longest haul.

Before 1901 S. P. worked preferentially for New Orleans route, and if traffic would not go that way, then via Ogden or El Paso.

(1336) Besides the shipment of nails, witness never knew of any freight to go from Pittsburg to San Francisco by way of Portland. That shipment was six or seven years ago. Doesn't know whether that shipment up to Portland went over the U. P. or Northern Pacific. Doesn't recall the routing. Went by water from Portland to San Francisco. Recollection about the shipment is faint. (1337) With that exception, all shipments controlled by the agents of the U. P. before the amalgamation, as far as witness knew, went to California over the S. P. Witness sees no reason from the standpoint of the shipper or of the railroad company, why, with the same activity that two representatives would give, a joint agent could not represent both the companies, as well as separate agents. There is competition enough by the Atchison and its connections to stimulate activity. All the eastern connections are very active in Pittsburg territory. The S. P. line by way of New Orleans is not an advantageous one. Competition of the Atchison is enough to stimulate a spirit of reciprocity in the S. P.

With exception of the nails, all other U. P. shipments for Cal. went S. P.

Competition active and sufficient.

(1338) Doesn't think the separation of the U. P. from the S. P. would improve the situation. If the Atchison agency was also turned over to Herring, competition would be eliminated between the three roads. The amalgamation of the U. P. and S. P. eliminated competition between the S. P.'s southern route and the Ogden route. The rates have been the same via all the routes for many years. (1339) Witness didn't know about divisions among connections, but thought they had remained unchanged for many years, so that the U. P. was free to get all the business it could, without fear of losing part of its divisions, and its agency did work actively for business. The Atchison has its own line to California points, with which to compete with the S. P. for California business, but the U. P. cannot get to California except in connection with the S. P., nor could the U. P. make a rate to California without the concurrence of the S. P. "The Southern Pacific would be the ruling factor," and control the situation so far as the U. P. is concerned.

Separation of U. P. from S. P. would not improve situation.

(1340) Knows of no reason why the S. P. shouldn't change the divisions, if the U. P. attempted to give concessions. S. P. cannot make a rate of itself from Pittsburg to California, but only in connection with other lines. (1341) The rates are made by concurrence, through bureaus. No one line controls it. All the lines have to concur. If the rate is lower, the other lines have to meet it.

S. P. cannot make through rate alone.

(1342) If there was a disagreement between the U. P. and S. P. as to divisions, or as to tariffs, at Ogden, the U. P. would have no outlet for transcontinental business, except by way of Portland and the boat line, whereas the S. P. might have forty, in that it could establish rates with the D. & R. G., with its connections at El Paso, and with various lines that it connects with in Texas and at New Orleans. If the divisions were not satisfactory, the rates could not be put in. If the U. P. attempted to coerce the S. P. by

Advantages of S. P. over U. P. in connections.

using the Portland route to California, it would suffer more by the S. P. transferring its business to the D. & R. G. at Ogden, instead of treating the U. P. as its preferred connection, (1343) because of the fact that the S. P. would control the larger tonnage. At Omaha the Northwestern and St. Paul, the Illinois Central, the C. B. & Q., the Wabash, the Chicago Great Western, and the Rock Island, connect with the U. P., and it would not be an advantageous thing for the S. P. to antagonize all these lines that are sending their business over the U. P. Irrespective of the fact that the law requires the S. P. not to discriminate against the U. P., the former could not afford to do that, in view of the enormous traffic that is controlled by those lines east of Omaha. Witness thought that a correct statement, with the modification that shippers are a factor in selecting the route. Both lines have a certain element of strength to compel the other to do it justice. (1344) Every one of the lines mentioned, that is feeding the U. P. at Omaha, can just as well feed the D. & R. G. at Pueblo, and reach the S. P. at Ogden that way, without going over the U. P. (1345) They are not dependent upon the U. P. to reach the S. P. If the U. P. tried to work the Portland boat line, its connections at Omaha would naturally use the D. & R. G. and the S. P., rather than to attempt to work the U. P.'s route around by Portland. Even if they were to use the Portland route and get to San Francisco, they would still have to get to interior points over the S. P. Witness meant by saying the S. P. could compete with the U. P., that the former could send east-bound business by the Sunset route or over its own line to Ogden, and thence over either the U. P. or D. & R. G. "Sunset control the traffic out there largely"—the unrouted traffic. (1346) If they were operated separately, the natural tendency would be for the S. P. to send its east-bound traffic by the Sunset route. If it is impossible for Mr. Herring and Mr. Stubbs each to compete with himself, it is equally impossible for the S. P. to compete with itself, since it controls both routes. It is not impossible for the U. P., if separated from the S. P., to get business routed westward via Ogden over its line.

If U. P. attempted to use Portland route its connections would turn their freight traffic over to competitors.

PITTSBURG, PA., JAN. 29, 1909, 10:30 A. M.

Snape.

(1346) THOMAS SNAPE.

East Liverpool, Ohio.

Has lived for 25 years at East Liverpool, Ohio. (1347) Routing agent for the C. C. Thompson Pottery Company. Ships to all parts of the country. Since 1901 witness' shipments have been solicited by Mr. Herring, who represents both routes. He expresses no preference between the two.

Wells.

(1349) W. E. WELLS.

Newell, W. Va. China Co.

Resides at Newell, W. Va. Secretary of the Homer Laughlin China Company. His coast shipments were invariably routed by the consignee. For twenty years has never known it any other

way. Is familiar with the routing prior to ten years ago. Used all the transcontinental lines. Occasionally a car went by New Orleans. Doesn't recall using El Paso as a connecting point. (1350) Recalls no other connecting point with the S. P. excepting New Orleans. Frequently shipped over the Santa Fe, the U. P., N. P., and G. N. Consignees were located all along the coast. (1351) For several years witness' business in California has been done with one wholesale firm, which has two leading houses, one at San Francisco and one at Los Angeles. The consignments to San Francisco are routed by the U. P., and to Los Angeles by the Atchison. That has been the standing routing since 1898.

(1351) WILLIAM C. WATSON.

Watson.

East Liverpool, Ohio. With manufacturer of earthenware.

Lives at East Liverpool, Ohio. Superintendent of Sales of the Knowles, Taylor & Knowles Company, manufacturers of earthenware, at East Liverpool, Ohio. Employed by that concern for 30 years, first going there from the Pennsylvania Railroad, as shipping clerk, and for the last eight years having been Superintendent of Sales. (1353) Complainant's Exhibit 112, page 1353, being a postal card distributed by Mr. Herring for signature by shippers, containing a note requesting the shipper to designate the through routing. (1354) Complainant's Exhibit 113, business card of J. A. Corfield, Mr. Herring's traveling freight agent.

(1354) Complainant's Exhibit 114, letters from Mr. Herring to Witness' Company. (1355) Portland business is usually routed by the consignee over the N. P. Some of it goes to Portland over the G. N., and probably one car in ten years over the U. P. Doesn't remember any shipment going to Portland by Ogden.

(1356) Has shipped around the Horn to San Francisco, and has also made shipment by the Morgan line of steamers, but cannot recall any particular shipment, because it was some years ago. Witness' plant is in Pittsburg territory. At the present time, ship to Los Angeles by the S. P. at El Paso, and also by the Atchison and other routes. Most of the freight to Los Angeles is routed by the consignee. Very little goes by the San Pedro. Ship a few less than carload shipments that way. San Francisco business goes by the S. P. and the Atchison from different gateways, sometimes over the Rock Island, sometimes over other roads to El Paso, and at other times over the Rock Island, St. Paul and other roads into Ogden, with different connections at Ogden. Some of it goes via U. P. at Omaha.

(1357) It is pretty generally distributed among the different lines. Since the Interstate Commerce Commission is looking after things, and the rate is the same, there is not much left for witness to do. (1358) There are various other lines soliciting business for the Pacific coast, besides the S. P. and U. P., among others, the Atchison, the Rock Island, the Missouri Pacific, the M. K. & T., the Texas Pacific, (1359) the C. B. & Q., the Chicago & North-

I. C. C. supervision.

western, the C. M. & St. Paul, the L. & N., the Illinois Central. All these railroads are soliciting. "They bother you to death."

Belleville.

(1360) JOSEPH M. BELLEVILLE.

Pittsburg. With Pittsburg Plate Glass Co.

Lives in Pittsburg, Pa. Since February, 1898, traffic manager of the Pittsburg Plate Glass Company. Previously, for fourteen years, agent of the P. C. C. & St. L. Railway Company, at Wheeling, W. Va. The Glass Company makes large shipments to the Pacific coast, and very few of the transcontinental lines have failed to share in the business. (1361) Shipments to the coast are made f. o. b. factory, and are routed as directed by the consignee. All shipped to one firm, W. P. Fuller & Company, the largest glass operators on the coast, who have various warehouses at Pacific coast points from Los Angeles to Spokane. Business for Los Angeles goes largely by the Atchison, divided between Atchison and San Pedro, and some of it goes by the Chicago & Nortwestern in connection with the U. P. The San Francisco business goes by the U. P. and S. P. via Ogden. Prior to 1901 "probably the Union Pacific got a little more. They probably got more than half of it," the lines by New Orleans, a quarter, and the rest divided among two or three different routes. Prior to the amalgamation, the soliciting agents of the U. P. and S. P. competed at Pittsburg.

Routing of his business.

(1362) Prior to 1884 or 1885 bills of lading usually contained no routing, but subsequently the shippers gradually more and more specified the routing. The personal element has more to do with solicitation to-day than anything else. The S. P. is the U. P.'s only outlet to California points. (1363) In 1898 the U. P.-S. P. Ogden line was stronger than the Atchison, but now witness thought the Atchison was equally strong. (1364) The S. P. agent wanted to make the best showing that he could, and he did this by getting the long haul via New Orleans. The public is not interested in the matter of division of through rates. There are many other lines soliciting business for the Pacific Coast. All the lines lying between Pittsburg and El Paso, and connected with the T. & P. between New Orleans and El Paso, the lines reaching the Missouri River and Rocky Mountains, are actively soliciting. The Missouri Pacific and Texas Pacific have a joint agency at Pittsburg. Some of the soliciting lines mentioned. (1365) On the lines named, the business ultimately went to the coast over the S. P.

Personal element in solicitation.

Everest.

(1366) WILBUR B. EVEREST.

Wilkinsburg, Pa. With Westinghouse Co.

Lives in Wilkinsburg, Pa. About nine years manager for the Westinghouse Electric & Mfg. Co., who manufacture electrical machinery and appliances. One of the largest companies in that line of business. Has been traffic manager since September, 1900. For a short time prior to that was General Freight Agent of the same company. (1367) Route almost all their own traffic, shipping in carload lots to their own warehouses at distributing points.

Routing of his traffic.

Own warehouses at Los Angeles, San Francisco and Seattle. Also carry a small stock in Portland. Traffic moves to the coast by all the various routes. For San Francisco it is divided between the U. P. the S. P. route and the Santa Fe. No business has moved by New Orleans of late. Some years ago, during a period of congestion, considerable business was shipped over the Illinois Central and L. & N. to New Orleans, and then over the Sunset route. Witness understood that the congestion of the Northern lines made the Sunset route at that time quicker.

(1368) Uses the Ogden route, the San Pedro, and the Atchison in shipping to Los Angeles. Ships into Colorado and Utah common points by the direct lines from Chicago, either the Northwestern or the U. P., or the Rock Island. Does not recall shipping to those points by New Orleans. Has used the Morgan line of steamers, but only for Mexican business, not for coast business. Oriental business is consigned by way of New York. Taken out of witness' hands at that point. Understands it goes by Suez. There have been Oriental shipments by the Pacific coast. (1369) Recalls shipments through San Francisco and also through Vancouver, but does not recall any through Seattle. Prior to the opening of the San Pedro line, all business for California routed over the U. P. passed over the S. P. Would not choose the El Paso route, except where the customer had purchased f. o. b. factory, and requested it. All those routes were always open, but generally preferred the U. P. Ogden route. There is very active solicitation by all the intermediate carriers, and if the S. P. had no solicitors at Pittsburg, much of the business controlled by its eastern connections would necessarily go over its lines. The shippers not interested in the division of the through rate as between carriers. (1370) A railroad would, however, get more business if it solicited it. Some of the lines feeding the S. P. mentioned.

Morgan line not used for coast business.

(1371) DENNIS CROWLEY.

Crowley.

Salesman for Carnegie Steel Company. Formerly stenographer, and part of the time solicitor of the S. P. Occupied the latter position for about five years prior to the amalgamation. The preferred route was the Sunset route via New Orleans. It moved over the different lines leading out of Pittsburg, some of it via St. Louis; not a great deal. Illinois Central. Didn't solicit any traffic for the Morgan line. The U. P. was represented separately. (1372) U. P. solicited business via Ogden. Witness doesn't remember having secured any Portland business. Had nothing to do with the passenger business.

Former solicitor for S. P.

(1373) Method of solicitation described. Witness solicited Oriental traffic. Sent it by way of San Francisco, via the Sunset as the preferred route. Over the Ogden route the S. P. got a haul of about 850 miles to San Francisco. (1374) Traffic controlled by solicitation of various eastern lines, naming them, would, as a rule, pass over S. P. They are all actively soliciting at Pitts-

burg. Some of these lines named could take the traffic to Omaha and deliver it to the U. P., so they are soliciting for the U. P., as well as the S. P. (1375) They could, however, carry it to Denver and deliver it to the D. & R. G. The U. P. is an intermediate carrier as regards the rate-making power. (1376) Would not consider it as good policy for the lines that reach Omaha to turn business over to competitors who go all the way from Chicago out to Denver. The U. P. at Omaha would be a preferable connection. Atlantic seaboard business moves to California by way of Cape Horn, also by Panama, the Tehuantepec route, the Morgan line.

U. P. is an intermediate carrier as regards rate-making power.

(1377) Witness thought the U. P.'s route to San Francisco through Portland would be relatively as desirable as the long routes mentioned from coast to coast. The Cape Horn, Panama and Tehuantepec routes get business because they make low rates, and they can make these rates as they please, without much opportunity on the part of S. P. to retaliate. Has never known of any substantial shipments to California through Portland. (1378) Although the S. P. Co. controls the Pacific Mail, which forms a part of the Panama route, witness stated that his experience was, the steamer lines always seemed to be able to make whatever rates they pleased. Witness is not familiar with the fact that a large part of the Panama business up the Pacific coast is carried by tramp steamers. (1379) The S. P. does not control the ships around Cape Horn nor the Tehuantepec route.

Never known of any substantial shipments going via Portland.

Woodside.

(1379) S. P. WOODSIDE.

Ben Avon, Pa. Traffic business.

Lives Ben Avon, Pa. Since July, 1907, general freight agent of the West Side Belt and the Wabash-Pittsburg Terminal Railroads. Prior to that for five years traffic manager of the Pittsburg Coal Company, the River Coal Company, and allied interests; and prior to that for fifteen years General Agent of the Erie Railroad in Pittsburg. Left the Erie in July, 1902. (1380) Prior to 1901 the soliciting agents of the S. P. and U. P. competed at Pittsburg for coast business. Thinks there was competition also for Colorado and Utah points. Occasionally had a car of coast business by way of the Morgan line. Erie got part of the traffic that went via New Orleans. Took it to Cincinnati or Louisville. U. P. business Erie carried to Chicago or East St. Louis, whichever way it was routed. S. P. agent tried to route business by New Orleans.

(1381) Cannot state positively that any cars went from Pittsburg via the Morgan line. Knew a few that went from Rankin, east of Pittsburg. The Erie was known as a neutral line, and always respected routing, taking it either through Cincinnati or Chicago. In a large majority of cases the traffic came to the Erie routed. Didn't understand that the Erie line to Chicago competed with the line to Cincinnati. (1382) Witness then did substantially what the joint agent of the S. P. and U. P. does now, took it by the long haul where he could get it. The Erie had two strings to the same bow, and witness had no preference. Every-

Erie line to Chicago did not compete with its line to Cincinnati. It had two strings to its bow.

thing that went over the U. P. went over the S. P., so that the S. P. had several strings to its bow. There are a great many eastern lines actively soliciting California business in Pittsburg, each trying to get the longest haul and the most revenue. (1383) It is about 1,000 or 1,100 miles from Pittsburg to New Orleans. Shippers are not interested in the division of through rates.

S. P. had several strings to its bow.

(1383) J. H. BLACKBURN.

Blackburn.

Lives at Salem, Ohio. Purchasing agent of the W. H. Mullins Company, at Salem, Ohio. They manufacture architectural sheet metal work, pressed steel bolts, fireproof windows. (1384) The factory at Salem is 70 miles from Pittsburg. Does not ship much to the Pacific coast, but have had some shipments. Prior to the consolidation, the S. P. solicited by New Orleans. Business that formerly went by New Orleans now goes by the all-rail lines. Some of it still goes by New Orleans; goes by all the lines, by the Santa Fe, and through Denver. Portland business goes by the Great Northern and Northern Pacific. None by the U. P.

Salem, Ohio. With W. H. Mullins Co.

(1385) Oriental business moves by New York. Witness had some Pacific coast business, but the great majority of it sent by New Orleans was for Mexico. What witness shipped to the coast was for lower or Southern California. Comparatively few went to San Francisco, and shipments for San Francisco usually went by direct railroad. All the lines between Pittsburg and New Orleans, the Missouri River and the Rocky Mountains, have solicited his business right along. (1386) Testimony with reference to competition for business between the New Orleans and the U. P. route had reference to coast business.

(1386) J. S. MURRAY.

J. S. Murray.

For about five years employed by the Aluminum Company of America. Not previously in the traffic business. That Company has plants at New Kensington, Pa.; Niagara Falls, N. Y.; Massena Springs, N. Y.; East St. Louis; Bauxite, Arkansas; Cave Spring, Ga. Most of the Pacific coast business moves from Massena, N. Y. (1387) over the New York Central to Chicago, and thence over the various lines, such as the Atchison, the lines to Omaha, the U. P., S. P., San Pedro. Portland business moves over the N. P. and G. N. Business to the Pacific coast also moves by the Morgan line. The consignee usually determines the routing. Has made shipments into Colorado common points via the Morgan line into Galveston and thence up to Colorado. Mr. Herring makes no distinction between the lines of the S. P. and U. P. in soliciting. Shipments to Colorado common points were made since 1901. Has no knowledge of shipments prior to that. (1388) Various eastern lines solicit witness' freight, and all these different routes are open to witness, who is not interested in the division of the rates by the railroads.

With Aluminum Co.

R. H. Thomson.

(1388) R. H. THOMSON.

Crafton, Pa. With Oil Well Supply Co.

Lives at Crafton, Pa., Traffic manager for about nine years, of the Oil Well Supply Company at Crafton, Pa. For about two years prior to that employed by the Chamber of Commerce, and prior to that commercial agent at Pittsburg of the Vandalia, a part of the Pennsylvania system, running from Indianapolis to St. Louis. For two or three years was also joint agent of the Illinois Central with the Vandalia. The Illinois Central pulled away, and put in an office of their own. (1389) The Oil Well Supply Company is the largest concern of the kind in the world. Ships their products wherever there is any gas or oil; all over the world. Have eight branches in California, from which distributions are made. Shipments also go direct to customers. Branches located at San Francisco, Orcutt, Bakersfield, McKittrick, Los Angeles and Maricopa. The latter is in California. Witness thinks its old name was Monarch. Shipments made from the boiler plant at Oswego, N. Y., go by way of Chicago, and if destined for Los Angeles usually move via El Paso, sometimes via the U. P., Salt Lake, and the S. P. They used to go by the Atchison, but not now. When going to San Francisco, they move by the S. P.'s long haul by way of El Paso, and at other times by way of Salt Lake and Ogden—the U. P.

Branches.

(1390) Atchison does not get any to Los Angeles, but does to Bakersfield. Warehouse located locally on their tracks there. Until a year ago, witness gave the Santa Fe all the Los Angeles business, but now it goes to the S. P. on account of his warehouse being located on the latter's tracks. The location at Los Angeles has been changed from the Atchison to the S. P., at the manufacturing company's own suggestions. During the period of congestion, something like a year ago, a great deal of material went there by the San Pedro, because it made better time. Would never send anything by way of New York and water, unless especially requested by the customer. Goods are very apt to be damaged in shipping by water. The all-rail routes are the best.

Liability to damage goods by water.

(1391) Have shipped some by the Morgan line at customer's request, with the distinct understanding that they would stand all loss or damage. The location of the tracks at destination largely governs the distribution of witness' business; also the question of reciprocity. Because of the S. P. purchases, some shipments were made by New York. It was a direct shipment to the consignee, not to witness' warehouse. (1392) These shipments, however, move from the Seaboard territory, and not from Pittsburg. The rates by the Morgan line are just the same as by the all-rail lines. Have shipped goods by way of New Orleans all-rail from Reading Mills, and from Pittsburg. Not as much as we used to, however. They don't make good time across the River there. (1393) Ships Oriental business by New York and the Suez. Shipments sold to the S. P. and carried by the Morgan lines originating at Reading, Pa.

Routing of his business.

(1394) Reading is less than 200 miles from New York. To reach the S. P. all-rail it would have gone fully 1,500 miles to the nearest point, namely, New Orleans, and approximately 1,500 miles also to have reached the U. P. All the lines reaching witness' plants actively solicit the business, and he is not interested in the division of rates between the carriers. Interested in good service. (1395) Soliciting agent is very useful in keeping shippers informed as to congestion, so that they may avoid it in making shipments. Mr. Herring solicits just as strongly for both lines as he used to, and gives just as good service.

Service just as good as formerly.

(1396) He still asks for business via New Orleans. Sometimes he asks for business by the U. P., and sometimes by the S. P. He does not try at the same time to get it for both the S. P. and the New Orleans routes. Witness has, however, the choice of all the lines that Herring represents, and doesn't care which one he solicits for. The Ogden route gives about as good service as any of the lines to the coast. (1397) Except sometimes when there is a congestion, and then witness uses other routes. When the other lines are congested, he uses that route. He is glad there is more than one. As far as witness can see, there is no harm in not operating the roads independently.

(1397) E. L. McGREW.

McGrew.

Lives at Crofton, Pa. (1397-8) Since April, 1900, Purchasing Agent and Traffic Manager of the Standard Underground Cable Company, with factories at Pittsburg, Perth Amboy and Oakland, Cal. Goods are shipped to Oakland and completed there; also manufactured there. The Company is one of the three large concerns of the kind. There are other minor companies. Going back to 1900, in the early days we sent stuff to the coast via the Atchison and the New Orleans gateway principally. That was up to four or five years ago, or a little longer, perhaps. It is now pretty equally divided between the Atchison and the S. P. Witness gives the S. P. (U. P.?) its proportion, divides it up pretty equally among the lines centering at Ogden—the U. P., Colorado Midland, D. & R. G.

Crafton, Pa. With Standard Underground Cable Co.

Routing of his business.

(1399) Probably the U. P. gets the largest proportion. Stopped sending all-rail by New Orleans five or six years ago. Mr. Herring wanted to send by Ogden, witness thought. Shipments from Perth Amboy all go to the Pacific coast by all-rail. Usually by the U. P. Some of the less than carload shipments go by the Morgan line, but witness does not have many. Most of the coast business is distributed from the Oakland factory. Use the Morgan line generally for Texas business. (1400) Witness thought Mr. Herring would rather have shipments go by Omaha. (1401) Witness is sure Mr. Herring knows witness prefers the Omaha route. Mr. Herring would take it either way. Before the consolidation, when Mr. Herring could not get a shipment by way of New Orleans, he would try to get it by Ogden. (1402) The Omaha and Ogden route does not give the Harriman lines a longer haul than the Sunset route by New Orleans.

Morgan line for Texas business.

Before consolidation when Mr. Herring could not get business via New Orleans he would try to get it via Ogden.

Depuey.

(1402) S. B. DEPUEY.

Munhall, Pa. With Conduit Co.

Lives at Munhall, Pa. For two years traffic manager of the Safety Armorite Conduit Company, which is the largest concern of the kind in the country. It manufactures steel conduits for electric wiring. Shipments for California go S. P. via El Paso, Atchison and U. P. (1403) Mr. Herring expresses no preference as between the U. P. and El Paso routes. Portland business goes by the Northern lines. Only knows of one car going to Portland over the U. P. and Short Line. That was routed by the consignee. The routing always comes in from the consignee with the order, and the soliciting agents of the various lines come in every time to check the order up. That is one of the functions of the commercial agents.

(1404) W. G. HARD.

Lives at Salem, Ohio. Testimony immaterial.

Henderson.

(1405) JAMES A. HENDERSON.

Pittsburg. Pres't of Packet Line.

Lives at Pittsburg, Pa. President and General Manager of the Pittsburg & Cincinnati Packet Line, which handles freight and passengers between Pittsburg and Cincinnati. (1406) Connected with the line for 25 years, which has been in operation during that time, except when there is low water or ice. The River is usually open eight months in the year. Witness was always interested in the Pacific coast rate. At Cincinnati and other points the railroad would take it up, and make a through rate. The rates were so adjusted that shipments could go by the Packet Line to Cincinnati, and then on to the coast. Formerly had a pro-rate on that business, which was taken out about 1900 or 1901. While the pro-rate was in existence, handled coast business out of Pittsburg. One shipment by the Northern Pacific to Portland. Doesn't recollect any to the Pacific coast by New Orleans. Had business to Colorado points by New Orleans over the S. P.

Operates on Ohio River.

(1407) About 1900 the railroads refused to pro-rate with the River lines. There was a considerable amount of coast business moved out of Pittsburg by the boat lines while the pro-rate was in existence. Never knew of but one shipment to go to Colorado points via New Orleans, and that was a shipment of wire nails. Recalls it because of the peculiarity of the route. Went from Salem to East Liverpool, to Cincinnati, and to New Orleans by boat, and there turned over to the S. P. Cannot recall any freight going by New Orleans to California points. (1408) Never had any shipments to California. Has handled with the railroads that tap the Ohio and Mississippi Rivers for almost every western point, but does not recall any shipment to California. Witness' line never had any published rates to California. Never quoted a rate to California.

CINCINNATI, FEBRUARY 9, 1909.

(1409) STEPHEN GANO.

Gano.

Cincinnati. Freight solicitor, formerly with U. P.

Lives at Cincinnati, Ohio. Since November, 1896, freight solicitor G. R. & I. Railroad, a branch of the Pennsylvania. Previously, for nearly two years, with the Addyston Pipe & Steel Company, and prior to that with the U. P. as a clerk. The last two years being city freight solicitor. (1410) Left the U. P. in 1894. Mr. Welsh was then its representative. He was succeeded by Mr. Connor. At the time Mr. Welsh represented the U. P., Mr. Connor represented the S. P. The latter now represents both. The two roads competed for business to all Pacific coast points as far north as Puget Sound points, while witness was employed by the U. P. The S. P. worked trans-continental business via New Orleans and El Paso. The U. P. through Missouri River, Council Bluffs, Kansas City, Omaha, and Ogden.

(1411) The S. P. for Portland business had two routes. They had a steamship route from San Francisco to Portland, and they had an all-rail route from Sacramento to Portland, called the Shasta line. To reach the latter, business moved via New Orleans. The Shasta route in winter time was sometimes out of business on account of snow. Witness thinks the S. P. had the steamship route, not the Navigation Co., but is not sure. The U. P. worked Portland business by the Nav. Co. There was very active competition for passenger business to the coast. Active personal solicitation for this business. (1412) S. P. tried to send their business by New Orleans. Describes names and signs on Harriman lines' joint office at Cincinnati. (1413) S. P. business to Puget Sound points from the east went either by boat from San Francisco or by rail from Sacramento. U. P. worked Puget Sound points via Nav. Co. Steamers run from Portland and Seattle to points on Puget Sound.

S. P. would solicit via Ogden when it could not be obtained via New Orleans.

(1414) Describes geographical extent of Harriman lines. The S. P. would sometimes solicit freight via the Ogden route, when they could not get it via New Orleans. (1415) It preferred the Sunset route on account of the revenue, but if they could not get it, they would use the Ogden route. They got a greater percentage of the rate via New Orleans. The U. P. reached the coast only in connection with the S. P. and there was competition between the Ogden route and the Sunset route. (1416) The Ogden line was competing against the Atchison. The various lines extending from Cincinnati westward, and also south and southwestwardly, were and are competing for the coast traffic. Various lines mentioned.

(1417-1418) Various coast routes discussed. (1418) Many of the eastern lines would not exchange with the Atchison, but preferred the S. P. because they would get the long haul by the latter interchange. Would not interchange with the Atchison, because they were competitive with them out of Chicago. (1419) The shipper can send either by New Orleans or El Paso, or any of the routes. That has been true both before and since 1901. Solicitor's duties

described. Thinks the S. P. had a line of steamers from San Francisco to Portland. Knows of a line of steamers, but doesn't know who controls them. Thinks they were operated in connection with the S. P., but has no personal knowledge about it.

(1420) The U. P. worked business for Portland and Puget Sound over the Short Line and Nav. Co., and from Portland to Puget Sound by water. Doesn't know whether business was interchanged with the N. P. to Puget Sound, or not. Passenger traffic moved to San Francisco via Portland—by boat, if the passenger wanted to go that way. Never attempted to move freight via Portland. Doesn't think that route was ever used for freight, except in case of an emergency. U. P. worked all California business by way of Ogden. (1421) Passenger rates to the Pacific coast and return were made up to accommodate the passenger, by any route he wanted to travel. (1422) In the winter time, the S. P. would call the U. P. a "snow route," and in the summer time the U. P. would call attention to sand blasts and sand storms, in the south. Both had folders calling attention to the beauty of their line, and newspaper and magazine advertisements. Solicitors also attempted to secure passengers for their respective lines. N. P. actively competed for business into Portland.

U. P. worked all California business via Ogden.

(1423) Doesn't remember about the G. N. Thinks the Canadian Pacific had a representative at Cincinnati. (1424) Remembers the time when the S. P. business for Portland was sent from San Francisco by boat, because the Shasta route was troubled with snow. No matter which way the coast business goes, the S. P. gets some of it, unless it goes via the Atchison. (1425) The S. P.'s line from Ogden to San Francisco is not a competing, but a connecting line. The passenger advertisements of both the Ogden and Sunset routes are now gotten up very expensively. The blockade by snow of the Shasta route occurred certainly more than fifteen years ago. San Pedro route has been built since witness left the U. P.

S. P. line from Ogden not a competing but a connecting line.

Williamson.

(1426) E. E. WILLIAMSON.

Cincinnati. Traffic business.

Lives at Cincinnati, Ohio. For five years Commissioner of the Receivers' and Shippers' Association, at Cincinnati. Previously traffic manager of the Macon, Dublin & Savannah road, at Macon, Ga., for two and a half years, and prior to that connected with the Traffic Department of the Cincinnati, New Orleans & Texas Pacific Railway Company, or the Queen & Crescent route. Entered the employ of the Company last named in 1886, and left in 1901. Was rate clerk, correspondence clerk, and finally chief clerk of the Traffic Department at Cincinnati. Would say that prior to 1901, the U. P. and S. P. competed for business out of the Cincinnati territory to the Pacific coast. S. P. endeavored to route traffic via New Orleans. The Q. & C. participated in that business to New Orleans. So far as the business that moved over the Q. & C. was concerned, very little of it moved further north than San Francisco.

Witness occasionally handled a Tacoma or a Portland shipment, but there was not much of that.

(1427) Occasionally some went as far north as Puget Sound —Seattle. As a Q. & C. man, witness would say competition was very active between the Ogden and Sunset routes, because freight going by the former would not move over the Q. & C. at all. Names Cincinnati agents of the U. P. and S. P. (1428) Method of solicitation described. The Atchison and N. P. and the G. N. had representatives at Cincinnati. Witness in working for the Q. & C. worked exclusively with the S. P. The chief competitor was the route of which the S. P. formed a link. The S. P. formed a part of that route, but the latter's agents worked all the business they could by New Orleans.

Cincinnati traffic.

(1429) Only one set of solicitors since the consolidation, for the U. P. and S. P. The Q. & C. is a short rail line between Cincinnati and New Orleans. It is about 827 miles. (1430) The route by New Orleans is much longer than by Ogden. Some distances named. All the lines were competing for the Cincinnati business. The L. & N. and Illinois Central competed with the Q. & C. to New Orleans. (1431) Some of the other lines mentioned. The Q. & C. and S. P. Sunset line competed against the U. P. and S. P.'s Ogden line. The Atchison was also competing. (1432) Witness never knew of any freight being sent to California terminals over U. P. to Portland and then down by boat. (1433) Various lines competing for California business mentioned.

New Orleans route much longer than Ogden route.

Never knew of use of Portland route to California.

United States v. Union Pacific Railroad Company, et al.

DEFENDANTS' ABSTRACT OF TESTIMONY.

TESTIMONY FOR COMPLAINANT.

VOLUME IV.

Buchanan.

(1434) R. P. BUCHANAN.

Cincinnati. With Proctor and Gamble.

Lives at Cincinnati, Ohio. For nine years manager of the freight department of Proctor & Gamble, at Cincinnati, soap manufacturers (among others, "Ivory Soap"), established in 1837. Previously assistant general freight agent of the Big Four Railroad; for seven years, as assistant general freight agent at Cincinnati; and two years on the Michigan Division, with headquarters at Benton Harbor; two years prior to that as general agent of the Big Four. Proctor & Gamble have established plants at Cincinnati, Kansas City, and New York. Since the establishment of the Kansas City plant four years ago, almost all the Pacific coast shipments move from there. (1435) Agents of the U. P. and S. P. named. Prior to 1901 the two companies competed for Pacific coast business. The U. P. routed via Ogden, and the S. P. via New Orleans; also via El Paso.

Routing of business.

(1436) The preference of the Big Four in routing coast business was via Chicago or St. Louis, or Peoria, in connection with the U. P. or Atchison. They could take business via New Orleans, but it was not a preferred route. They took it to New Orleans via Cairo and the Illinois Central, or by the Mobile & Ohio. They didn't solicit New Orleans business. California business of Proctor & Gamble moves via the U. P. or Atchison. None of it moves via El Paso. Before the Kansas City plant was established, a good deal of witness' business moved through New Orleans. The balance went U. P. or Atchison. Referring hereafter to the time prior to the establishment of the Kansas City plant, business to Portland and Puget Sound points moved by the northern gateways, the G. N. principally, or the N. P. (1437) Never shipped much to Portland over the U. P. Mostly over the St. Paul. Doesn't think the joint agent of the two lines discriminates as between the two routes in

routing business to California points. His solicitation is more especially against the Atchison.

(1438) There were several reasons for witness' shipping via New Orleans. Might want to give it to some of the initial carriers, as it gave them the longest haul that way, or might want to give it to the S. P., as that gave the latter the longest haul. All the lines extending westwardly were actively soliciting for California business. (1439) The Big Four runs like three fingers of your hand, from Cincinnati to Chicago, to Peoria, to St. Louis. By competition witness meant that practically all lines, even though running in opposite directions in Cincinnati territory, were competing for Pacific coast business.

Portland-San Francisco route not used.

(1440) Various competing roads mentioned. Witness never knew of any business from his territory for points on the Pacific coast south of Portland being routed over U. P. by way of Portland and then by boat down coast. Mr. Connor, if he gave his undivided attention to the New Orleans route, would be able to get a considerable amount of business for his line, but at present he is not discriminating as between the two routes. "He knows that we are going to route the business as we see fit, any how, and he is glad enough to get it." (1441) Lately we have shipped to the coast from the New York plant and that business moves by the Panama route. Doesn't recall sending anything by the Morgan line. So far as witness' business is concerned, Mr. Connor has represented both the S. P. and U. P. efficiently. (1442) Wouldn't like to say that it would be more important to have separate representation all the way up, for both the U. P. and S. P. U. P. couldn't make a rate to California without the concurrence of the S. P., under the Interstate Commerce Law. Shipper not interested in divisions. Trans-continental rates on soap and cottonseed oil are higher now than they were several years ago.

Uses Panama route.

Not opposed to reasonable advance in rates.

(1443) Proctor and Gamble not opposed to a reasonable advance on the part of the railroads. The joint agent is no longer a factor in competing for business for the New Orleans route as against the Ogden route. Didn't think it would be as well for the shippers, if all the trans-continental lines from the Missouri River to the coast had one set of officers and representatives. Doesn't know he would like to have it that way, but, if it had to be, there is no man he would prefer to Mr. Stubbs. (1444) There is a difference between the U. P. and S. P. and other competing trans-continental lines, in that both the former compose part of the same route. (1445) Thinks he would prefer entirely separate management for the two companies, because the shipper would probably get more liberal rate legislation. Perhaps this would be less true of the U. P. and S. P. than of other systems, because the S. P. forms a part of both trans-continental routes.

U. P. and S. P. jointly compose through line.

(1446) Desirability of having separate organizations, and its effect on the shipper, discussed. Witness said that it was somewhat theoretical with him, but he could not help but feel a separate

organization was more desirable for the shipper. (1448) Trans-continental lines all maintain the same rates from Cincinnati to the coast. (1449) Witness would think that the boat line from Portland to San Francisco would give the U. P. a greater voice in the adjustment of through rates to California than it would possess if its line stopped at Ogden. The fact that the G. N. and N. P. has a line of steamers to San Francisco, might have an influence in the adjustment of through rates from the east to California. The existence of the Panama route would have an influence on trans-continental rates.

S. P. has a decided influence in determining the through rate.

(1450) The fact that the U. P. has a through line and that there is a boat line, and that the northern lines have a through line, and that the Atchison goes through to the coast, (1451) renders it impossible for any one road to dictate what the rate shall be. The S. P. has a decided influence in determining the through rate, owing to the fact that it forms a part of both lines. Witness not prepared to say whether or not it has a controlling influence. U. P. cannot put in a through rate to California initially, without the concurrence of the S. P. (1452) Nor can it reduce its division without the consent of the S. P., either voluntarily or otherwise. If the U. P. reduced its division, and applied to the Interstate Commerce Commission for a reduced through rate, the S. P. would at once increase its own proportion of the through rate or cancel it altogether. Knows of no reason why the D. & R. G. couldn't attempt that practice, as well as the U. P. Would think if it were a practical proposition, any connection that had been discriminated against, as the D. & R. G. has been, would probably resort to it. In making the trans-continental rates, the U. P. has no more power than any other intermediate carrier.

(1453) The fact that the U. P. is a strong system gives it more power than the D. & R. G. Thinks the Rock Island would be in a better position than the D. & R. G. (1454) Witness thought that the U. P. would have a more important voice in trans-continental rates than even the Burlington, stretching from Chicago to Denver, because the U. P. reaches from the Missouri River, with all the more important connections there, clear through to Ogden. The U. P. to Ogden is all one road, one management, while the Burlington and D. & R. G. to Ogden are two roads. Witness' personal opinion is that one road is a more important influence than two. Witness cannot conceive of any conditions under which U. P. would have any voice in making rates to California without the consent of the S. P. (1455) Any traffic carried by the U. P. would have to go over the S. P. to get to the coast.

Keavy.

(1455) JOSEPH KEAVY.

Indianapolis. Formerly in railroad service.

Lives at Indianapolis, Ind. Since June, 1906, Commissioner of the Indianapolis Freight Bureau; previously in the railroad service. Details stated. (1456) Prior to 1901 there was competition between the S. P. and U. P. routes. The S. P. agent endeavored

to route via New Orleans, and the U. P. by the Missouri River gateway, Kansas City, Omaha, and St. Joe. Could not testify as to any specific incidents or grounds giving witness knowledge as to whether competition ceased after the consolidation, other than the general impression that the reorganization and joint agency necessarily tended to lessen the aggressiveness of the separate representation which existed before. Its tendency would be to eliminate any actual competition. Prior to the amalgamation, the solicitation of the two routes was quite pronounced and active.

Factors of competition.

(1457) The factors of competition stated, namely, the kind of service rendered, etc. Car supply one of these factors. Some features of car supply largely in the hands of initial roads. (1458) Business for Portland would necessarily move by the U. P. or the northern routes in preference to the long route through New Orleans. Does not know whether any moved by Ogden and Sacramento, or not. Observed the competition between the representatives of the S. P. and U. P. in Indiana. Was then in charge of the Michigan Division of the Big Four, running from Benton Harbor down to Louisville. It was immaterial to witness' road which way the freight was routed, whether by Ogden or New Orleans. (1459-1460) Various lines were soliciting the traffic by way of New Orleans. Various other routes soliciting against the lines leading to New Orleans described. (1461) Doesn't remember the time that the Canadian Pacific had a differential from California by boat line from Vancouver. Has no knowledge as to any traffic moving that way to California.

(1461) JOSEPH G. McDOWELL.

McDowell.

Indianapolis. With Atlas Engine Works.

Lives at Indianapolis, Ind. For about thirty years traffic manager for the Atlas Engine Works at Indianapolis. (1462) Has made considerable shipments to the Pacific coast. California points are principally Los Angeles and San Francisco. Ships to agents, not to jobbers. Usually routing controlled by the point of shipment. Sometimes agents requested special routing. Prior to the consolidation, the U. P. and S. P. had separate agencies, the former soliciting by Missouri River gateways, and the latter by New Orleans, or sometimes El Paso.

(1463) Ships to Portland over the U. P., G. N. and N. P. That business is largely controlled by the consignees. Cannot recall that the joint agent of the two companies expressed any preference between those companies. They solicit, however, against other routes. Bulk of witness' business moves via New Orleans, (1464) because most of his business in California is with Los Angeles, and that is the natural route. The only outlet for the U. P. by way of Ogden is the S. P. All the westbound and southerly lines solicited witness' business. Some of these lines named. (1465) Thinks it would be true to say that not only the U. P. and S. P., but all the lines, have been less active in solicitation in his territory in recent years.

All lines solicit less actively in recent years.

(1465) CHARLES S. BARKER.

Traffic manager E. C. Atkins & Company, saw manufacturers, at Indianapolis. (1466) Doesn't think the representatives of the U. P. and S. P. express any preference for either of their routes over the other.

Bean.

(1466) H. H. BEAN.

Springfield, Ohio. Farm machinery.

A manufacturer of farm machinery at Springfield, Ohio. For 33 years with the Thomas Mfg. Co. (1467) Before the consolidation, S. P. attempted to route freight by New Orleans, and the U. P. through the Missouri River gateways. The competition was quite aggressive. (1468) Now the solicitor expresses no preference as to the two routes. Solicitation described. Solicitors are undoubtedly important for getting business for railroad. (1469) Formerly shipped by New Orleans, but not much of late. Cannot recall that he has been importuned to ship much either way of late, but was before the consolidation. Formerly aimed to divide business between all the lines. His coast business is to a certain extent routed by the consignee. Where left to him, Portland business would be shipped by the N. P. chiefly, also the G. N. and U. P. All these lines solicit Portland business.

(1470) Doesn't recall ever shipping to Portland by way of New Orleans. Since consolidation, has been solicited by Mr. Connor's assistants. Routes by New Orleans and El Paso still open. All buiness south of Portland prior to the contruction of the San Pedro, had to go over the S. P. (1471) Doesn't recall whether S. P. attempted to solicit Portland business via the Shasta route.

Mayer.

(1471) S. D. MAYER.

Hamilton, Ohio. Mosler Safe Co.

Lives at Hamilton, Ohio. Since 1889, Asst. Treasurer and office manager of the Mosler Safe Company, for two years at Cincinnati, and subsequently, in 1891, at Hamilton, Ohio. Prior to 1895 the Company had a traffic manager, but when he stepped out, it was thrown on witness. (1472) One of the two largest safe companies in America. Ships all over the U. S., including the Pacific coast; also ships largely to Mexico, and some little to London and Canada.

(1473) Prior to the consolidation, the S. P. solicited business by New Orleans, and the U. P. by the Missouri River gateways. Competition was very active. Other lines also solicited. Since the consolidation, joint representative has solicited witness, and in one or two instances has expressed a preference for shipments via New Orleans. Prior to consolidation, witness shipped little by the southern gateway. Shipped nothing that way, unless it was routed by the consignee. Most of the business goes to the coast through the Missouri River gateway. (1474) Ships to Portland by the G. N. at the present time. Formerly shipped by the U. P., and often by the N. P., but principally the former. Witness actively solicited by representatives of all the lines for California business. (1475) Some of these lines named. Never attempted to ship to

Never shipped via Portland route.

California by way of Portland. Has never shipped anything by water in this country.

(1476) PAUL NICHOLS.

Testimony immaterial. (1477) Complainant's Exhibit 115, business card of W. H. Connor, General Agent, Harriman Lines, at Cincinnati. Complainant's Exhibit 116, business card of Lyon Liston, Traveling Freight Agent of Harriman Lines, at Cincinnati, on the reverse side of which is a map of the system.

(1478) HARRY C. SMITH.

Smith.

Cincinnati. Formerly with U. P.

Lives at Cincinnati, Ohio. In the factory supply business at Cincinnati for four and a half years. After holding minor positions with other railroads for about twelve years, entered the employ of the U. P. in 1884, and continued with them until about 1900. (1479) Was dropped on the consolidation of the U. P. and S. P. Then employed by the Big Four in Chicago, as traveling freight agent. Then was sent back to Cincinnati to open up the office of the Lake Shore, Lehigh Valley Fast Freight Route. Continued with them until he resigned to go into the manufacturing business. Was traveling freight and passenger agent while with the U. P. Was with them about sixteen years. Solicited Pacific coast business.

(1480) For trans-continental business there was competition between the U. P. and S. P. and also with the Atchison. The S. P. agency tried to move the traffic via New Orleans or El Paso. The U. P. by St. Louis, Kansas City, Chicago and Omaha. Competition between the U. P. and S. P. didn't extend as far north as Portland or Tacoma or Seattle. Business to Portland was competed for by the N. P. first, and the G. N. afterwards. S. P. worked for business by way of Ogden when they couldn't get it by the southern gateways. Competition was active between all the lines. (1481) Remembers distinctly one rate war before the Interstate Commerce Act was passed, when the U. P. had a rate to San Francisco of fifty cents per hundred on almost anything and everything it could take. The Sunset route participated in that war. Solicitation, when there are no cut rates, consists of a personal acquaintanceship with shippers.

S. P. worked for Ogden gateway when business could not be obtained via New Orleans.

(1482) S. P. advertised through tourist sleeping cars by New Orleans and Ogden. (1483) The S. P. Co.'s advertisements have continued much the same in recent years as they were before. Couldn't get business for the U. P. without sending it over the S. P.

S. P. advertisements the same.

(1484) In the rate war that witness spoke of, the U. P. and S. P. via Ogden were working together against the other lines, the Atchison and the N. P. Never solicited any business to San Francisco by way of Portland. Never knew any freight to move that way.

Portland route to California not availed of.

Blair.

(1484) J. L. BLAIR.

Hamilton, Ohio. With Niles Tool Works.

Secretary of the Niles Tool Works Company at Hamilton, Ohio. (1485) For about twelve years has had charge of its traffic. Prior to the amalgamation of the offices at Cincinnati, there was competition for Pacific coast business between the two. The S. P. agents attempted to route freight by New Orleans, and the U. P. by Omaha. Witness shipped both ways, and still tries to divide his traffic.

Routing of his business.

(1486) Doesn't recall shipping anything by New Orleans for a long time, although formerly he did. Joint solicitors express no preference as between the two routes. Business now goes principally by way of Omaha. The Atchison takes part of it. Portland business goes over the N. P. or G. N., not usually by the U. P. Thinks he made one shipment some years ago to California by the Canadian Pacific and down from Vancouver by boat. There was a differential of, witness thought, ten cents a hundred. Solicitors do the railroad a great deal of good, and do some good to the shippers. (1487) Business is solicited by a great many lines. Most of his business to the Pacific coast is to railroad shops, and is routed by the consignee. The more direct line is westerly as against New Orleans. (1488) Never knew of a shipment to go to California by way of Portland, nor to Portland by way of New Orleans or El Paso. Thought the Canadian Pacific differential was withdrawn as the result of arbitration. It is not in effect now.

Portland-San Francisco route not used.

CINCINNATI, FEB. 10, 1909, 10:30 A. M.

Gothlin.

(1490) A. P. GOTHLIN.

Columbus, Ohio. Former Traffic-Man.

Since August 1, 1908, a member of the Ohio Railroad Commission, residing at Columbus. There are three commissioners appointed by the Governor for a term of six years. Previously, from 1898 to 1906, was traffic manager of the National Cash Register Company, of Dayton. Prior to that, for nine years, he was general agent of the Wisconsin Central Railway at Cincinnati, and for the first four years of that time was general agent of that Company and the Northern Pacific. That was while the N. P. had a lease of the Wisconsin Central. (1491) From 1886 to 1889 was employed by the Wisconsin Central in Pittsburg, as general agent, freight department, and from 1883 to 1886 was traveling freight agent of the Chicago & Northwestern. Most of the Cash Register Company's Frisco business went by New Orleans.

Package car from Cincinnati.

(1492) Prior to 1901, the U. P. and S. P. competed for coast business. The S. P. agent solicited business by New Orleans, and the U. P. by Omaha or Kansas City. Got better service for less than carload freight, by New Orleans. For a large part of the time there was a package car from Cincinnati through to San Francisco that way. Also shipped by New Orleans because of

favors done the Company by Mr. Connor, the S. P. agent. Local representatives are very valuable to railroads in getting business. (1493) Solicitors of great value both to the railroad and the shippers. One function of the solicitor is to secure equipment. (1494) Favors which witness, as a solicitor, has rendered shippers.

Value of solicitors.

(1495) Favors done witness by Mr. Connor. Witness thought that after the consolidation, Mr. Connor always personally stuck to his first love, and preferred the Southern route. Mr. Liston, who was "supposed to represent the Union Pacific," always made it clear that if the business were already moving by the (1496) S. P., he didn't care to interfere, but if by the Atchison, he would like to have it by the U. P. About 1889 carried some wire from Pittsburg himself, by way of the Canadian Pacific to Vancouver, and then down the coast to San Francisco—a large shipment of some 30 or 40 cars. Witness thought there was then a small differential. Remembers active competition between the U. P. and S. P., and witness' own line, for the shipment of a lighthouse from Mount Vernon to Astoria, Oregon. Every western agent was after it, (1497) including the agents of all the intermediate lines. Remembers Ohio Bridge Company that shipped to a point in Oregon by the Louisville & Nashville and S. P. Witness thought the U. P. and all the other roads were after the shipment. Thinks the U. P., if it were a separate and distinct organization and had a vigorous management, could practically dictate to the Trans-continental Association any rate policy they might see fit to adhere to strictly, that is, they could at least be in a position not to be dictated to. Rates are made at meetings of the Trans-continental Association. (1498) The distance from Ogden or Granger to Portland over the Nav. Co. and the Short Line is about 800 miles, (1499) and from Portland to San Francisco about 777, while the distance from Ogden to San Francisco by the Central Pacific is about 850 miles.

Shipment of wire via Can. Pac.

U. P. with vigorous management could dictate.

(1500) Never knew the U. P. to try to use the Portland route for San Francisco, but doesn't see why that route could not be made as satisfactory as that by New Orleans. (1501) If the U. P. undertook to use the Portland route, the S. P. would divert its eastbound traffic to the D. & R. G. at Ogden. Thinks in a controversy of that kind, the S. P. would suffer the most. Experience of rate wars shows that the smaller line always hurts the larger line in a larger ratio. (1502) The U. P. could, if it saw fit to take drastic measures, arrange rates so that from this whole territory the New Orleans route would get scarcely anything. Hardly thinks any intermediate line would do that. No one of the other intermediate lines "would be as strong in a matter of that kind as the U. P. would with its two lines from Kansas City and Council Bluffs." Thinks the S. P. would suffer more, because it has more at stake. The larger line would not suffer more per mile of road, but more in the aggregate.

Never knew U. P. to use Portland-San Francisco route.

(1502-3) Witness thought the Interstate Commerce Commission would not permit the S. P. to cancel through route via Ogden

and U. P. Judge Lovett said they would not have power to prevent it, if there was another practicable route, namely, that by Portland. Witness replied that he did not wish to put his legal opinion against Judge Lovett's. Didn't know Supreme Court had decided that initial line had the right to route freight beyond its own line. Thought this applied only to fruit. (1504) Witness thought that as long as published tariff showed more than one combination of routes, shipper had the right to select any one of those routes, and his opinion upon the power of the U. P. to inflict more damage on the S. P. than the S. P. on it, is largely based on that understanding of the law, and also on the fact that he was thinking more of the westbound business than of the eastbound. Also thought that I. C. C. would prevent the S. P. from canceling its through rates with the U. P.

Little trans-continental business originates on U. P.

(1505) Very little trans-continental business originates on the U. P. They have six or seven connections at Kansas City and Council Bluffs, from which they take business, and witness thought they could take that business by way of Portland as against the S. P. at Ogden. They would have to use either the S. P. or Atchison to get into the interior, but witness thought the bulk of trans-continental business was to dealers at terminal points who ship back into the interior. Doesn't think the citrus fruit business could be handled by the U. P. via Portland. (1506) The bridge shipment to a point in Oregon, south of Portland, of which witness previously spoke, was a shipment to a local point on the S. P.

Juggling of rates.

(1507) The shipments that went around by Vancouver, of which witness testified, did not go because of the differential, but were shipped as a blind. The lines were accusing each other of having cut the rate, and the shipper was working the lines, one against the other. That is the only important shipment witness remembers that way, though the Wisconsin Central joined with the Canadian Pacific and put in oil rates to enable the independent oil men in Pennsylvania to get into Frisco. Doesn't know how much oil they carried. Thinks that was in 1887 or 1888. Doesn't know how long those rates stayed in. (1509) Doesn't know whether the package cars by way of New Orleans and the S. P. are still operated, or not. They were, up to the time witness left the Cash Register Company.

(1509) Never knew the S. P. to solicit California business by way of Ogden. They preferred the New Orleans route. (1510-1511) Various lines and routes soliciting business for California points discussed. (1511) The route to Portland and then by boat to San Francisco is many hundreds of miles shorter than by Vancouver to San Francisco. (1512) Any reduction in the rate made by the U. P. competition would reduce rates all along the line and, therefore, would reduce rates on all S. P. through business by New Orleans. From a part of this territory the distance via New Orleans is so much greater that the shrinkage would be felt a great deal more. It would reduce the rate per ton per mile so much more than by a

shorter line. U. P. actually competed with N. P. for Portland business when witness was connected with the N. P. Co.

(1513) The rates over the Sunset route and the Ogden route were always the same; also by the Atchison; so that competition existed in service and solicitation. The Sunset route is more even in time than the Ogden route. There were transfers via the Missouri River. The advantage in distance is greatly with the Ogden route. Doesn't recall whether there was any package car via Ogden. Thinks there was at times from Chicago. (1514) Package car via the Q. & C. was made up at Cincinnati.

Package car.

(1515) New Orleans route was undoubtedly aided by the fact that there were only two lines in interest from Cincinnati to San Francisco, with a through carriage arrangement, without transfer. Various lines mentioned as competitors for coast business out of Cincinnati. (1516) Witness thought the territory is now so thoroughly covered by connecting lines that the initial line has little to say on the subject of routing. It is true, however, that they have more to say about furnishing equipment. Witness thought that business was controlled by the fast freight lines, rather than by the Railroad Company. That is to say, if a shipper elects to give it to a particular fast freight line, he cannot change the routing after the initial line has got hold of it.

(1517) If the western lines found the initial lines working against them, they would influence the shipper against that initial line—retaliate. If the shipper was located at a non-competitive point, they would work against him at a competitive point. They would try to get even. Initial lines, witness' experience was, acted fairly, and let the western line get it if they could. They didn't attempt to interfere. Thought the initial line could exercise influence through furnishing equipment, but does not think that has been the practice. As a freight solicitor, witness' experience was that the initial lines were indifferent to routing. The solicitors of the western lines generally had discretion enough not to try to make the initial line give up the long haul. Sometimes the initial line gave up the long haul. (1518) It is quite a common thing for the Pacific coast representatives of the western lines to secure the routing of traffic from the east, and then to write their eastern representatives to go to the shippers and see that the routing was respected.

Initial lines indifferent to routing.

(1518) ABRAHAM RHEINSTROM.

Rheinstrom.

Engaged in the liquor, fruit and machinery business at Cincinnati. (1519) Has shipped fruit from California to Cincinnati in considerable quantities. Has also shipped his manufactured product to the Pacific coast since 1880 or 1881. Number of cars shipped, stated. Products moved to the coast in carloads, and some L. C. L. on account of discriminating rates against him. Car rates taken off and witness forced to make local shipments. Before the consolidation, the competition between the two roads

Cincinnati. Liquor, fruit and machinery business.

was pretty active. (1520) Now the solicitor makes no distinction between the S. P. route and the New Orleans route in soliciting business. About 1900 made shipments by Vancouver to California. At that time there was a cheaper rate by the Canadian Pacific. Shipped a number of carloads both ways.

Shipments via Can. Pac.

(1521) Witness preferred the Sunset route in the winter season, to keep his products from freezing. S. P. representative prior to the consolidation solicited via New Orleans, and the U. P. via Omaha. Since the consolidation, they have reduced the rate on fruit coming east from $1 to 75 cents, and they have advanced the return rates and taken away the benefits of carloads, and the valuation of the merchandise shipped. In shipping whiskies or liquor or alcohol, in order to have a reduced commodity rate, they lowered the valuation per gallon, sometimes 50 cents, and sometimes more, in order to get the reduced rate that in case of loss they would be called upon to pay, upon the valuation. Of course, as they had advanced the rates, they also raised the valuation of some of the liquors. The net result has been a tendency to increase the freight charges. They no longer make concessions as to carload shipments. At the present time, witness is not shipping anything.

Rate changes.

Ceased shipping.

(1522) Stopped over a year ago. Routing for westbound business came from witness' representative, sometimes via Omaha, and sometimes via New Orleans and El Paso. Sometimes by the Santa Fe. Doesn't recall having shipped by the Illinois Central and S. P. Usually shipped to Portland over the G. N. or N. P. Never shipped to Portland by way of the S. P. Changes in rates, classifications, etc., made in the last three years. Some changes were made prior to that where the roads advanced the rates and discriminated against liquor dealers on ordinary liquors and whiskey in favor of alcohol. These changes were made by all the lines. (1523) Witness' experience was that the Atchison hadn't much to say in bringing about the changes; that it was always the S. P. that controlled the rate situation.

S. P. controlled rate situation.

McGuffey.

(1524) WILLIAM H. McGUFFEY.

Milford, Ohio. Traffic-Man.

Lives at Milford, Ohio. For about four years in the Freight Dept. of the Proctor & Gamble Company, and prior to that for eight years in the Freight Traffic Dept. of the Queen & Crescent. The Q. & C. worked exclusively with the S. P. via New Orleans. Had no connection with the U. P. That line, and the Atchison were competitors of the S. P. (1525) Q. & C. worked very little in connection with the S. P. for business north of San Francisco. Obtained occasional shipments that way to Portland. S. P. solicited business via New Orleans. The joint agency expresses no preference as between the U. P. and S. P. Proctor and Gamble's Portland business now moves exclusively U. P. Ships to Puget Sound points by the G. N. and the N. P.

Joint agent impartial.

(1525) Method of solicitation discussed. (1527) After the combination, the Q. & C. continued to work exclusively for the

S. P. by way of New Orleans, and that gateway is still open. Other lines leading to New Orleans still work for that business. Witness' experience has been that the lines leading directly from Cincinnati do not solicit the coast business with anything like the activity that the western lines do. By the western lines witness meant the Santa Fe, U. P. and S. P. He didn't mean to include the Burlington or the Rock Island. (1528) The Burlington is not indifferent to coast business, but their solicitors talk more about Colorado business. The Rock Island doesn't work for the business as actively as the U. P. Never sent any via the Rock Island to El Paso. Knows there are divisions in effect that way.

New Orleans lines work for New Orleans gateway.

Western lines more active solicitors.

(1529) The reason for the difference in activity, witness thought, was because a great many years ago "the western lines" had their solicitors in Cincinnati, and they had given a good deal of the business they had secured to these intermediate lines, and witness thought there was some sort of understanding among them that the intermediate lines are not to be too active to try to get the business and divert it to their long hauls. Thinks the western lines would be interested in the selection of the route east of their lines.

(1530) Thinks they have traffic relations with the other lines, and have some preferences. Question of reciprocity. Cannot name a specific instance, but thinks he would know of a number of cases in which two lines have reciprocated in that way, in the absence of a common ownership. Thinks the Missouri Pacific solicits coast business a little more actively than some of the other roads. It solicits business by way of Denver in a majority of the cases, rather than by El Paso. (1531) The D. & R. G. has a solicitor in Cincinnati. Never knew of any shipments to California via Portland.

M. P. favors Denver route.

(1532) W. E. SHEWALTER.

Shewalter.

Lives at Springfield, Ohio. For nine or ten years in charge of the traffic of Mast, Foos & Company, manufacturers of windmills, lawn mowers, etc., at Springfield, Ohio. Prior to the amalgamation, the S. P. and U. P. solicitors competed at Springfield. (1533) The S. P. endeavored to route business via New Orleans and the U. P. via Omaha. Witness shipped both ways. Since the amalgamation, the joint representative expresses no preference as between the two routes. Ships to Portland partly by the U. P. and partly by the N. P. or the G. N. Never had any business move to Portland via New Orleans. All these gateways are still open, and the rates are the same. (1534) Before the amalgamation, S. P. sometimes solicited by way of El Paso. Cannot remember their ever soliciting by way of Ogden. Never made any shipments to California by way of Portland.

Springfield, Ohio. With Mast, Foos & Co.

Never uses New Orleans route to Portland, nor Portland route to California.

(1534) G. L. CORY.

Cory.

Lives at Springfield, Ohio. Since August, 1899, in charge of the James Leffel & Company's traffic department. Manufacturers of water wheels, steam engines, boilers, etc. (1535) Previously was employed in the local freight office of the D. T. & I. Railway,

Springfield, Ohio. Traffic-Man.

which was then known as the Ohio Southern. Prior to the amalgamation, the S. P. and U. P. agencies actively competed for coast business. The S. P. sought to route the business by New Orleans, and the U. P. by the Missouri River. Products are all sold f. o. b. cars at Springfield, and routed by the consignees. Shipments to Portland move over the U. P. and Nav. Co., also by the N. P. and G. N. Some of the Seattle business during the last few months especially, has been moving over the Can. P. Since the consolidation, the representatives express no preference as to the two routes.

Never shipped to San Francisco via Portland, nor to Portland via New Orleans.

(1536) Business shipped over the U. P. to California passed over the S. P. west of Ogden. Never shipped anything to Portland via New Orleans or El Paso. Never shipped to San Francisco by way of Portland. Not interested in the division of the through rate. Both now and formerly the various lines lying between Cincinnati and New Orleans and El Paso and Denver and the Missouri River solicited coast business. Before the amalgamation, the S. P. never solicited by way of Ogden.

Marshall.

(1537) F. L. MARSHALL.

Piqua, Ohio. With Pioneer Pole & Shaft Co.

Since 1903 traffic manager of the Pioneer Pole & Shaft Company, at Piqua, Ohio. For four years prior to that was in charge of the traffic department of the Buckeye Mfg. Co., at Anderson, Ind., engaged in the same business. The new company is a successor of the former. Does about half the entire business of the United States in that line. (1538) They have plants at Sidney, Piqua, Troy, Cincinnati, Akron, Ashtabula and Wellington, Ohio; at Muncie and Anderson, Indiana; and also at St. Louis and Memphis. Such shipments as they make to the Pacific coast originate chiefly at Anderson and Muncie, Ind., and at Piqua and Troy, Ohio.

Solicitation of S. P. and U. P.

Prior to the amalgamation, the S. P. endeavored to route business by New Orleans, and the U. P. by the Missouri River. Recalls one or two small shipments made around the Horn at the suggestion of the consignee.

(1539) Since the consolidation, the joint agent expresses no preference as between the two routes. Portland traffic is divided among the U. P., N. P. and G. N. Some of the various lines soliciting Pacific coast business from witness mentioned. (1540) If the agent of the Chicago & Northwestern got the business, it would be just the same to the U. P. as if its agent had secured it, because in either case the traffic would move over the U. P. line. Generally, if a shipment moves over the Chicago & Northwestern or the St. Paul, it would move over the U. P. and S. P. to the coast. Shippers are not interested in the divisions. (1541) Never shipped to Portland by the Sunset route. The route to San Francisco via Portland would be impracticable for witness. Knows the more competition there is between the lines, the more activity there would be to give good service. The U. P.-S. P. Ogden line is at least as good as any of the others.

Route to San Francisco via Portland impracticable.

(1542) H. P. BLUM.

Blum.

Formerly for five years, from September, 1903, traffic manager of the Globe-Wernicke Co., at Cincinnati. The joint agent never expressed any preference as between the two routes. Shipped to Portland by the U. P., G. N. and N. P. Shipped to the coast by the American & Hawaiian Steamship Co., and also by the Panama Railroad Steamship Company. Rail charges to New York were not absorbed, but the aggregate rate was lower. (1543) A large majority of shipments went all-rail. Shipments by water were small.

Formerly with Globe-Wernicke Co.

(1543) GEORGE W. VOSMER.

Vosmer.

Preceded the former witness, Mr. Blum, in charge of the traffic of the Globe-Wernicke Co. (1544) Was in charge of the traffic department for two years, and for two and a half years before that was rate and route clerk of the freight movement from the 8th Street plant. Agrees with the testimony already given by Blum. Before the consolidation, the U. P. and S. P. agents competed. The latter solicited by New Orleans. Portland business sent by the U. P., G. N. and N. P. Most all the California business went by New Orleans. It was routed by the consignee. Cannot recall ever sending any out by Ogden.

Formerly in charge of traffic of Globe-Wernicke Co.

(1545) After the consolidation, witness' impression is that the solicitors preferred the New Orleans route. That is the way he had always shipped, and he continued to do so. The joint solicitor tried to get business away from the Atchison. Never shipped business to Portland by the Sunset route, nor to San Francisco via Portland. Never knew of anybody shipping that way. Not interested in the division of through rates. Prior to the consolidation, never knew the S. P. agent to solicit business by Omaha.

Never shipped to Portland via Sunset, nor to San Francisco via Portland.

(1546) J. A. HEDGES.

Hedges.

Treasurer of the Peruna Company, at Columbus, Ohio, with supervision, since 1901, of the traffic department. Since the earthquake has shipped to San Francisco by rail. Formerly shipped principally around the Horn. Has also used the American-Hawaiian Line. From Columbus to San Francisco by the American-Hawaiian Line takes about 80 days. There was a differential in its favor. For a number of years kept a storage plant in San Francisco, making distributions from there. The Horn shipments were intended for this plant. Ordinary shipments on orders almost invariably went by rail. (1547) Business for California points moved principally over the U. P., and Portland business for the most part over the N. P. The S. P. and U. P. since 1901 have had no agents competing for business as between the two roads. The general agent is impartial. Witness has never shipped to Portland by the Sunset route, nor to California via Portland.

Columbus, Ohio. Peruna.

Routing of his business.

Never shipped to Portland via Sunset route nor to California via Portland route.

Doyle.

(1548) WILLIAM J. DOYLE.

Cincinnati. With J. A. Fay and Egan Co.

For sixteen years traffic manager of J. A. Fay and Egan Company, at Cincinnati, builders of woodworking machinery. One of the largest concerns in the world. Agents of the S. P. and U. P. named. The former endeavored to route traffic by New Orleans, and the latter by Omaha. (1549) Competition was very active. In the last five years has not done much business in Portland, but during that time has shipped over the U. P. and Short Line. The G. N. and N. P., however, got some. Has never shipped to San Francisco by way of Portland, by boat. Thinks at one time there was a blockade from Ogden, and cars were taken up to Portland and back to San Francisco, but is not sure. Traffic was then blocked both from Ogden and El Paso. Formerly Portland business went over the N. P. That was sometime ago, however. Sales are made f. o. b. Cincinnati, and shipments routed by consignees. Shipped to the Orient, but seldom by the Pacific coast. Shipments to Los Angeles moved by the Atchison.

Never shipped to San Francisco via Portland.

Car loads by bunching shipments.

(1550) Witness is a member of Pacific Machine Dealers' Association, which was formed by manufacturers of machinery, in order to get carload rates to Pacific coast, by bunching shipments. All the Los Angeles business goes Atchison, but not all the San Francisco business U. P. A lot of it goes Rock Island and El Paso. In fact, most of it goes that way. It was all routed at the other end. (1551) Never shipped to Portland by the Sunset route. A good many lines in Cincinnati territory soliciting business for California. The S. P., the U. P.'s only outlet to the coast.

(1552) The shipper is not interested in the divisions. Before the consolidation, S. P. always solicited by New Orleans. Since then, when they could not get business that way, they would endeavor to work the U. P. route. All witness' business for 10 or 12 years went by New Orleans until about four or five years ago. In fact, both the agents of his company route everything by New Orleans. That is witness' natural route. The few cars that were sent over the U. P., were in response to its solicitation.

Ships via New Orleans.

Kemper.

(1553) S. F. KEMPER.

Cincinnati. Hall Safe Co.

Secretary of the Hall Safe Company at Cincinnati. From 1897 up to two years ago, manager of its traffic. Never did much business with the U. P. and S. P., but prior to the consolidation the latter wanted business via New Orleans. (1554) Doesn't remember having been solicited by the U. P. Business goes to the coast over the Atchison, and has for a long time, and to Portland by the G. N., N. P. and Can. P. Doesn't remember ever shipping freight by the U. P. Oriental business goes by New York. Has had a little go through San Francisco, but doesn't remember by what line. Has had a few California shipments over the U. P. and S. P. recently. The earthquake shook the Santa Fe loose. After repairs were made, shipments over the Santa Fe were resumed. Never

Routing of his business.

shipped anything to Portland by the S. P., nor to San Francisco by way of Portland.

(1555) J. T. PURSEL.

Pursel.

For a little over three years in charge of the traffic of the Armleder Wagon Works at Cincinnati. Previously with Frank J. Enger Carriage Company. (1556) Agents of the U. P. and S. P. named. The two lines competed for Pacific coast business actively. S. P. preferred New Orleans route. Enger's business was divided between the two. Matter of equipment was very important, and business was diverted on account of one line being able to furnish equipment superior to that of the other. The U. P. was one of the first to have a large vehicle car. Since the consolidation, has been solicited by the joint agent. (1557) He expresses no preference between the two routes. Never shipped to Portland by the Sunset route, nor to San Francisco via Portland. Shipments over the U. P. went from Ogden over the S. P. Witness not interested in divisions.

Cincinnati. Wagons and carriages.

U. P. first to have large vehicle cars.

Never shipped to Portland via Sunset nor to San Francisco via Portland.

(1557) CHARLES BERNDT.

Berndt.

Lives at Cincinnati, Ohio. Traffic manager of the Andrew Jergens Company. Employed by them 23 years. (1558) Traffic to the coast moves chiefly over the Atchison, because it makes a little better time, which is important to shippers. Formerly shipped some over the U. P., and has shipped by New Orleans, but not during the past year. Question of time is the only reason. Before the amalgamation, was solicited by the separate agents of both companies, but not very much. They were in competition with each other. The joint agent has occasionally called on witness. He does not express any preference between the two lines. (1559) Traffic to Portland moves over the U. P. and Short Line. Still ships that way, and has for a long time. The northern lines occasionally solicited, but witness never employs them. Never shipped to Portland via the S. P., nor to San Francisco via Portland and boat line. Bulk of the business to California goes by the Santa Fe, but some by the U. P., that is, where the consignee requests the shipment that way.

Cincinnati. With Jergens Co.

Never shipped to Portland via the S. P., nor to San Francisco via Portland.

(1560) WILLIAM PISTER.

Pister.

For seven years traffic manager of the Christian Moerlein Brewing Company, at Cincinnati, the sixth largest brewery in the United States. Made considerable shipments to California up to three or four years ago. Not shipping there now. The joint agent of the two lines has solicited witness, and expresses no preference between the two routes. Shippers fix that themselves, in winter shipments going by New Orleans, and in summer by the Atchison and other northern lines. Doesn't think anything was shipped through by the U. P. Didn't ship to the north Pacific points. Has never shipped to Portland by the S. P., nor by way of Ogden. (1561) Has shipped, to San Francisco by way of Ogden over the D. & R. G., but not over the U. P. That was in recent years.

Cincinnati. Moerlein Brewing Co.

Routes according to season.

Has never shipped to Portland by the S. P.

Freiberg.

(1561) MAURICE J. FREIBERG.

Cincinnati. Distiller.

A distiller in Cincinnati since 1879. The Freiberg & Workum Company. Before the consolidation, the two lines actively competed for coast business. (1562) Shipments to the coast all made to one concern, which insisted on the privilege of routing its own shipments. Traffic to that concern was routed from Cincinnati to San Francisco all kinds of ways, including the New Orleans route, the American-Hawaiian Line, and around the Horn. Some went that way within the last few months. Witness' Portland business has gone by the G. N. and N. P. His business to California over the U. P. goes westward over the S. P.—there is no other way for it to go. Business not much solicited, because it is known that they don't control the routing. (1563) That condition existed at the time of the separate solicitation of the U. P. and S. P. Solicited by the lines leading to the southwest, and the northwest, and west, and even the northern lines. Never routed to San Francisco by way of Portland, nor to Portland by the Sunset route.

Routing of his business.

CLEVELAND, OHIO, FEBRUARY 13, 1909.

Coakley.

(1564) JOHN A. COAKLEY.

Cleveland. Formerly with Q. & C.

Since June, 1904, division freight agent for the American Steel & Wire Company, at Cleveland. Previously, from June, 1901, located at Pittsburg in a similar capacity. Prior to that, for six months, with the Q. & C. as traveling freight agent, and for two years before that with the American Steel Hoop Company, as chief clerk to the traffic manager, and previously engaged in various clerical capacities with the B. & O., the Pittsburg & Western, and the Pennsylvania.

(1565) As representative of the Q. & C., worked in connection with the S. P. S. P. endeavored to route by New Orleans and El Paso, and the U. P. by Omaha. Competition was active. American Steel & Wire Company ships to the coast chiefly by Omaha, but also considerable by El Paso. Formerly traffic moved from this territory by New Orleans, but witness has not moved any that way since his connection with the Wire Company. Considers that an unnatural gateway. The mileage is about 900 miles longer than by Omaha, and the route takes from six to eight days longer. The fact that business formerly moved that way was probably due to the personal influence of the S. P. agent, Mr. Connor. (1566) Remembers business moving to San Francisco by the Can. P. There was a differential rate via Vancouver. The same man represents both companies now at Cleveland. The joint agent now aims to get the long haul by Omaha, otherwise to take whatever haul they can get. The competition between them and the Atchison is very active. Do not seek to route particularly via New Orleans. Their solicitation is of a general character, without discrimination as between the two companies. Considers solicitors very valuable to the trans-continental lines, and of considerable benefit to the Wire Company.

New Orleans unnatural gateway.

Competition between joint agent and Atchison very active.

(1567) Solicitation described. Witness' traffic to the north Pacific during the season of navigation moves practically exclusively by boat, via Duluth, the G. N. and N. P., and by Omaha, and when lake navigation is not open, by Chicago and St. Paul. Witness aims to divide it pretty equally. (1568) Central California traffic moves over the Atchison and U. P. A small proportion goes over the Rock Island via El Paso. A large proportion of the Los Angeles business goes over the San Pedro, but none of the San Francisco. The Wire Company's tonnage for the coast is probably the largest out of Cleveland. U. P. doesn't get any of Wire Company's business for Seattle or Tacoma. Witness satisfied with the service given him by the joint agents. Business from Pittsburg territory by way of New Orleans has to go 1,000 or 1,200 miles to reach the S. P.

Lake and rail route.

Service satisfactory.

(1569) The fact that the U. P. Ogden route has been enormously improved, has had a very influential effect on routing traffic that way. The shipper is not interested in the division of rates. There are a great many lines soliciting traffic from the Ohio territory to the Pacific coast. The lines leading to New Orleans do not actively solicit that way. Witness has been given to understand that the division of the rate allowed them is so small that the business is unremunerative on account of the large mileage. (1570) The lines leading to El Paso, naming them, solicit business very actively. So do the lines connecting with the D. & R. G. or the U. P. Such business as would move over the St. Paul, the Northwestern, the Burlington, the Rock Island, the Missouri Pacific, or the M. K. & T. to California points, would ultimately pass over the S. P. or the San Pedro, unless it went over the Atchison via Pueblo. By the latter route the intermediate carriers would get the short haul, and ordinarily railroads aim to get the long haul wherever they can. All the trans-continental lines have been physically improved.

U. P. Ogden route greatly improved.

Division via New Orleans so small lines do not solicit the business.

Business would have to go over S. P.

(1571) Could not testify as a fact that there has been some change in the divisions, which caused the Q. & C. and L. & N. to stop active solicitation, but that was witness' impression. There has been no change in the through route, and witness doesn't know whether there has been any change in the divisions, or not, but thought the L. & N. and Q. & C. got such a small revenue that they would prefer other business. The Q. & C. and L. & N. do not, however, refuse to handle that business, and do handle some of it. Business has fallen off that way, for one reason, because the solicitation that way by the S. P. has lessened; also because of the improved service and shorter mileage by Omaha. The latter is the basic reason. Probably the bulk of the traffic moved by Omaha in the old days. Witness finally acquiesced in Mr. Severance's question to the effect that business moved to a greater extent via Omaha than by the Sunset route, "because they move it the other way," namely, by Omaha.

Improved service by Omaha.

Boltz.

(1572) F. W. BOLTZ.

Cleveland. With Nat'l Petroleum Ass'n. Formerly in railroad service.

For three years traffic manager of the National Petroleum Association at Cleveland. Previously, for four years, engaged in the mercantile business. Prior to that in the service of the Lake Shore and Michigan Southern at Cincinnati, in the general freight department, from 1881 to 1887. Then entered the employ of the C. M. & St. P. Railway, as traveling freight agent, and subsequently as commercial agent at Cleveland. In 1898 transferred to Sioux City as division freight and passenger agent. In January, 1899, entered the employ of the Iowa Central as general agent at Cleveland. Then, three years later, entered the mercantile business at Cleveland. (1572) Agents of the Harriman lines named.

(1573) The S. P. preferred New Orleans gateway, U. P., Omaha and Ogden. As the agent of the C. M. & St. P., witness solicited business in connection with the U. P. via Omaha or Kansas City. Competition between U. P. and S. P. was extremely active. Considerable business moved by New Orleans from Ohio territory. (1574) In the employ of the Iowa Central at the time of the consolidation, with headquarters at Cleveland. Joint agents named. (1575) The National Petroleum Association comprises thirty odd independent oil refiners, located in Ohio, Pennsylvania, New York, Kansas and Canada. Witness is solicited by various agents. The general agent of the S. P. and U. P. expresses no preference between the two. Business for north Pacific moves usually over the N. P., some via U. P. for Portland. This business not very extensive. It is greater to California points.

Competition active between U. P. and S. P.

(1576) This is due to the excessive freight rates, and also to the fact that until two years ago it was customary to charge for the return of empty tank cars to the Missouri River. Statement that rates were excessive, applied to the entire Pacific coast. Use all trans-continental lines. At present very little is moving by New Orleans, and what goes that way is due to the expressed wish of the consignees. Some shipments are sold f. o. b. and routed by the consignees, and others not. (1577) Remembers that considerable business moved via Vancouver on the Can. P. differential. Great bulk of National Petroleum Association's business moves in tank cars, which are owned by the shippers. Thinks it wise for a company to maintain solicitors, for the reason that they get more business. Method of solicitation described.

Routing of traffic.

(1578) While witness represented the St. Paul, at Cleveland, from 1887 to 1898, he endeavored to move traffic over the U. P. via Omaha or Kansas City, also in connection with other western Missouri River lines, such as the Atchison or Missouri Pacific. Frequently had business move via all of the western Missouri River lines. Simply sought the long haul to the Missouri River. The U. P. was his preferred connection, however, on business for California points. (1579) St. Paul got in all about 500 miles out of that business from this territory, and the U. P. 1,000. From Ogden

Solicited for the long haul.

to San Francisco it was 850 miles, so witness' work inured to the benefit of the S. P. and U. P. The U. P. in soliciting for itself necessarily solicited for the S. P. To the best of witness' recollection there was an arrangement by which business did move for a certain period over the U. P. to Portland, and by steamer down to California points. Witness never attempted to solicit business for that route.

Movement via Portland.

(1580) His solicitation was largely in connection with the U. P. against the Atchison. The latter had their own line in Chicago, and didn't work as closely with the St. Paul as the U. P. did. Didn't know whether any business moved by El Paso at that time. Almost all the lines solicited. (1581) The Burlington, whether working via the U. P. or the D. & R. G. would be working for the S. P., and that was true of the Rock Island prior to the opening of its line to El Paso; also as to a portion of the Missouri Pacific, it having two outlets, one by way of Denver or Pueblo, rather, and the other by way of the Iron Mountain, down through Texas. The Rock Island, the Missouri Pacific, the M. K. & T. and all the lines leading to the southwest and west actively solicit traffic. There has been very great improvement in the service via New Orleans. Witness' interest as a shipper has been efficiently served by the joint agent.

Solicited with U. P. against the Atchison.

All were working for the S. P.

Service via New Orleans greatly improved.

(1582) Change witness referred to in through rates on petroleum was made May 29, 1906. The charge of $1.05 for the return of empty tank cars to the Missouri River was eliminated, and the railroads agreed to establish a blanket rate, 90 cents per hundred, from all points east of the Missouri River to Pacific coast terminals, instead of the charge formerly made on combination of locals to and from Chicago. That arrangement continued in force until January 1st of this year, when the rate was advanced to $1.00 per hundred. At the time the charge for the return car was abolished, the rate which was formerly 78½ from Chicago west, was advanced to 90. There has been a decided increase in witness' Pacific coast trade since the blanket rate of 90 cents per hundred was made effective. The advance to $1.00 will again eliminate competition on the coast, so far as the independent refiners are concerned, to a very great extent. (1583) 90 cent rate put witness on an equality with the refineries of the Standard Oil Company, but he was unable to meet the local competition on the coast. There is a large oil production in southern California. None in Puget Sound territory, so far as witness knew. Never shipped anything to Portland by way of New Orelans. Shippers are not interested in the division of the through rate.

Reduction in oil rates.

(1584) Prior to the change in rates spoken of, the petroleum rate from all points east of Chicago to the coast was based on the local rate to Chicago, in addition to the 78½ cent rate beyond, so that previous to this adjustment the Standard Oil refineries at Whiting had the 78½ rate to Chicago. The weight of an ordinary tank car would be about 50,000 pounds, so that the railroad com-

Basis of petroleum rates.

pany's revenue would be about $450 a car. (1585) The advance to $1.00 has prevented successful competition on the coast, and compelled some of witness' people who had contracts on the coast, to ship via New York and the Isthmus, by the Panama Steamship Company and the American Hawaiian line. These shipments have not yet been made. A vigorous protest has been entered, and witness hopes to induce the trans-continental lines to restore the former rate of 90 cents. Witness ships only by barrels, when shipping by water.

(1586) The advance doesn't operate as much against the Standard Oil as against the independent companies, because the former are able to ship by water from their Atlantic Seaboard refineries in their own tank steamers. They have also made oil out in California. The Standard Oil has not joined in this protest against the increase. The joint agent has rendered effective service, but is no longer competing for business between the two roads. (1587) All the lines have been improved. This has been essential in order to get business, and also because heavy equipment is being used. No reason why the route to San Francisco via Portland is not as feasible as the longer route via Vancouver. Both the rail and steamship haul are shorter that way. The Portland route is rather an indirect one. When witness was soliciting business, he never tried to move any that way.

Never solicited business via Portland.

(1588) At one time, there was an arrangement by which business could move via Portland, but witness did not know of any business having moved that way. Aside from the time when the Can. P. had this differential, none of the northern lines have attempted to work California business. Not sure of the duration of the differential, but thought it existed possibly three or four years, late in the '80's. (1589) The Morgan Steamship Line to California is a longer route than that via Portland. So is the American-Hawaiian Line across Tehuantepec, or the Panama route across the Isthmus, or the clipper ships around the Horn. The matter of distance is a factor in the successful securing of freight, but it can be overcome by other considerations, such as rates. The rates by the Morgan Line are the same as the all-rail lines, but they get a large traffic by that route. Not very much from this interior territory. They do not absorb the rate west of Pittsburg. It takes a shipment four or five months by Cape Horn, and the all-rail route about two weeks. The rate by the Horn is much lower. Also lower by Panama and Tehuantepec than by the all-rail line.

Distance a factor.

(1590) The Morgan line from coast to coast is under a single management, whereas the U. P. line to Portland does not extend east of the Missouri River. The S. P. has three fast ships a week to New Orleans and Galveston, where it has extensive docks and terminals, and transfers the freight and sends it through in practically solid train lots, without break, to California, and the U. P. attempting to pick up freight in the middle of the continent, depending on the connections going to it, in broken lots, would not be

Morgan line under single management.

so favorably situated as the S. P. It is also a very important consideration that the U. P. is a direct connection with the S. P. at Ogden, and must be benefited by a very large interchange of traffic with the S. P. at Ogden, and if it should attempt to work the Portland route for California business, it might, if the two systems were independent, jeopardize that relation. (1591) If the Portland route was worked on a differential, it would bring down all the trans-continental rates, including that over the Sunset route. At equal rates, does not think any considerable business would move by Portland. Thinks that if as independent companies, the S. P. diverted all its unrouted traffic to the D. & R. G. as against the U. P., the latter would lose very much more than it would gain by that sort of enterprise.

Importance of U. P. connection at Ogden.

(1592) Thinks the possession of the Portland route would enable the U. P. to protect itself against any unfair demand for division by the S. P. Thinks, however, that the U. P. would suffer more than it would gain by attempting to use the Portland route, by reason of the diversion by the S. P. to the D. & R. G. As a rule, railroad managers are about as much alive to their own interests as other people. (1593) If the merger were not in effect, the S. P. would naturally try to route business via New Orleans, and would send unrouted business that way, so that if the S. P. undertook to fight the U. P. by diverting unrouted traffic to the D. & R. G., the S. P. would have to take unrouted traffic from the Sunset route, where it gets the long haul, and divide it up with the D. & R. G., in order to hit the U. P. That wouldn't pay very well. There is a great deal of traffic that moves all-rail in spite of the Sunset route, so, assuming that no more traffic was moved all-rail during this controversy than moves now, why, the S. P. could divert that amount to the D. & R. G. As it is now, the U. P. is the preferred connection, and if a controversy arose, the S. P. would naturally change the situation, and make the D. & R. G. the preferred connection, carrying all the traffic that way which it could not get by the Sunset route. There is necessarily a large volume of traffic that will not move by the Sunset route. The Atchison is pretty active in the field.

U. P. could use Portland route at its peril.

S. P. would retaliate.

(1594) If the S. P. insisted upon taking it by the Sunset route, and would not take it by Ogden, it would go by the Atchison. Much the larger proportion of the traffic to the Pacific coast, ever since the trans-continental lines have been open, has moved all-rail, and the S. P. could not move that by the Sunset. It might, however, move by the Sunset route all-rail via New Orleans or El Paso.

(1594) JOHN F. RYAN.

Ryan.

Lives at Toledo, Ohio. For ten years in charge of the traffic of the National Supply Company, (1595) manufacturers of oil and gas well supplies. One of the largest concerns of the kind in the country. Own eight or nine warehouses in Southern California. His traffic to the oil fields of S. P. very large. Warehouses at Los An-

Toledo, Ohio. With National Supply Co.

geles, Bakersfield, McKittrick, Coaling, Orcutt, and Sunset. Some of these points are on the Atchison, and some on the S. P. Some on both. (1596) At the time of the separate agencies, the S. P. and U. P. competed with each other actively, the S. P. working the New Orleans, and the U. P. the Omaha route. Joint agent makes no distinction between the two lines in soliciting. There are no longer any separate agents in this district. Witness' traffic to Southern California moves via El Paso, also over the Atchison, the U. P. and S. P. via Ogden, and the Salt Lake route. Not very much moves by New Orleans.

Agents.

(1597) When the S. P. had separate solicitors, a larger proportion went by New Orleans. Witness' freight is high-grade. It takes a machinery rate, under a Class A rate. Ships by the Tehuantepec route from Toledo. Traffic moves to the seaboard via the Lake Shore, D. L. & W. Delivered out on the coast by the Hawaiian line at San Diego, and then distributed by the Santa Fe. From Toledo to San Diego by the American-Hawaiian line takes from 35 to 45 days ordinarily. From there it is a short distance to Los Angeles. Shipment goes into warehouse there, and is then reshipped into the interior. Nothing shipped by water goes to warehouse at Los Angeles. Shipments to interior points and Southern California go all-rail to save rehandling. American-Hawaiian ships do not put in at San Pedro.

Routing of his business.

(1598) Not prepared to say that if a separate solicitor for the New Orleans route exclusively were put in this territory, it would affect the movement of witness' traffic in that direction. Thinks the right sort of a solicitor might influence some of his freight. Mr. Connor would fill the bill. If Mr. Connor worked exclusively for the New Orleans line, he would get some of that now carried by the U. P. and Atchison. The most direct routes for witness' shipments to Southern California, are the Atchison, and the Salt Lake, and the U. P. and S. P. via Ogden. (1599) That distance is, roughly speaking, 500 miles, as against the New Orleans line. The service by all-rail lines from Ohio territory has been very much improved in recent years. Not prepared to say it has improved relatively more than the line by New Orleans. Has shipped, and still ships, a good deal of business from the seaboard territory by the Morgan line. Never attempted to ship over the U. P. to Portland, and thence down by boat. Has never made any shipments to Portland proper. Not interested in the division of through rates.

Direct routes.

Never used Portland route to San Francisco.

Ryan.

(1600) E. D. RYAN.

Toledo, O. With Milburn Wagon Co.

Since 1902 traffic manager of the Milburn Wagon Company at Toledo, Ohio. Leaves it optional with the solicitor what route to take, but, of course, tries to get the long haul, namely, that via Kansas City or Omaha. If the solicitor learned witness was going to ship by El Paso, he would then try to get the shipment by New Orleans, but otherwise on San Francisco business he doesn't try to work it by the south.

(1601) There are other solicitors representing trans-continental lines in the field. When Mr. Choate, the joint solicitor at Detroit, finds a shipment is contemplated by El Paso, witness never knew him to endeavor to change it and have it go by Omaha, nor, if it were going by Omaha, to attempt to get it by El Paso or New Orleans. Doesn't try to play one line against the other. Witness has sent only a few cars by El Paso. From 1895 to 1900 the Wagon Company had no shipments for the Pacific coast. The wagons for the Pacific coast territory being special, interfered too much with the Company's other work. Since 1900 there have been a large number of shipments, with the exception of last year. California traffic has been about equally divided between the Atchison and U. P. Portland business, 50 per cent. goes to the U. P., and the balance divided over all the routings, the Denver gateway, the G. N. and N. P., a few cars by the Can. P. The first two or three were shipped on account of washouts and blockades on the American lines, (1602) that is, the northwest lines. All these lines have agents soliciting business. The solicitors of the other lines don't call any oftener than the representatives of the U. P. and S. P. Witness disliked to express an opinion because other railroad representatives were present, but said that he thought Mr. Choate was a little bit better than any of them. While there are a few railway solicitors who have nerve enough to argue with the shipper, Mr. Choate goes a little better on that, and on account of his liking to get into an argument, witness has learned many things about the railroad business—things that he had not known or learned when in the railroad service. Doesn't think it necessary to strengthen the S. P. and U. P. representation.

Traffic divided among the carriers.

U. P. and S. P. solicitors call as often as others.

(1603) Never shipped to Portland via the Sunset, nor to California by way of Portland. Taught by experience gained on shipments to Texas, that the service would be poor, first, on account of slowness, and second, on account of damage to wagons in the transfer. It would take a differential of at least 20 per cent. better than the all-rail to pay witness for making shipments via any such routing. The cost of crating wagons would be more than twenty cents a hundred. All the lines from this territory to El Paso, or the Missouri River gateways, or the Rocky Mountains, actively solicit business for California. (1604) If Mr. Choate represented the U. P. alone, he might get a larger percentage for that Company, unless the S. P. were represented by as good a man. He would get a larger percentage, any how, on account of the service being better by the U. P. and S. P. than by N. O. and the S. P. If Mr. Choate represented the S. P. alone, witness didn't think he would be able to secure business for that line via New Orleans. He might via El Paso.

Never shipped to Portland via Sunset, nor to California via Portland.

Service better by U. P. and S. P.

(1604) JOHN D. KLEUTER.

Kleuter.

For about 16 years employed by the Gendron Wheel Company, of Toledo. (1605) For ten years in charge of its traffic. Before

Toledo. With Gendron Wheel Co.

the consolidation, S. P. endeavored to route by New Orleans; U. P. by Missouri River. Now Mr. Choate, of Detroit, represents both, and doesn't discriminate between the two in soliciting. Witness' traffic generally moves to the coast by Omaha. Southern California shipments generally go by Salt Lake route, some by Atchison. To Portland by N. P. or G. N.; not over the U. P., nor over the Can. P., nor by steamship lines.

Rand.

(1606) W. F. RAND.

Cleveland. Railroad clerk.

Railroad clerk, residing in Cleveland. Has been with the Lake Shore since 1887, down to the present time, with the exception of one year, 1889-1890, employed by the U. P. In the Lake Shore office witness had charge of the eastbound billing department, until a year ago, when the east and west bound departments were consolidated, and he became assistant to the chief bill clerk. In the same department all the time. Acted as freight solicitor for the U. P. at Cleveland. (1607) Succeeded John Moran. When witness returned to the Lake Shore, the U. P. office at Cleveland was closed up, and the Company represented through traveling men. Witness' business was to get traffic for the U. P. by the Missouri River gateway, working in conjunction with the C. M. & St. P., the C. & N. W., the C. & A., sometimes with the "Q," and the Rock Island.

(1608) It is customary for freight solicitors to work with their connections. Mr. Connor, at Cincinnati, then represented the S. P. (1609) Solicited Portland business for the U. P. Mr. Connor worked the New Orleans gateway. The competition between the two companies was very active. The S. P. was U. P.'s strongest competitor for California business. N. P. chief competitor for Portland business. Didn't know of the Can. P. doing any business into Pacific coast points in the United States at that time, but presume they did. Heard of some shipments going on a differential. Remembers several carloads of machinery going by Vancouver for San Francisco. Doesn't know of equipment having anything to do with his solicitation of business for the U. P.

Competition between S. P. and U. P.

(1610) The business that went by the Rock Island and Burlington went to Denver, and then over the U. P. from that point to Ogden, and then over the S. P. All the business he got for the U. P. went over the S. P. in the end. That was also largely true of the Burlington and Rock Island. (1611) There were a great many agents soliciting that way for the Ogden route, the Rock Island and the "Q" were soliciting mostly that way. The Atchison was a strong competitor of the U. P., very active in the field. Witness never solicited any business for California by way of Portland, nor knew of any business moving that way.

No business via Portland route.

Longacre.

(1611) R. F. LONGACRE.

Lakewood, Ohio. Formerly railroad man.

Resides at Lakewood, Ohio, and for five years traffic manager of the Atlantic Terminal Line. Previously connected with various

railroads, beginning in 1884 in the general freight office of the Nickel Plate at Cleveland. In 1895 left them for the Erie, and remained with latter road until 1901. Then was employed by the D. L. & W. (1612) Handles all kinds of oils, paints and greases, and numerous specialties which oil people manufacture. California shipments move over all the different routes. Witness aims to divide it up as nearly as possible among the different roads. Mostly less than carload shipments. Traffic to Portland and Puget Sound points moves in connection with U. P. and Short Line, and some in connection with N. P. and G. N. Traffic solicitors of all these various lines solicit witness. The agents of the Harriman lines are glad to get business either way. Last three years witness was with the Erie he was division freight agent at Meadville, Pa. Prior to that a rate clerk and chief clerk of the general freight department. The S. P. and U. P. then had separate agencies, and competed actively in that territory.

Traffic solicited by all lines.

(1613) S. P. endeavored to route by Cincinnati and New Orleans, and U. P. by Missouri River. Ships by boat via Duluth during the season of navigation to North Pacific coast. Does not ship by the lakes to Duluth, and then the Omaha route to Omaha, and over the U. P., but only over the N. P. and G. N. Doesn't ship anything to the Pacific coast by the Atlantic Lines, by boat. Meadville is one of the Pittsburg common points. Doesn't remember anything going from Meadville via New York and the Morgan line. (1614) All business over the U. P. to Pacific coast points south of Portland moved over the S. P. from Ogden. Many other lines were soliciting business that ultimately moved over the S. P. from Ogden. The traffic controlled by the Northwestern, the St. Paul, the Burlington, the Rock Island, and the Missouri Pacific, for California points, would naturally go over the S. P. from Ogden. Never shipped any business for California via Portland and boat line down, nor to Portland by way of New Orleans. Never knew any to move that way.

S. P. and U. P. solicitation.

All coast business of U. P. moved over S. P.

Never used Portland route.

(1614) A. J. HENDERSON.

Henderson.

Fifteen years traffic manager of the White Sewing Machine Company and the White Company, at Cleveland, Ohio. (1615) Ships probably 300 carloads to the coast annually, generally divided up among all the lines—the Missouri River lines via Ogden, Omaha and El Paso. Do not ship by New Orleans. Did ten or twelve years ago. Separate agent of S. P. formerly solicited by New Orleans, and to a certain extent was successful in routing witness' traffic that way. The joint solicitors do not discriminate between the two routes. (1616) Portland business moves by the Northern lines all-rail all the year—G. N. and N. P. Before the consolidation, competition between the U. P. and S. P. for coast business was very active. Business to the Orient moved by the Can. P. via Vancouver. None moves by the Morgan lines. Has made a few shipments to the Orient by way of San Francisco. Not sure,

Cleveland. With White Sewing Machine Co.

Does not ship via New Orleans.

but thinks it went over the Occidental and Oriental. Doesn't remember any going by the Pacific Mail. Thinks if a line is represented by a local man it stands a better chance of getting business. Active solicitation of local men secures business.

Joint agents as active as separate agents.

(1617) Joint agents as active in their solicitation as separate agents ever were. Don't let any business get away, if they can help it. There are a great many solicitors for other lines. All U. P.'s business for California went over the S. P. west of Ogden. Some of the lines soliciting in Cleveland, named. There has been considerable improvement in the service of the trans-continental lines in recent years. Never shipped anything to California by way of Portland and boat down. (1618) Nor to Portland by way of New Orleans; nor to the Orient by way of Portland. Doesn't care about the division of through rate. In the old days, the U. P. and S. P. were competing with each other. Now they are not.

Never shipped to California via Portland, nor to Portland via New Orleans.

Rushforth.

(1618) WALTER RUSHFORTH.

Meadville. Wire screens.

Lives in Meadville, and for 18 years in charge of the traffic of W. S. Tyler Company, manufacturers of wire screens. (1619) California traffic moves chiefly through Omaha and Ogden. Ships some to Los Angeles and San Francisco by El Paso, and some by the Atchison and Rock Island. Never shipped any by New Orleans. In the absence of special direction, does not ship to Portland by the U. P., but by the G. N. and N. P. (1620) Witness routes a good many of the shipments. The others are routed by the consignee. The separate S. P. agent tried to route traffic by New Orleans, and the U. P. by the Missouri River. Knows Mr. Hild as the present U. P. man, but the S. P. business is so little, he doesn't remember any S. P. man. Makes some shipments using the lakes during the open season, to Montana chiefly. Doesn't ship to the coast that way.

(1621) Sometimes receives letters from Connor in reference to freight rates. One of these, dated July 22, 1902, appears in the record. In the past has shipped goods to California by New Orleans. (1622) Has also shipped by the Atchison, and some by the Ogden route, the freight going over the S. P. west of Ogden. Never shipped to California by way of Portland, nor to Portland via New Orleans. On Montana shipments figure the time by boat via Duluth is better. The rates are also lower. Witness gets direct connection with the delivering road at Duluth.

Never used the Portland route to San Francisco or New Orleans route to Portland.

Norvell.

(1622) W. G. NORVELL.

Detroit. With Park, Davis & Co.

Lives at Detroit, Mich. Since January, 1899, in charge of the shipping department of Park, Davis & Co., manufacturing pharmacists. (1623) Not called upon by solicitors much prior to January, 1902, but since then regularly. About 65 per cent. of witness' output moves carload, and the balance L. C. L. Pacific coast shipments usually move L. C. L. Principal points to which

shipments in California are made, are Los Angeles and possibly San Francisco. Ship generally U. P. and S. P. to Frisco, and Atchison generally to Los Angeles. Doesn't use the San Pedro route, though they have shipped small quantities that way. Also small quantities via New Orleans. Hasn't stopped shipping that way.

(1624) Mr. Choate doesn't discriminate between the two lines. Traffic to North Pacific coast points, including Portland, moves over the N. P. and G. N. None of it has moved over the U. P. of late years. Witness uses the Lake route almost exclusively during the open season. Business by the lakes goes to the North, not to California points. Never shipped anything to California by Portland and boat down. (1625) Never knew of any shipments to move that way. Never shipped any to Portland by way of New Orleans or El Paso. Rates by the lakes lower than the rail rates. Not interested in divisions.

Uses Lake route. Never uses Portland route.

(1625) WILLIAM J. GORDON.

Gordon.

Lives at Detroit, Mich. About seven years traffic manager of the Anderson Carriage Company at Detroit. Previously, for nine years, with the Michigan Central at Detroit. (1626) Before the merger, the U. P. and S. P. were separately represented at Detroit by traveling agents. The S. P. endeavored to route traffic by New Orleans, and the U. P. by Omaha. The competition was active, but the U. P. was more active, as it was in a better position to get business. The joint agent, Choate, does not discriminate between the two lines. There is no competition between them for business out of Detroit. On coast shipments witness uses all the lines, rather favoring the U. P. Doesn't ship by New Orleans, nor El Paso. To North Pacific coast points generally ships over the N. P. and G. N.

Detroit. With Anderson Carriage Co.

Uses all lines, favoring U. P.

(1627) Ships to Portland by the U. P. Sometimes by the N. P. Also ships to Southern California by the Salt Lake route. Before the merger, if the S. P. couldn't get business by way of New Orleans, they tried to get it by Ogden. "If they couldn't get the long haul, they were satisfied to get the short." Some of the lines soliciting business mentioned. Witness would not regard the U. P. and Chicago & Northwestern as competitors for coast business. They are connecting lines. Never shipped anything to California by Portland and boat line. Goods would not stand the transfer. All shipments over the U. P. to California before the opening of the San Pedro, went to final destination on the S. P. (1628) Not interested in the divisions. Do not use the lakes at any season, because of transfer.

U. P. and N. W. not regarded as competitors, but as connections.

Portland route not used.

(1628) JOHN L. EVANS.

Evans.

Lives at Cleveland, Ohio. For five years manager traffic department of Sherwin & Williams Company, manufacturers of paints.

Cleveland. With Sherwin & Williams Co.

etc., at Cleveland. Previously, for one year, with a boat line on the lakes, and before that, for two years, with the Atlantic Refining Company, and prior to that in the railroad and steamship service. Altogether, in the transportation business in Cleveland, 27 years.

Routing of his traffic.

(1629) Ships to the coast from plants at Cleveland, Kensington, Ill., and Newark, N. J. From Newark usually by the American-Hawaiian Line. Ships principally from Cleveland. That traffic goes by U. P., S. P., via Ogden; some via New Orleans, and some via El Paso; also ships some of it by the Atchison. Ships to North Pacific coast points by the U. P., N. P., G. N. and Can. P. Uses the lakes very little.

(1630) None of the traffic by the lakes goes to California by the U. P. or Atchison. The lakes are only used for North Pacific coast business. Before the merger, the S. P. endeavored to route by New Orleans, and the U. P. by Omaha. Witness' business was competed for by the two lines. (1631) Since the consolidation, where the initial or some intermediate line has secured witness' business, the joint agent tries to get it from the point of connection with those lines, and on coming to witness as an independent proposition, witness thought Mr. Connor would like to see the business go through Omaha.

Joint agent works with connections.

Portland route used briefly following earthquake.

(1632) None of the Portland business goes by way of New Orleans or El Paso. Immediately after the earthquake, shipped to California by Navigation Company to Portland, and the boat line down. Has never used the Shasta route. That was because of the railroad blockade, and freight could be delivered at the water front by using the boat line. That was the only time witness ever shipped that way. Other shipments always went over the S. P. west of Ogden. Not interested as a shipper in the divisions. Uses the lake route for coast points north of Puget Sound. The lake lines have a differential.

Hart.

(1633) JOHN HART.

Cleveland. With Gresselli Chemical Co.

For 18 years traffic manager of the Gresselli Chemical Company, at Cleveland. Ships to the Pacific coast mainly from the Chicago plant. Occasionally ships from Cleveland. The separate agents of the two lines formerly solicited witness. (1634) The S. P. worked the New Orleans route, and the U. P. the Omaha. Since the merger, the joint agent takes it any way he can get it, but preferred the Omaha route, witness thought. The joint agent is continually after the business, and as witness doesn't route through New Orleans very much now, he thought the agent preferred it by Omaha. No special reason for ceasing shipments by New Orleans, except that at the time Mr. Connor separately represented the S. P., his personality had something to do with getting business that way. In the old days there was a pretty even division between the New Orleans and the U. P. route. There is none going by New Orleans now. The freight solicitors are of considerable importance to the

Active soliciting by joint agent.

Used to be even division. None via New Orleans now.

railroads in getting business, and are also of service to the shippers. Business for North Pacific coast points, including Portland, goes exclusively G. N. and N. P.

(1635) The joint agent adequately serves the purpose of both lines, so far as witness is concerned, and looks after his freight as well by the Ogden route as he would by the New Orleans. The Ogden route is the shorter and better route. If business went by way of New Orleans, it would be largely on account of solicitation, to help out a good fellow. Never sent any freight to California by Portland, and boat down, nor to Portland by way of New Orleans or El Paso. There are a great many lines soliciting witness' traffic for the Pacific coast, including all the intermediate lines. Not interested in the division of the through rate.

Joint agent adequately serves the purpose.

Portland route to San Francisco not used.

(1636) It is an advantage in getting shipments through rapidly to have them go over as few lines as possible. Doesn't think there is any competition between the U. P. and S. P. now. By saying that the joint agent served both lines efficiently, he meant that the agent is soliciting for both lines continually, and witness' coast business, being Frisco business, it goes through Ogden, but witness has any amount of business in the southwest which the agent is continually soliciting for the S. P. Witness doesn't know that it is worse for the S. P. no longer to get a part of his coast business by way of New Orleans.

(1637) J. E. WILKINSON.

Wilkinson.

Lives at East Cleveland, Ohio. From October, 1899, in charge of traffic of Chandler & Price Company, manufacturers of printing machinery, at Cleveland. Before the merger, the S. P. endeavored to route business by New Orleans, and the U. P. by Omaha. Nearly all witness' shipments are routed by the consignee, and the joint agent calls simply to ascertain about the time the shipment is going forward, and the lines out of Cleveland. (1638) The agent's interest is simply to see that the consignee's routing is respected. If he found business was being routed by other roads, he would make a memorandum of it and go after it at the other end of the line. He is satisfied if it is routed either U. P. or via New Orleans. Thinks that traffic can be influenced by personal solicitation. Coast shipments go U. P. and Los Angeles business U. P.-Salt Lake route. San Francisco business usually moves Illinois Central-S. P. by way of New Orleans. Some of it goes Atchison. Hasn't sent over the U. P.-S. P. Ogden route for some time. (1639) Thinks this is mainly because of the efforts of Mr. Connor and Mr. Doul, the Ill. Central representative. Hasn't sent by El Paso for some time. Never shipped to California by way of Portland and boat, nor to Portland by the Sunset route. Not interested in the division of the through rate. All the intermediate lines are actively soliciting witness' business. Some of the soliciting lines named. (1640) Card of George B. Hild, Traveling Freight Agent, of the Harriman

East Cleveland. With Chandler & Price Co.

Shipments routed by consignee.

Portland-San Francisco route not used

Lines, at Cincinnati, Ohio, set forth. The reverse side contains a map identical with Exhibit 116.

Stewart.

(1640) O. J. STEWART.

Cleveland. With Standard Sewing Machine Co.

Traffic manager Standard Sewing Machine Company, at Cleveland. Ships to the coast chiefly over the Atchison, the U. P. and S. P., and to Portland over the G. N. and N. P. (1641) The joint agent doesn't solicit for one line against the other. Thinks solicitation secures traffic. Method of solicitation described. Oriental business goes via New York. Shipments to Australia and New Zealand via Vancouver. Never shipped to San Francisco by Portland and boat, nor to Portland by New Orleans or El Paso.

Never used Portland route.

Joint agency serves as well as separate did.

(1642) Present solicitors of the Harriman Lines adequately serve witness' purpose. Taking into account the location of the lines, the joint representatives are serving him just as well as two separate representatives could. The joint representatives could not, however, compete with themselves. Most of witness' shipments, however, go over the Atchison, and he has not had to call on the Harriman solicitors, for instance, in tracing cars, or anything of that kind, in late years. (1643) As between the two lines, it is a question of a long or a short haul with the S. P., but the U. P. has no interest in shipments by New Orleans. Witness not concerned as to what roads get the revenue, or how they divide it.

As between the two lines a question of a long or a short haul.

Krause.

(1643) GEORGE KRAUSE.

Cleveland. With Big Four.

Lives at Cleveland, Ohio. For 33 years in the traffic department of the Big Four. Now commercial freight agent at Cleveland. (1644) Agents of the two companies named. Previous to the merger, the solicitors had been competing for California business, the S. P. endeavoring to route by New Orleans, preferably, next by El Paso, and failing to get it in either of those ways, then by Ogden. The U. P. endeavored to route through the Missouri River gateway. (1645) The Big Four had an initial line's interest in this traffic both ways, whether it went by Cincinnati and then south, or went west to Chicago, and was therefore in a position to observe the way that the S. P. solicitors were working the business. Since the merger, the joint solicitors aim to get the business any way they can, without preference.. They work against the Atchison. If an L. & N. representative discovers a carload somewhere, he brings it to the attention of the joint representatives of the Harriman lines, and they work with him to secure the car through New Orleans. If, meanwhile, some of the Missouri River lines attempt to get the same car, Mr. Connor is neutral.

S. P. solicited via New Orleans, El Paso, Ogden.

Joint agents work for all routes without preference.

(1646) Witness thought Mr. Connor was so situated that he could work both lines, but admitted he couldn't work both lines on the same car at the same time. That element of competition is eliminated. In the last ten years the situation has changed, and more business goes through the Missouri River gateway. One reason is

that Mr. Connor is now working both lines. (1647) The situation is changed entirely. The Atchison have become much stronger by reason of their entrance into San Francisco. The Rock Island have strengthened the El Paso gateway very greatly, and in Cleveland all of the Missouri River lines have offices now, and they all fight for the Missouri River gateway, and by reason of the Sunset route from Cleveland to Frisco being about 1,000 miles longer, the latter has lost its standing. The change in the situation has also been largely brought about by the appointment of traffic managers by the industrials. They are always fighting to get improved service, and pitting one line against the other, and the improvements, in witness' opinion, seem to have been more through the Northern gateways. The Southern route is not longer now than it was ten years ago, but the service given then would not be satisfactory now. There has been an improvement both ways, but the New Orleans gateway is too far to be satisfactory. The roads have been able to shorten the time more through the Northern gateway than through the Southern, by reason of the less distance. Witness had a case the other day, where a shipper wanted to obligate him to put a car through to Frisco in ten days, while ten years ago, if we got it through in twenty, he would have thought he was doing well.

Atchison has become much stronger.

Effect of Traffic Managers of industrials.

New Orleans gateway too far to be satisfactory.

(1648) Witness didn't handle that car, but the shipper told him the Lake Shore and Atchison had promised to put it through in that time. There is more apt to be congestion at Chicago than at the gateways further south. The Big Four is a part of the New York Central system, but witness didn't know that the U. P. is a stockholder of the New York Central, and Mr. Harriman, a Director of the latter. He has heard of it from the newspapers. (1649) Since talking to the Government representatives, witness has also talked over the testimony with the Harriman representatives. (1650) Before the merger, the S. P. was the U. P.'s only outlet to California. The U. P. and Central Pacific are connecting lines. The all-rail lines, both before and after the merger, have competed with the Sunset route of the S. P. The S. P. owns a link of 850 miles in the U. P.'s all-rail line. So far as the S. P.'s interest in the traffic from Cleveland territory to California is concerned, it is largely a question of division, or, rather, the short haul as against the long haul; that is, except as against the Atchison.

U. P. and C. P. connecting lines.

With the S. P. it is a question of the long haul against the short haul.

(1651) All lines through the El Paso gateway, and through the Missouri River and Colorado, are actively soliciting business. The Big Four tries to get the initial haul either way. Makes no effort through any particular gateway, except it wants to get a haul, whether it is long or short, but, of course, tries to get a long haul, if it can. When an agent's attention is called to a car by a connecting line, he tries to work with them. That is the rule. Never knew of an attempt to move freight over the U. P. to Portland, and by boat down to California. Doesn't recall having attempted to move freight to Portland by way of New Orleans. The reports

Never knew of use of Portland route to San Francisco nor to Portland via New Orleans.

of Mr. Harriman's stock purchases in New York Central have not influenced witness' solicitation of freight.

Wicks.

(1652) J. C. WICKS.

With Erie Iron & Steel Co.

For six years has handled the traffic of the Erie Iron & Steel Companies. California shipments go over the Atchison, largely because of the good time they have given, and because they have asked for the business. Has not been solicited by the Harriman lines. (1653) Solicitors are a help to witness, because they direct his attention to sales and other matters not pertaining to transportation. Also furnish information as to rates, trace cars, and obtain settlement of claims. Thinks an active solicitor can secure business for his road. Ships to Portland and Seattle over the U. P. and the Northern roads. (1654) The consignees generally route the business.

Solicitors a help.

Peck.

(1654) FRANK A. PECK.

With Brown Hoisting Machinery Co.

About seven years traffic manager of the Brown Hoisting Machinery Company. Ships chiefly by Omaha. Not much by the Atchison. To the North coast by the N. P. and G. N. The joint solicitor does not discriminate between the two lines. (1655) Solicitation described. All shipments over the U. P. for California go over the S. P. Has never shipped to California by Portland, nor to Portland by New Orleans or El Paso. Has no interest in the division of the rate.

Never shipped via Portland to San Francisco, nor to Portland via New Orleans or El Paso.

(1655-1656) B. C. KRIDLER.

Traffic manager of the Cleveland Hardware Company for two years. Testimony immaterial.

Schwerin.

(1656) R. P. SCHWERIN.

Testimony given before the Interstate Commerce Commission at San Francisco, January 29th, 1907.

Vice Prest. and Gen. Manager Pacific Mail.

Lives in San Mateo, Cal. (1657) Vice-President and General Manager of the Pacific Mail Steamship Company since 1893. The steamships owned by the Pacific Mail Steamshp Company in 1893 were "The City of Peking," the "Peru," the "Rio Janeiro," the "Colima," the "Colon," the "San Juan," the "San Jose," the "San Blas," the "Acapulco," the "Barracouta," the "Starbuck," and the "City of New York." Of those ships the "Rio Janeiro," the "City of Peking," and "Peru," were engaged in the Oriental trade. They sailed out of San Francisco. They touched at Yokohama, Kobe, Nagasaki, Shanghai, and Hong Kong in the Orient and sometimes at the Port of Amoy. Two of those boats were withdrawn after the "Korea" and "Siberia" were put in service.

Steamships owned.

(1658) The "Peru" was withdrawn from the service, the "Rio Janeiro" was lost, and that left the "Peking," the "Siberia," and the "Korea," on the Trans-Pacific. There was an interval after the "Rio Janeiro" was lost that they had only two vessels in that

service. Those boats made up the Oriental fleet until the "Mongolia" and "Manchuria" were put in the service, when the "City of Peking" was withdrawn. The "China" was on the run all the time—witness should have mentioned her. The "Peru" was not in the service until after the "Rio Janeiro" was lost. "We had three on all the time, and we took one off the Panama line and put it on the Trans-Pacific line. The "China" was there all the time. She was there when I went into the company." When the "Mongolia" and "Manchuria" were put in commission, the line consisted of the "Korea," "Siberia," "Manchuria," "Mongolia," and the "China"—five ships.

(1659) Prior to 1902, the "Rio," the "China," and the "Peking" made up the line, as far back as witness was with the company. The "City of New York" was on the line part of the time when they had extra freight. She was lost. The company had agents at the different Oriental cities. Howard is the Pacific Mail's agent at Yokohama and has been since witness' connection with company commenced in 1893. Tilden was agent at Kobe until three years ago, the latter was then promoted to Hong Kong and afterwards to Shanghai, leaving the service of the company about a year and a half ago. (1660) He was succeeded at Kobe by Campbell who is still agent there. Holmes, Ringer & Company are agents at Nagasaki. Fearin & Daniel Company at Shanghai from 1894 until 1904, and since 1904, Thebau. Van Buren at Hong Kong until three years ago, and since then Tilden until the latter was relieved by Silverstone. (1661) The freight that is brought this way by the P. M. originates as far west as Calcutta, and as far north as North China.

Agents in Orient.

Origin of traffic.

It is assembled by these various agents at these ports. The means these gentlemen take to secure traffic—well, they are in communication with shippers—the usual methods that would be employed anywhere, not so much solicitation by correspondence as solicitation personally, or the shipping men coming into the office and asking if they can get space on the steamers. The freight is not only handled by the houses there, but very largely controlled by the parent houses in this country. It is routed both by the houses in China or Japan, and also in this country.

Means to secure traffic.

By whom traffic routed.

(1662) All the time that the P. M. has been represented in the Orient by these gentlemen at these various places, they have had practically the same functions, that is, to look after passenger and freight traffic and procuring it to be sent to this country by the P. M. ships. Those ships still make through billings of commodities that are destined to points in the eastern parts of the United States, issuing the bills of lading in the Orient.

Through bills of lading.

Mr. Garland is the present official of the P. M. that has charge of the through freights. Witness has the right to approve or disapprove his actions. Witness takes a hand in the making of rates. Steamship rates on the Pacific are affected chiefly by competition. When witness started with the P. M. in 1893, that company was competing for business with all the other lines that crossed the

Rates affected chiefly by competition.

O. and O. S. S. Co.

Pacific, with the exception of the Occidental and Oriental Line, with which it worked in unison. The O. & O. had a separate organization and the P. M. was its agent for freight and passenger business. The latter has continued to act as the O. & O.'s agent during all the time witness has been with them. The O. & O. has three ships, and had the same number when witness came with the Pacific Mail. Their names were the "Doric," "Coptic," and "Gaelic."

(1663) The "Gaelic" was given up. For several years the O. & O. had only the "Doric" and the "Coptic." The P. M. did not manage the line of the O. & O., but simply acted as its agents for freight and passenger business, for which service the P. M. was paid. The P. M. has been in the Oriental trade since 1868. The P. M. was then the pioneer and only line. It took the first cargo of flour in 1868 to the Orient. The Occidental and Oriental Line was established in 1874. Its manager was, when witness' connection with the P. M. began, and still is, D. V. Stubbs, a brother of J. C. Stubbs.

Pacific Mail pioneer S. S. line.

(1664) In so far as the procuring of traffic is concerned, the P. M. and O. & O. have always since witness has represented P. M., acted in harmony. They obtain traffic through the same instrumentalities. When witness first came to the Pacific Mail it had no agencies in the United States, except the one in San Francisco. Between 1895 and 1897, Mr. Hawley was appointed agent in New York City. He continued in that capacity until he left the Southern Pacific Company about 1902. He was succeeded by Spence, his chief clerk, in charge of the freight business, as general eastern freight agent of the P. M. and by Nutting as its eastern general passenger agent. An agency was also established in Chicago, with Neimyer in charge. These gentlemen were all connected with the Southern Pacific.

Pacific Mail and O. and O. acted in harmony always.

Agencies in U. S.

Hawley was the general eastern traffic manager of the S. P., and Neimyer was the general western agent. The P. M. has no agencies in the east outside of New York and Chicago. In Boston the representative of the S. P. acted for the P. M. The same was true of Baltimore and Philadelphia. This was principally on passenger business. The agent at Boston never acted for us in freight matters. Hawley is the only one that acted for us on freight in New York City, and Neimyer in Chicago, and every ticket agent in the United States of every connecting carrier, trunk line, was appointed as our agent. We asked them to act as our ticket agents, and we pay commissions for all the business they secured." Nobody had the P. M.'s freight matters in charge other than these general officers in New York and Chicago. (1666) The P. M. solicited shipments to every point in the United States, by any line by which it could move it.

Contracting freight agents.

Solicited business on all lines.

The S. P. bought its interest in the capital stock of the P. M. in the fall of 1900, after the death of Mr. Huntington. Mr. Huntington died in August, 1900. The P. M. stock purchased by the S. P. was owned by something like 5,600 different stockholders. It was purchased in the street. (1667-1668) From the fall of 1900 the S. P.

Purchase of Pac. Mail stock by S. P.

owned the majority of the capital stock of the P. M., and still owns it. 50 per cent. of the stock of the O. & O. was owned by the U. P., and 50 per cent. by the Pacific Improvement Company. The stock of the Pacific Improvement Company was owned in equal proportions by the estate of Governor Stanford, by the Crocker Estate, by Mr. Huntington, individually, and Mr. Searles of New York. The Searles stock was the Hopkins stock. The portion that was owned by Governor Stanford, Mr. Crocker, and Mr. Hopkins was afterwards, between 1903 and 1905, purchased by the Union Pacific interests. The Huntingtons still retain a one-eighth interest.

Purchase of Pac. Imp. stock by U. P.

At the present time seven-eighths of the O. & O. belongs to the U. P. The S. P. as a corporation never owned any of the stock of the O. & O. The P. M. became the agent for the O. & O. in 1884. "In the Orient, when they first started in, they had a joint agency, and then they split in 1876, and they continued separate agents until 1884, and then the Pacific Mail again took the agency for that company." The agency of the P. M. for the O. & O. has been continuous ever since witness has been with the P. M.

O. and O. stock owned by U. P.

Pacific Mail agent for O. and O.

(1669) At the time witness came to the Pacific Mail in 1893, these were the only two regular lines of steamships going out of San Francisco to the Orient. The Canadian Pacific was operating a line of steamers out of Vancouver. It was competitive with the P. M. It had separate agents in the Orient. There was also the Northern Pacific Steamship Company from Tacoma. That line was also in competition with the P. M. Those are all the lines. In 1899 the Toyo Kaisha Line was put on, running to San Francisco. The P. M. took the agency for that line from the beginning.

Trans-Pacific lines.

(1670) It has since kept that agency. The Standard Oil Company also runs a line out of San Francisco to the Orient. They run oil out and commercial freight home. Then there is The Dollar Steamship Company. The Standard Oil Line runs about a monthly service, which must take four boats. They take no outward freight except oil. They bring back anything they can get hold of. They are not represented in any way by the P. M. in the Orient. The Dollar Company has been running the last three or four years.

Standard Oil line.

Dollar S. S. Co.

(1671) The latter's service is irregular. They load lumber from the Sound and come back with general merchandise, anything they can get in the Orient. They are competitors homeward, and not outward. The Dollar Line has separate agencies in the Orient. The next one is the French Line. It has an arrival in San Francisco every month. They compete with the Pacific Mail on inward business only. They just keep going around to the eastward all the time, keep a line of ships going around the world. They go from San Francisco around the Horn and touch all along the coast of Central America, Mexico, South America, and so on. They have separate agencies in the Orient There is no other line coming inward.

French line.

Going back to the lines operating from the Sound, in addition to the Northern Pacific line, there is the Nippon Nushen Kaisha, run in

Nippon Nushen Kaisha.

connection with the Great Northern. That was established about 1898 or 1899. (1672) That company was not represented in any way by, but has been competitive with, the P. M. in the Orient.

Ocean S. S. Co.

There is a line called the Ocean Steamship Company, which sails from Tacoma or Seattle. They have separate agencies and compete

China Mutual S. S. Co.

with the P. M. both ways. Then there is the China Mutual Steamship Company, which sails from Tacoma or Seattle. They have separate agencies and are competitive with the P. M. both ways.

Dodwell line.

Then there was the Dodwell Line of Portland. That was established in 1896, or 1897, and lasted three years. They had separate agencies from the P. M., and competed with it. (1673) They were preceded

Samuels' line.

by Samuels & Samuels. They were there two or three years. Both companies were competitors of the P. M. Dodwell was succeeded by the O. R. & N. For about three months intervening, there

Graham line.

was a man named Graham had some ships running out of Portland, but witness never considered that a line. He had some ships there, chartered some ships. Witness didn't consider that the Graham line competed with P. M. It was too small and irregular. He, however, regarded the Samuels and Dodwell lines as competitors, also the

Portland and Asiatic.

P. & A. The P. & A. was organized by the O. R. & N. Company. It is still running. Witness is representing that company and has been (1674) since 1904. Prior to that witness had nothing to do with it. It is to-day independent of the P. M. Up to 1904, the P. & A. had agents of their own in the Orient, soliciting traffic and per-

Pacific Mail agent of P. & A. in Orient.

forming the usual duties of agents. To-day the P. M. are its agents. At the port of Nagasaki, which is a large coaling port, practically, Holmes, Ringer and Company represent all steamship lines that enter that one port. Witness reverts to the Great Northern. "Before them came on the Boston Towboat Company, with the Tremont, the Fremont, the Lyra, the Hyades and the Pleiades." In addition to that were the two ships of the Great Northern, the "Minnesota" and the "Dakota." The foregoing constitutes the whole list of ships that are plying between the ports of the Pacific Coast and the Orient, as a regular thing, outside of the tramp boats, at the present time.

San Diego line runs in connection with Santa Fe.

(1675) There was at one time a line of boats proceeding from San Diego—an English shipping firm put the line on, and witness thinks they were on about two years, 1901, 1902, or 1903,—around there. That was a competing line. Witness did not represent them. The line ran in connection with the Santa Fe. There are no railroads other than the Santa Fe reaching San Diego. Witness recalls no conferences between the officials of the Santa Fe and the Southern Pacific or himself about the time this line to San Diego was given up.

(1676) Witness had always tried to get the Santa Fe into business relations with the P. M. He had always told them he could do it better than they could get it done by anybody else. "Every time I saw Paul Morton, I told him he ought to give up his business, that we could do it better than anybody else. He was

very much dissatisfied with the service he was getting at San Diego." Witness understood the line was abandoned because they lost so much money. The agents of the P. M. in the Orient make no arrangements as to the rail line the traffic shall take upon reaching San Francisco. They do not solicit it for any particular route after it gets to this country.

San Diego line abandoned.

(1677) The Southern Pacific and Santa Fe do not maintain separate agencies in the Orient. "Q. Then will you explain, if you can, how the business is divided over there, as to removal to the east after it reaches this country? A. A ship comes in here and we just turn the whole cargo over to the Southern Pacific; and another ship comes in and we turn the whole cargo over to the Santa Fe." Have been doing that the past six months. "Q. * * Prior to six months ago what method did you take to secure a distribution of the east-bound traffic as between the Southern Pacific and the Santa Fe? A. We just loaded the cars put on the dock, and the railroad did the routing. * * * We have no agreement. We simply have an arrangement for the exchange of traffic. The Southern Pacific now gives a much larger proportion of traffic than the Santa Fe does, and we try to give the Southern Pacific as nearly equal percentages as we can offer them, and the same way with the Santa Fe. Q. That is, if the Southern Pacific gives you 75 per cent. of the inward-bound (outward) freight? (1678) A. Yes, sir, we would be in duty bound to give the Southern Pacific 75 per cent. of inward-bound freight. If the reverse of that were to take place, and if the Santa Fe should give us 75 per cent. of the outward-bound business, I would naturally be inclined to give the Santa Fe 75 per cent. of the inward-bound business."

Division of traffic between S. P. and Santa Fe.

The Southern Pacific has never interfered in any way with witness' operation of the steamship company. Witness thought Mr. Stubbs looked upon him in the question of traffic as if he had nothing whatever to do with any incorporation whose stock is owned in the other company by which he (Stubbs) is employed, absolutely as a rank outsider. Prior to six months ago all the freight was turned over to the S. P. "I suppose that they routed it—they had an arrangement by which they routed a certain portion by the Santa Fe, and a certain portion by the S. P., but that was done under our, under the steamship company's understanding." While the California and Oriental Line, the one to San Diego, was in existence, (1679) all of the freight from the P. M. steamships was sent over to the S. P. Witness does not know how the S. P. sent it east. Does not know whether they gave any of it to the Santa Fe or not. "Q. Did they, a year ago, give any of it to the Santa Fe? A. Yes, sir. Q. Did they not give a certain amount of that traffic to the Santa Fe at all times after the San Diego line was abandoned? A. That is my impression. * * * Q. * * * Did you hold out to Mr. Morton an assurance that his line would receive traffic from your ships if he would abandon the San Diego line? A. That stood to reason, that we had to, in making a traffic arrangement of that kind—it

S. P. never interfered with operation of Pacific Mail.

Formerly all the traffic of Pacific Mail was given to S. P.

stood to reason that we had to give him traffic in exchange for the traffic that he gave us."

Report as to amount of tonnage given to Santa Fe.

(1680) Witness made a report to the Santa Fe after the P. M. was in operation with that company, showing the amount of tonnage they had been given. "I kept them posted as to the amount of tonnage that passed over their lines"—that is, tonnage bound from San Francisco to interior points of the United States. Witness never made any stipulation with Mr. Morton as to any definite amount of freight. A report to the Santa Fe of it was made out each month after the business had passed over the dock.

(1681) Does not think any has been made since the fire. The report was sent to Mr. Bissell. Sometimes that freight would run for a month 20 per cent., sometimes it would run 30 per cent., sometimes 17 per cent., sometimes 28 per cent.—it varied from month to month. Santa Fe never found any fault with the amount of freight given it. "Q. They were quite content, were they? A. Well, we were giving them more freight than they were giving us. They were not giving us the same amount— Q. I say, they were content, were they? A. As far as I know. Q. They did not make any fuss about the amount of business they were getting? A. No, sir." There is a difference in the amount of cargo coming over in different ships. If the Santa Fe "is not giving us outward tonnage, we would not turn every second ship over to the Santa Fe; we would regulate that so as to have a fair exchange for the amount of tonnage over to us."

Santa Fe found no fault with tonnage.

Alternate cargoes.

(1682) Have been giving the Santa Fe every alternate cargoes for the past six months, but does not know that he will continue to do that. The change in the method of handling the freight came up in a conversation between Mr. Luce, Mr. Chambers and witness. Mr. Luce is the general freight agent of the Southern Pacific Company. Mr. Chambers is the general freight agent of the Santa Fe. "Q. What was said at that conversation, in substance, by each of you? A. Well, I believe that I raised the point that if we turned the freight—if we turned the freight over to the Southern Pacific Company the question immediately arose in regard to the Santa Fe handling the freight. We had had considerable trouble on the dock in regard to getting Southern Pacific cars, and I think I threatened that unless I had less trouble in getting cars from the Southern Pacific, I would shove all the freight over the Santa Fe; if the Southern Pacific didn't give me any cars, I would send the freight over the Santa Fe, because the freight was congested on the docks there." The question was discussed and it was concluded best, instead of apportioning out of the ship any special cargo, for instance, a cargo that might be served best by the Santa Fe lines, to try to aggregate that cargo out of the ship, that we would turn over the whole cargo to the Santa Fe, and let them bill (1683) it out as they saw fit, and then turn over the whole net cargo to the Southern Pacific, and let them bill it out as they saw fit. "Q. Mr. Schwerin, did you three gentlemen agree on that?

Discussion as to apportionment of traffic between S. P. and Santa Fe.

A. We did. Q. And you have since carried out that agreement? A. As far as I know." The P. M. did not adopt any new policy as to the publishing of rates.

(1684) To the best of witness' knowledge, rates from San Francisco to eastern points in the United States, over the Santa Fe, are the same as rates to the same points over the Southern Pacific. All the trans-continental and all the trans-Pacific lines are billing at the same rates. The principal commodities the P. M. brings from the Orient are tea and matting. Some rice is imported, locally, and silk is also imported; also curios—but the great bulk of the commodities are tea and matting.

Rates the same over Santa Fe and S. P.

In the Orient the steamship line's bill of lading is issued, which simply shows that the traffic will move via the port of San Francisco. The bill of lading does not name the American railroad that carries it to the east. It is reserved to the steamship line to determine there, or at any time it pleases, just how the freight shall move, once it reaches the port of San Francisco.

Through bills of lading.

(1685) Prior to the abandonment of the San Diego Line, the Southern Pacific had all the inward business of witness' ships. After the Santa Fe freight began to go through San Francisco, that company began to get a percentage of the inward business, which varied from 17 to 20 per cent. and higher than that sometimes. That division of traffic embraces the Japanese Line, the O. & O., and the P. M. When witness turns over to the Southern Pacific its share of this business, he has nothing to do with routing it to the east. That is left to the Southern Pacific.

Division of traffic embraces the Japanese line, the O. and O. and the P. M.

Witness would object to the Atlantic seaboard business moving via the Sunset Route. "We are all competing for the rapidity with which we deliver tonnage from the Orient destined for the Atlantic seaboard, and we believe that the Central and Union Pacific and Chicago & Northwestern can make better time than the Sunset—we want that all-rail route."

Better time made by C. P. U. P. and N. W. line.

(1686) That has been the route since witness can remember. Some of the teas used to go over the Rio Grande. Witness understands that teas are still going over the Rio Grande. It is routed that way by the Southern Pacific. If the shippers or the consignees have any voice in the routing of the traffic after it is turned over to the railroads, they do not exercise it. The traffic that goes over the Portland and Asiatic takes the O. R. & N., the Oregon Short Line, and U. P., and witness supposes, the Northwestern, (1687) After the freight reaches the junction of the Union Pacific, witness does not know which way it goes. Witness prefers to have inward business via San Francisco go east over the Northwestern because there is an Asiatic fast freight on that line. "As far as the Portland tonnage is concerned, with the exception of silk, silk piece goods, the rougher or common class of goods that go by tramp steamers rather than by mail and dispatch steamers, and excluding this local Oriental business which we have largely here in San Francisco, the general

Asiatic fast freight on Northwestern.

tonnage is about the same," (as that which goes through the San Francisco gateway).

Oriental traffic brought down from Portland by O. R. & N. boats.

Witness remembers that it was customary when the O. R. & N. was independent of the S. P. but had boats running to the Orient in connection with the former, for the O. R. & N. boats from Portland to San Francisco to bring down to San Francisco Oriental traffic that came in by Portland. (1688) That was done without extra charge, but the traffic was very small in amount. The charge between Portland and San Francisco is pro-rated between the Portland and Asiatic Line and the San Francisco and Portland Line. The same rates apply (from the Orient) to San Francisco via Portland as apply to San Francisco direct. The San Francisco and Portland Line has no corporate connection with the Portland and Asiatic.

(1689) Witness explains the method of pro-rating the local charge on Oriental shipments from Portland to San Francisco.

Pacific Mail Panama route.

(1690) The Pacific Mail has a Panama line. It runs to the ports of Manzanilla and Mazatlin, San Blas, Acapulco, Coos, Champerico, San Jose, Acajutla, La Libertad, La Union, Corinta, and Ancon. The last is the new name for the port of Panama. The P. M. brings out commodities from the east by way of Panama. Witness has no boats on the other side of the Isthmus. In connection with the trade that comes around by Panama the P. M. operates with the United Fruit Company from Gulf points and with the Panama Railroad line—from New York—the Panama Railroad Company's steamships—and with the Hamburg-American Packet Company from New York to points other than American, and with all the trans-Atlantic lines out of Colon. The P. M. accepts their shipments from Europe that way, brought from trans-Atlantic points and then on down from New York and across the isthmus to all the points along the Central American and Mexican coast that he has named. There were six ships in that trade when witness first became connected with the P. M., running between Panama and San Francisco. (1691) Is running nine there now. Has been running nine about five years. The P. M. is competitive with the rail lines on business from New York to San Francisco, and always has been. The present tonnage of the ships as compared with the average tonnage of ships that were running on the line in 1893, (1692) has increased about 33 1-3 per cent. It was about 15,000 tons and is now about 20,000 tons. The P. & A. charters its ships from the Hamburg-American Packet Company. The O. & O. charters its ships from the White Star Company. Mr. Mahl was in error in testifying that the O. & O. had gone into liquidation.

Pacific Mail competes with rail lines.

P. & A. and O. & O. lines charter their ships.

Pacific Mail owns its own boats.

"Magnolia" and "Manchuria."

(1693) The P. M. owns all the boats heretofore enumerated by the witness as operated by the Pacific Mail. In addition it operates the "Mongolia" and "Manchuria." As far as witness knows those two boats belong to E. H. Harriman, personally. Mr. Harriman is President of the Pacific Mail, and witness acts under his instructions. There is a charter party covering these two ships (1694) running between the P. M. and E. H. Harriman. The P. M.

has been operating those boats since 1904. The arrangement for the leasing or chartering of these boats was made with Mr. E. H. Harriman.

(1695) Witness represented the P. M. in the negotiations, and recognized Mr Harriman as acting personally. The rental for the ships varied. The first year it was in the neighborhood of $20,000.00 a month, and it was gradually increased until it was $30,000.00 a month, for each ship. "In the operation of a new ship, the expenses are always heavier than after you get the ship running, and also the expenses are heavier to introduce a new ship. So I contended that the first—the first six or nine months of the charter, the charter should be less than what it would be afterwards. So the final charter—we are paying, the last rate that we are paying, is $30,000.00 a month. But I don't just remember how the terms varied from $20,000 to $30,000, and exactly what period that covered." The rental is remitted to the controller, Mr. Mahl.

(1696) Witness is president of the O. & O. Referring to the Panama ships, they are the property of the P. M. except from time to time ships are chartered on that line, for extra service. Panama ships. (1697) The San Francisco & Portland Steamship Company was organized in 1904. Prior to that time witness had nothing to do with the running of the ships of that line. Up to that time they were known as the ocean division of the O. R. & N. "Q. Those ships made the connection of the O. R. & N. with San Francisco? A. Yes, sir; I presume so." The O. R. & N. are the stockholders of the San Francisco & Portland Steamship Company. The ships were chartered by the Steamship Company from the O. R. & N. Company. There is now only one ship on that line, the "Columbia," about 1,800 tons capacity.

(1698) When witness took charge of that line there were two boats on it, the "Elder" and the "Columbia." Knows nothing about the history of the Company prior to the time he took charge. The "Elder" was lost at the Columbia River about two years ago. The Company immediately bought the "St. Paul" and fitted her up and put her on the line, a much better ship than the "Elder." She was lost a year ago last summer on the coast. Then the "Barracouta" and "Costa Rica" and the "Aztec" and the "Spokane" were chartered. The "Barracouta," "Aztec" and "Costa Rica" belonged to the P. M. There is in the service there now the "Columbia," "Costa Rica," and "Aztec." They have been having a very serious time with that line this summer. It takes its beginning from the time of the earthquake. Boats of San Francisco and Portland S.S. Co.

(1699) Witness details the troubles experienced. There is now a five days' service for the two passenger ships between Portland and San Francisco and the "Aztec," carrying freight only, runs as fast as they can load and discharge. "She would take 21 days to make the round trip." It takes about five days to go up and down, that is, five days up and five days down, and the balance of the time is taken in the difficulties of discharging the ships in port. The Service between Portland and San Francisco.

passenger ships are run on a schedule—to Astoria, about 48 hours. They are about 4 or 5 hours going up the Columbia and the return is about the same. Witness states they have been trying very hard to purchase two five thousand ton ships for that line, but have not been able to get a satisfactory price yet.

Increase in rates.

(1700) There was an increase in rates on that line, made effective this month. Roughly speaking the increase covers southbound flour and feed-stuffs, and northbound canned goods, heavy wagons, automobiles, sugar. Does not know that the Southern Pacific raised its rail rates to and from Portland at about the same time that the steamship rates were raised, but witness states that they have always raised rates when the steamship line did so.

(1701) "COMR. LANE. Was there a consultation between yourself and any of the railroad men respecting the raising of rates before it was done? A. We had a differential against the railroad, and I have discussed it with the Pacific Coast Steamship Company, and our rates are governed very largely by their water rate; and I have discussed it with the railroad company. And there has been general discussion as to whether the rates were too low, and whether they ought to be advanced or not." It was decided to advance the rates in November or December. Witness discussed the increase with Mr. Luce, general freight agent of the Southern Pacific. "COMR. LANE. It was after that conversation, subsequent to that conversation with Mr. Luce, that you made your advance? WITNESS. Well, it would not have made any difference whether they made an advance or not, we would have advanced our rates, because the rates were unremunerative. The cost of labor had advanced so, our stevedoring charges had advanced over one-third, and it was costing us as high as 76 cents a ton to take freight out of the ship, and we were getting $2.50 a ton for it." The differential between the steamship line and the railroad witness thought was about 60 cents a ton. "It was absolutely immaterial to me whether the railroad advanced the rate or not. I said we would advance our rates, and the Pacific Coast Steamship Company said they would advance their rates. They were in the same position we were. There had been an advance in the price of fuel and supplies, and an advance in the pay of the officers, and in the crews' wages; and, all together, we were in a very bad shape."

Cause of advance in rates.

(1702) The steamship line has advanced rates in cases where the Southern Pacific did not do so. Witness has testified that the S. P. customarily advanced the rates when the steamship line did—that is the general rule; but he thinks there are cases where they have not done so. If the S. P. advance their rates the steamship line will advance theirs and he supposes if the latter advanced their rates, the former would advance theirs, though there is no understanding between them upon that point. As a matter of fact, in his study of the traffic between San Francisco and Portland, which is largely a traffic that moves from San Francisco to Portland, the

No understanding about rate changes.

S. P. is not a competitor. The steamship line gives so much better service than they can, that the former gets their business.

(1703) The steamship line gets the freight largely unsolicited, and it is not able to handle all the freight that is offered. It makes better time to Portland than the rail line. "A man can order his groceries in San Francisco, and barring those accidents that we have had, he will know just when he will get his goods in Portland." Transportation by rail has been very much disturbed lately. Does not consider the Southern Pacific a competitor at the present time, on account of the congested amount of freight, but if the market was lean of freight, he would consider they were competitors. Steamship lines solicitors would compete against S. P. for every pound of freight they can get. Does not mean to testify that under ordinary conditions they are not competitors.

Steamship line makes better time to Portland than the rail line.

(1704) The south-bound traffic is heavier than the north-bound. The north-bound ships have been going out with light tonnage. There is an agency in San Francisco for the San Francisco and Portland Steamship Line entirely separate from the P. M. It is under the charge of witness. The Pacific Mail runs no boats to Alaska, or to Puget Sound points. Has been unable to get two additional boats for the Portland and San Francisco Line, because of the difference of price between the owner and himself.

South bound traffic heavier than north bound.

(1705) Cannot buy a foreign made ship because a foreign bottom is not permitted to operate in coastwise trade. The supply of American made ships is very small. The traffic south-bound is mostly mill products,—flour, feed, bran, and oats, and shakes, shingles and laths. Most of it originates in Portland and witness supposes along the line of the O. R. & N. Those boats do not handle any traffic coming from the east. The north-bound traffic ordinarily is canned goods, sugar, salt, cement—almost entirely products of California. "Q. Is it not true, Mr. Schwerin, that as a rule, generally speaking, railroads are not equal to competing with ocean carriers; that is, coastwise carriers? Is that not true on the Atlantic? That is, I mean from seaport to seaport; I am not speaking of the ordinary river steamers, but of coastwise steamers. A. I think they get the first call on the traffic." That is true as to time and facilities.

Can not buy foreign made ship.

Steamships have the advantage on business from seaport to seaport.

(1706) For instance, the Old Dominion Line has the bulk of the traffic between Norfolk and New York City, and the Morgan and Mallory Steamship lines have the bulk of the traffic between New York and New Orleans and Galveston. Inquiries as to the basis of the differential between rail and steamship lines, San Francisco to Portland. (1707) The Pacific Mail has no steamers on the Atlantic. It used to operate a line from New York to Panama, and the Panama Railroad Company would not allow it to continue there, in connection with the Panama Railroad. That was discontinued late in the '90's. The Cosmos Line and the French Line are also operating between San Francisco and Panama, and South American and Central American ports. The Pacific Mail Company has had severe com-

Cosmos and French line also operating between San Francisco and Panama.

petition between San Francisco and the southern ports ever since witness has known it.

California and Oriental

(1708) The California & Oriental Line, which sailed from San Diego and went out of business in 1902 or 1903, was supposed to have a steamer first every month, and later they contemplated having two steamers a month, or a steamer every three weeks. Witness does not remember which. The P. M. had a steamer from San Francisco at that time about every nine days. The Atchison opened the steamship line from San Diego before it got its rails into San Francisco. Witness began his efforts to get the business of the Santa Fe Company almost from the time he became connected with the Pacific Mail. "Every time I saw Mr. Morton I would joke him about it, or talk earnestly to him, or any way to try to persuade him to give me the business." The last talk witness had with Mr. Morton about it was in the Waldorf in New York, and it was long after the California and Oriental Line had gone out of business. Witness had no arrangement with Mr. Morton until some time after the San Diego line went out of business.

Santa Fe abandoned boat line without agreement.

(1709) "COMR. LANE. Did they go out of business in view of any conversation that you had with Mr. Morton or the Santa Fe people? WITNESS. Absolutely not." It was not in pursuance of any agreement or understanding that they should get a share of the business that they put that steamship line out of business. Witness understood from Mr. Morton and from the agent of the line, at San Francisco, that they were losing considerable money—the line was very unprofitable. "Q. Then after that line was discontinued, you arranged with the Santa Fe to get some of their business, and to reserve space for them on your ships out-bound, so as to use their freight? A. We had to do that. We had to agree to let them have a certain amount of space on the outward bound ships, otherwise they would not have been able to contract it, and we would not have known what they would want to carry, how much." In return for that witness agreed to give them some portion, it varied above and below 25 per cent., but he tried to give them about 25 per cent. The Santa Fe has not given the Pacific Mail as much as that company has given the Santa Fe.

Formerly could make rates without consulting rail lines.

(1710) He doesn't cut the Atchison off, because he wants to have an argument on his side to make them get after freight and aid the Pacific Mail in competing with the northern lines who pull freight that would naturally go to the south. All the freight originates in competitive territory. All the freight the Pacific Mail carries could just as well go out from the north. There was a time when witness could make a rate from the Orient to any point in the United States, without consulting the rail lines at all. Now, under the Interstate Commerce Commission, thirty days' notice has to be given, and witness is entirely out of competition so far as the Orient is concerned, because the Suez Line can make any rates they please, without notice. The Pacific Mail publishes a through rate from Hong Kong to Chicago.

(1711) Published rate does not show the divisions. "We can arrange the division as we may desire." The Pacific Mail has the same rate with the Atchison that it has with the S. P., the same division. Witness thought he could publish a rate to San Francisco, and a rate upon import business from San Francisco to Chicago. The Suez competition is principally to Atlantic seaports, and the Pacific Mail is at a disadvantage in respect to that. The Suez competition is composed of foreign steamships operated very cheaply and as tramps. (1712) There is no written contract between the Pacific Mail and Atchison. It is merely an understanding. It was made in order to increase the business. Witness contemplated putting on the "Korea" and "Siberia."

Same division of rate with Santa Fe as with S. P.

(1713) Witness was trying to get business for the Steamship Company. Didn't consider the S. P. at all. Mr. Harriman has never made witness a single suggestion on that subject. When it comes to the division of rates, Mr. Harriman has nothing to say. It is fought out between Mr. Stubbs and witness entirely. Divisions have not changed since 1893 and 1894, when the S. P. was not interested in the Pacific Mail. Cannot imagine any reason why Mr. Harriman should wish the Pacific Mail worked in the interest of the S. P. against its own interest.

In getting business for the steamship Co. does not consider the S. P. at all.

(1714) The Atchison has no rail connection with the docks of the Pacific Mail, and any freight to or from its docks must be passed over the trackage of the Southern Pacific to reach the former's tracks. In testifying that all the traffic was turned over to the Southern Pacific, witness meant that the Atchison would turn their cars over to the Southern Pacific, to be again distributed over to the Santa Fe, to their own line. "On the inward bound freight, we would bill direct to the Santa Fe for our advance charges for freight routed by the Santa Fe, and the same way to the Southern Pacific." On the outward freight the Santa Fe and S. P. would collect direct from the P. M. for their respective proportions of the through rate. It was not left to the S. P. to decide what should go to the Atchison, but this was determined by the P. M.

Billing and collections.

(1715) The rental paid for the use of the "Manchuria" and "Mongolia" was reasonable and fair to the P. M. At the time the present rates or divisions with the Southern Pacific were put in by agreement between Mr. Stubbs and witness, the Southern Pacific Company had no interest in the Pacific Mail. Hawley in New York and Neimyer in Chicago were appointed agents in 1894 and 1895. The Pacific Mail was working with the Southern Pacific as a connecting line. "There were certain questions that would come up from time to time that required quick action in the east, in competition for traffic, and I solicited to have those people appointed there, so they could communicate direct with me, and get our authority as to what we were willing to do at the steamship end of it, and they acted there entirely under that understanding."

S. P. had no interest in Pacific Mail when rates were made.

Sailings of Pacific Mail.

In 1900 and 1901 the sailings of the Pacific Mail from this port were about the same as they are now, that is, about every nine days. "Q. How often were the sailings from Puget Sound at that time? A. There was one, at that time there was really one, what we considered one regular line there which had sailings that were absolutely definite. The Canadian Pacific and ourselves consider that we run those lines on railroad train service. That is, we know just exactly what ship is to come into port, and exactly what day she is to leave, and they carry mails. Outside of the Northern Pacific Steamship Company, that operated at that time from Tacoma, I think the Canadian Pacific and ourselves were the only ones that maintained an absolutely regular schedule, although they advertised a schedule possibly of dates of sailings."

Maintained regular schedule.

Sailings of tramp steamers.

(1716) Sailings from the Sound were very frequent. There were a great many tramp steamers coming in there under the guise of regular lines. Taking into consideration all the lines from the Puget Sound, their sailings were more frequent than witness'. The steamers of the P. & A. were at first to sail once a month. They did not anywhere near maintain that schedule. They were operating three steamers, carrying freight only. Witness believes they did carry some inward Asiatic passengers. There was no other line out of Portland.

Sailings of P. & A. line.

P. & A. established to take care of the flour and grain business.

(1717) Traffic of the P. & A. is almost entirely flour. That line was established to take care of the flour and grain business that originated on the lines of the O. R. & N. That line has never been able to compete with the San Francisco and Puget Sound lines for business from the Atlantic Seaboard. Witness gives the reasons therefor, as follows:

"A man who ships from the East wants to know when his freight is going to leave the seaport through which the freight passes, and he will figure to send his freight over by rail and reach the port so as to go by a certain steamer. We maintain our schedule some five, six, seven to eight months ahead of our sailings, so that a shipper in correspondence with the Orient can tell his correspondent what freight he is going to get a long time ahead. If a man puts his agreement into the form of a contract, he would contract that freight to be delivered by a certain steamer. It is to maintain that traffic, hold that traffic, that we have tried so hard to maintain our schedule. On the Portland and Asiatic line, they get bunched up sometimes in Portland, and then again they get bunched up in the Orient. They advertise a steamer to sail on a certain date, and she may sail two or three weeks later than that. The result was that the shipper would be continually growling about his freight, or, there might be some delay on the railroad, and the freight would not get in until the steamer had left, she might have gotten out at near her schedule, and then there would not be another steamer at all for a month, and meanwhile that freight would lie in Portland for a month waiting for a steamer; whereas in San Francisco, in case he missed one steamer, we had another steamer

Reasons why P. & A. cannot compete for business from East.

in 9 days, and that would take the freight right forward. That was the superiority of our line over the Portland and Asiatic, so far as the shippers are concerned, and what they demand in the handling of this Oriental freight."

(1718) The Portland and Asiatic Steamship Company has been operating at a decided loss. Schwerin Exhibit No. 1 is a statement of receipts and expenses of the P. & A. for the year ending June 30th, 1902, and for each subsequent year to and including June 30, 1906. It shows a loss for each year, except 1905, during which the Japanese-Russian War was in progress. It shows a loss for the entire period of $283,749.29.

P. & A. operated at a loss.

(1719) The line is maintained at a loss, because "if we don't maintain the line, Mr. Wilcox, who has the Portland Flouring Mill, will be compelled to close that mill at the port of Portland, and the people of Portland would very seriously object to having that enterprise destroyed there and moved to Puget Sound. He has another mill at Dayton upon which it would have some effect. Then all the grain that originates along the line of the O. R. & N., would go to Puget Sound Mills, and mills along the lines tributary to Puget Sound, and be milled there, and shipped to the Orient." The Wilcox mill has doubled in capacity in the last three years.

Reasons for maintaining it.

(1720) The O. R. & N.'s object in maintaining this line of steamers at a loss is to hold the traffic to its rails. Without the support of the O. R. & N. in that way could a steamship line of this character be maintained out of Portland. As a steamship proposition it is not practicable. It could not be made so, even if you ran a regular schedule, put on more boats up there and did a regular competitive business with San Francisco. The more steamers you put on there, the more money you will lose. "If the San Francisco line was dependent upon through freights alone they would go out of business. There is not a steamer out of the port of San Francisco to-day that we could run if it were merely a question of freight, I mean trans-continental freight. But we have here inward and outward passenger business, and we also have a large passenger business between the Orient and the Hawaiian Islands. It is a combination of the freight and passenger business that permits this line to run, although this year the Pacific Mail Line has lost nearly half a million dollars here in this port. * * * We have mentioned a fairly regular schedule out of Portland. The only time that our schedule has varied we are running four steamers—and in reality it has been at the earnest solicitation of the Portland shippers that we have made the divergences that have caused the irregularity of the schedule, and have sent one (1721) of our steamers, instead of sending it over to Hong Kong or Moji, at their earnest solicitation, to Kadodate or Newschwang, or some other place out of the regular line, and as those vessels are freight carriers and run to maximum speed, it is impossible, when making those divergences, to get them back into the schedule again without some little lapse. We tried to maintain a steamer every three or four weeks. Now, in Portland, you

San Francisco S. S. lines could not run if it were not for the passenger business.

Cause of disarrangement of boat schedules on Portland line.

have had an illustration there of the "Oregonian," lying four or five days at St. Helena trying to go up the river to discharge a cargo. And while she is lying there, she ought to have been up there and discharged. The "Nikomedia," again, appears up there off Astoria, and we have worked in Portland day and night to keep those ships on schedule. And the same way in the Orient, we have turned them around in Hong Kong in 48 hours, unloaded and loaded in 48 hours, working day and night and we come over to Portland and we can't get in on account of the bar. Then we make up that time again at Portland and go down the river and lie there 7 days trying to get over the bar again. * * * We not only have the difficulty of not getting this passenger business, but we have physical difficulties to contend with on the Portland line." The P. & A. ships are modern freighters.

Capital stock of Pac. Mail.

(1722) Business originating in the Orient and going over to Portland via the P. & A., and then to San Francisco, was very trifling in volume, being practically nothing. The capital stock of the Pacific Mail is $20,000,000.00. It pays dividends indirectly. It has just finished this last year paying for the "Siberia" and "Korea" out of earnings. It would run into some $1,300,000 in the last four years, witness thought. The Pacific Mail does not pay the insurance on the "Mongolia" and "Manchuria."

Insurance.

(1723) The insurance premium on both ships amounts to about $120,000.00 per year. The owners pay for all repairs and all the maintenance of the ships. The P. & A. cannot compete with San Francisco on business originating on the Atlantic seaboard, nor on business in the Orient and destined to eastern points in the United States. "It is the same difficulty here. Kobe is one of our principal ports, and sometimes in the port of Kobe there are four different lines of express steamers, and we have a pretty hard time getting any freight on a tramp steamer against four express steamers, for instance, the 'Minnesota' might be there and the 'Fremont' might be there, and the Canadian express steamer in there, and perhaps one of our express steamers in there."

P. & A. cannot compete on business originating in Orient.

Small cargoes on inbound voyage.

(1724) The P. & A. boats bring back some merchandise from the Orient, but do not bring back anything like full cargoes. The Pacific Mail boats bring back full cargoes sometimes. They usually do at certain periods of the year. High grade goods all move by the express steamers, and not by tramps, but as to mattings, teas and general curios, the agents in the Orient representing the P. M. and the P. & A. work just as hard for the one line as the other. "Shippers in the Orient will almost invariably ship by the first steamer, and they will give the preference to the better steamer." (1725) Witness' agents in the Orient solicit just as actively for the P. & A. as they do for the Pacific Mail, and the O. & O. or the T. K. E. The P. & A. pay the Pacific Mail a commission for transacting their business, the same as the Pacific Mail pay any commercial house that transacts business for it. Witness describes the manner of securing freight for the P. M. and P. & A. in the Orient.

Pacific Mail gets commission from P. & A.

(1726) "Q. There is no competition between the Portland & Asiatic, the Occidental & Oriental, the Pacific Mail, and the Japanese line, controlled by the Pacific Mail Steamship Company, but they are all four lines competing against the Great Northern and Canadian Pacific and other lines? A. Well, you might describe it that way." The Pacific Mail takes shipments from the Orient for Los Angeles. They are trans-shipped at San Francisco by the Pacific Coast Steamship Company.

Testimony of Mr. Stubbs, given in an investigation in Chicago, read, in which he stated that Atchison would abandon the San Diego line as part of an understanding that the Pacific Mail should be used. (1727) Mr. Stubbs did not think there was an agreement, nothing more than an expectation of that result. Witness knew nothing of any such negotiations. (1728) Witness has always believed he had a right to make arrangements between the Pacific Mail and the Atchison that way for the benefit of San Francisco and the individual lines. Felt that he was building up traffic. There is now a larger volume of traffic coming in, and he wanted the assistance of the Atchison against the fierce competition for outward traffic. Doesn't want the traffic coming into or going out of California to be divided between two ports. Witness' interest is in the port of San Francisco. Operates in connection with the Hawaiian Line, and also the Panama route. (1730) The California & Oriental line had been abandoned before the understanding between the Atchison and Pacific Mail was reached.

Trying to build up the port of San Francisco.

(1731) Witness frequently discussed traffic matters with S. P. officials, and asked them to help him build up the port of San Francisco. Had frequently discussed with Mr. Stubbs the advisability of handling Santa Fe traffic for the benefit of the steamship line. (1732) Ever since the first year of the operation of the California & Oriental, witness has sought to secure the business of the Atchison as a connecting line.

CHICAGO, ILL., MARCH 16, 1909.

(1734) J. A. WENTZ.

Wentz.

Lives at Chicago, Ill. Retired from business. A railroad man all his life. (1735) For fifteen years prior to Jan. 1, 1908, was commercial agent of the Rock Island at Chicago. For thirteen years prior to that was general agent at Kansas City. For one year prior to that was in business for himself. For four years prior to that was general freight and passenger agent of the Cairo & St. Louis Railroad. While soliciting coast business at Chicago, the business at first generally moved via the U. P. from the Missouri River; sometimes by the N. P. and G. N. After the Rock Island built its extension from the Missouri River west, El Paso was the preferred route. Frequently, however, he was obliged to give up business to the U. P. at Omaha, and sometimes to the Atchison,

CHICAGO, ILL., MARCH 16, 1909.

(1734) J. A. WENTZ.

Wentz.

Chicago. Traffic man.

Lives at Chicago, Ill. Retired from business. A railroad man all his life. (1735) For fifteen years prior to Jan. 1, 1908, was commercial agent of the Rock Island at Chicago. For thirteen years prior to that was general agent at Kansas City. For one year prior to that was in business for himself. For four years prior to that was general freight and passenger agent of the Cairo & St. Louis Railroad. While soliciting coast business at Chicago, the business at first generally moved via the U. P. from the Missouri River; sometimes by the N. P. and G. N. After the Rock Island built its extension from the Missouri River west, El Paso was the preferred route. Frequently, however, he was obliged to give up business to the U. P. at Omaha, and sometimes to the Atchison,

Worked coast business for Rock Island through its different gateways.

after they built through. Line to Denver was built before that to El Paso, and witness worked Denver line before the last mentioned line was built. Business through Denver moved via the Rio Grande, and also the U. P. It all went over the S. P. from Ogden. Worked Portland business any way he could; G. N., N. P. and U. P.

(1736) Worked quite a little business to Portland by the Shasta route. Prior to amalgamation, Neimyer represented the S. P., and Knight, the U. P. Didn't know which way S. P. tried to route business; thought both ways. Knew it went both ways. S. P. reached Chicago by way of New Orleans, over the Illinois Central generally. Thought that route was worked actively for business both ways. Knight sought to get business by Omaha. Thinks agents were active in their solicitation, and the Rock Island lost business that was taken from it by way of New Orleans. (1737) Doesn't know whether any change took place in Neimyer's efforts to work coast business after the consolidation. Neimyer became agent of both lines. Remembers a fast freight train run by the Illinois Central to New Orleans, on which coast business moved. Thinks the U. P. and S. P. were right up to date in their equipment. Had large furniture cars. Witness thought that they came into vogue about 15 or 20 years ago. To be able to furnish large equipment is an important item.

S. P. and U. P. solicitation.

U. P. and S. P. were up to date in their equipment.

(1738) Competitive traffic is secured largely by the agents' personality. Thinks if they were all done away with, one road would be as well off as another. The road which kept the solicitors, however, would be better off than the others that didn't. They are useful to shippers in furnishing information and in the settlement of claims; also in securing equipment. Doesn't think the S. P. had a representative at Kansas City. Thinks they left the solicitation of that business to their connections. (1739) The following lines solicit business for the Pacific coast: The C. B. & Q., the C. M. & St. P., the C. & N. W., the Atchison, the Mo. P., the Chicago & Alton, the Chicago Great Western, the R. I., the Wabash. Not sure about the M. K. & T. and the Iron Mountain. Doesn't think the competition of the Iron Mountain in connection with the T. & P. ever gave the Rock Island much trouble.

Lines which solicit coast business

(1740) Doesn't think the Iron Mountain and T. & P. furnished the shortest line from Chicago to El Paso. Possibly the shortest from St. Louis, but not sure. For a long time the S. P. was the only outlet for the D. & R. G. and the U. P. Missouri Pacific and Burlington, as well as the Rock Island, turned over their coast business to the U. P. The Rock Island had two lines, one by way of El Paso and one by way of Denver. (1741) Witness worked both those lines. It didn't occur to him that he was working competing lines. Tried to get the longest haul possible, that which would give the best earnings, which was usually by El Paso. Frequently, however, gave up business at Omaha, where he was obliged to. The S. P. did the same thing. That is the rule with railroads.

Rock Island had two lines one via El Paso and the other via Denver Didn't consider them competitive.

All the lines had solicitors at Chicago, and the solicitation of California business by the Rock Island, the Burlington, the Mo. P., the St. Paul, the Northwestern, the C. & A., inured ultimately to the benefit of the S. P. The shipments witness has testified about as having gone by New Orleans, were generally for Los Angeles. Couldn't put his finger on any particular shipment, but thought some had gone by New Orleans to San Francisco.

Solicitation of various lines inured to the benefit of S. P.

(1742) Thought the S. P. did work largely with the Rock Island and by El Paso, but is also under the impression that they solicited by way of New Orleans. Witness should guess there were 30 or 40 different lines which he could form by joint tariffs from Chicago to California points. Would consider the C. & A. one of them. (1743) Doesn't remember any competition for business through Denison to Houston over the H. & T. C. Never heard of the Morgan railroad from New Orleans to Lafayette, La., being used on Pacific coast business from Chicago, although it might have been. Knows that that road is a part of the S. P. system. There might have been 40 or 50 different routes between Chicago and Pacific coast. Most of them were soliciting traffic as long as witness was in business. Never tried to work any business to California by way of Portland. Thinks he worked some business to Portland by way of El Paso. Wouldn't work it that way as against the Short Line via Denver. "There might have been some reason for it on the part of the shipper wanting it to go that way." Believes the rates applied that way, but not certain. Moved some business to Portland by the U. P. and Short Line.

30 or 40 through lines, Chicago to California.

Never tried to work California business via Portland.

(1744) Also moved some by the Shasta route. As a rule, it didn't go that way at his direction, but because the shipper wished to use the route. It was rather unusual, however, and no great volume of business went that way. The amount was "very light compared with the whole volume." The S. P. could not participate in Portland business, unless it went by the Shasta route. The S. P. representatives in Chicago endeavored to route Portland business that way. The Frisco and Rock Island agency at Chicago were consolidated, just as the S. P. and U. P. were. (1745) The two former lines competed for coast business before the consolidation. What the Frisco got moved by way of St. Louis out of Chicago over the Chicago & Eastern Illinois, and then by the Frisco to a junction with the S. P. Witness forgot the junction point. Cannot say how actively the Frisco competed for coast business. Doesn't recollect any other cases where the agencies of competing lines were united. The agents of the connecting lines worked with the agents of the transcontinental lines. That has always been true.

Amount of Portland business via Shasta route very light.

(1746) Where the shipper wished to favor the U. P., the Rock Island would not be too persistent on its route by El Paso. Those cases, witness imagined, would be where the U. P. had been soliciting the shipper. After the solicitation, witness cannot say that there was any change in the movement of freight over the U. P. or over the Rock Island's connections by Denver. Knew the U. P. pre-

ferred the route by Omaha. Doesn't know whether there was any change in the volume of traffic coming to the Rock Island from the coast. The U. P. was soliciting business at Los Angeles. It had a route to Los Angeles by way of Sacramento. Doesn't think the New Orleans route to Los Angeles cut much figure, but cannot say how the volume of business on the other lines compared. S. P. solicited either by El Paso or New Orleans.

One party insisted on sending traffic via Portland.

(1747) The Atchison was an active competitor for all that business. Not sure whether they worked Portland business or not. Although he never solicited business for San Francisco by way of Portland, remembers one time when some party insisted, for some reason or other, on carrying business that way. It might have been on account of a blockade or something. Doesn't recall why. Knew the route was always open. Remembers the Can. P. maintained a differential to San Francisco. Doesn't remember how successful they were in getting business. (1748) The shipment by Portland above mentioned was the only one witness ever knew to go to San Francisco that way, and witness has been actively soliciting at Chicago and Kansas City for 28 years. Distance from Ogden to Los Angeles is about 1,154 miles; so that if business went that way, the S. P. would still get a thousand mile haul on it out of Ogden. If it went by way of New Orleans, the S. P. would get about an 1,800 mile haul.

That was the only business he ever knew to go that way.

Oranges.

(1749) There are a great many roads leading up to the Missouri River and very few from there on. Oranges coming east from Southern California, witness thought, moved by way of Sacramento and El Paso, and the Rock Island participated in the haul from El Paso. The business was not solicited at the Chicago end, but was controlled by the shippers generally. Hasn't gotten any orange shipments by way of Denver in recent years. The Rock Island's shipments all came by El Paso after that road was built. They might, however, have moved either by way of Denver, Omaha or El Paso.

Morse.

(1749) JOHN W. MORSE.

Chicago. Formerly in railroad business.

Lives in Chicago, Ill. Auditor for a private corporation in Chicago. (1750) Formerly in the railroad business. From 1870 to 1877 employed by the Burlington at Omaha. For ten years after that with the U. P. in Chicago and Omaha, and after that, up to May 1, 1906, commercial agent of the Missouri Pacific at Chicago. 1877 until 1879, represented U. P. at Chicago. After witness left, the freight and passenger departments were divided up and represented respectively at Chicago by McDonald and Gault. The latter is now dead. Various agents mentioned. (1751) Prior to the consolidation, the S. P. worked its coast business by El Paso. Knew of some business by way of New Orleans. That was when witness first came to Chicago. There were other junction points between New Orleans and El Paso. On business via New Orleans, S. P. worked with Illinois Central.

Prior to 1901, S. P. worked business via El Paso.

(1752) The Missouri Pacific worked coast business chiefly by the El Paso route. Took it from St. Louis on. The competition was active. U. P. worked Portland business by way of San Francisco and boat until the Short Line was completed. Short Line didn't belong to the U. P. during the receivership. The Shasta route was not used for Portland business while witness was with the U .P.

(1753) After the consolidation, the competition between the U. P. and S. P. was materially reduced. Doesn't think any competition existed after that. Shipments very rarely went to San Francisco over the O. R. & N. boat line. Doesn't recall any moving that way. Doesn't know of the Can. P.'s differential. That didn't come to his attention. Has had no connection with the U. P. since 1887.

Shipments rarely went to San Francisco over O. R. & N. boat line.

(1754) 'Witness' only opportunity for observing the relations between the U. P. and S. P., after he left the former's employ in 1887, was soliciting California freight, both by Ogden and El Paso, for the Missouri Pacific. Solicited business from Chicago territory. Of witness' own knowledge, the S. P. solicited freight prior to 1901 from Chicago via New Orleans. Witness co-operated with them in moving freight by Texarkana and El Paso, but not by New Orleans.

(1755) Missouri Pacific worked business with the coast by way of Texarkana and El Paso, or by way of Pueblo and Ogden. Worked with the S. P. by El Paso, but not by Ogden. S. P. didn't solicit business the latter way, at least, not to witness' knowledge. The S. P. co-operated with the witness by way of El Paso, because the latter wanted it that way by reason of the long haul. Witness had two lines, one by El Paso, and one by Pueblo, and the S. P. agent was in a similar fix. Both wanted the long haul, if they could get it, and if they couldn't get that, took the short haul.

Mo. Pac. had three gateways for California business-El Paso, Pueblo and Ogden.

Witness worked his two lines for the long haul.

(1756) Witness, however, never knew of Neimyer soliciting business by way of Pueblo. When business reached Pueblo, it might have gone west by the Atchison, but witness never sent business that way. All went over the Rio Grande and S. P. Notwithstanding competition was fiercest by way of Pueblo, and that the S. P. was bound to get business by way of El Paso, witness wished to be understood as testifying that Neimyer worked the El Paso route, but not the Pueblo. From Pueblo witness routed business over the Rio Grande to Ogden.

(1757) Southern California business rarely moved by way of Pueblo and Ogden. Some business was moved by the longer route, because the shippers wished to save storage by keeping the freight aboard cars a longer time. Climatic conditions also have a large influence, especially in fruit shipments. A great deal of fruit moved by way of El Paso. Not much by way of Pueblo. Didn't solicit fruit the latter way, because of climatic conditions. Witness' San Francisco business moved about equally via Ogden and El Paso. He worked it both ways, preferring the route that gave the longest haul. He represented the Texas & Pacific, as well as the Missouri Pacific, and it was his business to give the former a haul, if he could. Therefore, he preferred the El Paso route. The Missouri Pacific proper

Sometimes by longer route to save storage.

Climatic conditions a factor.

got the longer haul by way of Pueblo, about 20 per cent. longer, but witness preferred his longest combined line; also on account of the better service by way of El Paso.

(1758) Witness' immediate connections on El Paso business were the Wabash and the Alton. Principal lines soliciting California business from Chicago included all the lines west of Chicago. They were all soliciting California business. These lines named. (1759) Witness was connected with the freight department of the U. P. from 1877 to 1880. The next seven years he was not connected with the freight department, but was the general agent of the U. P. at Chicago—both freight and passenger. The shipments to Portland by way of San Francisco occurred between 1877 and 1880; also after 1887, when witness resumed the freight business with the Mo. P. He used the boats from San Francisco to Portland. The business moved by El Paso. The volume of this business was small. Never knew any traffic to move via El Paso and the Shasta route to Portland. Never knew any to move from Chicago to San Francisco via Portland. The U. P. used the direct line. The Great Northern and N. P. never competed for California business. The shipments to Portland by boat by way of San Francisco were prior to the opening of the O. S. L.

Shipments to Portland via S. P.

Boats to Portland prior to opening of O. S. L.

(1760) Never knew any shipment to go that way after the completion of the O. S. L. in 1884. In stating that the service was better by way of El Paso than by Ogden, witness referred to the service up to the junction points, the Missouri Pacific service to Pueblo being slower than by way of Texarkana. That was because the line was new and the equipment light. Witness didn't mean that the through time service was better. From 1880 to 1887 witness was general passenger agent of the U. P. at Omaha. The Atchison and the U. P. were competing for coast passenger business in those days. Witness didn't feel the competition of the Sunset route very actively in his territory. The S. P. ran through trains from New Orleans.

Passenger traffic.

(1762) On the passenger traffic from New York and the Central territory, Cincinnati and that region, to California, there was competition between the New Orleans routes and the routes through Chicago; chiefly the far east. That was in 1883 and 1884 and subsequently. The S. P. obtained a large amount of the passenger business, especially the emigrant business. Doesn't know that the Texas & Pacific completed a connection with the S. P. by way of El Paso before the S. P. line from New Orleans was opened. None of that business went over the T. & P. by way of El Paso. Witness presumed it was because of more active solicitation on the part of the New Orleans route. Doesn't think the T. & P. ran to New Orleans at that time. It had not been completed. It was opened to New Orleans about 1883. Didn't know the Texas Pacific line from New Orleans to El Paso was opened before the S. P. line. Thought they were opened about the same time. Didn't know the S. P. line between New Orleans and El Paso was the short line.

T. & P. opened to El Paso before S. P.

Thought that and the T. & P. were about the same length. The T. & P. got very little of that business. The S. P. had the advantage of a boat line. Passengers went by boat to Galveston over the S. P. line.

(1763) That is the line witness has been testifying about. Their rail line is the G. H. & S. A. Doesn't remember when that was consolidated with the S. P. That line gets to Galveston over other connections. Boat line went from New York to Galveston. Thought he was not mistaken about that. This emigrant business from New York to Galveston by boat, and thence over the S. P. to California, is what witness testified was in competition between the U. P. and Atchison. Doesn't know of any other lines that tried to get the business. Witness admitted that the N. W. and the trunk lines "between New York" were all soliciting it. (1764) The U. P. has a link of 1,000 miles from Omaha to Ogden, and of 800 miles from Kansas City to Denver. The U. P. got more per mile out of the through rate between 1880 and 1885 than the lines east of Chicago, because the rates west of the Missouri River were higher, because of the new heavy grades, new territory, sparse population, and the expense of operating. In testifying about passengers going to Galveston, he meant the Mallory line, not the Morgan line.

Emigrant business via Galveston

(1765) Divisions are made on the Missouri River, and then there is a division of the rate from that River to the coast, between the western lines. The U. P. had 54 per cent. and the C. P. 46, during witness' day, based on mileage. Before the divisions, there was some deduction for terminal expenses. There was a bridge arbitrary at Omaha, and a terminal arbitrary at San Francisco. The lines east of Chicago did not get percentages, but got an arbitrary. The foregoing applies both to freight and passengers. (1766) A large percentage of business is controlled by the active solicitation of agents. Witness in this territory worked both with connections and solicitors. Work with connections very important. Witness could not well control the business against them. In soliciting, sometimes the lines other than the initial lines secured the business and controlled it.

Division of rates

(1766) W. J. EVANS.

Evans

Lives at Peoria, Ill. For ten years traffic manager of the Kingman Plow Company, at Peoria, Ill. Ships principally to the south, southwest and west. Occasionally North Pacific coast points, California points, and to Russia. (1767) Russia business moves via the Suez. Formerly it went via the North Pacific coast points or San Francisco to Vladivostok. Prior to employment by Plow Company was for four years general agent of the Great Northern at St. Louis (from 1896 to 1900). Previous to that, for three and a half years, assistant general agent of the G. N. at St. Paul, having charge of the local territory in Minnesota, North and South Dakota, and the business to and from those states; and prior to that, witness was claim agent of the Great Northern lines; and prior to

Peoria, Ill. With Kingman Plow Co.

Routing of his traffic.

that chief claim clerk of the St. Paul, Minneapolis & Manitoba, and prior to that chief clerk of the Claim Department of the Chicago, St. Paul, Minneapolis & Omaha Railroad. Witness' California business is principally to southern points, and it moves principally via the U. P. and San Pedro. Witness is solicited by the Chicago-Missouri River, and the Chicago-St. Louis lines; also by representatives of the lines west of the Missouri River; the Salt Lake route and the U. P. principally. Soliciting done by traveling agents, who report to their superiors at Chicago. The joint agency solicits preferentially via the U. P.

(1768) The joint agency works for the long haul represented by the U. P. and S. P. together. The San Pedro solicitor works the long route, but is satisfied with that via Provo, in connection with the D. & R. G. He is willing to let it go C. B. & Q. to Denver or Rock Island to Colorado Springs. The San Pedro road expresses no preference between the lines. When witness was in St. Louis, the Harriman lines had separate representatives. Witness was then the general agent of the G. N., and was after north coast business, but he thought the S. P. on California business was working with nearly all the lines operating west of St. Louis.

Traffic from St. Louis.

(1769) The S. P. worked business from St. Louis by way of the Illinois Central to New Orleans. The U. P. wanted the long haul via Denver to Ogden. From St. Louis the business to reach the U. P. would go to Omaha or Kansas City. The latter principally. The U. P. competed with witness to Portland when he was with the G. N. He reached Portland over the O. R. & N. from Spokane. The competition was quite active. The N. P. was interested in that traffic, and had an agency at St. Louis, soliciting very actively in connection with the Burlington, via Billings, if they could not get the haul from St. Paul.

(1770) The Iron Mountain & Southern had a route in connection with the T. & P. via Texarkana and El Paso, and the Frisco had a route, witness thought, with the Texas Midland via the Ft. Worth & El Paso, and the M. K. & T. also had a connection with the T. & P. at Fort Worth. These were the principal southwestern lines. Never heard of any business going from St. Louis to Portland by the Shasta route. The G. N. tried to get no business south of Portland. Concerning the S. P.'s southern route, witness' testimony was based upon hearsay, but he understood that if they could not get the long haul, they sought to send it by Ogden, and that is the same principle upon which the joint agents still work.

Shasta route not used.

If S. P. could not get long haul, business was sought via Ogden.

(1771) Sometimes they are governed by the line from whose agent they obtain the "tip"—co-operate with the line whose solicitor gives the first information. Witness has been shipping to California principally by the Rock Island through Denver and the Chicago & N. W. and U. P., or the C. & A. and U. P. Doesn't ship any over the Rock Island by way of El Paso. Southern California business has gone principally to Los Angeles, for which witness uses the San Pedro. He is actively solicited by all the

western lines. S. P. was handling business from St. Louis by way of New Orleans, as well as by El Paso and the other connections. The Illinois Central had a considerable voice in that routing, and were trying to get the long haul via New Orleans. (1772) Since then, the Illinois Central has extended its line to Omaha, and witness thought they are now working that route, but doesn't know, because he never gave them any encouragement. When the agencies were separate, the long haul meant the longest haul over either line separately. Now that the agencies are united, the long haul means the longest, made up of the lines of the two roads. Witness is not interested in the division of the rates between the carriers.

Is actively solicited by all western lines.

(1773) W. A. BROLIN.

Brolin.

Secretary and Treasurer of the Skandia Furniture Company, of Rockford, Ill. About twenty years connected with that Company. Cannot state positively, but his recollection is at the time of the separate agencies, the S. P. tried to route via the Illinois Central to New Orleans. The U. P. routed by their own line. (1774) The joint solicitor doesn't specify the line. Just asks for the business. Portland business moves principally by the N. P. and G. N. Sometime moves by the U. P. and Short Line. That has always been the case, as far as witness recalls. Remembers a Canadian differential. Only a small amount of witness' business moved by Vancouver. Doesn't remember how long that lasted, but thinks he shipped that way only a short time. (1775) Rockford is 85 miles from Chicago, on the "Q," Illinois Central, N. W., and St. Paul. The shipments by way of the Can. P. were about 1901. Thinks that condition existed only a short time. Thinks he has shipped to California by way of Portland, but doesn't remember any circumstances connected therewith.

Rockford, Ill. Sect. and Treas. Skandia Furniture Co.

Movement of traffic.

Shipment via Portland.

(1776) The quantity would be a carload, but there would not be many. Wouldn't like to say whether it was three or ten years ago, but it was nearer ten. Didn't ship that way frequently. Not desirable to ship furniture by water. Would not ship that way at an equal rate. Cannot state positively whether the S. P. solicited preferentially by way of Ogden, or El Paso, or New Orleans. Not interested in the gateways. Doesn't mean to give any testimony on that point.

(1777) ALBERT EVI.

Evi.

Traffic manager for Deere & Company, large manufacturers of agricultural implements at Moline, Ill. In shipments to California they use the Ogden and El Paso gateways, also ship over the Santa Fe. Shipped to Portland via Ogden and over the Northern routes. S. P.'s solicitation at Moline was in charge of the St. Louis office, and the separate agent of the S. P. solicited both the Ogden and El Paso routes. (1778) Doesn't recall that he ever expressed a preference. The joint agent afterwards preferred the Ogden gateway. He solicited by Omaha or Kansas City; preferably

Moline, Ill. With Deere & Co.

Solicitation of his business.

Omaha. It is about 250 miles from Moline to Omaha, and witness guessed about 800 to El Paso. Wouldn't say it was not further. Lines soliciting California business mentioned. (1779) Witness not interested in the division of the through rate. Never shipped his plows by water, except to foreign countries. Traffic to the Orient moves both by Suez Canal and by Pacific ports, San Francisco, Seattle and Vancouver.

Routing of Oriental traffic.

(1780) The Oriental business moving via San Francisco has been handled by the S. P. via Omaha and Ogden, and also by the Atchison. That through Seattle has been handled with the G. N. by Minnesota Transfer; and Vancouver by the Can. P. There has been no change in the quantity of traffic via El Paso, as compared with that via Omaha, since the consolidation. Witness divides up the traffic, and gives it to the lines that are open and apparently able to give the best service. That varies at times, principally on account of snow. Witness' business moves practically all in the winter time. Shipments by El Paso for California points are about twenty per cent. of those via Ogden. That has been just about the same during the last ten years. Do not usually ship by El Paso, except when there is snow trouble north. Business is not solicited by lines connecting with the S. P. at El Paso.

Traffic distribution unchanged.

(1781) It is solicited by lines going to Omaha. Soliciting agents "can influence some traffic." The joint agent of the Harriman lines serves witness' purpose very well. Has no occasion to complain. The railroad transportation service is very much improved in recent years. That is true all over the country, quite perceptible over the Atchison and the lines running to the Missouri River. Doesn't know much about the Illinois Central. (1782) Joint representatives look after witness' freight, as well as separate agencies did, or as well as the representatives of other lines. That is what he meant in stating that he was well served by them. They pay the losses or help witness get them adjusted. Trace shipments. Thinks that if the S. P. had a separate agent, it might be able to route some business to California by the long Southern route, that now goes over the U. P. Doesn't see why the S. P. man should rather have it by El Paso than Ogden, except for a little longer haul. Witness not interested in the division of the through rate.

Joint agent services. No occasion for complaint.

Joint agents just as attentive as separate agents.

Phillip.

(1783) EMANUEL L. PHILIPP.

Milwaukee. Pres't of Refrigerator Co.

Lives at Milwaukee, Wis. For the last six or seven years President and Manager of the Union Refrigerator Transit Company. Prior to that, from 1894 to 1900, was in the lumber business in Mississippi. From 1892 to 1894 was traffic manager of the Schlitz Brewing Company, at Milwaukee, and from 1889 to 1892 agent at Milwaukee of the American Refrigerator Transit Company, and prior to that employed by the Northwestern. Before the consolidation, some perishable freight moved in winter to the Pacific coast from Milwaukee over the Illinois Central. Considerable freight

Routing of his business.

moved by El Paso. It was at times solicited that way, and the route was also desirable for other reasons.

(1784) When witness was with the U. P., he worked the Portland business via the Short Line. Knew of a few shipments going by the Shasta route, but they didn't amount to much. Heard of a few cars that moved via El Paso, but it was very small; a roundabout route and only a very few shipments. The El Paso route for California business was preferable in winter to shippers of perishable freight. Most of the Schlitz Brewing Company's shipments move via Ogden. The export business was divided between all the ports on the Pacific coast. Couldn't say now which got the most. It was largely a matter of vessel room—Seattle, Tacoma, Portland, San Francisco and Los Angeles. Export business went to every country on the globe. The boat lines had no soliciting agents that witness knew of. They worked by the rail connections. Shipments were determined largely by vessel room. Witness saw to that himself. In other words, it depends upon when you could get a boat to go where you wanted to ship. At that time the Brewing Company shipped about 12,000 to 14,000 carloads a year. Sometimes shipped over the Atchison. Export business.

(1785) The initial lines that took witness' shipments out of Milwaukee were the C. M. & St. P., the C. & N. W., and the Wisconsin Central. In case of traffic moving by way of El Paso most of it came via Chicago, and was there delivered to the St. Louis lines. Knew in a general way that the other breweries in Milwaukee used like routes. Export beer from Milwaukee is a very large business, and has been for many years. It moves altogether under refrigeration, except that the bottled beer does not move under refrigeration in summer. It needs to be protected against frost in winter, however. Remembers the Can. P. differential. That was used by the Milwaukee breweries to some extent, with their bottled product. San Francisco at that time was the largest market on the Pacific coast. Some of the breweries had distributing agents there. The Schlitz Company had not. It sold f. o. b. Milwaukee. El Paso route.

(1786) Traffic to Portland usually moved over the N. P. Sometimes over the U. P. and O. S. L. Ogden route handled more of the Pacific coast business than any other line. That business was actively solicited by all the lines west of Milwaukee. The S. P. west of Ogden handled more of the entire Pacific coast business than any other line. (1787) Whatever the N. W., the St. Paul, the U. P., the Burlington, and the Rock Island got passed over the S. P. west of Ogden. Some of the business went by way of New Orleans, and also El Paso. That was principally in winter. The El Paso route got some bottled business in summer. The heat didn't affect bottled beer particularly. That was not a very desirable route from Milwaukee. It was climatic conditions that controlled the movement by way of New Orleans. The El Paso gateway has Large business of Ogden route.

Effect of climatic conditions.

always been kept open. The cars of the Company of which witness is President, move over all lines.

Jilson.

(1788) H. B. JILSON.

Rockford, Ill. Agricultural Implements.

In charge of shipments of the Emerson Manufacturing Company, at Rockford, Ill. They are manufacturers of agricultural implements. Employed by that concern eighteen years. In charge of shipments for last ten years. California business now moves chiefly by U. P. and S. P. in connection with the San Pedro line; also by the Atchison. (1789) Prior to 1901 witness shipped some over the Rock Island via El Paso, but ships that way no longer. Business is usually routed by California agents. Routing is usually confirmed through the Rockford office of the U. P. and S. P. Before the consolidation, it was pretty much the same thing; the consignees did the routing. Very little was shipped by El Paso. Most of the shipments have moved through Ogden at all times. No longer ships to Portland, but formerly (1790) divided that business up between the N. P. and U. P. Thinks the G. N. also had some. Before the consolidation, some of witness' business moved by way of New Orleans over the Illinois Central None moves via New Orleans now. Quite a large percentage now moves over the U. P. and San Pedro, all routed by the consignees. (1791) The duty of the agent in this territory was generally merely to check up shipments, to see that it went by the route specified.

Routing of his business.

Jones.

(1791) C. S. JONES.

Peoria, Ill. Wholesale Grocer.

A wholesale grocer at Peoria, Ill., a manufacturing town of about 80,000 inhabitants, a great distributing center. There are fourteen railroads there, which witness named. (1792) Prior to 1895 witness was employed by the Chicago & Eastern Illinois Railroad for five years, and before that, from 1886 to 1890, by the Northwestern. Witness ships more from than to the Pacific coast. It comes usually S. P. and Atchison. Now largely via the Ogden gateway; part of it via El Paso. Prior to the consolidation, very little of witness' business ever moved by New Orleans from the coast. That happened where some of the business was destined, not to Peoria, but to points in Southern Illinois, on the line of the Illinois Central. More business moved by El Paso than New Orleans. The S. P. agent inclined to the southern gateway, but would take it either way.

Routing of his business.

(1793) The U. P. agent solicited by Ogden. Joint agent glad to get the business either way, but witness thought preferred the Missouri River route. It depends some on the agents of the other lines with whom they are working the business. If with the Rock Island, they take it by El Paso, and if with the Missouri River lines, by Ogden. When soliciting alone, their preference is the Missouri River. The joint agent frequently calls with the agents

Route solicited for depends somewhat on agent with whom he is working

of the other connecting lines. Witness' shipments principally come from San Francisco and from southern California, Yuba City. In 1901 witness' California houses were located on the S. P. tracks, but the Atchison now reaches more of them than formerly. S. P. agent preferred the southern gateway. (1794) He was not, however, particular in witness' case, because his traffic didn't admit of slow time. He was glad to get it either way. There has been no material change in the position of the joint agent since the consolidation. The Missouri River is, however, the preferred route now.

No change in position of joint agent since 1901.

(1795) JACOB YOUNGE.

Younge.

Lives at Peoria, Ill. From 1903, traffic manager of the Wilson Interest, at Peoria. For three years prior to that traffic manager of the Acme Harvester Company, and previous to that in the local office of the Atchison at Pekin, Ill. Prior to the consolidation, if the S. P. agent was soliciting alone, he would try to get the longest haul by way of El Paso or New Orleans, and if he was with the agent of one of the Missouri River lines, he would be glad to get it by the Ogden gateway. The U. P. agent solicited by Kansas City or Omaha. (1796) The joint agents now solicit by Kansas City and Omaha. Witness is solicited every ten days or two weeks. The Acme Harvester Company's North Pacific coast business moved by various routes—Atchison to Colorado Springs and Denver, and the Colorado Midland and O. S. L. and O. R. & N.; by Omaha, U. P., O. S. L. and O. R. & N.; by Minnesota Transfer, G. N. or N. P.; but the heaviest traffic moved by the Omaha gateway, O. S. L. and O. R. & N. to the North Pacific coast. The traffic was solicited by all the different lines. Witness ships to Portland over the U. P., G. N. and N. P.

Peoria, Ill. Traffic man.

Solicitation of business.

All lines solicited.

(1797) The S. P. solicitor, when he called with other agents, endeavored to work by Ogden, El Paso or New Orleans, as the case might be; and when alone preferred the longest gateway. He called alone about half the time. Witness not interested in divisions. S. P. agent worked actively with all the lines leading to Ogden, those leading to El Paso, and those leading to New Orleans. The business was solicited by all the lines in this territory. Witness never shipped any business to Portland by way of El Paso or New Orleans. Did have some cars to Portland via the Atchison and S. P. by Sacramento to Portland. That was on Atchison's solicitation. Never shipped anything to California by way of Portland.

S. P. solicitor worked for his three different gateways as the case might be.

Route to Portland via El Paso or New Orleans never used.

Never used Portland route to San Francisco.

(1798) JOHN J. BOLGER.

Bolger.

Lives at Chicago. Over four years traffic manager of the Michigan Stove Company. Previous to that for about a little over three years station agent and division agent of the Baltimore & Ohio, in Chicago, and at Chicago Junction. Previous to that employed by Swift & Company and one of their subsidiary concerns, the California Fruit Transportation Company, in New York, and in the

Chicago. Traffic man.

fruit territory. With Swift & Co. at Chicago as rate clerk for five years. Before that chief clerk of the Illinois Central Fordham yards. Was also for a time chief route clerk and chief billing clerk of the Illinois Central. Prior to the Illinois Central service, was with the Milwaukee & St. Paul for 3½ years, and with the Michigan Central before that.

(1799) 22 years either in the railroad service or connected with the traffic of shippers. When witness was with the Illinois Central, the S. P. handled Pacific coast business via New Orleans. The U. P. worked business by Omaha. The competition between the two lines was keen. The Illinois Central ran a fast manifest train from Chicago to New Orleans. Coast traffic moved on that train. That was a system invented, or, at least, copyrighted by J. M. Daily, to put certain high classes of freight on that train, with a manifest tag on the car, and the car waybill accompanies it, the car number, etc. The car number is known by a letter mark after it leaves Chicago, for easy tracing in the car record office. It has the right of way over everything, except passenger trains. (1800) Witness could not give the exact time, but his recollection was the run was made in sixty hours. The train ran daily, sometimes in several sections. Through traffic was not unloaded at New Orleans. The cars went through.

Manifest freight.

(1801) The Stove Company ships California business as much as possible over the Atchison; to the North Pacific coast over the N. P. and G. N. One or two cars have gone to Portland by the U. P. That was at the earnest request of the consignees. The joint agent solicits by the U. P., and when he knows he cannot get it that way, asks to have it routed S. P., that is, either via Ogden or El Paso. The Stove Works are at Detroit. Doesn't ship any by New Orleans now. Witness doesn't ship anything by the U. P. or S. P., if he can help it. (1802) It wasn't a good line to him. Didn't give him as good service as the Atchison. They have a shorter line than the Atchison, but it took them a longer time. The Atchison has put cars through in twelve days, and sometimes the U. P. took two months. The Illinois Central manifest train is still running. (1803) Illinois Central doesn't solicit from Chicago via New Orleans to-day. They don't come to witness soliciting either by New Orleans or Omaha.

Santa Fe preferred over U. P. and S. P.

(1805) They have never solicited witness. When witness was connected with the Illinois Central, the S. P. tried to get business through New Orleans. In witness' direct testimony he was speaking only of himself. The Illinois Central had no line to Omaha at that time, and the only intelligent way for the S. P. agent to solicit him was by way of New Orleans. Not knowing, he couldn't say that they didn't solicit as earnestly with other lines going by way of Omaha or by way of El Paso. Doesn't know how the agent solicited other lines. Wouldn't answer as to that. Doesn't know of any instance where S. P. agent went to the shipper and solicited business by way of New Orleans, when that business had not been

An individual expression only.

secured by the Illinois Central or some other New Orleans line. (1806) Doesn't know of any reason why the S. P. agent shouldn't try to get the long haul from the Mississippi River to California rather than the short haul from Ogden. It is over 2,000 miles from New Orleans to San Francisco.

An isolated case.

(1807) In the past witness has shipped over the U. P. The car that took two months was an isolated case, but ordinarily the Atchison has done better, and then witness gets answers to his communications and tracers from the Atchison office better than from the Harriman offices. Witness' Pacific coast business runs from 60 to 100 cars a year. Detroit gets the same rates as Chicago; Detroit-Cleveland territory they call it, as a rule. When a car goes from Chicago to New Orleans for San Francisco, it is further from its destination than when it started. (1808) In 1895 there was better train service by New Orleans than by Ogden. Knows he couldn't beat the Santa Fe on it now.

Route to San Francisco via New Orleans circuitous.

Soliciting agent works with lines originating traffic.

(1809) It is customary for the soliciting agents to work with the lines on which the traffic originates. (1810) The soliciting agent would use his strongest cards for the longest haul. If he couldn't get it that way, would try the next best. The fact that the S. P. agent would come out to see about cars that were moving to California over the Illinois Central proved that they had been soliciting from the shippers. The solicitor would not know anything about it, as a rule, until he was notified of the movement of it. (1811) Knew also that the S. P. solicitors were going to industries on the belt railway of Chicago, and asking business by way of New Orleans.

Solicited via New Orleans route.

(1812) F. B. MONTGOMERY.

Montgomery

Chicago. With International Harvester Co

For the last three or four years in charge of the traffic of the International Harvester Company, at Chicago. It was organized in 1902. (1813) Prior to the organization of that company, witness was employed by the McCormick Harvester Machine Company for two years. The latter was absorbed by the former company. Oriental business moves both through the Suez, and from the Pacific coast, from San Francisco, Portland, Seattle, Tacoma, and Vancouver. A little of it moves by the Atchison line from San Diego.

Texas gateways

(1814) Before the consolidation, the S. P. agent wanted the long haul through the Texas gateways. Witness doesn't think "any particular traffic" moved through New Orleans, nor is he sure that the S. P. agent solicited that way. The Illinois Central may have, but it is a roundabout way from Chicago. The Houston & Texas Central joins with the Santa Fe. The junction points of the Rock Island-Frisco line would be Fort Worth, Dallas, Sherman. Witness doesn't just remember the points. The U. P. agent solicited traffic through Omaha or Kansas City, as a general thing preferring the longer route. Witness' Portland business moves over the G. N.,

The various lines still solicit.

N. P. and U. P., the bulk of it over no one road. That business is and always has been solicited by the various lines.

(1815) The Oriental business is solicited chiefly by the rail connections of the steamship lines. Not very much goes that way. Rates are better through the Suez. To a considerable extent that has always been true. Ships by the Pacific coast into Japan, China and Siberia, but not very heavily. Since the consolidation, witness has not been brought into contact with the solicitors. One of his clerks sees them, and witness cannot testify how they solicited. Witness doesn't think there has been any difference in his shipments over the D. & R. G. since the consolidation of the U. P. and S. P. Could not say without examining his records, but he endeavors to divide traffic with all the railroads. Does that of his own motion, as far as he can. (1816) He routes his own traffic. It is solicited by all of the railroads that could handle any of it; every railroad running west, southwest or northwest from Chicago. The Northwestern lines did not solicit anything south of Portland. Thinks a steamship line from Portland once pretended to give some competition into Frisco, but it didn't amount "to anything worth while." Doesn't remember what year that was. Witness ordinarily doesn't ship his domestic business by water, because of the handling. Never used the water line from Portland to San Francisco. Traffic for California over the U. P. had to move on the S. P. west of Ogden.

Divides traffic with all the roads.

Portland-San Francisco route didn't amount to anything.

(1817) No other outlet prior to the construction of the San Pedro. Thought the agents of the S. P. and the U. P. before the consolidation solicited traffic by practically any route they could get it. Doesn't recollect the S. P. soliciting by way of New Orleans. The shipper is not interested in the divisions. Oriental business from the Pacific coast goes principally from Puget Sound. No considerable quantity has gone through Portland, and witness thought none during the last several years. Is not positive about it, and really doesn't know. (1818) S. P. solicited preferentially through the Texas gateway. (1819) Texas & Pacific joins with the S. P. at New Orleans and El Paso. It also crosses the H. & T. C. The latter line runs southeasterly, and to deliver at the junction with the H. & T. C. would detract from the haul of the T. & P., and would necessitate a back haul to a certain extent. Witness thought before the consolidation the U. P. and S. P. competed with each other. The U. P. agent, in working for business, was also necessarily working for the S. P.

Before 1901, agents of the S. P. and U. P. sought the traffic by any route they could get it.

(1820) Such competition as existed was between two lines, of both of which the S. P. formed a part. (1821) Never heard of any freight moving to Denver over the U. P., and thence over the Atchison to California. The three general routes, and the only routes for California, were the Atchison and its connections, the U. P.-S. P. via Ogden, and the S. P. and its connections by way of El Paso.

Never heard of freight moving to Denver over the U. P. and thence via Atchison to California.

(1822) OSCAR F. BELL.

Bell.

Chicago. With Crane Co.

For over sixteen years traffic manager at Chicago, of the Crane Company, largest manufacturers of steam fitting materials in the country, with plants at Chicago, Bridgeport, Conn., and one at Pittsburg not yet in operation. Shipments from Pittsburg have moved over practically all the lines to the coast. Prior to the consolidation, the S. P. agent endeavored to route business from Cincinnati and Pittsburg by New Orleans, and the U. P. agent by the Missouri River. The S. P. agent didn't try to route business from Chicago via New Orleans. Both agents actively solicited. (1823) Doesn't recollect sending any business from Chicago by New Orleans. It moved out via Ogden. Some small portion of it may have gone via Texas junction points. Quite a considerable tonnage has moved from Cincinnati and Pittsburg via New Orleans. From Chicago the route via Omaha was the quicker. It was shorter and gave a quicker and better service.

S. P. agent didn't try to route Chicago business via New Orleans.

Better service from Chicago via Omaha route.

(1824) Since the consolidation, the joint agent solicits business, but is neutral as between the lines via Omaha or El Paso. Some of witness' business to lower California moves over the San Pedro. It moves over the U. P. and also the D. & R. G. He endeavors to distribute traffic among the different lines, as equitably as he can. Traffic to the North Pacific coast points moves over all the lines, the St. Paul, the G. N., N. P., Can. P., and Missouri River crossings, the Rock Island, Burlington, D. & R. G., Short Line, and O. R. & N. Before the consolidation, witness' recollection is that S. P. agent solicited Portland business via Ogden and the Shasta route. The U. P. agent, when the O. R. & N. was not a portion of the U. P. system, solicited in connection with the Shasta route. Afterwards, in connection, with the Short Line and O. R. & N. Witness has shipped to the coast by the water lines, the American-Hawaiian Steamship Company, the clipper ships around the Horn from New York and Philadelphia, and also the Panama route. (1825) Shipped by the Panama route mostly from Bridgeport. From that territory also ships by the Morgan Line, but not a large volume. Traffic moves from that territory by the all-rail lines also. The U. P. has always solicited that traffic, and also the Morgan Line has. Thinks the Can. P. differential was before he, in 1892, entered the employ of the Crane Company. Doesn't remember using it. Atlantic seaboard business is now and has always been solicited by a great many lines.

Routing of his traffic.

(1826) Solicited by all the lines from the Atlantic to the Pacific, and traffic still moves by all of them. (1827) With reference to Chicago business, the Northwestern would turn its business over to the U. P. at Omaha, and so would the St. Paul, usually; although it might deliver it to the Atchison at Kansas City. The Rock Island and Burlington would take theirs to Denver, and then deliver to the D. & R. G. or U. P. All those lines in soliciting California business solicited for the S. P. route west of Ogden, or, after 1905,

All the Iowa lines solicited for the S. P. west of Ogden.

Never used Portland route.

for the San Pedro route for lower California. Never shipped anything to California by way of Portland.

Shasta route not used.

(1828) Witness thought a long while ago he had shipped a little traffic over the Shasta route to Portland. It was very unusual. That route is not as good as that via the O. S. L. or the N. P. or G. N. It is an impractical route, as compared with them, and since the O. S. L. and O. R. & N. have become a part of the U. P. system, business is not solicited that way. He is not interested in the divisions. Since the consolidation, rates to Portland over the Shasta route have been taken out, but apart from that, witness would not want to ship that way. (1829) It used to happen that the longer haul could make a lower rate than the shorter haul, but not very frequently. The Morgan Line, Sunset route, though longer than the all-rail line to San Francisco, in point of service is perhaps better. The S. P. through El Paso competes with the Atchison to Los Angeles, though the former is the longer line.

Service over S. P. and U. P. via Ogden very much improved.

(1830) Since the rates by all lines were made uniform, shippers are largely influenced by the service, and also by the personality of the agents. The U. P. and S. P. line via Ogden has been very much improved in the last seven or eight years. So have the Atchison and all the other railroads in the country. Both the Harriman lines and the Atchison give excellent service.

Ginz.

(1831) H. H. GINZ.

South Bend. Agricultural Implements.

For the last two years a dealer in retail agricultural implements at South Bend, Ind. Formerly for about ten years employed by the South Bend Chilled Plow Company, in charge of their traffic from 1899 to 1907. (1832) Prior to the consolidation, the S. P. representative endeavored to route business via New Orleans over the Illinois Central, and the U. P. via Ogden. They used every effort to get it, they could. At one time they were willing to pay for it. No special equipment required for carrying plows. Witness' business was practically all carload.

Fast freight on Ill.Cent.

(1833) Prior to the consolidation, he divided business equally between S. P. at New Orleans, and the Atchison, and the U. P. at Ogden or Kansas City. Shipped to the North Pacific coast points, including Portland, over N. P. and G. N. There was a fast train from Chicago to New Orleans on the Illinois Central, that used to pick up south-bound cars at the junction of the I. I. & I. and the I. C., and freight moving over that route made good time to the coast. After the consolidation, the joint agent solicited preferentially for the Ogden route. He claimed that there would be better service that way, and that the fast service on the I. C. had been abandoned. Doesn't remember any one working for the southern route after that.

(1834) Practically all the lines running west and southwest of Chicago in addition to the U. P., S. P. and Atchison, solicited witness' California business. All the intermediate lines. The U. P. and S. P. men were not the only two agents who were willing

to pay for business in the old days. The S. P. man came with an agent representing the I. C. about half the time. Witness doesn't remember his calling with an agent of any of the western lines. After the consolidation, witness gave the car to the agent to route either by the southern or Omaha route, as he pleased. (1835) Doesn't think the D. & R. G. ever sent a solicitor to call on him. Some few cars went over the Rock Island by way of El Paso. Possibly one or two cars over the Missouri Pacific and T. & P. Some of the business was routed by the consignees. None of the lines west of the "Missouri Pacific" got any of that business, except the U. P., unless it was routed from the other end. The I. C. has not quit soliciting business for California. They have always solicited by way of New Orleans.

S. P. solicited half the time with an Ill. Cent. man.

(1836) Doesn't think the I. C. solicits business by way of New Orleans as actively as formerly. That change occurred about three years ago. The I. C. man didn't tell witness the fast train was still on. He doesn't think he took it up with the agent. California business was practically all that witness had that the S. P. and U. P. could handle, and so he gave that to them and the Atchison. As to the intermediate lines, there was a good deal outside of the coast business that they could get a haul on, and witness' endeavor was to divide his business among all the lines. The Harriman joint agent ceased to route through the New Orleans gateway, and that is the reason witness' business ceased to move that way.

I. C. doesn't solicit via New Orleans as actively as formerly.

Divided among all lines.

(1837) CHARLES L. MILLHOUSE.

Millhouse.

For about eight years a manufacturer of asphalt at South Bend. Previously, for over three years, traffic manager of the Studebaker Mfg. Co., and prior to that agent of the Atchison at Peoria for eleven years. When witness was in Peoria, S. P. tried to get the long haul as much as they could via New Orleans, and the U. P. via Omaha. The business solicited consisted largely of agricultural implements and furniture, going west; and east-bound, canned goods, dried fruit and oranges. (1838) The east-bound freight was very often controlled in the east. Remembers some dried fruit or canned goods coming by way of New Orleans to points east of Northern Illinois points. The S. P. and U. P. were working the Ogden route together, in competition with the Santa Fe. That line was the Atchison's principal competitor.

South Bend. With Studebaker M'f'g Co.

The S. P. and U. P. were working the Ogden route together against the Santa Fe.

(1839) The U. P. solicitor worked by that route. The S. P. solicitor worked the Sunset route. (Presumably meaning by El Paso.) When witness worked the Atchison, all three were competing for business east and west. If S. P. couldn't get business by the Sunset, doesn't know whether they worked with the U. P. by Ogden, or not. Thinks he remembers the S. P. soliciting business by Ogden. Mr. Neimyer was actively working business that way. Understood that was what Neimyer was in Chicago for. If witness had been working for the S. P., and couldn't have gotten business out of Chicago by way of New Orleans or the Texas gateway,

and could have gotten it by way of Ogden, he would have tried very hard to do so, rather than have it go to the Atchison.

Holderness.

(1841) F. M. HOLDERNESS.

Kenosha, Wis. With Bain Wagon Co.

For sixteen years shipping clerk of the Bain Wagon Company, at Kenosha, Wis. Most of witness' Pacific coast business goes over the Atchison, and the U. P. via Ogden. Before the consolidation, the U. P. solicitor called on witness, but he doesn't remember the S. P. The I. C. solicitor also calls, but he doesn't solicit coast business via New Orleans. Quit soliciting that way some time ago. Witness in the old days sent very little by New Orleans. Sent some. The rates were equal at that time. Doesn't know whether they are now or not. He doesn't ship that way. The joint agent solicits by the Ogden gateway.

In old days sent some business via New Orleans.

(1842) Business for the North Pacific coast, including Portland, moves N. P. and G. N. and Can P.; also into Portland over the U. P. Almost all witness' business is routed by the consignees. That has always been the case. When business was brisk and there was a shortage of equipment, witness would take any car he could get hold of, and in that way shipments would occasionally be made over the I. C. via New Orleans. Some of the business goes to Los Angeles over the San Pedro. None goes over the S. P. since the San Pedro route was opened. Occasionally a car goes via El Paso. The question of equipment controls that. (1843) Doesn't recall ever having been solicited for California business via New Orleans by the S. P. Is positive that he has shipped that way, but very seldom. Almost all of witness' shipments go by way of Ogden.

Does not recall being solicited by S. P. via New Orleans.

Wratten.

(1844) EDWARD L. WRATTEN.

Racine, Wis. J. I. Case Threshing Machine Co.

Traffic manager of the J. I. Case Threshing Machine Company, at Racine, Wis. Has shipped to the Pacific coast for the last five years. The traffic moves via Omaha; also via Kansas City and the Atchison. Ships principally to Oakland, where there is a branch house, and distributes locally there. Business is solicited by the joint agent. Nobody calls on witness and solicits business by the Texas gateway.

(1845) The joint agent doesn't mention the route. Simply asks for the business, and if he gets it, it goes via Omaha. Shipments to California consisted of 10 or 15 carloads a year. Traffic to Portland moves N. P., G. N. and U. P. Witness has a distributing agency at Portland; also one at Spokane. Distributes from Portland to Oregon and some points in Washington. Threshing machines are all shipped on flat cars. Witness' business has never been solicited by way of the S. P. There are no rates in effect by way of New Orleans or Texas gateways from Racine to California. Witness is located on the tracks of the St. Paul and Northwestern. Never shipped anything into Portland by the Shasta route, nor to California by way of Portland.

His business has never been solicited via S. P. No rates in in effect.

(1846) W. H. KNIGHT.

Knight.

Resides at Hinsdale, Ill. His railroad experience is as follows: Commenced with the Buffalo & Erie, at Buffalo; then went to Des Moines, Iowa, and worked for the Rock Island in 1871-2; then came to Chicago in 1873 and worked for the Lake Shore for a short while; and then went to work for the Michigan Central until April, 1876, as a clerk; then transferred to the Chicago, Danville & Vincennes, and worked for them until 1881 as a clerk, contracting agent and general agent; in 1881 transferred to the Missouri Pacific as general agent in Chicago; in 1882 (1847) became contracting agent for the Wabash and Missouri Pacific, until 1883; then went to Detroit as division freight and passenger agent of the Wabash; remained there until 1887; then went to St. Louis as assistant general freight agent of the Wabash; on December 1, 1888, became general agent of the U .P. in Chicago, in charge of freight and passenger business until 1901. Since then worked for the Atchison a short time, soliciting business until witness took his present position (which does not appear). Witness didn't represent the passenger business of the U. P. all the time he was employed by it. His territory as general agent extended to just the other side of Erie, Pa., south of the line to the Ft. Wayne road; and west to the C. C. C. & I., out of Cleveland, and extended along that road through Indianapolis to the line running from Indianapolis through Decatur, and then the line of the Wabash railroad to Hannibal, and then the east bank of the Missouri River clear north to the Canadian boundary line. Witness competed with the S. P. agents. The traffic from that territory to the coast was substantial.

Chicago. Former general agent of U. P.

Witness' territory.

(1848) Competition for it was active. When you got south of the witness' territory as general agent of the U. P., the S. P. tried to work traffic by way of the southern gateways, but north of that line, in witness' territory, they worked the larger part in connection with him by Ogden. Traffic from Indianapolis dependent on service. Where rapidity was required, the S. P. used the Ogden gateway. Where it was a class of business that would stand longer service, they would take it by their longer haul. Where they used the Ogden gateway they worked with all the lines, but the U. P. were the closest connection that they had. The U. P. had the most direct route, and could give them the best service. They also worked with the Rock Island, the Burlington and the Missouri Pacific. Those lines would haul to Denver, and turn it over to the R. G. & W., or the R. G. and R. G. & W. and Colorado Midland. The D. & R. G. in those days had representatives in the Chicago territory. They were actively working on a strict maintenance of rates. They were not a strong line, because of being longer and having the mountains to go over. The service through the Ogden gateway was then excellent. Witness has taken certain classes of freight out of here with effort to make time, and put it in San Francisco in five days, but six or seven days was pretty regular service.

South of witness' territory, S. P. worked southern gateways; north of that line, S. P. worked with U. P. via Ogden.

Also worked with other roads using Ogden gateway.

Time.

(1849) There was a special freight schedule from New York of about eight days. The service from New York to Chicago was then about four days. The time from New York to Chicago is not as good to-day as it was then. All the railroads have gone crazy on the tonnage proposition. The time is not so good between Chicago and the coast, by any means, by any of the lines. Witness as agent of the U. P. worked business into Portland and Oregon points, and also out of there. Participated in the hop business. The principal hop distributing point was Sacramento. (1850) But there were a great many hops from Eugene and Ashland, or north of Ashland, that came out by way of Portland. Witness believes the U. P. was S. P.'s preferred connection, and they always treated the U. P. so that witness was perfectly satisfied with the share that the S. P. gave the U. P. Doesn't know of any hops moving down from Portland by boat. From Sacramento the hops moved east via Ogden. The S. P. even on the Atlantic coast business sent most of it all-rail direct through Chicago. From Ogden it didn't move exclusively by the U. P., but both ways. They divided their tonnage. The hop business came through both by the O. R. & N. and by the S. P. down to Sacramento. The O. R. & N. had a line of steamers from Portland to San Francisco.

Hops.

U. P. was S. P.'s preferred connection.

S. P. even routed Atlantic coast business through Chicago.

Distances.

(1851) Witness thought the boat line might well be continued as a good means of requiring fair treatment from the S. P., but that, of course, was a matter away above his determination. If witness remembered right, the division between the Central Pacific and the U. P. was 46 and 54, the distance being 850 miles from Ogden to Sacramento, and 1034 from Omaha to Ogden, but those distances have both been shortened up. The divisions were maintained without change while he represented the U. P. Witness never knew of any change at any time. There are a great many agencies maintained here in Chicago, of which the manufacturing or originating point is in the east, so that witness would very frequently solicit business in Chicago that would have an eastern shipping point. (1852) There was a good deal of business of that sort, and as to that business, witness competed with the S. P. In those days a great deal of the time rates were not maintained on this competitive business. When rates were maintained, service is the principal element. Included in the service, in the first place, is the convenience for delivery to the carrier, next, the time required to transport, also the question of equipment.

Service the principal element.

(1853) The S. P. were always pretty well supplied with equipment. Remembers the Can. P. differential. The U. P. couldn't meet it. The Can. P. not only maintained a differential, but something more in addition, that is, they published a differential and made rates to get the business. Witness thought that was one reason why it was not continued. It was too unprofitable. A great deal of business moved that way. Thought the time was fifteen days or more. Witness was in San Francisco and saw some lumber that had come around by the Can. P. It had been very much dam-

Can. Pac. differential unprofitable.

aged from handling, so that the Can. P. must have made a good deal better than a ten per cent. of the rate differential, in order to take care of the loss. They could not take bulky machinery that way, but things that were easily transferred; "rolling freight" more than anything else.

Rolling freight.

(1854) Rolling freight would include sugar and pork, in barrels, and boxed stuff of all kinds. Witness remembers a differential rate in which the U. P. participated from the Atlantic seaboard by way of New York to Savannah; also a line by way of Newport News or Norfolk, with the Norfolk Dispatch. Witness routed the business to Portland over the O. R. & N. There was no change in that during the receivership of the O. S. L. They were regarded as one interest, and merely for legal requirements a disintegration was made, and traffic was worked that way just as though there was no separate receiverships, but about that time what is known as the Provo gateway was thrown open to the D. & R. G. connections, and as a result there was lots of competition up on the Short Line and O. R. & N. with the Rock Island, the C. B. & Q., the Missouri Pacific, etc. It was said that the wool buyers would sit down at Salt Lake and play poker, and the railroad fellows would go up and load their wool for them, and ship it out, and then pay them a rebate. That was competition between the lines east of Salt Lake. It was wool traffic principally.

U. P. water and rail route.

Rebate competition in wool.

(1855) Never knew of a time when the D. & R. G. were getting in pretty strong on the O. S. L. business, and the U. P. sent a lot of Portland stuff around by the Shasta route. Witness never knew of a single shipment that the S. P. controlled taken out of the Chicago territory by them via New Orleans or the Texas gateways. Witness stated that if the S. P. took any business from the Chicago territory to the Texas gateways, he was very much duller than he thought he was. They certainly did not let him know it, and he was trying to keep track of all that was going on, and generally did pretty well. Mr. Neimyer once made a mistake and took some rails by New Orleans and apologized for it.

Never knew of a shipment that S. P. controlled, taken out of Chicago territory via New Orleans or Texas gateway.

(1856) They couldn't have done much of it without witness finding it out, and he had no cause for any friction. Business further east was competitive. Witness, when his time expired, worked with Mr. Neimyer nearly a month without expecting any consideration in order to post him fully on the affairs of the office. All the Los Angeles business that the U. P. could control, and also all that the S. P. could control, largely went through the Ogden and Sacramento gateway. The best service could be had that way. Doesn't think the S. P. tried to route Los Angeles business through the Texas gateways to anything like the extent they did through Sacramento. The cut-off of the Rock Island to El Paso was not completed at that time, so that the lines were through Fort Worth, which is a long line, and the service not good. Some traffic undoubtedly moved through Fort Worth. There was the M. K. &

S. P. routed more Los Angeles business through Ogden than via Texas gateway.

T. and their connections, of course, but the principal lines working out of Chicago solicited for Ogden.

Division of rate.

(1857) The division of the through rate to Los Angeles from the Missouri River was about 54 per cent. for the S. P. and 46 for the U. P., practically a mileage pro-rate. Fast freight went from Chicago to Los Angeles then, in eight or nine days. Soliciting agents often made recommendations to their superior officers as to changes in rates, which finally led to readjustments. (1858) These recommendations would be made a file of, pending a meeting of the Association. For instance, if it was a transcontinental proposition, the recommendation, together with all necessary data, would be sent to the traffic manager, and he would keep it for the next transcontinental meeting, when it would be adopted, if it was a worthy proposition. If the suggestion pertained to a matter of classification, it would go to the Chairman of the Classification Committee, which met bi-annually. Out in the west, with new commodities and new manufactures springing up, such suggestions were more frequently required.

Rate changes recommended by solicitors.

The S. P. a connection of U. P.

Never attempted to move San Francisco freight via Portland.

(1859) Such competition as the U. P. engaged in for California business from the Chicago territory was as a connection of the S. P. line from Ogden west. Never attempted to move any freight for San Francisco via Portland and by boat. Never had any instructions to work that line. Apart from any antagonism to the S. P., the use of that line would have antagonized the U. P. patrons to such an extent that the Company could not afford to do it. (1860) With reference to these reports and recommendations for changes in rates, witness knew of no reason why the situation should have changed since 1901, only they would be less frequent because of the change in the condition of the country. Less new development after the country became more settled. In testifying about the short service from Chicago to San Francisco, that was not during the whole period from 1888 to 1902 that witness was connected with the U. P., but during the latter part of that period. There was a short time, during the receivership, that they got balled up on service. Best service was during the Burt administration, "which was the last four or five years of my service with the Company." The physical condition of the road had been very much improved, and that of the Central Pacific also.

Physical conditions of S. P. and U. P. much improved.

(1861) Service on the trunk lines between New York and Chicago not as rapid as it was some years ago. That is also true of the western lines. Witness didn't mean to convey the impression that the amalgamation of the agencies had anything to do with the change in service, or that Mr. Neimyer slowed up things at all. The service is now uniformly bad over all the lines. Witness thought the U. P. and S. P. gave as good service as the best in the west. Witness has not been actively engaged in the transportation business in recent years. The Can. P. differential applied from the Chicago territory. It went through St. Paul over the various lines. Knew of their going to Kansas City and moving quite large ship-

Service now uniformly bad on all the lines. U. P. and S. P. give as good service as the best in the west.

ments from there by way of St. Paul, and then taking it up over the Soo Line by way of Minot and out over the Can. P. and down to San Francisco by boat. (1862) That was done without regard to published rates. Even from the southern portions of the territory that witness had, business rarely moved by way of the southern routes. Anything that was on the Illinois Central road, they would take the New Orleans haul on, if they could, but anything off the I. C. almost uniformly moved through Chicago and Ogden. While the I. C. had a line by way of Omaha, they almost invariably hauled that stuff by way of New Orleans.

Business from I. C. moved via New Orleans. Business off the I. C. moved via Ogden.

(1862) JAMES T. MORRISON.

Morrison.

Since November, 1908, Secretary of the National Association of Implement and Vehicle Manufacturers, at Chicago. (1863) Before that, from July, 1900, witness was in charge of traffic of the Racine Wagon & Carriage Company, at Racine. Prior to that, and to November, 1895, was chief rate clerk of the Milwaukee & St. Paul at Chicago, and from 1891 to 1895 was contracting freight agent of the same road at St. Louis, where he worked only north coast business. The Milwaukee & St. Paul had no working arrangement out of St. Louis for California. Worked with the Wabash via Ottumwa, care of the Milwaukee & St. Paul at Mason City, via Minnesota Transfer, also C. P. & St. L. via Peoria; C. R. I. & P. via Minnesota Transfer; C. & A. via Chicago; and C. M. & St. P. at Chicago. Entirely via the Minnesota Transfer. Could not work by Omaha on account of having no working arrangement that way. The U. P. were working that business via Omaha or Kansas City, and over the O. S. L. When witness was in Chicago, the St. Paul worked California business by all the Missouri River lines. Presumed on California business he met the competition of the lines to California through the southern gateways. They were certainly in the field via Texas points, but witness' work in the office "would not make known to him" whether they were in the field for California business via New Orleans, or not.

Chicago. Sec'y Implement Ass'n.

Routing of California traffic.

(1864) The Texas junction points were Fort Worth and El Paso. Doesn't know whether the S. P. solicited business from Chicago via El Paso or Fort Worth, or not, but knows they took business that way that was secured by the Rock Island, the M. K. & T. or the Iron Mountain. When witness was at Racine, he was solicited by the S. P. agent, and witness' recollection is that the agent was agreeable to taking traffic either by Ogden or El Paso. The plant was located on the C. M. & St. Paul Railroad, which supplied large vehicle cars and naturally insisted upon the long haul either to Omaha or Kansas City; therefore, our connections beyond Kansas City, consisting of the Rock Island or the M. K. & T. or the Frisco, could all take the business by El Paso, or, if witness chose to let it go by Omaha, it went by the Rock Island, the Burlington or U. P. Witness cannot recall that an S. P. representative ever asked for business at any particular gateway, either Omaha, El

Paso or Fort Worth. (1865) The S. P. representative, Mr. Harmon, was employed by Mr. Neimyer. That was in 1900 and 1901. He wanted the business, but expressed no preference. The connecting lines running both to El Paso and Ogden were very actively soliciting the business.

S. P. wanted the business, but expressed no preference as to gateways.

Stebbins.

(1865) C. S. STEBBINS.

Asst. to Gen. Auditor Harriman lines.

Assistant to the General Auditor, at Omaha, of the Harriman lines, including the Pacific Mail and the P. & A. (1866) but not the Occidental & Oriental. The Secretary of that Company is in charge of its accounts, but makes certain reports to the General Auditor (Young). Witness had immediate supervision of the compilation of the figures shown in Exhibits 119 to 126, inclusive. The work was done in the name of Mr. Young. (1867) The month of October ordinarily gives the heaviest traffic. April is a heavy month, but not so much so as the fall months. April and October were selected as representative months. It was impossible to furnish statements of statistics for these months in 1900 and 1901, requested by counsel for the government, because of the destruction of the S. P. records in the San Francisco fire in April, 1906, and also because a considerable portion of the records of the U. P.'s freight business was destroyed by a fire in the record room at Omaha in December, 1906.

Prepared traffic statistics.

April and October were selected as representative months.

Records destroyed.

(1868) Exhibit No. 123 does not cover the business which was carried east of El Paso by the T. & P. and there delivered to the S. P. It is an incomplete statement, and because of the destruction of the records, it would not be possible to make up a similar statement as to freight business. March is the heaviest month for passenger traffic over the southern lines, and September over the northern. They were considered fairly representative months.

March and September representative months for passenger business.

Exhibit 125 does not include revenue accruing to the steamship lines in which the railroads are interested, but only the rail lines' proportion of the business.

(1869) Exhibit 119 does not show revenue obtained by the S. P. through the Ogden gateway on business exchanged with the D. & R. G., unless it was carried over the U. P. to Denver, and then by the D. & R. G. to Ogden. There is a considerable amount of passenger business carried from Kansas City by the U. P. to Denver, and then over the D. & R. G., but not much freight.

"Southeastern territory."

The seventh sub-division of Exhibit 120, "southeastern territory," embraces all the territory east of the Mississippi River, which is not covered by the other six sub-divisions (1870) the latter being strictly defined in the transcontinental tariffs which were then in effect.

List of Statistical Exhibits Prepared Under Supervision of Witness, at Request of Counsel For Government.

These exhibits are set out in full at close of Abstract.

Exhibits prepared at request of Government Counsel.

(1872) Complainant's Exhibit 119—revised. Statement of certain traffic carried by Union Pacific System lines and Southern Pacific Company lines, being freight traffic between all eastern territory and western territory, sub-divided as follows: 1. All points in California, points in Nevada for which the rates are the same via Central Pacific Railway and Southern Pacific Railroad, and points in Oregon south of Portland, except points on the Willamette River north of Harrisburg, inclusive, formerly reached by the Oregon Railroad and Navigation Company's Boat Lines. 2. Portland, Oregon, and points on the Willamette River north of Harrisburg, inclusive. 3. The Orient—China, Japan, the Philippines and Hawaii. It shows westbound and eastbound traffic for month of October, 1906, via Omaha, via Kansas City, via El Paso, and via all routes.

Complainant's Exhibit 120—revised. Statement of certain traffic carried by Union Pacific System lines and Southern Pacific Company lines, being freight traffic between all western territory and eastern territory, sub-divided as follows: 1. Missouri River and Common Points Territory (excluding points in Nebraska and Kansas west of Omaha or Kansas City, Kansas). 2. Mississippi River and Common Points. 3. Chicago and Common Points. 4. Cincinnati, Detroit, and Common Points. 5. Pittsburg, Buffalo, and Common Points. 6. New York, Boston, and Common Points. 7. Southeastern Territory. It shows westbound and eastbound traffic for month of October, 1906, via Omaha, via Kansas City, via El Paso, and via all routes.

Complainant's Exhibit 121—revised. Statement of certain traffic carried by Union Pacific System lines and Southern Pacific Company lines, being freight traffic between all eastern territory and western territory, sub-divided as shown in Exhibit 119. It shows westbound and eastbound traffic for month of April, 1907, via Omaha, via Kansas City, via El Paso, and via all routes.

Complainant's Exhibit 122—revised. Statement of certain traffic carried by Union Pacific System lines and Southern Pacific Company lines, being freight traffic between all western territory, and eastern territory, sub-divided as shown in Exhibit 120. It shows westbound and eastbound traffic for month of April, 1907, via Omaha, via Kansas City, via El Paso, and via all routes.

Complainant's Exhibit 123. Statement of certain traffic carried by Union Pacific System lines and Southern Pacific Company lines, being passenger traffic between all territory east of eastern boundaries of North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, and Texas, including also cities of Omaha, Nebraska, Kansas City, Kansas, and western territory sub-divided as shown in

Exhibit 119. It shows westbound and eastbound traffic for month of September, 1900, via Omaha, via Kansas City, via El Paso, via all routes.

Complainant's Exhibit 124. Statement of certain traffic carried by Union Pacific System lines and Southern Pacific Company lines, being passenger traffic between all territory east of certain eastern boundaries, as shown in Exhibit 123, and western territory subdivided as shown in Exhibit 119. It shows westbound and eastbound traffic for month of December, 1900, via Omaha, via Kansas City, via El Paso, and via all routes.

Complainant's Exhibit 125. Statement of certain traffic carried by Union Pacific System lines and Southern Pacific Company lines, being passenger traffic between all territory east of certain eastern boundaries, as shown in Exhibit 123, and western territory subdivided as shown in Exhibit 119. It shows westbound and eastbound traffic for month of September, 1906, via Omaha, via Kansas City, via El Paso, and via all routes.

Complainant's Exhibit 126. Statement of certain traffic carried by Union Pacific System lines and Southern Pacific Company lines, being passenger traffic between all territory east of certain eastern boundaries, as shown in Exhibit 123, and western territory subdivided as shown in Exhibit 119. It shows westbound and eastbound traffic for month of March, 1907, via Omaha, via Kansas City, via El Paso, and via all routes.

Complainant's Exhibit 120-A. Statement of certain traffic carried by Southern Pacific Company lines via El Paso, being freight traffic between western territory as shown in Exhibit 119, and eastern territory sub-divided as shown in Exhibit 120. It shows total traffic for month of October, 1906, via Southern Pacific steamers, via New Orleans and rail connections, via rail connections west of New Orleans.

Complainant's Exhibit 120-B. Statement similar to Exhibit 120-A, except that it shows total traffic for month of April, 1907, instead of October, 1906.

Complainant's Exhibit 120-C. Statement of certain traffic carried by Union Pacific System lines and Southern Pacific Company lines, being freight traffic between Atlantic seaboard territory and Colorado common points and Utah common points. It shows westbound and eastbound traffic for month of October, 1906, via Omaha, via Kansas City, and via Southern Pacific Company.

Complainant's Exhibit 120-D. Statement of certain traffic carried by Union Pacific System lines and Southern Pacific Company lines, being freight traffic between Atlantic seaboard territory and Colorado common points and Utah common points. It shows westbound and eastbound traffic for month of April, 1907, via Omaha, via Kansas City, and via Southern Pacific Company.

Correspondence in regard to compilation of foregoing statistics.

(1873-1885) Defendants' Exhibits 1 to 8, inclusive. Correspondence between Judge Lovett and Kellogg and Severance and Auditor Young, regarding foregoing statements.

(1887) On Exhibit 119 is shown, on the first line, 3,321 tons of freight, under column 1, "via U. P. system lines to or from Portland," on which the U. P. and S. P. respectively realize the revenue there shown. That is shown as traffic to or from California, etc. As a matter of fact, none of that freight either originated at or was destined to points in California, but it had its origin or destination on the S. P. line in Oregon, south of Portland. None of that traffic had its destination or origin in California, but all in Oregon at points not reached by the boat line. It moved between Oregon and destination by way of Portland, that is, its origin or destination was east of the Missouri River, and it moved on the S. P. south of Portland via Omaha and Portland. (1888) The months set forth in the Exhibits and the territories shown therein were selected by the Government. In April the traffic is not the smallest in the year. It is a large month on the northern lines, but not so large as the fall months. (1889) Witness understood that the months of April and October would show a fair average of the year's business.

(1892) MARTIN VAN PERSYN.

Persyn.

For 25 years employed by Sprague, Warner & Company, wholesale grocers, in Chicago. With the exception of about two years, all the time connected with their traffic. Ships comparatively little to the Pacific coast. Has shipped oranges, canned goods, dried fruit, raisins, prunes, etc., east-bound. Witness shipped oranges over the Atchison. (1893) The S. P. solicits the orange trade over the I. C. into Chicago, and represented that their time was extremely good that way. The U. P. solicited by Pueblo or Omaha, but not very frequently. They solicited by Pueblo, because they knew that witness was favorable to the Atchison. Since the consolidation doesn't think the joint agent has solicited witness' coast business. Agent knew the way it was going. May have asked incidentally for some of the business, but mentioned no routing. Ships by the Atchison because, for one reason, he can keep better track of cars in transit. West-bound shipments to Oregon usually move U. P.-O. S. L.

Chicago. With Sprague, Warner & Co.

Orange shipments.

(1894-1895) Prunes and salmon originate a little further north than Portland, and most of it comes east over the N. P. Witness admitted on cross-examination that his reason for preferring the Atchison was to a considerable extent of a personal nature. Means to cast no reflection on the U. P. or S. P. Orange shipments that were formerly solicited by the S. P. were carload. Doesn't think he was mistaken in stating that they were solicited by way of New Orleans rather than the Texas gateways. Once during a shortage of cars on the Atchison, witness shipped oranges over the S. P. They did not come by way of New Orleans, however. Came in via Ogden, the D. & R. G. to Pueblo, and then the Atchison. That is an unusual route. Doesn't recall shipping any oranges over the U. P.

United States v. Union Pacific Railroad Company, et al.

DEFENDANTS' ABSTRACT OF TESTIMONY

TESTIMONY FOR COMPLAINANT

VOLUME V.

Cribben.

(1897) WILLIAM H. CRIBBEN.

Chicago. Stove Manufacturer.

William H. Cribben, of Cribben & Sexton Company, stove manufacturers, in Chicago. Has been shipping to the Pacific coast for 25 years over all the routes. Has never shipped by boat. Once shipped a carload of hollowware, a good many years ago, to New York and then around the Horn. Part of the traffic to Portland goes over the U. P. and O. S. L. Has branch houses at San Francisco and Portland. (1898) Before the consolidation, both companies solicited business from witness. Doesn't know that the S. P. agent ever made any distinct request to have traffic go either way. The solicitation used to come from their offices, and also the connecting line. Thinks on two or three occasions the agent preferred the New Orleans or Texas route, on account of the long haul. The U. P. solicited by the only line they have. On one occasion the S. P. solicited Portland business by the Shasta route. Witness thought it was because they were having some little difficulty with the Short Line and O. R. & N. The boat line from Portland to San Francisco never solicited at the Chicago end of the line, but it did from San Francisco. Witness never shipped anything that way. His representatives there wrote him about it, and the boat line made a rate, but he could not afford to have his goods transferred. Thinks that was in 1893 or 1894. The two companies were active in their solicitation.

Does not know that S. P. specified a preferred route.

Shasta route.

Never used Portland route.

(1899) Doesn't think the solicitation is quite so active now. Anything witness ships now goes out to Ogden, either over the U. P. or the D. & R. G. Since the consolidation of the agencies nothing has been said about traffic going through the southern route at all. All the lines were soliciting business from Chicago to the River, and from Chicago south, and witness thinks the S. P. agent formerly expressed a preference for the southern route, but "it is

barely possible" that he may have got him mixed up with some of the other solicitors. Neimyer was glad to get the business either way. He co-operated with any of the lines leading into Ogden for business that way.

Neimyer glad to get the business either way.

(1900) Neimyer before the consolidation was not particular, of course, from the Chicago territory, whether business went by the southern route or by Ogden. Once, in discussing a change in the transcontinental tariff that witness desired, Neimyer, during the course of the conversation, wanted to know if he could give him some Portland business by the Shasta route, but witness never routed any that way. Could not transfer his goods at all. (1901) The S. P. agent solicited generally for that company. If he could get the longer southern haul, he preferred that. If not, he would take the shorter haul. The general agent solicits for the Ogden route, but the other is still open. Witness is not interested in divisions.

(1902) J. E. RYAN.

Ryan.

About twenty years shipping clerk for the Union Wire Mattress Company at Chicago. Has shipped to the coast for about 15 years over all the lines—St. Paul, some of it by Omaha, U. P.; some by Kansas City and the Santa Fe; some by Rock Island, El Paso, and on account of the nature of the equipment on the Atchison, until a little while ago, witness was compelled to use the El Paso route. The Atchison had forty foot furniture cars which were so high and the eaves so wide, they claimed they could not take them through the snowsheds on the S. P., and the Atchison claimed they could not get them through their tunnel at Raton. Consequently, a car like that was compelled to go by El Paso, until a couple of months ago, when they sent out notice they could handle them the other way. Shipments to Portland move N. P. and G. N.

Chicago. With Union Wire Mattress Co.

His cars could not go through S. P. snowsheds until recently.

(1903) Before the consolidation, the S. P. agent would come in and ask if he had any California business for them. They wanted to know how witness was going to give it to them. Sometimes he would give it by Rock Island to Denver, or the Colorado Midland, or the D. & R. G., and sometimes to the U. P. at Omaha, and they seemed perfectly satisfied whichever way witness told them. Doesn't think his business was ever solicited by the S. P. via New Orleans or El Paso. Thinks it was, however, by the I. C. Witness didn't ship that way, because the I. C. had no large furniture cars. Remembers the Can. P. differential. (1904) Four or five cars of his went that way during a period of five or six years. Has also shipped to San Francisco by Portland and boat. Doesn't remember of his Portland freight being solicited via the Shasta route, nor has witness ever shipped that way. The joint agency is soliciting by Omaha and the S. P. The Los Angeles business generally moves over the San Pedro.

S. P. agent satisfied with business through any of its gateways.

His business never solicited by S. P. via New Orleans.

Portland route.

(1905) The San Pedro man solicits the latter way. He comes in by himself. Before the consolidation, Neimyer in soliciting

for the Ogden route was satisfied, no matter over what line it reached Ogden. They had no preference. Witness has no recollection of the S. P.'s solicitation by southern routes as against the western. His business is now solicited by the various lines leading to the west, including the lines connecting with the S. P. at El Paso, as well as those at Ogden. Witness not interested in divisions. Witness shipped to San Francisco by the boat line from Portland, in order to get a better rate to San Francisco. The rate to San Francisco on folding beds was third class, new furniture $2.20 a hundred, limited to a 40 foot car. The rate to Portland on beds, value not to exceed $12, was $1.25 a hundred, 20,000 pounds minimum, and you could use any size of a car, use a 50 foot car; and the boat rate was 25 cents a hundred. (1906) It was a combination of locals; the commodity rate to Portland, and the local down. That condition continued about seven or eight months. It was ten or eleven years ago. It may have been as far back as 1893 or 1894. That condition existed only temporarily. What stopped it was, one car went down that didn't go on the regular boat, but witness thought on an S. P. boat, and they set the rate up to $2.20 a hundred. Witness paid it, and put in a claim for the difference, and it took two years to get it back; so, after all it went into the hands of the S. P. (1907) In shipping by Vancouver, witness' freight moved from Chicago over the N. W. to St. Paul, and via the St. Paul to Winnipeg; thence over the Can. P.

Solicited by the various lines.

Reasons for use of Portland route.

Dutton.

(1908) BUELL B. DUTTON.

Chicago. With Chicago Iron Store.

Since July 1, 1908, has looked after the freight matters of the Chicago Iron Store. Previous to that, from 1883, held the same position with Kelley, Maus & Company, with the exception of one year, 1884, witness thought, when he was employed by the Goodrich Transportation Company at Racine. Kelley, Maus & Company shipped to the coast over the Atchison, the Rock Island and the Burlington. Witness is not positive, but thought he shipped three carloads of iron once by New Orleans. Cannot place the date. Business to Portland generally moves over the "Q" and the O. S. L. Generally worked over the C. B. & Q. because his lumber yard was on their tracks, and they always treated him right in switching matters, so they worked together. It was witness' intention that most of the business which went out over the "Q" should go to the D. & R. G., because that Company's general agent in Chicago was a personal friend of witness'. In solicitation, the personal element controls more or less, that is, everything else being equal. (1909) Doesn't recall that the S. P. agency ever solicited by New Orleans, except the single time witness shipped that way. They were after the business, and witness would generally tell them frankly it was going out Atchison, or Rock Island, or "Q," as the case might be. Used to ship iron from Pittsburg by New York and around the Horn. Doesn't remember ever shipping any by Panama or the Morgan line. The joint agent now occasionally

Routing of his business.

S. P. never solicited via New Orleans but once.

comes in. Cannot say there is any difference in the activity of that solicitation. Don't think they are quite as active now as they were then. (1910) Couldn't say that they now solicit witness' business. Continued to ship after the consolidation just the same as before, and that was known to the joint agency. Witness is not certain that the S. P. ever solicited business of him by way of New Orleans. Witness' present house doesn't ship anything to California at all, so there is not as much occasion for the joint agents to call on him as before. Kelley, Maus & Co.'s California business was solicited by all the lines leading west and southwesterly. Doesn't remember whether he was ever solicited by the I. C. via New Orleans, or not. (1911) Cannot state positively whether the solicitation that he recalls via New Orleans was by an S. P. or an I. C. agent. Didn't pay any particular attention as to whether any of his shipments went by El Paso or not. A shipment given to the Rock Island, he let that Company take any way it wanted. Not interested in the division of the through rate. Has no recollection of Neimyer soliciting his carload business by New Orleans and stating that they didn't care for less than carload business that way.

Not positive whether New Orleans solicitation was by S. P. or I. C. agent.

(1911) DAVID N. BARKER.

Barker.

Lives at Evanston, Ill. For 14 or 15 years manager of the Chicago branch of the Jones & Laughlin Steel Company, of Pittsburgh. (1912) Has been employed by that Company in Chicago since 1875. They shipped to the coast, generally from Pittsburgh, occasionally from Chicago. Years ago, before the consolidation, the U. P. and S. P. agents solicited that business. Witness' recollection was the S. P. man solicited by way of El Paso, but didn't solicit by Ogden. The U. P. solicited by the Missouri River. Witness' traffic from Chicago moves to the coast by the Atchison, by El Paso, and by Omaha and Ogden. Shipments to Portland go G. N., and N. P., sometimes U. P. (1913) After the consolidation, witness was solicited by the joint agent, and understood it made no difference to the latter which way business was routed, so long as it went over either the S. P. line or the U. P. line.

Evanston, Ill With Jones & Laughlin Steel Co.

Routing of his traffic.

The Chicago house didn't have charge of San Francisco business from the mill, but did have Southern California, and that was solicited by the S. P. via El Paso. All of witness' California business is now routed from Pittsburg, and has been for nearly ten years. There has been very little solicitation of witness in connection with that business in recent years. Shipments from Chicago to California are very small. Any business over the U. P. must go over the S. P. to reach California. Witness' business is solicited by all the lines leading to the west. (1914) All the lines extending easterly from the three western roads solicit witness' business.

Witness' California business routed from Pittsburg.

All lines solicited.

Gallagher.

(1914) C. V. GALLAGHER.

Chicago. Formerly rate clerk for U. P. and S. P. at Kansas City.

Lives at Chicago. Contracting freight agent of the Soo Line and Canadian Pacific at Chicago for four years. Previously, for nearly five years, chief clerk in the general freight office of the U. P. and S. P. at Kansas City. Became chief clerk with the U. P. in 1900 or 1901. The office was consolidated with the S. P. later. (1915) Witness had been there a year or two when the office was consolidated. Prior to the consolidation, both the U. P. and S. P. were seeking the coast business out of Kansas City. Doesn't know how the S. P. were endeavoring to route it. Didn't know much about it. Had reports that it moved by way of Texas junction points. Sherman and Dennison were the northern Texas junctions with the Frisco and M. K. & T. That is about 600 miles from Kansas City. (1916) U. P. sent traffic via Ogden. After the consolidation, business was worked preferentially that way—the "100 per cent route." Kansas City traffic consisted of manufactured products and meat, furniture, and things like that. The D. & R. G. was represented in that territory. They preferred the Missouri Pacific and Rock Island, and Atchison to Colorado junctions. Before going to Kansas City, witness was employed in the traffic manager's office in Omaha, for about eight years, working up from junior clerk to chief rate clerk—1893 to 1900. (1917) The Shasta route occasionally had shipments by the U. P. and Ogden.

"Portland Special."

(1918) Remembers that during the receivership, a special train called the "Portland Special" was put on on account of trying to whip the Short Line into giving better divisions, witness thought, or taking away their divisions. They put on a train and handled quite a few cars daily via the Shasta route to Portland. Doesn't know how long that kept up, might have been a day or it might have been a month. Just remembers it as "one of the sensations of that period." Doesn't think it lasted very long. (1919) Remembers lumber moving out of the Coos Bay region via steamship to San Francisco, and east over the S. P. and U. P.; at least, rates were put in that way. Doesn't know whether the lumber moved or not. That was when witness was a rate clerk at Omaha. Witness didn't have anything to do with putting in or arranging transcontinental rates. That was committee work, done by Munroe (freight traffic manager), Wood (general freight agent), and Garrett (assistant general freight agent).

Coos Bay lumber.

Rate meetings.

(1920) Those gentlemen made up the Committee on behalf of the U. P. At different meetings, one or the other would attend as representatives of the U. P. The most usual way of effecting a change in rate was that the party interested went to the U. P. and asked to have a rate put in. He probably canvassed all the transcontinental lines, and tried to secure their approval of the change, and when it came up in the transcontinental meeting, they all voted on it. The proposed change might be initiated by any of the transcontinental lines.

(1921-1922) Knows there was a differential over the U. P. and its eastern connections by the Old Dominion Line of steamers from New York, or the line down to Savannah, into Colorado and Utah common points through Kansas City. In witness' position, he didn't know whether shipments were made that way, or not. Simply knew the rates were put in. Thinks those rates were the same as the differential in force over the Morgan Line and S. P. and connections. That differential was in force during all the time witness was in the rate department. Thinks those differentials were in for some part of the period from 1894 to 1900. Doesn't remember that they were taken out. Just has a general recollection that those tariffs were in. That is all. Doesn't know what the differential was that way or, by New Orleans and Galveston. From Kansas City, the Missouri Pacific, the Rock Island, the M. K. & T. and the Frisco were soliciting business by way of El Paso. What the Missouri Pacific controlled, and much of the business the others controlled, went over the Texas Pacific to El Paso. (1923) That was the short line to California by way of El Paso. The S. P. never had any line north of Denison and Fort Worth. Prior to the merger, the U. P. worked business from Kansas City exclusively by Ogden. There were a good many lines soliciting freight in the same direction via Ogden, and if some of them got it, the U. P. wouldn't get a haul.

Colorado and Utah differentials.

El Paso gateway.

(1924-1925) Some business moved from Kansas City, U. P. to Denver, and then D. & R. G. The division of the rate to Ogden was 54 to the U. P. and 46 to the S. P. The rates to San Francisco were the same by all the all-rail routes. Witness not sure about the divisions via Texas, but thinks the lines north of Sherman and Denison got 24 or 25 per cent. By El Paso thinks they were 52 and 48. Doesn't know whether the S. P. got 52 or 48. Doesn't want to be understood as testifying definitely about any of those divisions.

Rates same on all routes. Divisions.

(1925) H. W. RICHARDS.

Richards.

Since July, 1906, traffic manager of the American Radiator Company, at Chicago. Previously, for twenty years, employed by the Illinois Central Railroad at Chicago. The last six years chief clerk in the general freight department. Prior to that chief tariff clerk, and prior to that chief rate clerk. (1926) Pacific coast business moved over the Illinois Central and the S. P. via New Orleans, chiefly from Pittsburg territory, Ohio, Ohio River points, and witness thought there was a certain amount from south of the Ohio river. He was not familiar with that movement. There was an extremely small amount from Chicago, "an occasional shipment—an accidental shipment, to a certain extent." Witness thought "shippers would be foolish to send it that way. It is a thousand miles longer." It has some advantages, for example, in the case of beer from Milwaukee, steady movement of beer went during the winter months. The shorter lines are troubled with snow,

Chicago. Formerly with Ill. Cent.

Small movement from Chicago via New Orleans. Foolish to route that way.

and that is avoided by New Orleans. Doesn't think that it is often quicker by New Orleans, because of the winter delays on the northern routes. Wouldn't route business that way out of Chicago. If there was congestion on the western roads, that would be an available route.

Routing of his traffic.

(1927) The Radiator Company has plants at Litchfield, Ill., Detroit, Mich.; Buffalo, Black Rock, N. Y.; Titusville,Pa.; Springfield, Ohio; Brantford, Ont. Witness' California business moves over all the lines from Chicago to the Missouri river; the U. P., the S. P., the Rock Island via El Paso, the Atchison, the North Pacific coast lines, via New York and Tehuantepec, the American-Hawaiian Steamship Company. Ships by the latter route principally from Buffalo and Detroit. Ships nothing by the Morgan line. Too far west to get advantage of the absorption of the rates to the coast via the gulf. Has never been solicited that way. (1928)

Ill. Cent. fast freight.

Remembers the fast train 51 on the Illinois Central. Thinks its time from Chicago to New Orleans was 51 hours. That is the reason it was numbered 51. Witness not sure, but thought the I. C. got

Divisions via New Orleans.

24.7 per cent. via New Orleans, after deducting certain arbitraries, namely, witness thought, ten cents on San Francisco, and five cents on California points. The extra five cents to San Francisco was the bay toll there. I. C. didn't have a line to Omaha until 1901. Had a line to Sioux City, and a working arrangement with the Omaha line in connection with the U. P. Witness thought their division was 15 per cent. 15 per cent. is the fixed proportion east of the Missouri River from Chicago for all the lines. (1929)

Divisions via Omaha.

Thinks there was only a five per cent. arbitrary via Omaha for the bridge there. That was absorbed by the lines west of the River. On the business via New Orleans, the I. C. bore five cents of the arbitraries. That was made up of two cents at Cairo and three

Time and rates.

at New Orleans. That is merely a recollection. Takes 47 to 50 days from Buffalo or Detroit to San Francisco by the Tehuantepec route. The rate from New York is 85 cents. From Buffalo to New York is sixteen cents. In all $1.01, as against the overland rate of $1.40. Never moved any business by the Panama route. Business to Portland goes over the northern routes, the U. P., and the Burlington, in connection with the N. P. via Billings.

(1930) Uses the Can. P. for Seattle, but nothing south of that. During the navigation season, ships via the rail and lake routes. It moves via Duluth to the North Pacific coast from Detroit and Buffalo, both. Witness' policy in handling freight is to divide it among all the roads. The Illinois Central got fifteen per cent. of business originating in the Chicago territory and going over its line to Omaha. Where business originated as far south as the Ohio River, there was a special basis of divisions; but he didn't

Business on I. C. from north, central and northern part of Ill. moved via Omaha.

remember what they were. Business on the I. C. from the north central and northern part of the State of Illinois moved via Omaha, and south of that territory via New Orleans; not exclusively, but that was the preferred route of the I. C. from a revenue standpoint.

Doesn't recollect any business moving by Omaha from as far south as Memphis. (1931) Doesn't think there was any point on the I. C. from which business moved both ways. It might have happened, but the general policy and instructions were to divide the territory up. Business from some points had to go one way, and from other points the other way. Doesn't know when those instructions were given, whether it was 15 or 12 or 10 years ago. Witness was with the I. C. road at the time.

Division of I. C. traffic.

(1932) Thinks it was prior to 1901. Those instructions were issued by the general freight agent, W. E. Keepers. Transcontinental lines had agencies along the line of the I. C. at St. Louis, Chicago, Memphis and New Orleans. Witness thought they also had traveling agents. Witness didn't know what instructions those traveling agents had, but the I. C. generally moved the business as it saw fit. The shippers, as a rule, never raise the point. Doesn't recall any controversy between the I. C. and U. P. over business going by way of New Orleans. The volume originating on the I. C. for the coast was not such a great amount. (1933) Witness didn't come in contact with the western lines soliciting agents along the I. C.

I. C. coast business small.

(1933) FREDERICK L. HASTEDT.

Hastedt.

Lives in Chicago. For three years and a half contracting freight agent of the Rock Island-Frisco Line, at Chicago. Previously lived at St. Louis and for six months was employed by the C. H. & D., Pere Marquette system. (1934) Prior to that for eight years was in the general freight office of the U. P. at St. Louis. Previously employed by the Frisco-Santa Fe and previous to that with the Santa Fe, in all 25 years in the railroad service at St. Louis, before coming to Chicago. Entered the employ of the U. P. June 1, 1896. (1935) Before the consolidation, the S. P. worked very strongly to El Paso. Didn't work via New Orleans, to witness' knowledge. U. P. worked by the Missouri River. Most of the business out of St. Louis moved by Kansas City and Omaha. Efforts to move coast business by the respective agencies were certainly active. U. P. worked Portland business by the O. S. L., and Oriental business by San Francisco and Portland.

Chicago. Formerly with U. P. at St. Louis.

S. P. worked strongly via El Paso—not via New Orleans.

Oriental business.

(1936) From Portland by the P. & A. and from San Francisco by the Occidental & Oriental. Doesn't think they were then working with the Pacific Mail. The agencies in St. Louis were consolidated about the summer of 1901. After that, some business went by El Paso, and some by the Missouri River. The latter was the preferred route, in connection with the Wabash. (1937) The U. P. and S. P. agencies in St. Louis were very friendly before the consolidation. Principal competition was with the Atchison. Witness had very little experience with the Oriental business. There wasn't any great amount of it at all. The U. P. before the consolidation preferred to send Oriental business via San Francisco. All its beer business went that way. (1938) Before the consolidation,

U. P. and S. P. agents friendly before consolidation.

Competition was with Atchison.

the Atchison was witness' principal competitor. Afterwards it was the only competitor. The S. P. was, however, a part of both the El Paso and Ogden routes.

Wait.

(1939) J. J. WAIT.

Chicago. Hardware business.

For about fifteen years in charge of the freight department of the Hibbard, Spencer & Bartlett Company, of Chicago, dealers in hardware. Previously in the railroad business, and also in a similar capacity with the Illinois Steel Company, North Chicago Rolling Mills Company, and also at one time a freight broker. Before the consolidation Neimyer solicited by any route he could get it, the Ogden route, the El Paso, and witness thought there were some other Texas junctions, and he also had a route by New Orleans. Witness thought he solicited by all those routes, and that Hibbard, Spencer & Bartlett Company had shipped over all of them. The U. P. solicited by Ogden. Business to Portland moved over the N. P., G. N. and U. P. Some moved to Ogden by the D. & R. G.

Before 1901, S. P. solicited via all of its gateways.

(1940) Thinks the latter interchanged both with the Shasta route and the O. S. L. part of the time. Thinks the O. R. & N. part of the time would not accept business from their eastern connections, but witness' recollection is not clear about that. Witness does not maintain distributing houses on the coast, but ships to retailers. Ships also to a considerable extent from eastern factories, that is, sells goods and ships direct from the factories to the consumers. The eastern traffic moves very largely by the Sunset, also by the Mallory and Atchison routes. The agent of the S. P. at Chicago, before the consolidation, solicited business from those eastern factories for the Sunset route, and the all-rail lines, including the U. P., solicited it also.

Routing of his business.

(1941) Witness has also shipped by the Panama and the Tehuantepec and the old Magellan and Cape Horn routes. Prior to 1901 witness thought the rate by the Panama route was about 80 per cent. of the all-rail rate, and by Tehuantepec as low as 60 per cent. Has also shipped from Chicago and the east by the Canadian Pacific to California. Since the consolidation, Neimyer solicits coast business by any junction he can get it. Witness doesn't know what their preferred route is. When the agencies were separate, the S. P. solicited California traffic by any gateway they could get it. Shipped very little by the Sunset route from Chicago territory. Didn't regard that as a good route. Preferred the Ogden route from Chicago, or the El Paso route.

Solicited via any gateway.

(1942) Various lines extending westerly from Chicago solicited the coast business and always have. Everything shipped over the U. P. necessarily went over the S. P. to California. Witness thought he had shipped to Portland over the Shasta route, but assumed that most of the Portland business went over the O. R. & N. Shipments over the Can. P. prior to 1900, had a differential. All the lines engaged in transcontinental traffic solicited witness'

Shipments over U. P. necessarily went over S. P.

shipments from the Atlantic seaboard to California, and always have. The last shipment to Portland by the Shasta route was a long time ago. Witness could not say when. He is not interested in the divisions. (1943) As a guess, witness would say that there was twice as much business moving, by Omaha, and Ogden, and also twice as much by the Atchison, as moved via El Paso.

(1943) E. C. WILMORE.

Wilmore.

For fifteen years traffic manager of the Sefton Manufacturing Company, manufacturers of paper goods at Chicago. (1944) Before the consolidation, Neimyer was glad to get witness' business by any route. They didn't express any preference. He solicited by the El Paso route, but if he could not get it that way, he would just as leave have it by one of the other routes, but they didn't solicit witness' business from Chicago by the New Orleans route. The U. P. solicited by the Ogden gateway exclusively. Witness shipped to Portland by the U. P., the N. P. and G. N. He also shipped to California by Vancouver, via the Soo Line and the Minnesota transfer.

Chicago. Paper goods.

Before 1901, S. P. glad to get witness' business via any route.

(1945) Since the consolidation, they have expressed no preference. Witness doesn't think he ships any more by Ogden now than before the consolidation. The percentage is about the same. Also ships by the Atchison. Possibly has used the N. P. and G. N. at times. The shipments that witness remembers more particularly over the Can. P. were two or three years ago. Others were longer than that. There was no differential in the latter shipments. (1946) Not a great deal moved that way. A long while ago there was a differential. Has made some, but not many, shipments to California by the N. P. and G.N., via Seattle or Portland, and down by boat. Very little that way. It was some years ago. The N. P. and G. N. don't solicit California business that way, to any extent, and never have. Prior to the consolidation, the S. P. were glad to get business any way. They didn't argue with the shipper as to which route he should choose. If he wanted it to go by Ogden, they didn't try to induce him to ship by El Paso. Never shipped to California via Portland and by boat down. Were never solicited that way. Witness' business is solicited by all the lines extending westerly. Business that went via Portland and by boat down to California, went over the N. P.

Since 1901, no preference expressed.

Can. Pac. differential.

S. P. didn't argue as to route.

Never used Portland-San Francisco route.

(1947) W. B. HURLBUT.

Hurlbut.

Traffic manager at Chicago for the Wisconsin Pulp and Paper Mills, and looks after the traffic of 35 or 40 mills in Wisconsin. Has also been in the railroad service. His last railroad service, which was brief, was in St. Louis, with the Missouri Pacific and Iron Mountain. Before that was for a good many years in the employ of the I. C. From boyhood until 1890 employed by the I. C. Then became assistant general freight agent in Chicago, for two

Chicago. Formerly with I. C

years. From 1892 to 1896 was assistant general freight agent of the I. C. and Y. & M. V. at Memphis. From 1896 to 1900 was general freight agent for both those roads, with office at Louisville, and for the next two years was general coal agent of both those roads in Chicago. Then left the railroad service. Worked for Pacific Coast business particularly during the time he was in Memphis and Louisville.

Traffic south of Ohio river, handled by I. C. via New Orleans.

(1948) Traffic handled from points south of the Ohio River moved almost invariably by New Orleans. None of the traffic over which the witness had jurisdiction moved via the Missouri River. The I. C. is divided into two grand divisions, one north of the Ohio River, and the other south. The S. P. co-operated with witness in securing the business. The witness didn't know of any U. P. agencies at Louisville or Memphis, nor to his knowledge did they have traveling agents in that section. Some of the lines connecting with the U. P. had agencies at Louisville or Cincinnati, more particularly the latter, but doubted if they had in Memphis, except the Missouri Pacific. Presume the Missouri Pacific was working for the coast business.

(1949) When witness was in Chicago, the I. C. had no line into Omaha, and the one into Sioux City was not regarded as a gateway for western traffic. They did try to work a line with the U. P. at Norfolk, but that didn't seem to work very well. It reached the U. P. on a diagonal shoot across Sioux City. In shipping the products of the paper mill, witness uses the routes by Ogden and the Atchison. To north coast points, the G. N., the N. P. and Can. P. The mills are located on the Wisconsin Central, the St. Paul, the N. W., and the Soo. It would be very much out of the way to get that to the coast by the southern gateways. Doubts if there are any working arrangements via the southern routes east of El Paso, and witness doesn't use the latter. Thinks some business was moved from Chicago by the I. C. and S. P. while witness was there, but the I. C. made no effort to get that business that way, because they didn't get much out of it, and could figure that the service that way would not be satisfactory. Business moved over the I. C. from Cincinnati and Cleveland via New Orleans to the coast, and that business was strongly solicited. (1950) The further west he went, the stronger was the competition of the more direct routes.

No working arrangements for his coast business via southern routes.

I. C. made no effort to get Chicago business via New Orleans.

Heinrichs.

(1951) PETER P. HEINRICHS.

Chicago. Trunk business.

For two years in charge of the traffic of P. Becker & Company, at Chicago, in the trunk and traveling bag business. California traffic moves by the U. P. and the Atchison. Might have had a D. & R. G. shipment which witness doesn't recollect. Has tried pretty nearly all these devious routes going out. Has shipped less than carload via New Orleans, over the I. C. That routing was principally controlled from the coast, and occurred recently. (1952) On car shipments, witness controls the routing. Ships to Portland by the

U. P., N. P. and G. N. Matter of equipment affects shipments, because it is necessary to have a large car to carry the minimum weight required by the transcontinental tariff. Remembers one carload shipment that consignee controlled the routing of and wished sent by New Orleans, but equipment could not be furnished, and witness diverted it to the C. B. & Q., care of U. P., at Denver, which is principally the point that the "Q" carried his California business to—either there care of the U. P. or care of the Atchison. Routing of witness' traffic controlled by equipment and convenience to his plant. Had no switching facilities, and patronized the road that had the nearest depot.

Equipment affects routing.

(1953) Transcontinental rates now are higher. They are, in fact, prohibitory. Business has dwindled down to very few carload shipments. The first of last January the rate was advanced from $2.20 to $2.60. Before that the rate was $2, and from three to five years before that $1.80, and ten years ago $1.10. The less than carload rate is $3. Last year witness didn't ship more than three or four cars, whereas formerly he shipped a car or two a month. Local factory influences out in the west has had its effect, as well as rates. (1954) The joint agents express no preference in soliciting business. They cannot control the routing at all, because witness ships it the way he sees fit. That has always been his practice. The "Q" is the road whose depot is convenient to witness. The separate solicitors of the two roads never specified any particular routing. Occasionally, Neimyer would say: "Try to get us some Portland business, or some Seattle business." (1955) Neimyer never attempted to solicit by one gateway as against any other. The local lines did a lot of soliciting. The I. C. man came in every day or two, but didn't express a routing. The lines leading west all actively solicited, and do yet. All freight witness gave to the U. P. would go over the S. P. from Ogden. There are now trunk factories out on the Pacific coast that supply that section.

Advance in rates.

Local factory influence.

Trade now supplied by local factories.

(1956) C. A. JENNINGS.

Jennings.

For sixteen years manager of the transportation department of the American Cotton Oil Company, with plants all through the southern portion of the United States, excepting Texas, also at St. Louis, Chicago, Cincinnati, Montreal, Providence and New York. Manufactures cotton seed products, soap, washing powder, lard compound and cottolene. The N. K. Fairbanks Company is one of the subsidiary concerns. (1957) Some of the products require speedy transportation. Has shipped to San Francisco by Vancouver, but no very extensive amount. Thinks those shipments moved largely from St. Louis through the Minnesota Transfer. It must have been soap, which does not require rapid service. Doesn't recall Neimyer as the separate representative of the S. P. soliciting his Atlantic seaboard business. The solicitation for that would be in New York and Providence.

With Cotton Oil Co.

San Francisco-Vancouver route.

Shasta route.

(1958) Has shipped to Portland via the Shasta route from St. Louis. Is inclined to think that those shipments went through El Paso, and not by Ogden. The factories in St. Louis were located on the Iron Mountain, and those shipments were more out of compliment to that road. (1959) Where traffic can move either via New Orleans or El Paso or Ogden, the general agent solicits rather in favor of the Kansas City gateway. Witness' Oriental business now moves by the Suez. Formerly some of it went by the Pacific coast out of practically all the ports, through Seattle and San Francisco, and thinks at one time San Diego. Doesn't remember by what steamship lines. Thinks the solicitation was not by them, but by the railroads entirely. (1960) Business over the U. P. moved over the S. P. from Ogden west. There were three rail lines to California: the S. P. by way of El Paso, the Santa Fe with their connections and the S. P. to Ogden. Never shipped to San Francisco via Portland and the boat line down. Witness' business is solicited by all the lines leading to the west, including the intermediate carriers. Neimyer for 20 or 25 years in his solicitation has been practically impartial as among the several gateways.

Oriental business.

Never used the Portland-San Francisco route.

(1961) He is not interested in the divisions. Oriental business was never a large item. Has no recollection of any moving via Portland. Witness' business from Cincinnati was not solicited by New Orleans in the old days. The application of rates and the transit privileges in connection with cotton seed oil would rather operate against its back haul through New Orleans, and force it out through Chicago or St. Louis or Missouri River crossings. That would be the case in St. Louis also. (1962) Also the case as to Cincinnati. The Chicago refinery does not handle oil to the coast. Neimyer solicits witness for Chicago, St. Louis and Cincinnati business, but not for New York and Providence. From Chicago, Neimyer expressed no preference before the consolidation. (1963) Now he tries to get business by Ogden.

Witness' business from Cincinnati not solicited via New Orleans.

Sage.

(1963) G. K. SAGE.

With Fairbanks, Morse & Co.

For about six years traffic manager of Fairbanks, Morse & Company, manufacturers and jobbers of gasoline engines, etc. Largest factory at Beloit, Wis. Also one at Three Rivers, Mich.; Indianapolis, Ind.; and the scale factory at St. Johnsbury, Vermont. Previous to that, witness was connected with the Rock Island at Chicago, in the office, and also as freight solicitor. Shipped to the coast by all the available routes. Doesn't recollect shipping by the Morgan Line from New York, except possibly in cases where they had purchased goods from New York houses. (1964) Has distributing agencies at Los Angeles, San Francisco, Portland and Seattle. Moves business to Southern California "via Ogden and El Paso, first via the Missouri River gateways." Some of the pipe and that sort of thing, from Pittsburg and Youngstown, has in the past gone by New Orleans, but now it all goes by Missouri River gateways. Portland business goes over the northern lines; some over the U. P.

Uses Ogden, El Paso and Mo. River gateways.

Before the consolidation, when witness was with the Rock Island, he worked business via El Paso, and worked both independently and with the S. P. His long line to Southern California was via El Paso.

(1965) Before the line to El Paso, witness worked business via Fort Worth, in connection with the T. & P.; sometimes independently, and sometimes with the S. P. The Rock Island worked Portland business via Ogden in connection with the D. & R. G. or the Colorado Midland and the Short Line. Remembers that for a time he had a route to Portland via the Shasta. There was no other way in which the S. P. could participate in Portland business. Always worked in connection with the Short Line, however, except that for a time, when there was trouble of some kind and the rates taken out that way, then witness worked with the Shasta. (1966) California business was routed via the D. & R. G. via Ogden. Turned traffic over to the U. P. at Omaha when it was so routed. Doesn't recall that the general agent specifies any route. Witness generally sends it via Ogden, if he were not going to ship by the Atchison. Thinks soliciting agents are useful to railroads in getting business.

Shasta route.

(1967) That is not so much true, however, with a large shipper that maintains a traffic department. Two roads competing for business at the same rate, one maintaining a solicitor, and the other not, the former would get the more business. Witness' recollection as to whether shipment moved to Portland over the Shasta route is not very clear. Remembers there was a route that way. Could not swear any shipments moved; however, there are a good many routes, on paper, over which traffic does not actually move. (1968) Solicited for the Rock Island prior to February, 1902. Ships nothing from Beloit to California via New Orleans. Thinks no rates have ever been in effect that way. (1969) Thinks there have been a few shipments from Vermont by way of the Gulf, but they are very exceptional. There were some commodities that witness bought from a Pittsburgh house which they sold delivered; routed that themselves, and witness thought that some of that went around by the southern route. Now witness buys from another house at Pittsburgh, and routes the shipments himself via the Missouri gateways. The New York shipments that went by the southern route were also routed by the sellers.

Paper routes.

No rates effective from Beloit via New Orleans.

COMPLAINANT'S EXHIBITS 127 TO 149, INCLUSIVE.

Exhibits.

It is stipulated "that the Oregon Short Line Railroad Company subscribed for and took the proportion of the $35,296,623 of additional preferred stock issued by the Southern Pacific Company, as shown by this statement (Complainant's Exhibit 127), which it was entitled to take by reason of ownership of preferred and common stock of the Southern Pacific Company, and thereby acquired sufficient stock so that it now owns the same proportion of the total capital stock of the Southern Pacific Company that it owned before said additional stock was issued." (1970) Com-

plainant's Exhibit 127. List of securities issued by Southern Pacific Company since December 31, 1906, to and including December 17, 1908.

Complainant's Exhibit 128. List of securities issued by Union Pacific Railroad Co. from December 31, 1906, to December 17, 1908, inclusive. (1971) Complainant's Exhibit 129. Directors of Union Pacific Railroad Company, elected October 8, 1907, and October 13, 1908. (1972) Complainant's Exhibit 130. Oregon Short Line Railroad Company directors elected October 9, 1907, and October 14, 1908. (1973) Complainant's Exhibit 131. Directors of Southern Pacific Company elected April 3, 1907, and April 8, 1908. (1974) Complainant's Exhibit 132. Pacific Mail Steamship Company directors elected May 29, 1907, and May 27, 1908. Complainant's Exhibit 133. Oregon Railroad and Navigation Company directors elected September 26, 1907, (1975) and September 10, 1908.

(1976) Complainant's Exhibit 134. Occidental and Oriental Steamship Company directors elected July 10, 1907, and July 8, 1908. San Francisco and Portland Steamship Company directors elected June 10, 1907, and June 3, 1908. (1997) Complainant's Exhibit 135. Stubbs.

(1990) J. C. STUBBS, (2).

The Canadian Pacific differential was put into effect by agreement with the transcontinental lines in December, 1887. Witness thinks it is almost certain that he was present at the meeting of November 5, 1887, at the Grand Pacific Hotel in Chicago, when it was decided to organize the Transcontinental Association. Witness represented the Southern Pacific Company at the time. "In November, 1887, it was understood that the Canadian Pacific should adopt differentials below the all-rail routes from New York on the 30-cent scale, and from Chicago, 20-cent scale of difference. That is to say, the first-class rate from New York, via the Canadian line, would be thirty cents (1991) lower than the all-rail rate, and from Chicago twenty cents lower, and so on down to five cents on the lowest class. Whenever, so far as these differentials are being discussed, he refers to the Canadian Line, he means the rail line to Vancouver and the boat line from there to San Francisco. The differentials applied both ways.

Can. Pac. differential.

"The differentials for Buffalo were ninety per cent. of the New York rate, and Toledo and Detroit eighty-five per cent. of the New York rate. That I understand to be ninety per cent. and eighty-five per cent., respectively, of the Canadian Pacific's differential rate to New York. * * * The record says that the Northern Pacific claimed the same differentials through Tacoma by rail and water, and their claim was allowed and agreed to." There was an arrange-

N. P. differential.

ment with the Pacific Mail, which represented the Panama Route, whereby certain space was rented in their steamers by the constituent members of the Association. Witness does not know how long the arrangement ran—not more than two or three years. Steamship space rented.

"Q. And after that lapsed did the rail lines have any control over the rates by the Panama route? A. Not that I recall." The Panama Route mentioned above was made up at that time of the following lines: (1992) Pacific Mail, New York to Colon, the Panama Railroad across the Isthmus of Panama, and the Pacific Mail from the west coast of Panama. At that time witness thinks the Pacific Mail was on both coasts. "Later on the persons interested in the Panama Railroad established their own steamship line from New York to Colon, and the Pacific Mail retired from that service. After that period, (I cannot recall the date of its beginning) the Pacific Mail operated the steamships in connection with the Panama Railroad from Panama on the west coast to San Francisco only." Constituency of Panama route.

Witness does not admit that by the contract above referred to there was a control exercised by the rail lines over the rates by the Panama route, "but there was no agreement by which the railroads had any influence upon the rates used, quoted, or carried by the Panama route after that time, as I recall it. * * * The mere fact that the Southern Pacific later on, as I understand it, purchased a controlling interest in the Pacific Mail Steamship Company's stock did not give the railroads any control over the rates. That is to say, I, as the chief traffic officer of the Central Pacific or the Southern Pacific System, never had any control over, or anything to do with, the rates by the Panama." Witness never exercised any control over rates by the Panama.

(1993-1994) Witness does not recall of a move later on agreed to by the transcontinental lines other than the Union Pacific, to make a similar contract to rent space on the ships of the Panama Route. His attention is called to statements made by him before the arbitrators of the Canadian differential, found on page 82 of the record of the arbitration (Exhibit 150), and also to the statement of Mr. Kerr on page 13, and witness stated that it was a fair inference that the refusal of the Union Pacific Railway Company, or its receivers, to unite in the agreement, caused it to fail. "Q. Was the Union Pacific acting independently of the Southern Pacific at that time, in 1896? A. Always." Can. Pac. differential.

On May 17, 1888, a meeting of the Association was held in San Francisco, and the differential previously given to the Canadian Pacific not having given that company what they claimed to be a reasonable share of the traffic, they applied for an increase on the basis of 40 cents on first-class and 10 cents on tenth class, and lower between San Francisco and New York, and a committee was appointed to consider the matter.

(1995) A resolution was adopted by the committee to the effect that the differentials should be such as to secure to the Canadian Pacific a fair and reasonable share of the overland tonnage, and that they should be so modified as to bring it about. The chair-

Resolution as to changes in differential.

man was authorized to negotiate for the American Lines with the Canadian Pacific and make such changes from time to time as in his judgment were warranted, with the understanding that the same differentials should apply to St. Paul and Minneapolis traffic via the Northern Pacific—it being understood that the differentials should apply via the ocean routes only.

The following changes were thereupon made in the differentials: "From New York they were made on the 40-cent scale; from Buffalo, 32 cents; Detroit, 30 cents; Chicago, 25 cents; St. Paul and Minneapolis, 15 cents. That scales down to: On the tenth class

Changes made.

7½ cents from New York, 7 cents each from Buffalo, Detroit and Chicago, and 5 cents from St. Paul and Minneapolis." There were some slight differences in the eastbound record to Chicago. "To Chicago, he (Mr. Kerr) states that there appears to have been a 24-cent differential on first-class; second-class, 19; third, 16; fourth, 15; fifth, 13; sixth, 13; seventh, 13; eighth, 10; ninth class, 9; and tenth class, 7." The westbound and eastbound differentials as modified continued until July, 1889, when they were changed, at the instance of the Southern Pacific—according to this record—that is merely

Motion of S. P.

Mr. Kerr's statement as to who proposed it. The fact that Mr. Kerr stated that it was witness who moved for the reduction does not indicate that the Southern Pacific was alone the proposer of it, or even the instigator of it.

(1996) "Q. What figure were the differentials placed at as the result of that meeting? A. This is the scale 'From'—what is called the first-class scale: Chicago, 17½ cents; Detroit, 21; Pittsburg, 22; Atlantic seaboard, 28; scaled down to 5 cents to or from all points on the lowest class—E. Wool, in grease, 7½ cents. That means 7½ cents per 100 pounds." In July, 1889, these differentials were again changed and the substitute differentials were to run for three months. They were afterwards extended to October 1,

Allowance in lieu of differential.

1890. In 1891 a new proposition was made to the Canadian lines, whereunder the Canadian Pacific was to receive an allowance in lieu of their differential. This arrangement lasted through the year 1891, when the Canadian Pacific restored its differentials, under resolution of the Association at the New York meeting January 14, 1892.

Association dissolves and Can. Pac. adopts 10 per cent differential.

At the end of 1892 the Transcontinental Association was dissolved, and the Canadian Pacific adopted the basis of 10 per cent. differentials. The 10 per cent differential was adopted of its own motion and without the consent of the other lines. (1997) In going over the records in the hands of witness for the purpose of refreshing his recollection, he states that he sees something that will probably answer a question asked him a while back as to how long the Pacific Mail did the work on the Atlantic side. "I see here that the Columbia line opened in 1893." Since 1893 there has been no composition of the differences with the Panama road. "They stand in the market ready to take business that offers at any rate that will take it."

Arbitration of Can. Pac. differential.

Witness recalls the arbitration of the question as to whether the Canadian Pacific should continue to make the 10 per cent. lower rate. The arguments were made in Chicago. The decision was made October 19th, 1898. (1998) The Canadian Pacific with the exception of one year when they were granted an allowance by the American lines, had in, either what is technically termed a differential, (that is, by consent), or a lower rate maintained independently by them, to San Francisco and return, by way of Vancouver, from the last part of 1898—a period of eleven years. The Canadian Pacific desired to continue that situation and the matter was submitted to arbitration. Witness gives a list of the American transcontinental lines, as shown by the record of arbitration. They are: The Santa Fe, the Burlington and Missouri River in Nebraska (which is the Burlington Railroad west of the Missouri River), the Rock Island, the Colorado Midland, the D. & R. G., the M., K. & T., the Missouri Pacific, the Northern Pacific, the O. R. & N., the O. S. L., the Rio Grande Western Railway, St. Louis and San Francisco Railroad, the S. P., T. & P. and U. P.

Quotation from argument of witness as to competition between carriers by water and carriers by rail.

(1999) Reference is made to page 70 of the same record, where witness gives an example of competition in whole or in part between a carrier by water and a carrier by rail, and attention is called to his statement to the effect that "another example is found on the Pacific coast between San Francisco and Portland, between San Francisco and Los Angeles, Santa Barbara and San Diego, where the service can be done entirely by rail or entirely by sea." Witness thought that the Pacific Coast Steamship Company boats was the only line running between San Francisco and Los Angeles, Santa Barbara and San Diego at that time. That is the same line that came down from Vancouver. "There were occasional outside boats; and there were always the steam schooners. They were more potential in their competition coastwise on freight than the Pacific Coast Steamship line."

Boat service between San Francisco and So. Calif. ports

At that time the line owned or controlled by the O. R. & N. was being run between San Francisco and Portland. Thinks the Dollar Line was there too. Does not know whether the Pacific Coast Steamship Company also put in at Portland at that time on their way to San Francisco or not. Witness is requested to read from his statement to the arbitrators and reads as follows: "The Great Northern, at Seattle, the Northern Pacific at Tacoma and Seattle, connect with the same steamers for (2000) San Francisco, as the Canadian line connects with at Vancouver. The distance from Seattle is 804 miles as against 833 miles from Vancouver. These are distances that are taken from the official schedule of distances published by the Pacific Coast Steamship Company. The Oregon Railroad & Navigation Company connect at Portland, Ore., with steamers for San Francisco which are owned jointly by the Oregon Railroad & Navigation Co. and the Pacific Coast Steamship Company. It also connects with the Great Northern Ry. at Spokane and with the Oregon Short Line Railroad at Huntington. Huntington

Quotation from argument.

Mixed water and rail routes to San Francisco.

is on the Oregon Short Line. The latter, in turn, connects at Granger with the Union Pacific; at Salt Lake with the Rio Grande Western, which, in turn, connects with the Colorado Midland, and Denver & Rio Grande, and at Pueblo, Colorado Springs and Denver, they connect with all these systems. The distance from Portland to San Francisco is 653 miles against 833 from Vancouver. These steamship connections which are actual and not merely possible, form the following through lines to San Francisco, which correspond to the Canadian line in the respects described and are therefore justly entitled to every consideration as an offset to the alleged better facilities of other lines, that the Canadian line is entitled to on the same ground, namely: From Minneapolis: First, the Great Northern Railway to Seattle and San Francisco. Second, the Northern Pacific Railway to Tacoma, Seattle and San Francisco. From Omaha: (There are three routes from Omaha) First, The Union Pacific Railroad via Granger, the Oregon Short Line Railroad and Oregon Railroad and Navigation Company to Portland and San Francisco. Second, The Burlington out through Denver, the Denver & Rio Grande, Colorado Midland, Rio Grande Western, Oregon Short Line Railroad and Oregon Railroad & Navigation Company, to Portland, thence to San Francisco. Third, The Rock Island, following the same route through Colorado Springs and Denver, thence on via the Colorado Midland, Denver & Rio Grande, Rio Grande Western, Oregon Short Line and Oregon Railroad & Navigation Company, to Portland, thence via Oregon Railroad & Navigation Company's steamships to San Francisco. From Kansas City: There are three lines from Kansas City: First, The Union Pacific Railroad through Denver, Cheyenne, Granger, Oregon Short Line to Huntington, Oregon Railroad & Navigation Company, to Portland, thence via Oregon Railroad & Navigation Company's steamships to San Francisco. Second, The Atchison, (2001) Topeka & Santa Fe Ry. to Denver, Colorado Springs to Pueblo, where they connect with the Denver & Rio Grande and Colorado Midland, in connection with the Rio Grande Western, thence via Oregon Short Line Railroad and Oregon Railroad & Navigation Company to Portland, thence via Oregon Railroad and Navigation Company's steamships to San Francisco. Third, the Missouri Pacific Railway; the same way. These American mixed rail-and-water lines do not exist merely on paper. They are open and in daily use for both freight and passengers. They are effectively worked against the all-rail lines for San Francisco trade with Oregon, Washington, Idaho, Utah and Montana. Some of them are preferentially worked for San Francisco's trade with St. Paul and Minneapolis and points further east—the Great Northern works them." The mixed rail and water line that worked into Utah from San Francisco was made up of the Navigation Company's steamers to Portland, O. R. & N., Oregon Short Line. The direct all rail route over which most of

Mixed water and rail routes to San Francisco.

Those lines worked for San Francisco trade with Oregon, Washington, etc.

the business from San Francisco to Utah moves is the Central Pacific Line, San Francisco to Ogden direct.

(2002) The mixed rail and water lines competing for Oregon freight from San Francisco are the Navigation Company's steamers to Portland and then the Navigation Company's rails into Oregon, or the Southern Pacific Company's rails south of Portland. The rail and water route to Oregon would be the steamships between San Francisco and Portland, and the O. R. & N. rails. Against that would be the all-rail line of the Southern Pacific. As to the competitive business handled into Washington there would be the same routes between San Francisco and Portland, and to them would be added the routes via Tacoma and Seattle—the Pacific Coast Steamship Company in connection with the Northern Pacific at Tacoma, or in connection with the Great Northern at Seattle. At that time the O. R. & N. witness thought had a line from Portland up to Spokane, the same as now. The Great Northern had an entrance into Portland over the O. R. & N. for transcontinental business.

(2003) "My understanding is—it isn't worth much, though, because I was not officially connected with these lines—that for points east of Spokane on the Great Northern or the Northern Pacific, they exchanged with the Oregon Railway and Navigation Company. Now that may not be true, but I think it is true." Witness is requested to read from the record of arbitration: "I submit, where would the Union Pacific that makes in connection with the Central Pacific the shortest and most direct line, that is the oldest line to San Francisco—where would that company be to-day if their agencies were to carry out the program indicated for his agencies by Mr. Kerr in that testimony? Would it get any business that was competitive as between themselves and the Santa Fe or the Missouri Pacific or Burlington or Rio Grande Western roads? In three months, notwithstanding all its natural advantages, more than 50 per cent. of its business would leave its rails; if it would get anything at all that possibly could go over another route." That is a pretty strong statement made there. Probably he would not make it to-day. Probably he would not have made it if he had been in any other position (2004) than that of an advocate trying to make things as strong as possible. Where business is competitive, soliciting agencies are of great value in securing business for the lines that they represent.

Effect upon Union Pacific.

Statement as to value of soliciting agents.

Witness is requested to read from record of arbitration, beginning at the bottom of page 95: "Blot out from the map, remove from the earth's surface this single line of railroad, the Central Pacific between Ogden and Sacramento, the pioneer road—would any of these eight American lines entertain the proposition which is involved in the Canadian line's contention for a moment? Does the existence of the Central Pacific Road and its operation as a part of a through all-rail line (in which some of the integral parts of the through line via Portland, which are part water and part rail, are interested), alter the rights, the

Effect of extinction of Central Pac.

equitable rights of the Portland mixed lines as against the Canadian line or against any other competitor? We contend that it does not—that as a matter of right, of equitable right, as well as a matter of law under Justice Brewer's decision in the case of the Chicago-Northwestern, plaintiff in error against John Osborn, and the same plaintiff in error against A. J. Junod, a through line is a line, is a unit, regardless of whether part of it may be used in forming another through line even if it be a rival through line. The reasonableness of this proposition is manifest. Any other view would deprive certain individual carriers, not only from participation in, but also of an opportunity to compete for a given traffic. To illustrate: If the Oregon Short Line (indicating on map) running from Huntington to Granger and to Salt Lake, were deprived of a connection for the purpose of making a through line to San Francisco, via Portland with the Union Pacific at Granger, or with the Rio Grande Western at Salt Lake City, because those roads respectively had physical connection with the Central Pacific at Ogden, the Oregon Short Line would be deprived of all opportunity to compete for a share of the San Francisco traffic.

A through line is a unit.

O. S. L.'s route to San Francisco.

"Q. That was a statement that you made of your view with reference to competitive through lines, wasn't it? (2005) A. That was my argument to win the case that I was advocating. Q. Well, you were endeavoring to give the arbitrators your best judgment? A. I was endeavoring to convince them that the Canadian Pacific had no right to a differential. Q. Well, you succeeded, as you usually succeed? A. I think so. Q. Turn over to page 97. Down towards the bottom of the page—your reference to the San Francisco community. A. Shall I read? Q. Yes.

Witness' argument.

"A. (Reading:) 'In May, 1888, the right of the Northern Pacific to make by its mixed rail and water line between Minneapolis and St. Paul and San Francisco the same rates as were made by the Canadian Line between the same points was recognized and conceded by the Canadian Line by vote of its representative at a meeting of the Trans-Continental Association in San Francisco, but it long ago fell into disuse. The Northern Pacific found it would not work, for immediately upon the suggestion of the proposition the Oregon Railway & Navigation Co. came in and wanted the same advantage. Since then the Great Northern has been completed. Give the Northern Pacific a differential and can you withhold it from the Great Northern? Give it to the Great Northern and Northern Pacific and how can you withhold it from the Oregon Short Line and Union Pacific? If you give it to them how can you withhold it from the Kansas City lines? The Great Northern, Northern Pacific, Oregon Railroad & Navigation Co. in connection with the Union Pacific, which means the Union Pacific, the Burlington, the Rock Island, the Missouri Pacific, the Atchison, Topeka & Santa Fe, all in this market working a mixed rail-and-water line on a differential rate and where would rates be? How much business would the other lines get? What would the all-rail lines do with the San

Differentials follow to competing lines.

Francisco community, who began with the use of the Cape Horn route, accustomed to subdivide its business and to ship a large part by water around Cape Horn; accustomed to divide it between the Cape Horn sailing vessels and the Pacific Mail Company previous to the opening of the overland route; accustomed to put a large share on the sailing vessels, a small share on the Panama route and a still smaller share on the overland roads simply to avail themselves of differences in rates? Touch this question. Introduce differential rates with any of the American lines, and it must be manifest to any practical railroad man who knows the interdependence of these rates and these lines, that they will operate exactly as a cut rate. Let the rate be cut on the Great Northern and it goes down to the Gulf of California. Let it be cut on the Northwestern and it goes down to the Gulf of Mexico.'"

Introduce differential rates on the American lines and they will operate as cut rates.

(2006) Under like circumstances he would reiterate that statement today. It would make all the difference in the world whether the cut rate is what is technically called a differential—that is, put in by agreement, or whether it is put in as an act of competition. If it is put in by agreement then the lines consenting are bound to hold to that agreement until they take the proper steps to annul it. There are such things as agreed differentials. Referring to his argument made before the arbitrators witness states: "If one of these mixed lines claimed a differential, then there were so many other mixed lines that could be created that they would immediately come in and demand a like differential and would so involve the whole traffic that there would be nothing left for the all rail lines. It would disorganize the whole situation. It would shatter the whole rate fabric; that was the contention, that was the gist of the argument there."

Demoralizing effects of differentials.

Witness thinks that the effect of maintaining the lower rate by the Canadian Pacific after the other lines ceased to agree to it, was to (2007) cause the other lines to secretly cut the rates. At the present time if the Canadian Pacific put in the 10 per cent. differential all the other lines would meet it openly with published rates.

Can. Pac. differential caused secret rate cutting.

The necessary effect of putting in such a rate as the Canadian Pacific had in at that time, would be worse than merely to cause a reduction of the published rates by competitive lines. "It would eventuate in destructive rates—a war of rates that would be quite as much damaging, if not more, to the commercial communities than to the railroads. If one line started out to put in lower rates than its competitor, or its numerous competitors, and would put in a lower schedule, the other lines would meet it. Then the original line would go lower; that would be met; it would go lower still, and that would be met, until rates became beyond the power of the average line to carry for any great length of time; and in the meantime all commercial conditions are upset and trade relations destroyed."

Would eventuate in rate destruction.

(2008) Witness is again requested to read from the record of arbitration: "The Union Pacific-Oregon Short Line's Portland route is practically of the same length as the Cana-

Length of routes compared.

dian Line's Vancouver route from Portland, Maine, Boston and New York City, and is only 260 miles shorter from Philadelphia, but these differences would be reduced to insignificance were the Canadian Line to use its Minneapolis route." The route referred to is the one to San Francisco. Witness further reads from record as follows: "We now pass from the American part water and part rail lines via Seattle and Portland, which work through Minneapolis, Omaha and Kansas City gateways, to the consideration of other American part water and part rail lines, whose ocean service is performed on the Atlantic side and which work via Mexican Gulf Ports. Their San Francisco trade is confined almost wholly to that part of it which is done with the Atlantic seaboard territory. They are, therefore, much more restricted in the territory laid open to their competition than the Canadian line is. These lines, like the eight already reviewed, present physical features which are substantially similar to the characteristics of the Canadian line and pleaded by it in support of its contention. If there is a difference, it is of degree only and in degree the advantage is with the Canadian line as compared with them. They are the (2009) Southern Pacific 'Sunset' lines: Morgan Steamship Line, New York to Algiers (New Orleans), 1,800 miles; thence via rail to San Francisco, 2,489 miles; total, 4,289 miles. Texas & Pacific Gulf Line: Cromwell Steamship Line, New York to New Orleans, 1,800 miles; thence via rail to San Francisco, 2,455 miles; total, 4,255 miles. 'Santa Fe' Gulf Line: Mallory Steamship Line, New York to Galveston, 2,300 miles; thence via rail to San Francisco, 2,666 miles; total, 4,966 miles. They all do San Francisco business too at equal rates. They compare with the Canadian Pacific's line from New York in this wise: The Sunset line is longer by 240 miles; the Texas & Pacific Gulf line is longer by 206 miles; the Santa Fe Gulf line is longer by 917 miles.

"From the territory north, northwest and east of New York City, the difference in distance favors the Canadian line still more, because it takes the business up and forward directly by railroad, while we have to bring it down to New York and transfer it to steamer. From the territory west, southwest and south of New York City, the differences are the same as from New York City, as the traffic moves via New York City, to reach any of the lines contrasted. * * * (2010) Q. * * * You have read these figures that show that the Gulf routes from New York to San Francisco are somewhat longer than the Canadian Pacific route from New York to San Francisco. A. Yes. Q. And I say that difference in length against the northern routes to San Francisco by rail and water applies likewise when they are compared with the Portland route as with the Canadian Pacific? A. Yes. I would answer that question, practically so. * * *

"Q. Turn to page 102; next to the last paragraph, commencing 'All these Gulf lines present.' A. (Reading:) 'All these Gulf lines present the same physical characteristics (some of them in an exaggerated degree), as are set forth as peculiar to the Canadian line.

Undoubtedly they have equal rights with the Canadian line to have a share or a part of the traffic set apart for their exclusive enjoyment. By contrast the equities would be with the Texas and Pacific and Santa Fe, rather than with the Canadian line, and we claim the same thing for the Sunset line. Having the same kind of a line, the same opportunities and the same necessities to obtain by fair means a reasonable share of traffic, a differential in their favor would operate to increase their respective takings in like manner and to the same extent that a differential in its favor would operate to increase the volume of traffic taken by the Canadian line. Having rights, equal to the right of the Canadian line, if the latter is, under all circumstances entitled to a differential, they are equally entitled to a differential.' Q. That was a truthful statement, wasn't it, in so far as it is not a matter of argument but of fact? A. At the time, I believed it. Still, it is a matter of argument. * * *

The Gulf lines have equal rights with the Can. Pac.

Part of his argument.

"Q. Page 108, at the top of the page. Just read that, will you? A. (Reading:) 'Reverting again to the comparison between the Sunset Route and the Canadian line: the Sunset Route competes in this New England territory, the great manufacturing center for cotton piece goods, domestics, boots and shoes, nails and many other commodities with which you are all familiar. It competes with the (2011) all-rail lines on a dead level equality of rates. The Canadian line takes up goods at Boston, or at any of these New England points or any of the interior New York points, in cars; transports them without breaking bulk to Vancouver, transfers them from car to ship and delivers them at San Francisco. The Sunset line and all the Gulf lines take these goods from Boston, as a rule, and put them aboard of the steamers of the Metropolitan Steamship Company; they are delivered by that Company on their pier, in New York City; they are then lightered to the Mallory steamship pier or to the Morgan steamship pier, reloaded into the vessels of the Gulf lines, transported to New Orleans or to Galveston, then transferred from vessel to car, and carried to San Francisco. There is evidently a disparity between the ability to handle these goods; but in whose favor is that disparity? Is it the Canadian line?' "

Further comparison between Sunset route and the Can. Pac.

One disparity he was discussing there is the necessity that the Sunset has of breaking bulk twice. The Sunset line still takes most of its New England business from Boston and New York by boat, and that which is taken there by rail is unloaded and loaded on the ships there. So that the same disparity exists, so far as the necessity of breaking bulk twice is concerned, whether the traffic is taken into New York by rail or steamer—that is right, provided the cars run through over the Canadian line. The Union Pacific Portland line to San Francisco would only have to break bulk once at Portland. The same handicap, if it is a handicap—would exist as against the Sunset route, in favor of the Portland route, as he pointed out, exists when it is compared with the Canadian Pacific..

Disparity in ability to handle traffic.

"Q. Turn over to page 119. * * * (2012) A. (Reading:) 'They (differentials) are not used for San Francisco traffic with Montana,

Montana, Colorado and Utah business.

Utah and Colorado, as between the all-rail lines and the mixed water-and-rail lines. There is much valuable business in Montana, Colorado and Utah, competed for by these direct Central Pacific, Union Pacific, Denver & Rio Grande lines and by the Oregon Railroad & Navigation Co. and Oregon Short Line, and for Montana by the Great Northern and the Northern Pacific, as well as the Oregon Railroad & Navigation Company and Oregon Short Line, but we all work on a dead level equality of rates.' Q. Has that equality of rates always continued, as far as you are advised, between the rail and water combined lines and the— A. Well, as I meant it at the time, and as I guess it was understood by the arbitrators, it did not mean that the rates from San Francisco to Ogden, for example, were the same as the rates from Omaha to Ogden; that is that competition, but as between the various routes from San Francisco that could be made, there was the dead level of rates." So far as witness knows that has always been maintained.

That competition from San Francisco was on a dead level of rates.

"Q. Now turn to page 139. * * * A. (Reading:) 'Is it apparent from this showing'—that is, the showing as to the growth of the State of California—'that the Canadian line has any equitable ground for claiming that its right to the smallest part of San Francisco's trade is paramount to the rights of the American lines to do, and enjoy, the whole of San Francisco's business with other points in the United States? Is its competition desirable and helpful; promotive of trade? Is its presence in the San Francisco markets welcome to the San Francisco merchant? We aver that it does not introduce any necessary element of helpful competition which promises a freer and fuller exchange of commodities between San Francisco and its eastern markets of supply and consumption. A single glance at the map will prove that San Francisco is served by a sufficient number of independent American lines, not only to handle all her freight, but to do so if it were (2013) increased many times over its present volume. I refer to these lines out via Portland, Seattle and Tacoma; out via San Diego, not touching the Central Pacific; besides the Central Pacific and Southern Pacific lines and added to these the Pacific Mail Steamship Company, the original line, in connection with the Panama route, and the vessels of Cape Horn.'" Witness thought that argument stated the facts as he understood them at the time.

San Francisco has ample service without the Can. Pac.

"Q. Now read on a little further on page 140. A. (Reading:) 'The history of the operation of these lines proves beyond question the impossibility of any combination without the competition of the Canadian line which would not be possible with it. The public interest is fully protected in this respect by the natural, uncontrollable, competition of the American lines, so that the Canadian line can not find any substantial foundation for its claim of right to share in this traffic in the assertion that its services are necessary or desired by San Francisco merchants either to move the traffic or maintain helpful competition.'" Witness believed that was a good argument, and under the circumstances, a truthful state-

Public interest fully protected.

A good argument under the circumstances.

ment. Those circumstances, he thought, had not changed—all the competition that ever existed exists today. At that time witness did not have charge of the line from Omaha to Portland, but as a line matter he exercised practically as much control then as now.

S. P. had the advantage of the U. P. at Ogden.

(2014) The Union Pacific could not use the rail line from Ogden to San Francisco without the consent and co-operation of witness as representing the Southern Pacific. "Q. And on the other hand you could not use the line from Ogden to Omaha without the consent of the Union Pacific representatives? A. That is true, but I had the advantage of the Union Pacific. I had another string to my bow. Q. And the Union Pacific had the advantage of you, in that they had another string to their bow, in the line by Portland as you have demonstrated by your argument. A Yes for what it was worth. But there is a good deal of difference between the efficiency of the two lines respectively. * * *

Volume of traffic not so great as to tax American lines

"Q. Now, read a little further on page 140. * * * A. (Reading:) 'Moreover, the volume of the traffic is not so great as to tax the capacity of any of the American lines to move it safely and expeditiously, while there are six of the American lines, all-rail and mixed water-and-rail, over which it can move to and from the State of California, under as favorable conditions, approximately, as it can move over the Canadian line, and we contend that it is not equally just and right to all concerned to require these American lines, or any of them, under such circumstances, to surrender, through the device of a differential or any other expedient, any portion of this trade which may otherwise seek their line.' Q. That is enough. A. I had better add that other sentence, hadn't I? Q. Do you want to read a little more? A. (Reading:) 'We are talking about *right* now.' Q. In so far as the paragraph you have read involves statements of fact, it was a truthful statement, wasn't it? A. I think so, with the probable exception that would follow the increased tonnage. * * *

Further comparison between Sunset and Can. Pac.

"Q. Now turn to page 196. * * * A. (Reading:) 'Now, the Canadian line adheres to its allegation of physical disability by reason of being a broken line, as its chief (2015) and almost its only dependence in its case here. The Sunset line has been shown to you—and I take it as the extreme case; I take it because the Sunset line is the great bugbear in the eyes of the Canadian line—has been shown to you to be physically, in respect to the disabilities described by the Canadian line, a weaker line than the Canadian line. In the first place the ocean haul from Vancouver to San Francisco, is eight hundred and some odd miles—I have forgotten—eight hundred and fifty or sixty miles. It is 1,800 miles from New York to New Orleans—more than double. Compare the line, New York to San Francisco, via the Sunset, New York to San Francisco via the Canadian line and Pacific Coast Steamship Company, and it is 200 miles longer this way.' (Pointing on the map.) Q. Pointing on the map of the Sunset line? A. Yes, pointing out on the map the Sunset line.

'There is a comparison. Narrow their contention down to that physical disability and there you have a graphic comparison; a picture of the two lines. Now, where does the Canadian line stand under that? What is its answer? Oh, well, the Sunset line has been operating so successfully that it has demonstrated its ability to take the business, and it has got all it should have.' Do you want more? Q. Yes. A. (Reading:) 'That is a fine argument, isn't it? If the Sunset line can build steamships, improve transfer service, run trains 2,400 or 2,500 miles from New Orleans to San Francisco, and take a fair share of the business; so much of the business that the Canadian line and no other line would be willing to give it any more, and it has double the ocean haul; and in total length of haul it is 200 miles longer than the Canadian line, tell me why the Canadian line can not do it? Mr. Chairman, I know that you could do it, and while I am not an operating man, if I were on the Canadian line, I could do it.' * * *

Backers must put up the money.

"'All I should ask would be that my backers should put up the money, as they did in the case of the Sunset line.'" All witness stated with respect to facts, length of haul, etc., was a truthful statement. When he expressed his ability, with proper financial (2016) backing, if he was on the Canadian line, to do what he said he could do, he didn't state the whole case. "Q. You were giving an honest opinion as to your ability to do that, weren't you? A. I was giving an argument to impress the arbitrators. No, I didn't state the whole case—I might as well tell you so. Of course I didn't state the whole case. Q. But I say, in so far as you did state anything, what you said was so, wasn't it? A. I think so. * * * (2017) In the arbitration of the Canadian differential it was expressly stipulated that the case would be presented by traffic officers. No lawyers appeared in the matter at all. (2018) The arguments were made by Mr. Kerr, for the Canadian Pacific line, supported later on by Mr. Shaughnessy, and by witness for the American lines. The statements which witness read from the record of the arbitration are widely separated paragraphs from a very extensive argument made before the arbitrators.

Was making an argument.

The statements read from the record are widely separated paragraphs from a very extensive argument.

Naturally, the argument of the Canadian Pacific was to magnify the strength of the American lines and minimize its own strength. "In fact, to my mind, all there was to substantiate the claim of the Canadian Pacific was the fact that its line was a broken line—partly by rail and partly by water." On the other hand, in order to defeat the claim of the Canadian Pacific for the differential witness conceived it to be his province as an advocate of the American lines to minimize, at least as far as the facts warranted, the strength of the American lines as against the Canadian lines. He made every argument that he could with regard to the facts and presented in the strongest light that he felt he was justified in presenting, the facts from the side of the American lines as against the contention of the Canadian lines.

Witness as an advocate minimized the advantages of the Am. lines as against the Can. line.

"Q. In some of these paragraphs which you read at the request

of Mr. Severance, you were asked to state whether or not they were (2019) correct statements of facts. Have you attempted to separate in those paragraphs any statement of fact from any matter of argument. A. No. Q. You were presenting the arguments of the American side, and were not testifying as to the facts in that matter, were you, Mr. Stubbs? A. Yes; that is, I was not testifying—I was simply arguing the case of the American lines and presenting their case in its strongest possible light as I saw it. Q. Not mis-stating the facts, but putting upon the facts the interpretation favorable to your side of the case? A. Not consciously misstating the facts. * * * Q. Now, in the last statement to which your attention was called appeared the assertion by you that if you were in charge of the Canadian Pacific and had the proper backing, that you could do with respect to San Francisco business from the east certain things. I understand that to be an expression of opinion, on pages 196 and 197. * * * After reading that, you were asked by Mr. Severance to state whether the statements of fact in that paragraph were correct, and, as I recall, you said that they were. Did you mean that as one of the statements of fact or as an expression of opinion or of argument? A. Of course it can be no more and no less than the expression of an opinion."

Statements were argumentative.

Statement as to ability to do San Francisco business via Can. Pac. mere expression of opinion.

(2020) After the argument of witness was made and the Canadian Pacific denied a differential, it did practically no business to San Francisco. Neither the Great Northern nor the Northern Pacific nor any other line, mixed rail and water, via the Northern Pacific coast ports, including Portland, has done much, if any, business, to San Francisco. At the time of the argument that fact had not been developed. At the time of the argument, every traffic man present thought some business could be done by the use of the mixed rail and water lines, having in mind what had been done via the Gulf ports, but none of them (as witness did not) appreciated then as they all do now, the essential difference in the controlling conditions between the two classes of service. The routes via Puget Sound or Portland to San Francisco have been demonstrated to be insufficient and uninviting routes that would not take the business at equal rates as against other routes all-rail and the Sunset. The fact that the Northern lines have not solicited business indicates to witness that in their judgment the undertaking would cost more than it would come to. If they regarded that business as at all profitable, they would engage in it.

No San Francisco business carried by northern lines.

"The Canadian Pacific line, with the Soo connections, reaches St. Paul and that territory, and with their Canadian line reaches the eastern part of the Canadian Dominion, and connects at the border (or thereabouts) with New England lines that serve all New England and the Eastern States; and, of course, coming back to St. (2021) Paul, their connections there with the lines running south from St. Paul, get them into this territory." Their route to move business to San Francisco would be to take it over

Can. Pac. route to San Francisco.

their line through Canada to Vancouver; there deliver it to a boat line which would carry it to San Francisco, or they could connect at the border at that time with an independent line (witness has forgotten its name) which would give it a connection with the Northern Pacific. They did use that route and that connection for Seattle, Tacoma and Portland; but they did not, as far as witness can remember, attempt to use that route for San Francisco business in connection with the Southern Pacific line south of Portland. All the San Francisco business they ever took, as witness remembers, they sent through Vancouver and delivered it to or took it from Pacific coast steamship companies' vessels.

The Central Pac. U. P.'s only route to San Francisco.

The Union Pacific for San Francisco business has always used from the time it was opened and is now using, the Central Pacific line, running from Ogden to San Francisco. In the estimation of witness, the Union Pacific must use that line, because of its directness, because it serves intermediate territory as well as San Francisco; and because there is no other line open to it which would be at all effective or satisfactory in any degree, except at a differential rate, and witness thinks that no one of the lines leading across the continent would consent to any line using a differential rate against it.

(2022) "So far as the Union Pacific is concerned, its line, made in connection with the Central Pacific, was the original line across the continent, has always been the controlling line in so far as the control is represented by its taking the largest share of the business, and is the line of such paramount value to the Union Pacific that I do not think any company operating it would ever think of trying to make another line." If the Union Pacific attempted to use the line by way of Portland and San Francisco as against the Southern Pacific, at a cut rate, as the Canadian Pacific did, it would be cut off from a connection with the Central Pacific at Ogden. "Now, I do not mean to say by that that there would not have been through rates made in connection with that line, but I mean to say that in my judgment the result would have been about as bad as if there had been no rates made with them. In other words, they would have lost more than they would have gained. * * * They would have lost so much more that no sane manager would have ever attempted to divert business—San Francisco business—from the Ogden route to the route via Portland." (2023) Witness meant no sane manager of the Union Pacific, or any other line for that matter, under like conditions. "Q. The Canadian Pacific, then, could put in, as it did, these differential rates and through its only line, its only outlet, that is, through Puget Sound, and it did not have any other line that it was sacrificing by that procedure. Now, if the Union Pacific had attempted to put in differential rates by Portland, as the Canadian Pacific was doing by way of Puget Sound, as I understand you the Union Pacific would be sacrificing a very much more important line, namely, its line by way of Ogden. Is that correct? A. Yes; but, if I may be permitted—

Impracticability of Portland route.

"Q. State fully. A. A differential, as I interpret it, can not hold except by agreement. A differential over the Union Pacific line via Portland involves the consent of the Central Pacific, of the Rio Grande, of the Santa Fe, of the Burlington and of all these other lines. The fact that the Canadian Pacific was refused a differential is, it seems to me, evidence that the Union Pacific and no other line could ever have obtained the consent of the all-rail lines, or even the Gulf routes, to a differential for its line via Portland; and it follows, I think, at least it does in the minds of every traffic officer, every manager, that without a differential that route is practically a no thoroughfare as against the direct route. Now, added to that feature of the case is the fact that since 1883 the Central Pacific had a connection with the Rio Grande Western at Ogden, which made another all-rail route to the Missouri River and to Denver, and through the connections at Denver to all points in the United States; and I think it is obvious to the mind of every practical man, a man who knows anything about the business, that if the Union Pacific had undertaken to use its Portland route at a differential rate as against the Union Pacific-Central Pacific Ogden route that the Central Pacific would not have worked for it, that that Ogden gateway would have been closed to them, and all the influence not only of the Southern Pacific but of the connections of the Southern Pacific, the Rio Grande connections of the Southern Pacific, at Ogden, would have been thrown dead against it, with the result that it would have lost a great deal more than it would have gained. Now, of course I don't know what took place in the councils of the Union Pacific road in those times, but I venture to say they considered that in all its phases time and again and elected to hold to the Ogden route, and not to undertake to work the Portland route. Not because they had any regard for the Central Pacific, but because they had a regard for the material interests of the Union Pacific Railroad Company.

Reasons why Portland route is impracticable

"Q. Yes. I have been asking you really to demonstrate the obvious because (to be perfectly explicit) Mr. Severance, I take it, is trying to establish the inference from the fact that in your argument before (2024) this arbitration you included among the trans-continental lines, the line of the Union Pacific to Portland and boat line down, that the Union Pacific was in a position to compete on trans-continental business with the Southern Pacific by using, instead of its Central Pacific connection via Ogden, its line up to Portland and then its boat line down to San Francisco, and I wanted you to state whether that is a practical proposition, and if not, why not. If there is any other reason why it is not, in addition to those you have just stated, will you add them?

"A. To answer directly the last part of that question, whether in my judgment it was a practical proposition, I will simply say that to me it is obviously an impracticable route for the Union Pacific; obviously the Union Pacific would have been very foolish to have undertaken to use that route; obviously the Union Pacific official

Portland route never used by U. P.

knew that just as well as I did, and as a matter of fact they never did undertake to use it to any appreciable extent. I think possibly it will be found on the record that there may have been sporadic shipments that way, but for any organized endeavor on the part of the Union Pacific road to use that route I never have known of any such thing as long as I have been connected with the Southern Pacific. * * *

Cost of attempt would have been greater than gain.

"The Union Pacific could not have organized for the use of its line, we will call it, via Portland and the steamboats to San Francisco, without being practically cut off from the business it was enjoying with San Francisco, and not only with San Francisco, but with the business it was doing and had always done in all the interior territory in connection with the Central Pacific—it would have lost a great deal more than it could possibly have gained; and, as I have stated, that was evidently the view of the Union Pacific officials because they never attempted in any regular way, or open way, or systematic way, to do business that way.

Exact issue in Can. Pac. case.

"There is one statement that I should like to make with reference to the routes I enumerated in this argument as possible routes to California. The contention of the Canadian Pacific was for a differential on account of its line being a broken line. Its contention was for a differential against, not any one American line, but all the American lines, each and every American line; that it alone should have a differential under the rates used by any of the American lines for San Francisco business. Now, of course I seized upon that as manifestly inequitable and unjust, and I tried to make on paper, as it could have been made in fact if it had been attempted, as many routes to San Francisco similar to the broken route of the Canadian as was possible. I do not think it will be found in that argument or anything I have said that I regarded those American broken routes which I used by way of illustration (2025) and as opposed to the Canadian line, as effective routes or profitable routes. Q. But as compared with the Canadian Pacific? A. But as compared with the Canadian Pacific. I did not argue that the Canadian Pacific was not entitled to a differential against the all-rail short line. The whole argument and all the statements made were based upon the fact that there could be made any number of broken lines, meaning by that part water and by rail, that would be just as much entitled to a differential, as the Canadian Pacific, the result of which would have been chaos—there would have been no rates at all.

Traffic S. P. could have diverted.

"Q. Recurring again, for a moment, to that Ogden connection. Suppose that the Southern Pacific had been unable, for legal reasons or other reasons, absolutely to cancel its rates with the Union Pacific at Ogden and divert all of its traffic say to the Denver & Rio Grande, and had been required to keep in its rates, yet any traffic that it was able to control and route against the Union Pacific in a contest of that sort, would that have been a very large traffic? A. It would have been a very large percentage of all the

Pacific coast traffic. But I don't know why it is necessary to take my testimony on these points. The fact is that that route has been open—I mean the physical possibilities of such a route have always been there, just as the physical possibilities of a mixed rail and water route by the Northern Pacific through Tacoma or Seattle, and by the Great Northern in recent years through Seattle and of the Union Pacific and Short Line through Portland, and of the Santa Fe through Los Angeles before they got into San Francisco, or through San Diego before they got into San Francisco. None of them has ever been used effectively. While there have been sporadic shipments that way, they have not amounted to anything." (2026) The substance of witness' statement is that no sane management of the Union Pacific would attempt to use that Portland route in competition with the Southern Pacific for California business. It is supported by the fact that they have not attempted to use it. They may have attempted it and found out they could not do it. If so the attempt wasn't serious enough to attract his attention. Witness stated his opinion as to why the Sunset Route had been so successful in handling California business at rates upon which the Canadian Pacific has practically withdrawn, as follows:

Other transcontinental lines did not effectively use such route.

U. P. never made serious attempt to use Portland route.

"When I made this argument I did not understand the conditions as well as I understand them now and did very soon afterward, especially after I became more intimately associated with conditions up in the northwest which followed my taking service with the Union Pacific as well as with the Southern Pacific. I think the whole trend of this argument goes to show that all of us, every officer of a trans-continental line, from the outset, borrowed of their fears more than their judgment in dealing with the Canadian line. We did not understand—we did not know how inefficient such a line would be. We never ought to have allowed them to use the differential against us. If we had known as much as we did at the time this arbitration came up and the still more that we know now, the Canadian Pacific would never have had a differential there. We would not have permitted it. Now, there is a very different set of conditions as between the use of a steamship line on the Pacific in connection with the rail lines for this so-called trans-continental business and the use of a steamship line on the Atlantic. In the first place, there is practically but the one port, and that is San Francisco—practically speaking. San Diego doesn't amount to much as a tonnage producer. There is no other port which is a large producer of tonnage on the California coast but San Francisco. San Francisco's whole trade with the United States is inland, that is, is back towards the east, is in the territory that is served en route by the railroads that reach San Francisco. The Canadian Pacific line or any other line which attempted to use part rail and part water, the water line being on the Pacific coast, could only reach San Francisco, and

Reasons for success of Sunset route.

when it has got its freight there, except for that which was used in the city of San Francisco, all the rest would have (2027) to be distributed back into the interior and up the local roads—a very great handicap, a handicap not only in the rates around but also in the time used. * * *

"A. And the distribution would be through its rivals, and all its business would be revealed to its rivals. While on the part of the Sunset Route, it serves the port of New York, which in tonnage production of course is many times greater than that of the city of San Francisco. Its steamships had, in addition to the San Francisco trade, for their cargo all of New Orleans, Louisiana, Galveston, Texas, Oklahoma, part of Mississippi, some of Colorado, even some of Utah, all of western Texas, all of Arizona and New Mexico, and the whole state of California, from its southern boundary up to San Francisco, as contributors to its cargoes. At New York it could fill a vessel three times a week—never less than twice a week. It did not have to depend on San Francisco business alone for cargo for that vessel; it did not have to depend upon California business alone for that cargo; it did not have to depend upon the territorial business in addition to California business alone; but it had, as I have described, Louisiana, Texas, and the tonnage of other states. The Texas tonnage itself has always been equal to that of California, so far as the amount that is moved out of New York is concerned. For that reason the line was enabled to put high class boats on, and a number of boats, and sail always twice or three times a week, with full cargoes. Then at the opening of the Sunset Route, the rail line, after you pass Houston, it was very light in tonnage, there was very little delay in the movement of trains. When the vessel arrived at New Orleans, or at Algiers, rather, the cargo was taken out; that which was for the territories and California was loaded into cars solid, and that was usually a train load, never less than ten cars, and sometimes as high as forty, and those cars were put in a through train, and it moved as a through train, without the ordinary delays, and went into San Francisco or to Los Angeles solid, besides having the opportunity to distribute on its way up to San Francisco at all points in Southern California along the line of the road and in the San Joaquin valley. That made it possible to have a steamship service on the Atlantic and a rail service that could not be duplicated by the use of an all-rail line to Seattle or to Tacoma or to Portland or to Vancouver, with a steamship line running from those ports to San Francisco. In the first place, they would have nothing but San Francisco business that they could possibly compete for at any reasonable rate and they would gather their business up in such a way, and the arrivals at the port of departure would be so broken that it would be almost impossible for them to have full cargoes. A steamer would sail with a half cargo and less than half cargo, and the delays incident to the rail transit would be, as it would

Reasons for success of Sunset route.

have to move in its regular trains, such that—well, it would make it an impossible route as compared with the Sunset Route. * * *

(2028) "The Canadian Pacific would have to take cargoes from New York and its connections, from Boston and its connections, and then all along the Canadian pick up cargoes at the various junctions with their lines to St. Paul, and they would not make a solid train at any one point. The result would be that the tonnage necessary to fill their ship would arrive at destination in such broken lots that the steamers would run on half cargo and quarter cargo." Witness thought it obvious that the unity of management of the Sunset line, under a single control, is an important element in the advantages of that line from New York to San Francisco. Why Northern lines are not successful.

"We may theorize just as we please on that. I would have to confess it has been a surprise to me that there has been so little accomplished in the way of using the steamship lines via Vancouver and via Seattle and via Portland. We learned by experience originally. When we opened the Sunset line I thought we would have to have a differential rate, a lower rate. We started in with a differential rate. But the rail lines would not have it, and we had to stop it, within five months after we put it in. Since that time we have made rates equal with the rates of the all-rail line." Witness thought that the Northern Pacific once attempted to work California business by boat from Puget Sound down, and gave it up, that all the lines have tried it. He hasn't any clear recollection of particular shipments or particular dates. He has not heard of any such attempt for a number of years. Sunset differential rate abandoned.

Referring to the paragraph near the bottom of page 119 of the record of arbitration, which witness read at the instance of Mr. Severance [reading:] "There is much valuable business in Montana, Colorado and Utah, competed for by these direct Central Pacific, Union Pacific, Denver & Rio Grande lines and by the Oregon Railroad & Navigation Company and Oregon Short Line, and for Montana by the Great Northern and Northern Pacific, as well as the Oregon Railroad & Navigation Company and Oregon Short Line, but we all work on a deal level equality of rates." That statement is rather indefinite. The competition that he referred to is rather the competition of markets. For example, take the Utah trade: San Francisco was competing for Utah trade as against Chicago and Omaha. "MR. SEVERANCE. Mr. Stubbs, you read the sentence just before that and you will see you are on the wrong tangent. That shows what you were talking about—the sentence just before that, where you (2029) state 'They are not used for San Francisco traffic with Montana, Utah and Colorado, as between the all-rail lines and the mixed water-and-rail lines.' Excuse me from breaking in on the cross-examination, but I know you want to be accurate. MR. LOVETT. That is all right: except that I do not attach the significance to that that you do. However, what has Mr. Stubbs to say about that? Competitive business in Montana, Colorado and Utah.

"WITNESS. That is all right in that connection. What I had in

mind in writing that statement was this: That in Utah and in Montana and in Idaho there was business which was competed for by these lines. Now, let me illustrate: Utah business was competed for by San Francisco and by Portland merchants and by the East. * * * It might be inferred that the business from San Francisco to Ogden could be taken out via Portland over the Navigation Company's boat to Portland and then down over the Oregon Short Line. But if they ever did anything of that kind, any such business as that, they did it upon the deal level of equality of rates. That is all that that amounts to. That is why the statement was made. And so with respect to Montana business. If the boats took freight from San Francisco to Portland, or to Seattle, and then out to Spokane, as against the all-rail line, it was done, so far as I know, on a dead level of equality of rates. Now, that is what that paragraph was meant to convey."

Business between San Francisco and Portland.

There was considerable traffic between San Francisco and Portland proper—all kinds, general merchandise. "The Southern Pacific rail line between San Francisco and Portland never competed in the sense of meeting the rates of the steamship line; it never made rates that were equal, according to my recollection, to the rates offered by the steamship line with insurance added; but always did have rates in. I do not recall that there was any fixed relation between the rates. There may have been, but if so, I have forgotten it. And, with the exception of perishable freights and high explosives, I think that upon the average the rail line got very little business from San Francisco to Portland, as against the steamship line. But the (2030) rates primarily from San Francisco to Portland made by the rail line were made as basing rates, in order to secure the business south of Portland on its own line, in the interior of Oregon; and they did work for that business and carried the bulk of it, I think." * * *

"What I said was this: that the Southern Pacific did, in a certain sense, compete against the steamship lines for the business from San Francisco to Portland; that is, it made rates; but there was such a difference in the rail rates and the steamship rates, the rail rates being so much higher, that, upon the whole, with the exception of perishable goods and probably high explosives, ordinarily the business from San Francisco proper to Portland proper, moved by boat; that the rates which the Southern Pacific Company made from San Francisco to Portland were made, in the main, as basing rates for the territory south. That is to say, what I meant to convey was that the Southern Pacific's rates to a point on its own line south of Portland would not exceed the Southern Pacific rates to Portland plus the local back. Sometimes it was less than that. And the main object of the Southern Pacific—because it recognized its inability to compete with the steamship line—in making rates from San Francisco to Portland was to make them as basing rates for the intermediate territory. That is as I understand it. And, of course to points east on the O. R. & N."

(2032) Any traffic which the Southern Pacific engaged in between San Francisco and points in Washington was in connection with the O. R. & N., or the Northern Pacific, as it had no lines north of Portland. The eastern boundary of the Transcontinental Association is through Kuna on the Oregon Short Line. That is to say, that is the eastern boundary of the territory to which the transcontinental rates apply. It is a rather crooked line. In making the statement, "This line forms the eastern boundary of the Transcontinental Association," before the arbitrators, witness meant by that the boundary east of (2033) which the initial transcontinental rates apply. West of that boundary, which is practically the Missouri River, we added a local back, in order to make the through rate. "Q. The traffic involved in that arbitration was that between San Francisco and points east of a line referred to in your argument before the arbitrators. Now, what was that line? A. It was practically, as I say there, the Missouri River line—the Missouri River common point line. That would be Kansas City, St. Joe, Council Bluffs, Omaha and St Paul." It takes in Houston and Galveston on the south. New Orleans is treated as a Mississipi River point.

Business between San Francisco and Washington.

Traffic involved in Can. Pac. arbitration.

(2034) Witness doubts very much whether the Southern Pacific solicitors paid any attention to the merchandise business moving from San Francisco to Portland. They were out of it for that. It is the recollection of witness that the Navigation Company paid no attention whatsoever to the rail rates in making its rates from San Francisco to Portland. They had more or less competition by other vessels, and that competition was controlling in its influence on their rates. The Southern Pacific hauled very little, if any, general merchandise from San Francisco to Portland, except the items heretofore mentioned by him. (2035) Thinks the Southern Pacific have hauled some, but very little, lumber from Portland to San Francisco, and at some times hauled special shipments of grain. Thinks likely that they hauled some flour, but whether that originated at Portland could not tell. It is more than likely that flour originated at a mill south of Portland. The divisions of the through rate between the Central Pacific and the Union Pacific from Omaha to San Francisco have always been the same,—54 per cent. to the Union Pacific and 46 to the Southern Pacific. Witness thinks the division was unfair to the Southern Pacific, because the cost of service west of Ogden was such that its division should have been more. The division was practically on the basis of the original mileage.

S. P. paid no attention to merchandise business from San Francisco to Portland.

Freight hauled by S. P. from Portland to San Francisco.

Divisions between U. P. and S. P.

(2036) "Q. * * * The situation is about this, is it not: the Southern Pacific, either by reason of self-preservation to maintain its rates and maintain its business, or because of the generosity of its traffic department, as represented by yourself, was always willing to maintain with the Union Pacific a fair division of through rates. That being the case, there was never any occasion for the

Union Pacific, as a retaliatory measure, to attempt to use that Portland line, which is a round-about line; isn't that about so? A. I am not aware of any provocation by the Southern Pacific to the Union Pacific to use any other line than the Central Pacific line."

American-Hawaiian line.

(2037) Witness thinks the American-Hawaiian line is probably carrying 200,000 tons per annum. It originally went around the Horn. They have carried more tonnage since the Tehuantepec road was constructed. They have more steamers. The line is much longer than the all-rail line. It is much longer than the Morgan line. The Tehuantepec road crosses the lower end of Mexico.

Where in the argument of the Canadian differential witness stated facts as facts he understood them to be facts; and where he gave his opinion, he gave the opinion that he thought would answer his case. "Q. And you would not want to say now whether the opinions that you gave there were honest opinions, or not? A. Well, that depends upon the definition of the term 'honest.' I think my statements there were made in the same spirit and with (2038) the same degree of accuracy as any statements that a lawyer would make in pleading a case at the bar—whether it was Judge Lovett, or Loomis, or anybody else."

Statements in Can. Pac. case made as a lawyer would make them.

So far as he undertook to state a fact there, as to tariffs, movement of traffic, the location of lines of railway, or railway and steamship, or any other fact in there, it was accurately stated, as he knew about it from his sources of information. And when it came to a matter of argument or deduction from those facts, he put it as well as he could for his side. As to what he could do under certain circumstances, he might have exaggerated a little there, using the poetic license.

Statements of fact, correct.

Witness did not withdraw the statement appearing on page 197 of the record of arbitration, reading as follows: "If the Sunset line can build steamships, (2039) improve transfer service, run trains 2400 or 2500 miles from New Orleans to San Francisco, and take a fair share of the business, so much of the business that the Canadian line and no other line would be willing to give it any more, and it has double the ocean haul; and in total length of haul it is 200 miles longer than the Canadian, tell me why the Canadian line cannot do it? Mr. Chairman, I know that you could do it, and while I am not an operating man, if I were on the Canadian line, I could do it. All I should ask would be that my backers should put up the money, as they did in the case of the Sunset line." But he wanted the backers to put up the money, "and I do not guarantee that it would be a profitable investment. There is the nub of the whole thing. That is, an investment that any reasonable man would make. They are better off without the business than attempting to get it under such conditions."

Can. Pac. line to San Francisco would not pay investors.

Witness thinks that perhaps the productiveness per mile of road, Omaha to Ogden, is greater than the productiveness per mile of road Ogden to San Francisco, but thinks the difference would be small if figured out. After the Sunset line was started it operated

for about four months, under a differential. (2040) Since that time there have been occasional lower rates by that route than the all-rail route—"Not an agreed differential, but a condition of competition by the sea routes that the all-rail lines did not care to encounter, and they turned it over to the Sunset Route to take care of: and I think that there is today and has been for some time, what they call New York pier rates to certain points, which are lower than the all rail rates from New York," that is on certain special commodities. The class rates are just the same; and on a majority of the commodities they are the same too.

Sunset differential lasted about four months.

(2041) The book referred to by witness is here offered in evidence as Exhibit 150. The Southern Pacific has always allowed the Denver and Rio Grande and its connections east the same divisions that it has allowed the Union Pacific. The Denver and Rio Grande has no boat line to Portland, or outlet that way. Witness thinks the Southern Pacific's proportion is the same west of Ogden from Kansas City as it is from Omaha. (2043-2226) Complainant's Exhibit 150, being a record of proceedings at hearing before Board of Arbitration on question of Canadian Pacific differentials at Auditorium Hotel, Chicago, October 12, 1898.

D. & R. G. has same divisions as U. P.

ST. LOUIS, MARCH 22, 1909.

(2227) M. C. MARKHAM.

Markham.

Lives in St. Louis. For over three years assistant to the Vice-President of the Missouri Pacific Railroad at St. Louis. Started in the railroad service in 1869, and since then has been train dispatcher, superintendent of telegraph, clerk in the general freight and passenger office, secretary to the traffic manager of the Illinois Central for about six years, assistant to the general manager of the I. C. two years, assistant to the traffic manager of the I. C. fifteen years; joint representative of the Rock Island-Atchison, the Gould lines, the M. K. & T. in New York for six months; assistant to president of the Western Pacific. Witness' experience chiefly in traffic. Left the service of the I. C. in 1903, after 21 years' service.

St. Louis. Mo. Pac. traffic official.

(2228) Before the I. C. line was built into Omaha, it was not engaged in transcontinental business to any appreciable extent. The Omaha line was built, witness thought, in 1897 or 1898, along there. Previous to that, whatever transcontinental business he had moved via New Orleans and Sioux City. From Sioux City traffic went over the Omaha line to the U. P. Picked up business on the I. C. lines from such points on connecting lines as solicitors could get it, all the way east on the Chicago parallel of latitude, probably. Before the consolidation, thought the S. P. and U. P. were competitors on all traffic east of the Missouri River, and probably north of the Ohio. That was the territory in which the competition would be marked. On the Pacific coast there were competitors all the way from Portland to San Diego, witness thought.

Route of Ill. Cent. transcontinental traffic.

Routing of S. P.'s transcontinental traffic.

(2229) Witness thought the S. P. routed traffic both ways. It might secure it in connection with some other lines. From the Atlantic seaboard they sent a great deal of traffic by the southern route, and witness supposed also by the other. He found traffic going both ways. From seaboard territory, Pittsburg, Cincinnati, and points there, I. C. worked business by New Orleans, and found the S. P. very willing to aid them. (2230) Witness stated that the U. P.'s possession of a line by Portland would have an influence on the transcontinental rates. If the U. P. made a rate by Portland to San Francisco, the other lines might meet that rate, or might not. If the U. P.'s rate was of a character that enabled it to take an important amount of traffic, the S. P. would probably retaliate and reduce its rates.

Influence of U. P.'s Portland route.

(2231) Distance from Ogden to San Francisco about 800 miles. Thinks it is all essential for competitive lines to maintain solicitors. Witness thought from Ogden to Portland by the O. R. & N. was about 750 miles, and about 770 to 800 miles from Portland to San Francisco by water. (2232) The natural line for California traffic handled by the U. P. was the Central Pacific, because it is a long established route, the shortest route, and it is today recognized that it has better facilities than probably any other line. Witness doesn't know about the Atchison, but he thinks the former is so regarded. The direct all-rail line much more efficient than the transfer by boat down from Portland. Never knew of any freight to be worked by the U. P. via Portland. Never knew of any shipments going to San Francisco from east of the Missouri River by Portland. Never knew the U. P. to solicit freight that way, and the I. C. never routed any that way. Didn't have any divisions in that way.

U. P.'s natural connection is the Cent. Pac.

Never knew U. P. to work the route via Portland.

Why it would be foolish for U. P. to work Portland route.

(2233) If the U. P. cut the rate, or otherwise antagonized the S. P. by working the Portland route, the latter could turn its eastbound business over to the D. & R. G. The S. P. is able to control a very large amount of both east and west-bound business, and always has been. They have very active agents in the field in the east, "and, of course, it controls it in the west, entirely so." Witness understood the D. & R. G. thought a good deal of traffic went to the U. P., which it might have gotten, but for the friendship of the S. P. for the U. P. Thinks as a railroad proposition it would be a foolish thing for the U. P. to work the Portland route. Not simply because of the power of the S. P. to retaliate by diversion of traffic, but because the U. P. couldn't hope to do better by any other route than the S. P. Witness refers to the net revenue, which, of course, was what everybody was after. Witness understood the S. P. worked both the Sunset and Ogden routes to California.

S. P. worked for longest haul.

(2234) It worked preferably the way it could get the long haul, ordinarily, provided there was more revenue in the long haul—which generally follows. From Chicago territory they worked for the Ogden route more than the Sunset route. The S. P. was the U. P.'s only outlet to California before the San Pedro was built.

There were only two corporations in California operating railroads eastwardly, the Atchison and the S. P. (2235) Various trans-continental lines described and discussed. (2236) Witness thought Missouri Pacific had a joint agent with the D. & R. G. on the coast. The Texas & Pacific and the Missouri Pacific has had a general Pacific coast agent for at least twenty years, with a corps of assistants actively working for California business. The T. & P. have one man at Los Angeles. Witness doesn't think they have one at San Francisco. Of course, the Missouri Pacific representatives solicit the T. & P. The Missouri Pacific moves traffic either by El Paso or Ogden. Witness thought the T. & P. was in operation before the M. P. reached Pueblo.

Soliciting agencies.

El Paso and Ogden, M. P.'s gateways.

(2237) M. P., after the close relations that now exist with the D. & R. G., route California business by Ogden. Where the I. C. has control of the business, sometimes it would send it by Omaha and sometimes by way of New Orleans, depending upon which way it got the most revenue. (2238) The S. P. and U. P. agents co-operate with the I. C. on the different routes. The I. C. had an agent in California, and there the conditions were reversed, the latter co-operating with the S. P. and U. P. representative. (2239) In a war of rates, brought on by the U. P.'s use of the Portland route, the Sunset route would necessarily be drawn in. Witness would consider it foolish for the S. P. to attempt to exact unfair divisions from the U. P., or to divert business from them.

New Orleans and Omaha I. C.'s gateways.

(2240) Witness doesn't understand that the D. & R. G. cannot compete on equal terms with the U. P. for business moving out of California through Ogden. The U. P. is the S. P.'s preferred connection on such business as the S. P. controls. (2241) Witness can understand that the S. P. does not give the D. & R. G. as much business as it formerly did, but thinks it would still reciprocate with that line for business which it gave to the S. P.; in other words, a quid pro quo. Before the consolidation, understood Mr. Stubbs favored the U. P., because they had more traffic to deliver. (2242) The U. P. coming to the very portal of the traffic to the Missouri River, Mr. Stubbs would naturally think it was the best line to build up. The U. P. has always been influential in controlling the transcontinental situation in the west, because of the importance of the line and the personality of its officers. Traffic moved east over the S. P. from the Pacific coast by way of New Orleans, and thence over the I. C. It consisted largely of fruit. Thinks some of it went as far as Chicago, and a good deal of it would go to eastern points via Cincinnati, Louisville, and those gateways. The Missouri Pacific is an independent line, worked wholly in its own interest by its officers. Witness considers the U. P. route to San Francisco via Ogden as of value in that it would enable the U. P. to always get fair and reasonable terms from S. P. from Ogden west. When witness was with the I. C., there was competition between the New Orleans route and the Ogden route on passenger business. (2243) The tourist traffic by way of New Or-

D. & R. G. competes on equal terms with U. P.

U. P. had more traffic to deliver.

Value of Portland route.

leans is a large business. The S. P. and U. P., as witness now recollects, after the consolidation divided transcontinental traffic between the Southern and Ogden route by a line drawn northeast from Cairo to some point on Lake Erie. All south of that line would go by New Orleans and all north of that line by the Ogden route. The I. C. might participate in Sunset traffic that was delivered to the S. P. at some point other than New Orleans. It might take business to Cairo, and turn it over to the Iron Mountain, thence it would go to St. Louis and El Paso.

Passenger business via Ogden and New Orleans.

(2244) In testifying about the dividing line, witness meant the joint agent preferred to take the freight in accordance with those geographical limits. He was willing, however, to take it either way, and that didn't interfere with witness' solicitation, and the Harriman lines didn't work against him in his solicitation of freight by way of New Orleans. (2245) No matter what the Tehuantepec or other lines may have to do in carrying freight a long distance, witness said "Foolish" is a very mild term for the havoc that would ensue if the U. P. attempted to work the indirect and handicapped Portland line as against the direct line. The U. P. doesn't extend east of the Missouri River, and the trunk lines east of Chicago can work either with the U. P. or the Atchison or the S. P. by El Paso, or with the D. & R. G.

No interference with witness' solicitation.

Foolish to work Portland route.

(2246) And all those lines could refuse to join the U. P. in cutting rates, and could divert their business to the D. & R. G. and S. P. Of course, the U. P. could command a certain business of its own. It could solicit business in Chicago or the central states, or beyond, which according to the present practice would be delivered to it by the other lines at Omaha. The U. P. could not cut the through rate legally, without the concurrence of its connections. It could only make a local rate from Omaha, and the through rate would be made up of the sum of the locals on that point. The other lines would have a right to cancel their divisions with it, and would deliver traffic to the U. P. at Omaha on their local rate. It would be suicidal for the U. P. to attempt it. No sane railroad man would attempt such a thing, unless the provocation was very great. Of course, if the S. P. didn't deal fairly at Ogden, there would be no other alternative left, but witness could not conceive of the S. P. not dealing fairly with the U. P. and thus losing its direct connection. It is to the interest of both of them to work together, and they have never done anything else.

Suicidal to use Portland route.

(2247) If the U. P. were to attempt to cut the rate against the S. P. all of its connections on transcontinental business are in a position to ignore it on that business, except such as the U. P. might get by cutting the local rate from Omaha. Witness thought the disastrous consequences to the U. P. would also reach the S. P., because the transcontinental rates in such case could not be held up. The S. P. could not afford to ignore the amount of business that the U. P. would take from Omaha and points

Effect of rate war.

east on the cut rate. The rates from the Missouri River are so very high, they could be cut a great deal, and still leave a margin. (2248) The U. P. would, however, have to pay the locals up to Omaha, and the locals to the Missouri River from the east are a good deal higher than the eastern proportion of the through rate. Witness didn't know what the difference would amount to. By the time the U. P. had paid the local, there wouldn't be much left to pay it for getting that business up to Portland and down by boat to San Francisco, and they would be at a great disadvantage in the matter of time and handling. Witness never knew of one line's cutting transcontinental rates, that the others didn't participate in it. A cut on one line would bring down all. Never knew of a war, however, being inaugurated, except between terminal lines. Such wars as have existed in transcontinental rates originated either between the S. P. and the Atchison, or the S. P. and some of the water carriers. Witness thought the only one he knew of was on the advent of the Atchison in 1882 or 1883. It might have been as late as 1886. Never knew of a rate war between connecting lines that couldn't agree upon a division.

(2249) CHARLES VON BEHREN.

Von Behren.

For thirty years manufacturer of vehicle wood stock, at Evansville, Ind. His town is reached by the L. & N., I. C., E. & T. H., and the Southern. (2250) Before the consolidation, the S. P. solicited witness' business via New Orleans. Witness routed his business that way principally over the I. C. The U. P. then solicited by way of Omaha, witness thought. Since the consolidation, the joint agent has not called as frequently as before. Most of witness' business is routed by the consignee. Prior to the consolidation, the S. P. agent never attempted to route other than by New Orleans. (2251) But the S. P. agent never attempted to dissuade witness from shipping via Ogden. Witness didn't know whether traffic passed over the S. P. in those days west of Ogden, or not. Witness' traffic has been solicited by the Atchison. Doesn't know when was the last time he saw that agent. Wouldn't say they had discontinued solicitation. Doesn't know whether the Rock Island solicits coast business or not. Thinks that the Missouri Pacific does not, nor does the M. K. & T.

Evansville, Ind. Manufacturer.

S. P. agent did not oppose Ogden route.

(2252) Doesn't think the Rock Island, the D. & R. G., the St. Paul, or the Northwestern solicit his coast business. Most of witness' north coast business is taken by the G. N., but the G. N. takes no California business. Never shipped anything to San Francisco via Portland and boat. Thought he shipped about fifty carloads a year to the coast, moving principally by the U. P. and S. P. Some of it by the Atchison. The S. P. shipments referred to go via New Orleans. Not interested in the divisions. (2253) The S. P. solicitors never mentioned Ogden to witness. He knew nothing about Ogden, never having been there.

Never used Portland route.

Morrill.

(2253) C. H. MORRILL.

Former freight solicitor of S. P. at St. Louis.

Except for four years, when he was in the mercantile business, since 1876 in the traffic department of the M. K. & T., the Missouri Pacific, the Cotton Belt, H. & T. C. and S. P., respectively. Entered the employ of the H. & T. C. in 1887. That road then ran from Denison to Houston, trackage arrangement into Galveston; Hempsted to Austin, and the short line up to north of Waco, a little west, and then the Fort Worth Branch. (2254) It was taken over by the S. P. in 1891 or 1892, witness thought, and he remained with the joint properties up to the end of 1893. Then became commercial agent of the S. P. at St. Louis. Solicited traffic with the assistance of a contracting agent, stenographer and one clerk. Aglar was then the general agent of the U. P. at St. Louis. The S. P. then participated in the general class of business that went to the coast which included woodenware, implements, beer, glass, or practically all the traffic that moved. Witness covered the St. Louis territory, which included practically the Mississippi River points between Quincy, he thought, and Cairo, Missouri, and some of the Missouri River points, and also part of Arkansas.

Solicited via longest haul.

Transcontinental routes from St. Louis.

(2255) What route witness solicited by depended partly on what tracks the industry was located. He would be foolish to undertake to move freight by New Orleans if it were located on a Missouri River line. Business that was not controlled by conditions of that sort, witness naturally tried to route by the longest haul. There were two or three routes through El Paso, the Iron Mountain in connection with the T. & P., also the M. K. & T., which witness thought then had a connection via La Grange or Columbus, Texas, or could haul it to Fort Worth. There were also lines through the Missouri River, either at Kansas City or Omaha. At the latter, it would be in connection with the U. P. At the former, in connection with the several lines leading from there. The only place from which witness tried to get business by New Orleans was St. Louis, over the I. C. The traffic struck the S. P. at La Grange and Columbus. The former was probably 700 or 800 miles from El Paso, and the latter just a few miles.

Frequently solicited via Ogden. Stood in with the local man.

(2256) Columbus is 100 miles west of Houston. Witness doesn't know how the U. P. was endeavoring to route traffic. He worked with Aglar at one time, and the latter was glad to get business at Kansas City and at Ogden. On occasions, lots of times, witness has solicited business via Ogden. It depended on local conditions. He tried to stand in with the local man, and get as much of the loaf as possible. Worked the other way preferably, because of the longer haul. When employed by the M. K. & T. witness only had to do with the local business, not with the coast business, until he became commercial agent. Business over the M. K. & T. moved for a while via La Grange, and at one

time there were divisions via the Fort Worth and the T. & P. Thinks that was the junction. That would be El Paso. Then worked with the S. P., and received lots of information from them about shipments to move. Also, when working for the S. P., received notice from San Francisco of shipments moving west by Ogden.

(2257) At times, but not always, the witness would go after the shipper, and undertake to get a longer haul. It would depend largely on who the shipper was, and how he was located. If witness thought it to his interest, he would let the shipper alone. He always had the Atchison to look out for. Doesn't recollect getting any instructions from San Francisco to try to route by New Orleans, in connection with notification that shipments had been routed by Ogden. Never received instructions from San Francisco in future to get business by New Orleans. Never got any instructions from his territory that there was any embargo on the Ogden route. If Government counsel understood witness that way, either witness had not made himself clear, or didn't understand the question. What he meant to say was as follows: "That at the time I was here, the Mojave route, as they call it, was very active, and that route would undertake to get in future shipments via longer haul. That was the extent of any notifications that I have any recollection of coming from either the San Francisco offices or any of the commercial offices on the coast." (2258) Where business was through, witness routed it by New Orleans or Texas junctions, which ever way he could get the most revenue, always keeping in view the local conditions. Not very often found himself in competition with the U. P. for coast business, although that did happen. They had an active agency at St. Louis, and witness also tried to be active.

No embargo on Ogden route.

(2259) Witness' principal work was with the local line. It was to his interest as a solicitor to work with the line on which traffic originated, and to try to get it to work with him. Carload business that he handled was not only that which originated on the tracks of the I. C., but also that of the Terminal Company at St. Louis. The Terminal Company would handle it across the River, and deliver it to the I. C. As far as witness knew, the Terminal Company was impartial as between the various roads, and carried it whichever way they desired. Doesn't recollect ever attempting to divert business going by way of Ogden to some other route. If the U. P. controlled business that way, the S. P. would get a share of it.

Principal work was with local line originating traffic.

Never attempted to divert traffic from Ogden route, as S. P. got part of it.

(2260) Never tried to get that business away from the U. P. All the lines leading westerly and southwesterly from St. Louis were soliciting California business. Doesn't know that the Frisco was, but the Missouri River lines were, and the Texas lines were. Doesn't know whether the Frisco had any route to El Paso at that time, or not, but all the lines then in existence solicited. Witness was employed by the M. K. & T. up to 1902. It attempted

St. Louis lines that solicited Calif. traffic.

to work business by way of Texas. They tried to get the long haul, and could deliver it to the T. & P. at Fort Worth. (2261) If the T. & P. controlled a car from Fort Worth westerly, the M. K. & T. would try to work with it to get that car, but didn't get lots of encouragement, because the T. & P. were working with the Gould lines, the Iron Mountain. There are a lot of industries located on the line of the Terminal Company,—pretty nearly everything shipped out of Cupples station is a terminal proposition. That is a pretty big place in itself. Witness solicited the men who had industries on the terminal lines, sometimes through the Terminal Company, and sometimes personally. Witness was free to go in and solicit the business that was on the lines of the Terminal Company.

(2262) Unrouted business which witness was able to secure he worked by New Orleans. The Terminal Company is a terminal connecting company, a switching company, operating between St. Louis and East St. Louis. Its switching charges, witness thought, were paid by the local lines, but not by the S. P. Witness thought the U. P. agent was also soliciting business via Ogden off that terminal line. They were not sending any business by New Orleans. Didn't try to take shipments away from the U. P.'s Ogden line, but did attempt to divert shipments from the Atchison even after the latter had secured control of them. Witness thought he had already testified as to this. "That was the Mojave route."

Tried to divert traffic from the Atchison but not from U. P.

(2263) The Mojave route of the Atchison at that time gave the S. P. a haul from Southern California up into San Francisco. Witness didn't know what the arrangement was, though. That line was competitive both with the Sunset and the U. P. In reference to witness' direct testimony that he worked with the U. P. or the D. & R. G. after they had secured business, witness admitted that it didn't take any work, on his part in relation to the shipment after those companies had secured control of the business, because such business had to go over the S. P. from Ogden. "We didn't bother with those shipments."

(2264) When witness heard of a shipment that he understood was going to move, or was likely to move by the U. P., he never attempted to divert it to the Sunset. In that case, he would cooperate with the U. P. to get it by Ogden, if there was any work necessary on his part, whereas, if he heard of a shipment which was likely to move by the Atchison, he went to work to divert it. He regarded the Atchison as the S. P.'s real competitor for California business from St. Louis territory, but didn't regard the U. P. as a competitor to the same extent as he did the Atchison. Regarded the U. P. only as offering him the shorter route than by the southern gateway. The Terminal Company witness has testified about, that is, the St. Louis Terminal Company, serves practically all the roads entering that city. It serves all the lines entering St. Louis, the same way that it serves the I. C., and the representatives of all those lines could go to the industries

Regarded Atchison as real competitor and U. P. only as offering shorter route.

on its tracks, and solicit business. (2265) And they constantly did so solicit. If witness could control unrouted shipment on the terminal lines, he would send it by New Orleans, and to that extent he was competing with both the Atchison and U. P. He was, however, very careful to avoid antagonisms of any of the lines that were working with him. Was not afraid, however, to antagonize an Atchison shipment.

Sent unrouted freight via New Orleans.

(2266) So far as the S. P. was concerned, it was merely a question of revenue. Has solicited by the Ogden route in connection with the U. P. lots of times. (2267) So far as the S. P. was concerned, it was a question of a division of revenue. Didn't know of any business moving from the St. Louis territory by the Panama route. (2268) Where he found business he could control, he didn't tell the U. P. about it, but where he found the business was not going to move by way of New Orleans, but was liable to move by the Atchison, he has informed the U. P. of it, and tried to get the shipment by way of Ogden. Has told the other lines, too, any line that he thought would give him the strongest help.

Worked with U. P. as against Atchison.

(2268) JAMES C. LINCOLN.

Lincoln.

Resides in St. Louis. Is Commissioner of the Merchants' Exchange Traffic Bureau. Occupied that position since May 1st, 1905. Entered the railway service in the Car Service Department of the St. Joseph and Denver City Railroad in 1876. Continued in the employ of that company through its various departments, transportation and traffic, for twelve years, and then in 1888, entered the employ of the Missouri Pacific as commercial agent at Atchison, Kansas, where he remained until the end of 1889. Then came to St. Louis in the employ of the same company, where he continued until he accepted his present position.

Com'r St. Louis Traffic Bureau.

Former traffic officer of Mo. Pac.

(2269) Witness names the various positions which he held with the Missouri Pacific at St. Louis, all in traffic department. The Missouri Pacific maintained commercial agencies on the Pacific coast at San Francisco, Portland and Los Angeles. It had a line leading from St. Louis to Pueblo—the Iron Mountain from St. Louis to Texarkana, there connecting with the T. & P. to El Paso. Connected at Pueblo with the D. & R. G. and Rio Grande Western. Had commercial agents in the principal cities in the east, such as Pittsburg, New York, Boston and Philadelphia. Business via Pueblo reached San Francisco over the Central Pacific, and Portland by the O. S. L. and also the Shasta route.

Mo. Pac. agencies and transcontinental routes.

(2270) The bulk of his Southern California business moved to Los Angeles by way of El Paso. Strongest competitor for business which the Missouri Pacific sought through its New York agent was the Morgan Line. After the consolidation, the Shasta route was not open for Portland business. Tried to route Pittsburg-San Francisco business by way of St. Louis, then M. P. to Pueblo and D. & R. G. to Ogden; S. P. beyond. Southern Cali-

Mo. Pac.'s competitors.

fornia business via Iron Mountain and the T. & P. to El Paso. North coast by way of Pueblo and Ogden gateway. Didn't meet the Morgan Line competition at Pittsburg to the same extent as on the seaboard. Pittsburg proper would move all rail, but east of Pittsburg there was the water route competition. Met, however, with the competition of the Sunset route all-rail to New Orleans on and east of the Mississippi River, south of and including St. Louis.

Effect of combination on Mo. Pac. business.

(2271) The combination of the Harriman lines diminished the business of the M. P. through the Ogden gateway, by Pueblo. If business was secured by the S. P. it very naturally went to the U. P. Business from California to the east via New Orleans, moved to all the territory east of the Mississippi River, north (south) of St. Louis, and business moved to Chicago that way. "Q. So that movement was both ways? A. Both ways."

(2272) After the amalgamation, business from St. Louis and this more northern territory, witness observed, was sent by the joint agents through Omaha and Ogden and from south of the Ohio River through New Orleans. From this middle territory they used the New Orleans route to southern California. That was up to the time witness left the M. P. in 1905. After the amalgamation, they solicited business for the longest haul, treating both lines together, as their own rails. The M. P. and T. & P. have been operated that way with respect to California business as one line. They always try for the long haul over both lines. The M. P. has an outlet for California by way of Texarkana to a connection with the T. & P., and another by way of Pueblo and Ogden, and would naturally work California business by the gateway that affords most revenue, (2273) just as the U. P. and S. P. have since the amalgamation. Where routes are reasonable, all railroads undertake to get the business for the longest possible haul. The solicitation of the S. P. south of the Ohio River and east of the Mississippi was very active before the amalgamation. Witness has also found from the reports made by his agencies, that the S. P. was then soliciting business somewhat actively for lower California in Illinois territory, where it was served by the I. C., but not where it was served by other lines, working with the I. C., but outside of the I. C. territory they were operating largely through Ogden, with the U. P., the M. P., and any other line that would take it to Ogden. (2274) He didn't know of the S. P. soliciting San Francisco business from Chicago territory.

Business solicited for longest haul.

All railroads do this.

Solicitation of S. P. via Ogden.

S. P. dominated Calif. business. Was U. P.'s only outlet.

(2275) S. P. was a large controller of the California transcontinental business. It practically dominated that situation. It was the U. P.'s only outlet before the construction of the San Pedro line. After the consolidation, the S. P. became the preferred connection of the U. P., and all the business it could control it gave to the U. P. rather than to the D. & R. G. and the M. P. (2276) For Southern California the M. P. operated by the Iron Mountain and the El Paso route; for San Francisco it operated by the Ogden

gateway. After its relations with the D. & R. G. became closer, its efforts were, of course, much stronger to get the business to the Ogden gateway, but necessarily even before that time the two companies were very closely allied, because they had to depend very largely on the Ogden gateway. The M. P., however, became a little more strenuous for the Ogden gateway, and a little less strenuous for the El Paso gateway. All the lines leading west and southwest, without exception, have always solicited California business.

Interest of Mo. Pac. as between El Paso and Ogden gateways.

(2277) The Rock Island has two gateways for California business, one by El Paso and one by Denver, Colorado Springs and Pueblo. It tries to get the long haul. That is the universal practice among all railroads. The M. P. never attempted to send any business to California by way of Portland and the boat line down. Witness thought the U. P. worked business out of St. Louis in connection with the Wabash and the C. & A. Never knew of it to work California business via Portland. Business has moved over the M. P. to Portland via the Shasta route—general merchandise. (2278) He thought the O. S. L. was the better route, but using that line, the M. P. came in competition with the U. P., and necessarily it worked through the Ogden gateway with the S. P., because it could get the latter's assistance in the solicitation of business. A shipper is not interested in divisions. The M. P. participated in the east-bound traffic in hops and wool from Oregon.

Mo. Pac. never used Portland route; never knew U. P. to work traffic that way.

(2279) Wool moved from the Oregon Short Line territory via Ogden over the D. & R. G. and the M. P. That came mostly out of Idaho. Prior to the amalgamation, the S. P. was competing with the O. S. L. from Ogden to Portland. Doesn't remember the date, but knows the business ceased to move via Sacramento to Portland. Then the sole route left, from Ogden into Portland, was the Oregon Short Line. In competition for California business, M. P. found the Morgan line a factor. This was not true of the Oregon business. The Morgan line was not a serious factor there, because of other routes.

Traffic between Ogden and Portland.

(2280) Speaking of the so-called Gould Lines, the longest haul is from St. Louis to Ogden, but exclusive of the D. & R. G., the longer haul would have been from St. Louis to El Paso. It is a greater distance between the latter points than from St. Louis to Pueblo. As a separate road, the M. P.'s longest haul is to Pueblo. Witness was general freight agent of the M. P. system, which was the Iron Mountain and the M. P. road, and when speaking of the M. P. he was very apt to refer to the M. P. rather than the separate properties. Going to the Pacific coast, Chicago territory follows approximately the Illinois-Indiana state line down to the Ohio River. It would include Milwaukee, but going south, for example, if New Orleans were the destination, Milwaukee is not in Chicago territory. St. Louis is in St. Louis territory. There is also the Memphis territory, and the Mississippi River territory. Rates have usually been made by conference; transcontinental rates by the Transcontinental Association.

Mo. Pac.'s longest haul.

Boundaries of certain traffic territory.

Method of changing rates.

(2281) When a line wished a transcontinental rate changed, it was customary to submit its proposition to the Secretary of the Association, so that it might come up for discussion at the next meeting. Witness didn't recall the particular rules of the different committees. Some required a three-fourths and others a unanimous vote. Ordinarily, to secure Association action, it required unanimous recommendation, as the term is. Even though the U. P. before the consolidation opposed a rate change, witness always felt that if the S. P. wanted it, they could have it, because they had their own rails from the coast to the Mississippi River. "We were usually very largely guided by their views." Doesn't remember a case where the U. P. strenuously objected to the S. P.'s action and persisted in the objection.

(2282) "Where the S. P. wished to establish a rate, they established it; gave notice that they wished to put in the rate. The same thing is true of the Santa Fe, but it is not often the case. Usually they meet in conference and the rates are approved." Thinks that Association requires unanimous action. Witness thought it was absolutely essential for rates to be uniform, and this could only be accomplished through associations and conferences. Witness thought that each separate road was entitled to one vote. Before the amalgamation, the U. P. and S. P. were separately and very ably represented at those conferences. There are various reasons for initiating a rate—because of some new industry, or because of some established industry that needs relief, or because of over-production, or various other reasons. Witness thought it was of value to each road to present its own views at the conference. Mr. Stubbs, as a representative of the S. P., with all that line's predominant influence, didn't undertake to overrule everybody's objections in those meetings.

(2283) The Sunset route participated in competition on the east-bound business as against all the other roads. The U. P. and S. P. now have a joint agency at St. Louis. (2284) It was not very long after the consolidation, that the east-bound business of the M. P. fell off. If witness' representatives on the coast had a routing order, either via the Iron Mountain, or the M. P., care of the S. P. either at El Paso or Ogden, the S. P. would usually work with the M. P. agent to see that the business didn't get away from them. If the S. P. man found the California business could be worked by the M. P., and not by New Orleans, he would work with the M. P. as against the Atchison. The position of the D. & R. G. was distinct from that of the terminal lines. They were an intermediate carrier. They could not go to the S. P. either as an east-bound or a west-bound proposition, because they had to work with other lines either east or west-bound. They (2285) are not situated the same as a line that originates and destinates business. They could not very well exert influence, because they would antagonize their connections. From certain territory, that was also the position of the U. P. and intermediate carriers between Ogden

S. P. worked with Mo. Pac. on routing orders secured by it.

and the Missouri River. If the S. P. man heard that the Burlington was after business, he wouldn't go to the Burlington and work with it as against the Atchison, until he had tried the shipper first. If he found out from the shipper that the Burlington had the "inside," as the saying goes, he would then work with that line to get it as against all competition.

(2286) That is customary with railroads. It takes the consent of either the S. P. or the Atchison to change the rail rates to California. M. P. could not make a rate to California without the consent of the S. P. Neither could the U. P. before the consolidation, so that any number of changes might be suggested, but could not be made effective without the consent of the S.P. or the Atchison. That is true as to transcontinental traffic—California business. The fact that lines have separate representatives in the Transcontinental Association, doesn't necessarily indicate they are competing lines.

U. P. could not make Calif. rate without consent of S. P.

(2287) Before the amalgamation, the S. P. was impartial between the U. P. and the D. & R. G. and their respective connections, so the three lines had their separate representatives on the coast and in the east. After the amalgamation, the U. P. became the S. P.'s preferred connection, and the same necessity for the separate representation of the U. P. didn't exist. If the S. P. and D. & R. G. had instead been brought into close relations, there would have been no necessity for separate representation of those two roads. The S. P. and the O. S. L. were competing for practically all the business that moved through the Ogden gateway to Portland. The M. P., until the U. P. influenced the movement of the business over the O. S. L., could work with both. Thereafter it worked with the S. P., if it (2288) could not secure the business as against the U. P. and the O. S. L. Witness has never been to Portland, and knows nothing personally about the character of those two lines. In saying that a rate could not be made to California without the consent of the Atchison or S. P., witness didn't take into consideration the U. P.'s line to Portland and by boat down. In a general way, recalls the Canadian Pacific differential. The Rio Grande could not very well solicit business in connection with the S. P., because it was an intermediate line, and might offend its connections who were giving it business.

After amalgamation U. P. became preferred connection of S. P., and separate agencies not necessary.

Rio Grande's relations with connecting lines.

(2289) The D. & R. G. has to be friendly with the Rock Island, the C. B. & Q., the M. P., and the Frisco lines. When witness spoke of notifying the S. P., he had reference to business in and out of this territory east of the common points. Of course, the D. & R. G. could very safely communicate if it were an independent and intermediate line on east-bound business from the Pacific coast. It could deal with the S. P. representative, because it is the one line, and the S. P. is its only connection, but on the west-bound business delivered to it at Pueblo, it has various connections. The U. P. was competing with the M. P., the D. & R. G. and the other lines that were working with the latter. With reference to the U. P. attempting to make a rate into California via

Portland route poor string to tie kite to.

Portland, witness said: "I would hate to tie my kite to such a string." The difference between the Canadian Pacific and the U. P. is that the former has but one way of reaching San Francisco, whereas the U. P. has a direct line from Omaha to Ogden, and there a connection with the S. P., making by far the U. P.'s best line. It has a great advantage in respect to California business over the Canadian Pacific.

Railroads do not work their inefficient, against their efficient lines.

(2290) He never knew of a railroad company which had two lines—one first class and the other a mixed and indirect one—one very much inferior to the other, that attempted to work its indirect and inefficient line as against its direct and more profitable line. "They do a good many things, but hardly that." Carrying traffic by Portland, the U. P. would get the entire haul from the Missouri River, but the bulk of the business originates east of the Missouri River, and there is a large business that would not move by Portland and water, and therefore witness considered it an impracticable route to be used for the purpose of forcing a rate situation. The Portland route would be valuable only as a retaliatory measure in case the S. P. demanded unreasonable divisions. It could then be used to cut the Sunset rates, and everything else. If a weaker line, the Canadian Pacific, could demoralize the rate situation by a reduced rate, witness thought the U. P. could disturb the transcontinental rates a great deal.

Portland route could be used to cut rates.

Bad judgment if U. P. used Portland route.

(2291) Witness thought it would be bad judgment for the U. P. to attempt to disturb the transcontinental situation. He thought that it would be bad business judgment, under existing conditions for the U. P. to attempt to work the Portland route as against its direct route by Ogden. (2292) The relations between the S. P. and U. P. have always been friendly, and it would be very bad judgment for the U. P. to attempt to use the Portland line to San Francisco. (2293) The S. P. and U. P. would interchange business at Ogden as long as they could agree on rates. If the U. P. introduced a cut rate by Portland, the S. P. would divert its traffic by Ogden to the D. & R. G., and witness thought "the U. P. would be more seriously injured than the S. P." Witness never heard of a rate war starting from a difference between two connecting lines over divisions. They generally get together somewhere.

Probable effects from use of Portland route.

(2294) When witness stated that the U. P. would be hurt more than the S. P., he considered the loss to the former by reason of the more favorable position of the latter in California. The latter can control the California business by reason of the terminal facilities, whereas in meeting the competition, the U. P. would suffer because they could not get in there, and they would lose all their business. Witness was figuring on the Ogden gateway being entirely closed to the U. P., not on its simply being in the position that the D. & R. G. is now. (2295) Witness also took into consideration the fact that the Burlington, the Rock Island, the M. P., the Northwestern, the St. Paul, the C. & A., and, in fact, all the lines from Chicago to the Missouri River, and the lines east of Chicago,

can get to California without going over the U. P., and all those lines could divert their business to the D. & R. G. or the Atchison, and leave the U. P. practically bottled up. Witness didn't think these roads would be interested in the question to any serious extent east of the Missouri River, because the cut would start from the Missouri River.

(2296) If the Sunset rates were reduced by reason of the fight, witness couldn't say whether the all-rail lines would reduce their rates or not. Judging by a recent example, he would say no. The war would be between the lines west of the Missouri River. The rates have been cut from New York to Galveston, and the all-rail lines have not met it. The rates into Texas have been reduced, so the business is moving almost from (2297) Cincinnati to New York and New York to Galveston and other territory operated by the same lines. The eastern lines would be antagonistic toward the U. P., if it inaugurated a scheme of that sort to cut rates to California by way of Portland. Witness thought that the cut over the Portland route would spread, and that rates from Chicago, New Orleans and the Mississippi River would be affected.

(2298) Witness also thought that "If the rates from New York were affected, I doubt if the rates between the Atlantic seaboard and the Mississippi River and Chicago would be changed, except as the accommodation of locals changed them." The rate war would affect all the lines west of Chicago and west of the Mississippi River. It would also affect the rates from New York, but witness doubted if there would be a complete rate adjustment in the territory east of Chicago and east of the Mississippi River. As a general principle, railroads are opposed to rate wars. Witness didn't think, however, that the eastern connections would divert business from the U. P. to the D. & R. G., but they would keep up their rates and their relations with it, and handle business by the U. P., just the same.

(2299) Thinks the other railroads would hesitate a very long time before they would meet a rate established by the Portland route. All the lines can get into most of the territory in Colorado, Utah and California without using the U. P. (2300) Witness didn't know of any important town—of a town with a population of 5,000 or more, in Colorado, into which the other roads couldn't get without using the U. P., nor in Utah, nor in California. The U. P. has a large tonnage outside of transcontinental business. There is not a great deal that originates on its lines. The U. P. would be a serious factor in a rate war, and could disturb the other lines' revenue just as much as they could disturb its. Witness believed the U. P. could hurt the Burlington, the N. P., the Northwestern, and the Rock Island just as much as those lines could injure it.

U. P. as a factor in rate war.

(2301) The U. P. could accomplish this by demoralizing the rates between the Missouri River and Colorado and Utah points. Didn't think it was in the range of possibility for all this to occur and all of witness' answers have been more or less theoretical. The

situation in Texas, which witness referred to, is assumed to have been created by the Texas Steamship Company by rates from New York to Texas City. The other steamship lines from New York to Galveston have met the cut, but the all-rail lines have not reduced their rate. (2302) The Morgan Line and Mallory Line both met the rate. The cut has changed the movement of business through the St. Louis gateway and by the regular all-rail lines. Doesn't know of any freight going under these reduced rates from what is called the Mississippi Valley, but freight as far west as Cincinnati has gone to New York, and thence over the Morgan line. If the Portland line gave the U. P. any power with reference to trans-continental rates, it has never attempted to use the power.

West.

(2303) J. L. WEST.

Traffic official of M. K. & T. in St. Louis.

For twenty years connected with the M. K. & T. For last eleven years assistant general freight agent at St. Louis. Has also been stationed at Houston, Dallas and Kansas City. The eastern termini of the M. K. & T. are at Hannibal, Alton and St. Louis. It runs down through Missouri, Kansas, Oklahoma and Texas, reaching San Antonio and Galveston on the south, connecting with the Sunset at Houston, La Grange and San Antonio. The M. K. & T. routes most of its trans-continental business via the Texas & Pacific at Fort Worth and El Paso. It, however, handles a great deal of business via the S. P. and San Antonio.

M. K. & T.'s transcontinental route.

(2304) From St. Louis to San Antonio is 1,000 miles; from St. Louis to Fort Worth is 750 to 760 miles. Before the merger, the S. P. solicited St. Louis business preferably via New Orleans, and through Texas junctions. The Missouri Pacific, in endeavoring to route traffic to Texas junctions, met with the competition of the S. P.'s New Orleans route in the territory on and east of the Mississippi River. The U. P. endeavored to route St. Louis business via Omaha and Kansas City. The Missouri Pacific connected with the U. P. at Junction City, Kansas, and sometimes took St. Louis traffic up there. Business has moved via the Texas gateways as far north as San Francisco, but not to Portland. M. P. at times largely participated in east-bound fruit shipments from California. Received that from the T. & P. at Fort Worth.

Traffic has moved via Texas gateways to San Francisco, but not to Portland.

Diversion of citrus fruit.

(2305) Much of the citrus fruit is sold while it is on the rails, and using the southern route the shipper has greater possibilities of diversion in transit. For instance, if a car starts out destined to Kansas City via Texas, it can be diverted to Atlanta, or to any point in the southeast, or it can go to Kansas City and there be diverted to Chicago or St. Louis, or at northeastern points, while if it is routed by the north, it cannot well reach the southeast by diversions. Witness doesn't know the exact distance, but doesn't think there is a great deal of difference in the mileage from St. Louis to Southern California via El Paso and via Ogden. To San Francisco the northern route is shorter. Since the merger, witness has observed no preference shown by the joint agency as to the

south or north gateway. They have competed against other outside lines.

(2306) The S. P. representative has always worked with the M. P. in securing business via El Paso as against the Atchison. He was always quite ready to co-operate. That is true both before and since the merger. If the S. P. representative could control the routing, he would naturally take it via New Orleans from territory where the movement via that route would not be detrimental to the traffic, but if some of their Texas connections had an influence in the movement of it, witness never saw any evidence of their placing serious obstacles in the way of these connections, sending it that way and getting the business. When witness said the S. P. co-operated, he meant they didn't work against him particularly. They were willing to take the business that way. The route was open. Witness thought the divisions were about equal east and west of El Paso, but was not certain. (2307) Didn't know what the divisions were through New Orleans. Witness would say that if the S. P. agent found it was going to move by a northern route, he would co-operate with lines which could handle it through Ogden as against lines which would handle it with the Atchison. The right to divert is afforded by all the lines on citrus fruit traffic. The season of the year has great influence on the routing. Up to and including February, it moves almost exclusively via El Paso.

S. P.'s relations with its connections.

S. P. worked for Ogden route as against Atchison.

(2308) J. R. PEACHY.

Peachy.

Since February, 1909, traffic manager of the Chester, Perryville & Ste. Genevieve Railroad. Previously, for a year and a half, in private business. From 1885 to 1907 employed by the Illinois Central, the last 13 years of that time assistant general freight agent at Chicago and St. Louis; nearly three years in St. Louis; prior to that in Chicago. Prior to the building by the I. C. of the line to Omaha, all of its Pacific coast traffic was operated via New Orleans, because that was practically the only gateway it had, with the exception of a time, many years back, a route via Sioux City, the Omaha Line, Norfolk and Union Pacific, but that was not a very practical route. The I. C. moved traffic that way from all of its territory, from Chicago and south and east.

Traffic man. Formerly with Ill. Cent.

Before building its Omaha line, Ill. Cent. worked all Pacific coast traffic via New Orleans.

(2309) The S. P. when working with the I. C., naturally worked via New Orleans, because that was the only I. C. outlet. That gave the S. P. their longest haul. Whether it gave them their greatest percentage in net earnings, witness couldn't say. The I. C. met with the competition of the U. P. and Atchison. Got into Omaha about 1901 or 1902. After the consolidation, witness thought that whatever originated upon the lines of the I. C. south of the Ohio River, or on its connections operating between Louisville, Evansville, Cincinnati or via Cairo, would be solicited by both the I. C. and the representative of the Harriman lines via New Orleans, because that would be the natural way to send the business. The business north would naturally seek an outlet by the Missouri

In working with I.C., S. P. naturally worked via New Orleans.

Now, business from south of Ohio River solicited by I. C. via New Orleans; north of river via Omaha.

River. Both the Harriman lines and the I. C. would recognize that the Missouri River routes were the more practicable, but if the shipper desired to ship any other way, if he preferred to ship by New Orleans, there wouldn't be any obstacles placed to the business moving that way.

Interest of I. C. as between New Orleans and Omaha.

(2310) The interest of the I. C. centered in the New Orleans route. Hence, it assisted the S. P. in securing traffic that way. The I. C. secured more revenue by New Orleans than by Omaha, but with twice as long a haul. Witness doesn't recollect the percentages, but he would say, so far as the I. C. was concerned, the earnings by one gateway would be approximately as good as by the other, considering the difference in haul. Witness thought the net results to the I. C. via New Orleans or Omaha would be about the same. This does not apply to Southern Illinois, to Chicago, from which the bulk of the traffic came. The distance from New Orleans to Chicago is 918 miles, and from there to Omaha 513. The grades from Chicago to Omaha are not as great, witness thought, as those between Chicago and New Orleans, unless the I. C. diverted its business by its river line, the Y. & M. V.

(2311) The I. C. formerly worked all its traffic by way of New Orleans, because it was its only line, but after the opening of the Omaha line it worked traffic north of the Ohio via Omaha. Before the merger, the S. P. agent worked with the I. C. via New Orleans.

Before merger S. P. worked Chicago territory extensively via Ogden.

(2312) It also worked very extensively in the Chicago territory with lines via Ogden. In other words, it worked by all gateways. Before the consolidation, New Orleans was, however, their preferred route, but not since. The U. P. worked the Missouri River gateway. The two lines were competitive in that way. New Orleans was not the preferred route of the S. P. from Chicago territory. Prior to the consolidation, the S. P. worked the Ogden gateway very extensively, much to witness' chagrin, very often, if he didn't get their co-operation sufficiently by New Orleans. (2313) The U. P. worked exclusively by the Ogden gateway, but in working that route it necessarily also worked for the S. P.

Swingley.

(2313) C. W. SWINGLEY.

St. Louis Car Co.

From 1902 to May, 1908, traffic manager of the St. Louis Car Company. (2314) Since 1900 street cars have been built a great deal larger, and in routing witness was influenced by the clearances.

Routing of his business affected by clearances.

Clearances on the U. P. were not as high as they were via New Orleans and the S. P. This, and the fact that during the period from 1902 to 1905 witness had great difficulty in getting flat-car equipment, while the I. C. had an abundance of that equipment, caused him to route a good deal of traffic via New Orleans. (2315) It is difficult to say whether the Harriman lines solicited business via Ogden or New Orleans. After they found out about the clearances, they knew as a natural consequence if the cars were of a certain height they would go via New Orleans. Prior to 1902, witness was employed by Liggett & Myers Tobacco Company. Their

Pacific coast traffic all moved over the Wabash to Kansas City or Council Bluffs, and U. P. to Ogden.

(2316) Traffic to Portland went altogether over the Burlington and N. P. The principal reason that all California traffic went over the U. P. was that witness got far superior service that way. Witness knew Col. Aglar, the U. P. agent, and his friendship for Col. Aglar influenced him to some extent in routing, other things being equal. (2317) The route via New Orleans, since 1902, when witness entered the employ of the Car Company, has always been open.

(2317) A. M. FIELD.

Field.

St. Louis. With Wrought Iron Range Co.

Since August, 1905, traffic manager of the Wrought Iron Range Company at St. Louis. California traffic moves over the Wabash, Omaha, Burlington via Denver, and the Missouri Pacific, D. & R. G. at Ogden. Some business goes by the Atchison. Nothing goes south. It is a question of time with witness. Makes no Portland shipments, but ships on the S. P. between Portland and San Francisco. Some of that business goes via the Wabash, care of the U. P. at Omaha, some by the Burlington and N. P. at Billings; and then it is delivered to the S. P. at Portland; that is, since the 1st of January. Before that, witness couldn't ship that way. (2318) The rates wouldn't apply over the N. P. to Portland, and then over the S. P. Business had to go over the O. R. & N. into Portland, and then out. Prior to his present employment, witness was for twelve years employed by the I. C. For ten years contracting freight agent at St. Louis. Worked Pacific coast business at that time by New Orleans.

Routing of his business.

(2319) The I. C. had an agency in San Francisco, but witness thought this was not until after the merger; since the I. C.'s Omaha gateway was opened. The joint agency of the U. P. and S. P. at St. Louis didn't play any favorites. They were impartial. The New Orleans route gave the I. C. a longer haul. Nearly all the Pacific coast business was controlled by the other end, and that was the reason the I. C. had an agent in San Francisco. He worked chiefly on west-bound business. Witness didn't know how he endeavored to work business out there. After the Omaha line was opened, the I. C. endeavored to work California business by both lines. (2320) Tried to send it the way that would afford most revenue, provided there were not disadvantages that would interfere with the traffic.

Pacific Coast business controlled at other end.

(2320) P. M. HANSON.

Hanson.

Traffic Manager National Enameling &c. Co., St. Louis.

Since 1899 traffic manager of the National Enameling & Stamping Company. Previously traffic manager of the St. Louis Stamping Company from 1894, which afterwards became a part of the former company. Plants are located at Granite City, St. Louis, Baltimore, Long Island, New Orleans and Milwaukee. (2321) Ships to the Orient from the New York and Baltimore plants. Almost all goes by the Suez. Ships to the Pacific coast from Mil-

waukee and St. Louis, but not from New York or Baltimore. Has a distributing agent at San Francisco. Business to San Francisco moves over all the lines. The shipments consigned to the distributing agency witness routes, but he also sells direct to the jobbers on the Pacific coast, and respects their routing to a considerable extent.

(2322) The I. C. solicited business via New Orleans. In referring to "all routes" witness meant the Burlington, Wabash, Rock Island, M. K. & T., and Frisco, and to north coast points via the N. P. and G. N. Some of the business moved via El Paso, and some by Ogden. The I. C. doesn't call on witness any more. (2323) Witness has shipped over the I. C. via Omaha very recently. The business was routed on the coast. Not a great amount goes that way from his company. (2324) The joint agent solicits either by Omaha or Kansas City. Those are the only two ways that the U. P. and S. P. join in their solicitation. Witness doesn't come in contact with the Sunset route here in St. Louis. The joint agent would not object to taking business by the Sunset route if witness wanted to give it to him. When the joint agent comes into witness' office, he generally has a routing order, a request from the consignee for the routing of the shipment, and witness usually respects the request. Treating the U. P. and S. P. as one line, the route via New Orleans gives a longer haul than that via Kansas City or Omaha, but via New Orleans the U. P. does not participate.

Does not come in contact with Sunset line in St. Louis.

(2325) The question of equipment is important with witness. Under the rules of the western classification, it is necessary for the witness to get forty-foot cars, in order to reach the required minimum. Because of the difficulty in obtaining these cars, witness frequently asks the consignees to leave the matter of routing in his hands. The joint agent solicits witness' business whichever way he wants to send it, either by El Paso or the Missouri River. Witness didn't mean to testify that they only solicited by Kansas City and Omaha. I. C. has not solicited witness' business for four or five years. (2327) Lots of the lines leading west and southwest from St. Louis solicited. Witness' business moves over all the lines, the M. K. & T., the Iron Mountain, the T. & P., the Frisco-Iron Mountain, the Missouri Pacific, the Burlington and the U. P.—lines by the El Paso and Ogden gateways. As far as witness knew, the joint agent would have no preference between the El Paso and the Ogden routes. He would simply ask for the haul, and not designate any particular route.

Joint agent has no preference as between El Paso and Ogden gateways.

(2327) THOMAS E. ROOT.

Testimony immaterial.

Gesarich.

(2329) L. A. GESARICH.

Employe of Moon Bros. Carriage Co. of St. Louis.

Since February, 1892, employed by Moon Bros. Carriage Company of St. Louis. Has shipped to the Pacific coast principally by the

Atchison. Some by the U. P. Has also shipped some via El Paso. Has shipped two cars over the San Pedro. Ships to Portland by the Burlington, and some by the U. P. and O. S. L. (2330) The S. P., before the merger, solicited for the longest haul, either by New Orleans or by some Texas junction, and the U. P. by Omaha and Denver. The first joint agent, Lothrop, never called on witness. Townsley, who succeeded him, called once, and the present agent, through his contracting men, solicits the business. Nearly all of it is sold f. o. b. destination, and is routed by the consignees, and the joint agents solicit business whichever way they can get a haul. Occasionally they present routing orders. A great deal of the business is always routed by witness, and as to this, in their solicitation the joint agency has never expressed any preference as between their two lines. They expressed no preference between Ogden and El Paso.

Nearly all his coast business routed by consignee.

(2331) The Santa Fe formerly carried the bulk of witness' business. At the present time he divides it up, some over the Salt Lake route, some by the U. P. and S. P., and some by the Rock Island via El Paso. Prior to the merger, if the S. P. could not get the longest haul, the next best would be entirely satisfactory to him. He would be glad to get the business by Ogden, as against the Atchison. (2332) All of the business going over any of the lines to Ogden would go thence over the S. P. The same is true about business going via El Paso. All the California business was carried by the S. P., unless it went over the Atchison or the San Pedro. Shippers are not interested in divisions, but are interested in the service. (2333) Competition, witness has found, led to improvement in service. Service ordinarily would be based on the short line. The New York Central to Chicago is 47 miles longer than the Pennsylvania, but that does not make it impossible for them to compete and give fair service as against the Pennsylvania line. The Erie is also competing on freight business, and occasionally carries passengers. The Grand Trunk is in that business, too.

Prior to merger, if S. P. could not get longest haul, next best was satisfactory.

(2334) The U. P. and S. P. line has to go over the Sierra Nevadas and the Rocky Mountains. That is not true of the Sunset route. Other things being equal, the shorter line gives the better service, and is the preferred route for the shipper. (2335) Witness doesn't respect the routing requests of shippers. Would not inconvenience his plant for the purpose of trying to oblige a customer by shipping his business over some preferred route. Witness more interested in conditions at the point of origin than the point of destination. His business is of a nature that requires the largest sized equipment, and frequently he is not able to get cars from all the different lines.

(2336) LESLIE AGLAR.

Aglar.

St. Louis broker. From 1899 to 1901 was general agent of the U. P. Witness' father, J. F. Aglar, was joint agent of the two companies. He died in 1901. Witness had nothing to do with

St. Louis. Former Gen. Agt. of U. P.

solicitations. (2337-2338) Witness was formerly with the Drummond Tobacco Company. Their export business went by San Francisco. Nearly all of it over the U. P. From Ogden it all went over the S. P.

Schoenhard.

(2339) L. P. SCHOENHARD.

St. Louis. Traffic Manager Charter Oak Stove Co.

Since 1896 traffic manager of the Charter Oak Stove & Range Company. Majority of his California business has moved by the Sunset route via the U. P., O. R. & N. and S. P. To Portland it goes via the N. P. and the Billings route. (2340) In the last seven or eight years he has had a car by way of El Paso and the Iron Mountain. Doesn't recollect shipping over the San Pedro. Traffic generally routed at the other end, and sold f. o. b. St. Louis. He tries to respect the consignee's routing. At present, principal part of his Portland business goes over the Burlington and the Billings route. Has had shipments over the Rock Island and the U. P., which they delivered at Junction City, and has had shipments over the Wabash and U. P., and some cars over the I. C. via Omaha and U. P. None that way since 1907. Had quite a number of shipments that way from 1904 to 1907. Those shipments were routed at the coast or Portland. The I. C. only solicits in the shape of presenting a routing order. They never solicited witness' business by New Orleans. The roads leading to El Paso do not solicit him. (2341) His business is all routed at the other end. The agents understand that. Witness' trade in Portland is larger than in California. It is not very heavy to California. Never shipped by water except once thirty years ago, from New York around Cape Horn, before the U. P. was finished.

Routing of his coast business.

Broderick.

(2342) JOHN BRODERICK.

St. Louis. Rope business.

Since 1886 in the wire rope business in St. Louis. Formerly routed coast business via the I. C. and S. P., but the I. C. were not able to furnish the large cars required, and the Wabash having built cars for his purpose, the latter road gets the most of it. His shipments are very heavy. Most of the coast shipments weighed over 80,000 pounds, some as much as 130,000 pounds in one spool. Routing was done at the other end. He hasn't been able to do any business in San Francisco for some time. The California Wire Works sold to the American Steel & Wire Company some years ago, and after that witness couldn't sell any cable out there. (2343) Has since then shipped to Portland, chiefly over the Burlington and N. P. "Some of it moved O. R. & N. to Portland." Occasionally ships a car to Los Angeles, which is routed by him; some by Ogden; some by El Paso. The joint agent has solicited the business, but didn't state any gateway. (2344) Witness thought the business routed by the Wabash went via El Paso. The cars were too large to go through by the U. P. and S. P. The reels are very high on top of those cars. They couldn't get through the tunnels. Witness thought the Wabash delivered the cars to the Atchison at Kansas

City, and witness doesn't recollect just how they got to El Paso, but the S. P. took them into San Francisco.

(2345) LOUIS FEICKERT.

Feickert.

St. Louis. Traffic Manager Lemp Brewing Co.

Lives at St. Louis. Traffic manager of the W. J. Lemp Brewing Company. Has shipped not a large amount, but considerable, to the Pacific coast. It has moved from St. Louis by various lines, Iron Mountain, T. & P., and S. P., some by the Atchison; some by the Rock Island, Colorado Midland via Ogden; some by the M. P., D. & R. G. via Ogden; some by the M. P. and Wabash in connection with the U. P. Portland business has moved either by the M. P., D. & R. G., or the M. P., Wabash and U. P., or C. B. & Q., and the N. P., and witness thought some G. N., and some Can. P. The latter got the business from the Soo Line at St. Paul. Has shipped that route within the past year, and regards it as feasible. It is longer than the U. P. Its length didn't put it out of competition, because it made good time on the shipments.

(2346) The joint agent has no preferred route. They take it any way they can get the business—the long haul, if possible. They express no preference as to whether business shall go via Omaha or El Paso. Witness gets hops from California and the northwest. from the Willamette Valley. (2347) They usually move U. P. in connection with some line at the Missouri River. Some come in via Missouri Pacific or Rock Island, either from Pueblo or Colorado Springs. Thinks they are routed by the consignor. The Willamette Valley hops are routed over the O. R. & N. Witness buys the hops through a New York house. About half the hops come from New York State, and one-half from the Pacific coast.

Gets hops from Calif. and Willamette Valley.

(2348) R. MUEHLBERG.

Muehlberg.

St. Louis. Traffic Manager of Brewing Co.

Lives in St. Louis. Traffic manager of the Anheuser-Busch Brewing Association since 1900. Previously claim agent in the legal department of that Company for about twenty years. While the U. S. troops were in the Philippines, witness made shipments there, both via the Suez and San Francisco. (2349) Witness didn't then have charge of traffic, but he thought the San Francisco shipments were via El Paso. Witness thought it went out from San Francisco over the S. P. steamship line, the Oriental & Occidental. Couldn't say whether it went over the Pacific Mail or not. Business to California points moves through El Paso and Ogden both. It has never gone by New Orleans. Has two customers in Portland. Shipments for one go over the U. P., and for the other, the N. P. It is routed on the coast. He deals with the wholesalers out there.

Trans-Pacific business.

(2350) Ships for southern coast points by the San Pedro Those shipments move either by the M. P., D. & R. G. to Salt Lake, or by the Wabash—U. P. Has had pretty large quantities of hops coming in from the Willamette Valley. Witness thought the hops were consolidated from the various fields around in Oregon, and pre-

Hops from Willamette Valley.

sumes they are shipped to Portland, and reshipped from there to him.

Reicke.

(2350) LOUIS REICKE.

St. Louis. Manufacturing business.

Assistant Secretary of the Bridge & Beach Manufacturing Company, at St. Louis. (2351) Employed by them for twenty-six years. In charge of traffic department prior to 1901. Ships about an equal amount to Portland territory and to California. Probably a little more to the latter. Has branch houses at Portland and at San Francisco, from which the product is distributed. He aims to divide up the business as far as possible among the various lines. The U. P. before the merger solicited by Omaha or Kansas City, and the S. P. either El Paso or Omaha; also by New Orleans, but witness never gave them any business the latter way. (2352) They stopped soliciting by New Orleans because they found they couldn't get any business that way. Portland business moved over the U. P., the N. P. and the G. N. Probably had one or two cars by the Can. P. It was an unsatisfactory route. The N. P. takes most of it. The routing is controlled here. If a carload moves direct to a customer, his routing is respected. Remembers a few shipments going to Portland by the Shasta route. Doesn't remember who routed them. It very likely moved to Ogden over the U. P. It was some time ago, and most of his business was going over the U. P. for those points at that time. Also made shipments by the D. & R. G. and the M. P., and they would reach the Shasta route at Ogden.

Routing of his coast traffic.

Prior to 1901, S. P. solicited both via El Paso and Ogden.

(2353) Prior to 1901, when witness was in charge of traffic, the S. P. solicited from him both via El Paso and Ogden. The solicitors all understood that witness endeavored to apportion the freight equally between them, and they would come around and find out if it was their turn, and to try and get it if they could. If the S. P. solicitors couldn't get it via El Paso, they were well satisfied via Ogden. Usually shipped over the Iron Mountain to Texarkana and T. & P. to El Paso; Wabash and U. P. to Ogden; thinks probably M. P. and D. & R. G. to Ogden. Whatever lines, all California business eventually went over the S. P. Only way he remembers shipping by the Shasta route is that his manager at Portland objected, and requested him not to route any more that way. That was nine or ten years ago. (2354) At most, only two or three cars went that way. They went over the U. P., because most of his business at that time was moving that way. Cannot say the S. P. solicited either way, El Paso or Ogden. If they could not get it one way, they would take it another. At one time they solicited by New Orleans, but found out witness would not ship that way.

All Calif. business eventually went over S. P.

Manager objected to Shasta route to Portland.

United States v. Union Pacific Railroad Company, et al.

DEFENDANTS' ABSTRACT OF TESTIMONY.

TESTIMONY FOR COMPLAINANT.

VOLUME VI.

SALT LAKE CITY, APRIL 27, 1909.

(2355) WILLIAM S. McCARTHY. McCarthy.

Lives in Salt Lake City. For six years traffic manager of the Salt Lake Hardware Company. Previously in the railroad service, beginning in 1881 with the Grand Trunk as a messenger. Subsequent to that employed by the Michigan Central at Grand Trunk Junction, just outside of Detroit. (2356) Afterwards with the Wabash in Detroit. Then entered the employ of the U. P. in 1887, and came to Salt Lake with U. P. in 1897 as contracting freight agent. Left the employ of the U. P. in 1901, and entered the employ of the O. S. L. (2357) Prior to the acquisition of S. P. by U. P. in 1901, the route over which the U. P. worked traffic from the Atlantic seaboard was left to the consignee. In ocean and rail movement the favorite line was the Kanawha Despatch. Its business originates at New York, and moves by steamer to Newport News, thence over the C. & O. and Big Four into Chicago, and there delivered to the connections of the U. P. and afterwards delivered to U. P. at Omaha.

Salt Lake. Traffic Manager, Salt Lake Hardware Co.

Water and rail routes to Utah.

(2358) Very little, if any, went through St. Louis and Kansas City. The S. P. was then engaged in soliciting shipments to Utah from Atlantic coast points by way of Galveston; thence north through Fort Worth, Colorado common points, principally over the Colorado & Southern and Rio Grande to Utah. Traffic that was secured by the Morgan Line didn't move over the U. P. There was the most intense rivalry between the U. P. and S. P. agencies for that traffic. (2359-2362) Complainant's Exhibit 151, Rate card and pamphlet, gotten out by U. P. for distribution among shippers, showing rates in effect October 1, 1900, from all points east to Utah by all-rail lines, and also by ocean and rail lines, of which

U. P. formed a part; also showing time schedule. The gulf route was in rivalry with the U. P. for this business.

Time of U. P. freight, Council Bluffs to Ogden.

(2363) The fast freight time from Council Bluffs to Ogden was 54 hours. Witness' last information was that the fastest freight train between Council Bluffs and Ogden now took 100 hours and 45 minutes. The old time from Kansas City to Ogden was approximately 84 hours. Doesn't know what it is now. It is ordinarily about 24 hours longer than from Omaha. The distance from Omaha to Ogden has been decreased approximately thirty miles. (2364-2366) Complainant's Exhibit 152, Rate Card showing rates from the east via the all-rail and ocean and rail lines to Utah, issued by the Harriman lines, and showing rates in effect July 1, 1908. This includes the routes via the Morgan Line.

Percentage of Seaboard traffic via rail and water lines.

(2367) Previous to the merger, witness should say seventy per cent. of the business into Salt Lake from the seaboard moved by the rail and water lines, either the U. P. or the Gulf route,—that is 70 per cent. leaves New York and common points by water as against 30 per cent. moving all-rail. "MR. SEVERANCE. It is agreed that according to the time-card of the Union Pacific of December, 1900, the Overland Limited left Council Bluffs at 7:45 a. m. and reachd Ogden at 2:00 p. m. the following day and Salt Lake City at 3:30 p. m.; that at the present time the Overland Limited leaves Council Bluffs at 8:08 in the morning and arrives at Ogden at 4:50 the following day and Salt Lake City at 6:15. That in 1897, according to Volume 1 of the Pathfinder, of date February 20, 1897, the time of the Overland Limited from Council Bluffs (2368) to Ogden was as follows: leaving Council Bluffs at 7:55 a. m., reaching Ogden at 1:40 p. m. the following day and Salt Lake City at 3:10 p. m. The Fast Mail train of the Union Pacific left Council Bluffs at 3:15 p. m., and arrived at Ogden the second morning at 2:00 a. m. and at Salt Lake at 3:30 a. m. At the present time the Fast Mail leaves Council Bluffs at 3:00 p. m. and reaches Ogden at 5:45 a. m. of the second morning, and Salt Lake City at 8:15 a. m."

Time of Overland Limited, Council Bluffs to Ogden.

Solicitation of Seaboard traffic by Harriman lines.

The joint agent of the Harriman lines solicits witness' business from the Atlantic seaboard by the Morgan Line, from interior territory either by Kansas City or Omaha. If the business goes by the Morgan Line it moves as follows: "Morgan Steamship Line to Galveston, Southern Pacific lines to Fort Worth, Fort Worth and Denver City and Colorado & Southern and U. P." Witness' business is no longer solicited by the Kanawha Despatch in connection with the U. P. The O. S. L. and U. P. were separate, witness thought, about the latter part of 1897.

(2369) The O. S. L. then worked business out of Portland with the D. & R. G. or the U. P.—both ways. There was a time when divisions were canceled, and if they moved business east out of Salt Lake, it had to go D. & R. G. At that time, the competing lines into Portland were the U. P. and the Shasta Route, on the one hand, and the Short Line and the Rio Grande on the other.

Controversy between U. P. and O. S. L.

Witness doesn't know whether the two lines actively competed. The Portland train made the run from Omaha to Ogden in about 30 or 32 hours. That train was on for about sixty days. Witness had very little to do with the movement of wool to the east. He was familiar at that time with the efforts that were made to secure wool shipments to the east. (2370) "Q. In what part of this region does the wool originate that moves to the east chiefly? A. Why, at all wool-producing points along the Oregon Short Line Railroad, on the Union Pacific east of Ogden, on the San Pedro, and on the Rio Grande south and east of Salt Lake. Q. All around Salt Lake? A. Yes, sir. Q. There is some territory, is there not, lying between the Southern Pacific route west of Ogden and the Oregon Short Line, in California, Utah, eastern Nevada, and southern Idaho, that produces a good deal of wool? A. Yes, sir. Q. At the time the Union Pacific and Southern Pacific were competing with each other for business was there any competition for the wool traffic out of that region? A. Very little. The Southern Pacific wouldn't allow anybody in there very much." The O. S. L. worked that territory, but their efforts were more towards drawing the sheep to their line so that it might be sheared along their line. The Southern Pacific and the Short Line were competing for that business—the wool or the sheep—raised on the ranges in between those two lines. The Southern Pacific moved that traffic to the Atlantic seaboard via Galveston. It went west over the Southern Pacific and east over the Sunset line to Galveston. The Short Line moved it directly east by the Union Pacific.

Very little to do with wool business.

Wool traffic.

(2371) Does not know whether wool moved via the Southern Pacific as far east as Corinne (which is 20 or 25 miles west of Ogden) or not. Witness did not have very much to do with the movement of wool. He never saw any billings and never billed any out himself. All he knows about it is from information that came to him as an attache of the office from 1897-8-9 during the time he was connected with them. "Q. You don't know whether that (wool secured by the S. P. from the territory northwest of Utah) moved eastwardly over the Denver & Rio Grande or Union Pacific? A. No; I don't know of any moving that way." (2372) Business moved to Portland over the Shasta route in the latter part of 1897, only for about sixty days, by way of Ogden and Sacramento. That route competed with the D. & R. G. and the O. S. L., and also the northern lines into Portland. The divisions between the O. S. L. and U. P. were then re-established. They had been canceled, witness understood. He thought it was after the receivership of the O. S. L., but during that of the U. P. The fast train was taken off, and business was handled as formerly.

Did not know much about movement of wool.

Fast freight train via Shasta route lasted only 60 days.

(2373) Witness had nothing whatever to do with the making of the divisions or the interchange of business. He was then working for the U. P., and had nothing to do with the Portland business. The Kanawha Despatch moved business via steamer to Newport

News. Thence by rail to Chicago. Witness solicited most of the business in connection with friendly connections at Chicago, thence to Council Bluffs, and U. P. from there. Very little of it, if any, went by way of Kansas City. The connections of the U. P., the Northwestern, the St. Paul and the Burlington, all sought to get that business carried by the Kanawha Despatch to Newport News for Salt Lake City. The D. & R. G. tried to get it. The connections of the D. & R. G., the Burlington, the Rock Island, and the Missouri Pacific, also worked actively for that business in connection with the Kanawha Despatch. Witness didn't know what their choice of lines was, however. They might also have used other water lines.

Kanawha Despatch.

(2374) Some of the D. & R. G. connections solicit business via Newport News. Witness didn't know whether the D. & R. G. does at present, or not. They don't solicit his that way. Very little of his moves that way. It moves over the Mallory line from the seaboard, in connection with the International & Great Northern, Colorado & Southern, Rio Grande lines. Practically none moves via the Kanawha Despatch. The N. & W. Despatch, the Cumberland Gap Despatch, the Morgan Line, and the Mallory Line were all operating between Salt Lake City and the Atlantic seaboard, and were working business more or less actively. Two other lines have since been established, the Central Savannah line, and the Seaboard Air Line.

Water and rail lines.

(2375) None of the other lines have, however, retired from business. They all solicit business. Witness never knew of a car moving via the Morgan Line in connection with the U. P. Thought they wouldn't work with the Morgan Line because they preferred the longer haul from the Missouri River. They have worked with the Morgan Line since the consolidation, but not before, to his knowledge. That was all during witness' experience in Utah, up to the time of the consolidation in 1901. The S. P. was competing actively for business by way of Galveston. Didn't know the S. P. didn't have a water line to Galveston until after 1901. Knows they handled business that way. (2376) Didn't know that the S. P. never operated a steamer to Galveston until after 1901. Perhaps he should have said gulf ports, instead of Galveston. New Orleans is a gulf port. Didn't know a good deal of business was handled by the Morgan Line moving via New Orleans, and thence over the Illinois Central. Never knew any to move that way, or over the T. & P. from New Orleans, nor over the Gould lines. Morgan Line business now moves via Galveston, S. P. lines to Fort Worth, Fort Worth & Denver City and Colorado & Southern. It has been moving right along that way since 1901.

Southern ports of Morgan line.

(2377) None of it goes by New Orleans, to witness' knowledge. What the U. P. handled by way of Newport News was carried through the Missouri River gateways by its eastern rail connections. Now the business moves by gulf ports, and it gets the haul from Denver to Salt Lake. It also gets a good deal of all-

rail business through the Missouri River gateway. Business also moves by way of Savannah. Witness hasn't shipped any that way. Business moving from the Atlantic seaboard partly by water is still competed for by five water lines, the Morgan, Mallory, Kanawha Despatch, Central Savannah, and the Seaboard Air Line. There are also the Cumberland Despatch, the Norfolk & Western Despatch, and the Ashville Line—that was occasionally heard from, but was not actively soliciting. Witness thought the U. P. had rates by all those lines. At the time witness was soliciting, the Kanawha Despatch was the preferred connection, but he understood there were rates in by the other lines. His impression is that the U. P. then had no rates in by the Mallory Lines, but he couldn't testify as to that.

Five water lines that carry seaboard business.

(2378) Doesn't know whether the U. P. at that time had rates with the Morgan Line by way of New Orleans, or not. There was always a differential rate by way of the gulf from the east. That is still so. That is, the rates via the water and rail lines to Newport News and the lower Atlantic and gulf ports are lower than the all-rail lines to this territory. The difference is 39 cents on first-class, and grading down from that. It has always continued about the same. The joint agency solicits now by the Morgan Line, not by the Kanawha Despatch. It has also been solicited via the Central Savannah Lines, and it is solicited by the all-rail lines, too. They try to get business any way they can get it, preferring the long haul. (2379) The joint agent will move business from New York via the Morgan Line, if he can. If he were a U. P. man, he would want it through the Missouri River gateways. He would prefer to have it all-rail if you would send it through the Missouri River gateways. It is only the business that you are going to send by the Morgan Line, any way, that he is willing to take the short haul on. Shippers are not interested in divisions of the through rate. Atlantic seaboard territory is bounded by a line drawn practically north and south through Buffalo and east of Pittsburg.

Always a differential rate via Gulf.

(2380) Witness got his information about the present U. P. fast freight time between Ogden and Omaha, from a time-card. Other roads don't make better time from the Missouri River than the U. P. The D. & R. G. and its connections takes six or seven days from the Missouri River. That is a fair average. Couldn't say as to all the connections. Witness has been using the Missouri Pacific. His business from the middle west points in Illinois, Ohio and Indiana moves Wabash and M. P., and D. & R. G. Carloads from Chicago take eight to ten days. About the same time as on the U. P. The service on all the railroads that witness has used so far as time is concerned is not as good as it was in 1897.

Other roads do not make better time from Mo. River than U. P.

Service on all the roads not as good as in 1897.

(2381) His opinion is that time was lengthened on the U. P. in order to increase the net revenue, increase their train haul. Time on the Gould lines is due to deterioration of their property, and inability to make better time. Witness hasn't shipped over the

Hasn't shipped over U. P. for a year or more.

U. P. for a year or more. The number of the train that occupied 100 hours and 45 minutes from the Missouri River to Ogden was 53. Merchandise moving less than carload varies from seven to twelve days from Council Bluffs to Salt Lake City. The U. P. doesn't make their lengthened time. In the old days they very closely kept up to schedule. (2382) The joint agent doesn't solicit exclusively by the gulf route as against the Kanawha Despatch, but the former is the preferred route. The differential by the gulf and Newport News is and has always been the same.

Change in rates via water line from Seaboard.

(2383) The reduction shown on Exhibit 152 in the rate into Salt Lake from New York common points by this water line, from the rate shown on Exhibit 151, took place the 24th of November, 1906. Witness doesn't know the reason for that change. The schedule of rates that were then carried to Montana through Utah was applied to Utah common points. The new rates had previously been in effect to Montana points. Previous to that time, traffic had moved through Salt Lake City and through Granger to those Montana points. Rates were in effect that way. The G. N. and N. P. also reached these Montana points. Witness didn't know of any water rates applying to Montana. The water rates are made on a regular differential. Witness intended to testify that the all-rail rates to Montana applied to Salt Lake. The water rates follow the rail rates.

Tariff rates on wool.

(2384) It is stipulated that by S. P. tariff, Supplement No. 1 to Joint Freight Tariff No. 426, the S. P. by tariff issued February 5, 1909, effective March 17, 1909, provided for a commodity rate on wool in grease, carloads, minimum carload weight 20,000 pounds, from Corinne, Utah, Marmol, Nevada, and points shown in Group 3, pages 6 and 7, to New York, N. Y.; Boston, Mass.; and to points shown on pages 8 and 12 inclusive, as taking Group 4 rates, the rate being 207½ cents per hundred pounds, and the routing via Route 1, page 17 of this tariff. That routing is as follows: "Via the S. P. Co., via Rio Grande, New Mexico, and G. H. & S. A. Railway Company, T. & N. O. R. R. Co., L. W. R. R. Co., Morgan's L. & T. R. R. & S. S. Co., via New Orleans, La., S. P. Co.'s Atlantic Steamship Lines (Morgan Line) and New York Pier, or G. H. & S. A. Railway Company via Galveston, Texas, S. P. Co.'s Atlantic Steamship Lines (Morgan Line) and New York Pier." That is, all stations on the S. P. west of Corinne, and the points in the east, to which the traffic is routed are in what is known as Atlantic seaboard territory. There is also a note to this tariff as follows: "The privilege of stopping at Reno, Nevada, wool originating at Tecoma, Nevada, and points intermediate to Reno, Nevada, in transit to destination, is extended to shippers for the purpose of preparing packages for through shipment; in (2385) such cases, in addition to the freight charges, from original point of shipment to final destination, there will be assessed for handling to and from the warehouse at Reno, Nev., 30 cents per 100 lbs., which will

accrue to So. Pac. Co. (Pac. Sys.)." All the lines east of the Missouri River solicit freight in Salt Lake City; also the following lines east of Chicago: The Pennsylvania, New York Central, and the Erie. That freight is delivered here both by the U. P. and D. & R. G.

(2385) STEPHEN H. BABCOCK.

Babcock.

Salt Lake Commercial Club Traffic Manager.

Lives in Salt Lake City. Since January, Commissioner of Traffic of the Commercial Club Traffic Bureau of Salt Lake City. (2386) Entered the employ of the Michigan Central in 1865. Remained in their employ for ten years, and since that time in the employ of the N. P., D. & R. G. and R. G. W., with short terms of service with one or two other companies. Was the N. P.'s general utility man for North Dakota for three years. Then went to Denver as the local freight agent of the Chicago, St. Paul, Minneapolis and Omaha. Was then employed in the Gen. Supt.'s office of the D. & R. G. at Denver. Was for two years claim agent for the same road, and in 1885 came to Utah as contracting freight agent. Then became Right of Way Agent of the Rio Grande Western Construction Company, and became General Freight Agent of the R. G. W. in 1892, and three years later traffic manager. Resigned in April, 1897, but returned in August, and continued with that company until it was sold to the D. & R. G. in July, 1901, when he became assistant general traffic manager of the D. & (2387) R. G. system, and remained in that position until 1903.

Former Traffic Manager on Rio Grande.

Since then has been out of the railroad service, as a general thing. The eastern terminus of the R. G. W. was at Grand Junction, Colorado. It connected there with the D. & R. G. and Colorado Midland. It handled all classes of traffic in both directions, and participated in California and Portland traffic. Prior to the consolidation the U. P., so far as witness knew, worked Atlantic seaboard business via the North Atlantic ports, and the D. & R. G. worked in connection with the Morgan Line through New Orleans, and the Mallory through Galveston. The competition was very active. Witness didn't have exact figures, but thought the percentage of traffic reaching Salt Lake City from New York common points territory, as regards the all-rail and the water and rail lines, was from 70 to 85 per cent. in favor of the water and rail lines.

U. P. water route prior to 1901.

(2388) Business both ways between Portland and Oregon points and the east, passing through Ogden and Salt Lake City, in connection with the Rio Grande line, moved for a long time via the Shasta route. There were through trains. Over the U. P. it went O. S. L. As to traffic between Salt Lake and Portland, which the R. G. W. carried, it moved entirely by the Shasta route. Later, when the O. S. L. was in the hands of a receiver, witness worked both lines. The R. G. W. ran only to Ogden. During the O. S. L. receivership, witness didn't desert the S. P. route to Portland. "They desired us to work with that route so far as we could. In

Traffic between Salt Lake and Oregon.

fact, desired us to work altogether with it, but we worked with both lines."

Willamette Valley hops.

(2389) The hops from the Willamette Valley usually went to the Atlantic seaboard, and they took the Sunset route. The D. & R. G. was never able to secure much of them. The D. & R. G. had no agency in Portland until 1897, after the O. S. L. receivership, and they got some hops after that. All that the D. & R. G. could get, of course, came by the O. S. L. Those over the S. P. went around by their long route. The D. & R. G. was never able to get many hops, for the reason that it was Atlantic seaboard traffic that went by the Sunset route. Doesn't know that he could state what change, if any, took place in the movement of hops after the merger. Witness thought the U. P.'s ownership of the boat line from Portland to San Francisco had a commanding effect in any controversy that might arise between it and the S. P. (2390) If the U. P. reduced rates by that route, "all rates would have had to work to whatever basis they established." At the time of the receivership, the D. & R. G. worked business into Montana points in connection with the O. S. L. Met competition from the U. P., G. N. and N. P. Those divisions were not taken out during witness' time, but were after he left Utah. He understands that the gateway is now closed to the D. & R. G in respect to general merchandise traffic; that there is some interchange of certain commodities, such as coal and coke, perhaps, but that is all. Wool from this region is a very important traffic. In Utah it originates very largely south of Salt Lake City—south and east of it, some west, some north. There is a large clip of wool each year in Nevada, Southern Idaho, and in Montana.

Montana business during receivership.

Wool traffic.

(2391) The competition in wool commenced before it was taken off the sheep's back. The O. S. L. endeavored to attract the sheep away from the line of the S. P. west of Ogden. On the part of the Union Pacific they tried to attract it away from the D. & R. G. to Ogden, by trailing the sheep along into western Wyoming, and in southern Utah witness did his part trying to attract sheep away from the O. S. L. onto his line. When the S. P. was successful in attracting sheep, the wool moved via Sacramento and the Sunset route. Occasionally they had rates in from some points in Nevada east-bound through Ogden. Some buyers, perhaps, insisted upon taking it that way, and from some of the nearby points an occasional shipment went through Ogden, but the bulk of it they worked by the Sunset route. The O. S. L. shipped over the U. P. direct. Witness moved it sometimes by rail, but quite largely by rail and ocean via Galveston. Witness understood there was a tax per head upon sheep brought into Wyoming from Utah and Idaho, and the U. P. people, in their desire to attract the sheep, paid the tax. Most of the wool went to Boston, New England. Boston is the great wool market. (2392) After the merger, the disposition of the S. P. was more strongly to favor the U. P. as against the D. & R. G. Witness could not get definite figures, but except

for the fact that the traffic generally began to increase, he thinks the merger would have caused a falling off in the D. & R. G.'s westbound traffic. He thinks as a matter of percentage, there was a falling off, but the (2393) general movement in traffic increased very rapidly from that time on.

Merger caused S. P. to favor U. P.

Doesn't think that the D. & R. G. traffic received from California points over the S. P. from Oregon points over the Short Line increased in proportion to the increase in general business. Thinks it just about held its own. The S. P. and O. S. L. were the D. & R. G.'s only outlet, and it gave them all its traffic westbound. There was a general increase throughout the west in freight traffic. The Rock Island, which had for a long time worked steadily with the D. & R. G., meanwhile formed a new route via El Paso, which diverted some traffic formerly taken by the D. & R. G. to Ogden. The following divisions of through water rate from New York common points to Utah common points via the Morgan Line were in force during the 90's, up to the time witness left the service at Salt Lake. (2394) From the through rate there was first deducted five per cent. for marine insurance and any interior arbitraries, that is, the rate from some interior point to New York was deducted, and the remainder divided east of Fort Worth 37.92, Fort Worth to Pueblo 26.67, and Rio Grande system 35.41. When the traffic moved via the Atlantic ports, such as by Newport News and Kanawha Despatch, the ocean and rail lines up to the Mississippi River were given 20.4 per cent., after the deduction of the interior arbitraries, and the lines from the Mississippi to the Missouri River by the Rio Grande route 17 per cent. and the balance was subdivided west of the Missouri River 62½ per cent. to the Rio Grande lines, and 37½ per cent. Missouri River to Colorado junction points. In the case of the U. P., the lines between the Mississippi and the Missouri River, witness understood, got 16 per cent., and the U. P., after deducting 20.4 per cent. for the lines up to the River, got the balance. When Mr. J. A. Monroe was freight traffic manager of the U. P., he at various times suggested to witness that, while their lines were performing the same all-rail service, whether the traffic moved all-rail from New York or whether it moved through the Atlantic or Gulf ports, they should have all-rail revenue out of the traffic moving by the Atlantic or Gulf ports, and expressed the desire that witness should join with him and the other lines in demanding that basis of divisions.

Rock Island formed new line via El Paso

Divisions on water rates from Seaboard

(2395) That would have reduced the earnings of the steamship lines, and if it lessened their revenue to the point where it became unprofitable, its effect would have been to cause them to retire from business and throw it all to the all-rail line. Witness never considered Monroe's proposition favorably. The Morgan and Mallory lines had always been friendly, and given the D. & R. G. a satisfactory amount of traffic. (2396-2398) Correspondence between San Pedro district freight agent and witness, showing that the San Pedro had no tariffs naming through freight rates between Salt

San Pedro could form feasible route to San Francisco.

Lake City and San Francisco. The San Pedro makes connection with the Atchison for San Francisco at Daggett, Cal. That would be an entirely feasible route from Salt Lake to San Francisco by San Pedro road to Daggett, and thence into San Francisco by the Santa Fe. It is about 1,083 miles long. By the S. P. it is 786 miles from Ogden, 823 from Salt Lake.

(2399) Witness thought the S. P. rate from Salt Lake to San Francisco would be highly remunerative for a line composed of the San Pedro to Daggett and the Santa Fe to San Francisco. First-class passenger rate from Salt Lake to San Francisco by S. P. $31.10, by San Pedro and its connections $39.55, to Los Angeles by San Pedro $30. The rate over the S. P. to Los Angeles is $39.50. Distance from Salt Lake to Los Angeles via Southern Pacific 1,181 miles. (2400) Witness thought these rates would have the effect of forcing traffic to Los Angeles over the San Pedro, and to San Francisco over the S. P. Witness was never aware of any rates into Salt Lake City over the O. S. L. from Butte, in connection with the N. P. and G. N. via St. Paul. Witness didn't know the passenger schedule between Salt Lake and Los Angeles and San Francisco, also via Daggett over the various roads. He considered only the rates.

(2401) Witness thought time was an important consideration, but thought passengers would go from Salt Lake to San Francisco via Los Angeles to a certain extent, regardless of the increased length of time. The only through freight rates in effect between Salt Lake City and Ogden are on the S. P. (2402) Witness never knew of the route to San Francisco via Portland and the boat down being used. Thinks the fact they might have used it was an influential factor in having the S. P. favor them with traffic via Ogden. (2403) Witness thought it was 900 miles from Portland to Ogden by the O. S. L., and probably 750 or 800 miles from Portland to San Francisco by rail. If the U. P. carried business via Portland and the boat line, it would then be farther from San Francisco when it got to Portland than at Ogden. Still, witness considered it a practicable route. Witness thought that the U. P. could use the Portland route to compel the S. P. to adopt a friendly attitude. Mr. Charles F. Smurr, freight traffic manager of the S. P., who is now dead, "essentially admitted that to witness." (2404) Witness doesn't know that he ever had occasion to discuss the question with any living S. P. traffic man. Witness has talked on the same matter with Mr. Richard Gray, another S. P. man, but he unfortunately is also now dead.

Never knew the Portland route to San Francisco to be used.

(2405) It was in connection with a conversation in which witness accused the S. P. of trading with the U. P. and giving the latter business at Ogden because it closed up the through route to San Francisco via Portland. Witness thought it was a matter of common knowledge that the U. P. formerly operated that route from points east of Ogden. The use of the boat line occurred, as he had always understood, through the administration of Mr. T. J.

Does not know personally that Portland route was ever used, but it was common knowledge that it was used during T. J. Potter's time.

Potter, in general charge of the U. P. system. He died in 1889. The use of the boat line began during that time, but witness didn't know how long it continued. Witness got that impression by his experience in soliciting business, by reports of his agents, and agents of connecting lines, the Burlington and Rock Island, working with him. (2406) Doesn't know of his own knowledge that the boat line was ever used, but it was a matter of common information and so understood among railroad people.

(2408) Witness didn't know whether the U. P. had taken off the boats at that time, or not. He understood they were not operating it as a through line actively. The D. & R. G. didn't attempt to work any business that way. They had no occasion to attempt it, because the S. P. line was open to them, and it was the most direct and best line. Of course, that was true as to the U. P., but the O. S. L. and water line was a part of their own system, and they would naturally want to feed it. Witness doesn't know what the S. P. would have done to retaliate, if the U. P. had attempted to use the boat line by Portland. "They are the most resourceful people in the country, and they probably would have found a way to protect themselves." (2409) If the U. P. had attempted to use the boat line, witness doesn't know whether the S. P. would have retaliated by diverting business at Ogden to the D. & R. G. Cannot say what they would have done. It would have depended entirely upon circumstances.

(2410) Witness thought the U. P.'s possession of that line afforded it a strong leverage, and in his opinion and belief, from the operations of things, they made it very effectual. He thinks the S. P. did use the D. & R. G. at one time when that road was first built into here, to coerce the U. P. into their view of things. Witness thought it placed the S. P. in a comparatively independent position to what they had been before the D. & R. G. got here. The latter line was connected through to Utah in May, 1883. That gave the S. P. another outlet at Ogden, and released the S. P. from the domination of the U. P. Before that, the S. P. and U. P. had been in a position of equal power. Neither could dispose of the other. (2411) After that, the S. P. could use either the D. & R. G. or the U. P., but the U. P. and the D. & R. G. had no option whatever, except that the U. P., after the construction of the O. S. L., had that route. A great deal of traffic originates on the S. P. lines. After the merger, the U. P. entered into closer relations with the S. P. The percentage of the business which the D. & R. G. did after that fell off, so much so that it resulted in the building of the Western Pacific by the Gould people, witness understood.

Construction of D. & R. G. placed S. P. in an independent position.

Merger compelled the Goulds to build the Western Pac.

(2413) Witness doesn't think there is any danger of the U. P. ever attempting to work all their business to San Francisco by Portland. He never knew of the S. P. gateway at Ogden to be closed to the U. P., but as a matter of general impression and report, knew that the U. P. used the Portland route. He is quite certain that the S. P. wanted to shelter themselves against the U. P. using

it. (2414) Up to the receivership of the O. S. L. and O. R. & N. in the autumn of 1893, witness thought, the D. & R. G. worked with the Shasta route on Portland business. The business was not very important in volume, not enough so for him to establish an agency in Portland. The D. & R. G.'s haul, from Ogden to Salt Lake was short, and the divisions were so great against witness west of Ogden and the traffic so meagre that he never established an agency up there. The most valuable traffic around Portland was the hops, but it usually moved by the Sunset route to the east. Witness occasionally had shipments for St. Louis or Chicago, but his San Francisco agent looked after his interests in the Portland territory. They also carried through business to Colorado and beyond, but got no Atlantic seaboard business. It was taken by the Sunset route. If it got any, it was a small quantity that was gathered up by connecting lines. From Chicago and the middle west, business used to come through Denver and thence over the D. & R. G. and Shasta route to Portland. After the receivership, witness handled some, but not very much, business with the Short Line.

Portland business too meagre to justify agency.

(2415) During the receivership, he worked business from and through Salt L[illegible]e to Portland largely by the Short Line, but also worked with the S. P. at the same time. The Shasta route is probably 400 miles longer; about 900 miles via the O. S. L. The Shasta is a hard, mountainous route across two mountain ranges. The Short Line makes very much better time. (2416) Witness' recollection was that the O. S. L. and U. P. adjusted their differences in the autumn of 1897. The disturbance lasted, witness thought, from May to October or November. Didn't suppose that the O. S. L. did much of anything at that time with their line from McCammon down to Granger, except that they had very important coal traffic over there, and the merchants' modest merchandise traffic. The traffic moved up to Hampton, and down over that line, so that whatever traffic there was, was formerly handled by the D. & R. G., just as it had formerly gone in by Granger and under the same basis of rates. (2417) Wool and live stock, coal and merchandise originate over there.

Shasta route crosses two hard mountain ranges.

(2418) Practically all of the D. & R. G.'s business was exchanged with the S. P. at Ogden. It had another route to California for a short time, to Southern California via La Junta and Grand Junction, with the Atchison. At that time the Atchison owned the Colorado Midland. The Rio Grande Western road from Grand Junction to Salt Lake City got a haul of 292 miles. The D. & R. G. got no haul at all on that business. That was chiefly citrus fruits. (2419) The fruit was destined to Utah common points. Essentially all of his California business was handled in connection with the S. P. via Ogden. All of witness' business having origin or destination east of Pueblo and Denver, went via Ogden. Witness' company solicited that transcontinental business, as did all of its eastern connections. The U. P. was soliciting that business. So were its connections east of the Missouri River. The connections of the D. &

Nearly all of his Calif. business went via Ogden.

R. G. east of the Missouri River were also soliciting it. All this traffic went over the S. P. west of Ogden, except what the U. P. sent by the O. S. L. and the boat line.

(2420) The D. & R. G. could not make any rates to California without the concurrence of the S. P. Always had to have a joint tariff established. (2421) It is about 675 miles from Corrine to Sacramento, and about 2,300 miles from New Orleans up to San Francisco or Sacramento, and 1,800 miles by boat from New Orleans to New York, an aggregate of about 4,775 miles from Corrine to New York by that route. From Corinne to Omaha it is about 1,027 miles, and 500 miles farther on to Chicago, and 950 from there to New York. That makes 2,429 miles, as against 4,775. Witness thought the freight rate is sufficiently high to justify the S. P. in doing it. Presumably a tariff on wool over that route was filed for the purpose of making something on it. The matter of distance is not controlling, by any means.

D. & R. G. could not make rates to Calif. without concurrence of S. P.

(2422) If the U. P. used the boat line into San Francisco, and cut rates, it would break down rates over the Sunset, so the S. P. had more than any other line at stake in maintaining rates. That is the main reason why witness said the U. P.'s possession of the boat line gave it such a commanding position. Rates from Missouri River to California are made by agreement between the lines concerned as a general proposition—the members of the Transcontinental Freight Association. The Atchison lines could make a rate independent of the S. P., but the D. & R. G. could not. (2423) Any line could bring up a proposition to change a rate, but they could not establish it, except by agreement. Competition expedites railway service.

The Atchison lines could.

(2424) The U. P. might use its boat line, because they were not getting a reasonable share of the traffic, or because of divisions, or there might be financial reasons. The U. P. and S. P. formed a direct line. Recalls once that the U. P. became a little jealous of the D. & R. G., and charged witness with cutting rates, and Mr. Stubbs would haul me up and tell me to desist. The real motive for that was so that the business could move by the U. P. (2425) The U. P. exercised all the influence it could to make the S. P. favor them as against the D. & R. G. The U. P. had a shorter line, and could make much quicker time to Omaha, if it desired. The D. & R. G. and the Central Pacific would make a better line from the Missouri River than the U. P.-O. S. L. boat line. (2426) He didn't know of any attempt on the U. P.'s part to use the boat line to coerce the D. & R. G. or the Atchison. They had the power to use it, and it was an effective force in creating respect for the U. P. system.

The U. P. and S. P. formed a direct line.

(2428) DAVID ECCLES.

Eccles.

Resides at Ogden. Principally in the lumber business; also President of Utah Construction Company, which builds railroads and does other construction work. It is now building the West-

Ogden. Principally in lumber business.

Lumber mill at Hood River, Ore.

ern Pacific. Witness' lumber operations are in Oregon, at Baker City, Hood River. Hood River is 65 miles east of Portland, and the products of his mill are shipped chiefly to Utah and Idaho. Some to Nevada. (2429) Traffic from Hood River to Nevada now moves by Portland over the Shasta route. Until a year ago it moved by Ogden. There are no longer any rates by the latter route. The traffic originates on the O. R. & N. The rate is forty cents via the Shasta route. If witness ships from Hood River, he pays to the O. R. & N. a five per cent. arbitrary to Portland, making a total rate of forty-five cents. The rate via Ogden was forty cents, as far west as Wells. That is the same place to which he now pays 45 cents. The change occurred about a year ago. Witness has spoken to Mr. Reeves about the increase in rates.

Route from Hood River to Nevada points.

(2430) He is the general freight agent of the O. S. L. Witness has also spoken to Messrs. Miller and Stubbs. Their only excuse for the change is that the S. P. wanted the long haul. The boat line used to maintain a $5 passenger rate between Portland and San Francisco. (2431) The rate included berth and board. The Shasta route also made a similar rate, including berth in a tourist. The fight lasted the greater part of a year. The present lumber rate to Ogden from Portland by the Short Line is 37½ cents, and by the S. P. 40 cents. The shingle rate from Portland to Ogden by the O. S. L. used to be 50 cents. Witness is not sure whether this has been cut down to 47½, or not. There used to be a ten-cent differential and the lumber rate used to be 40, and it was cut to 37½, and witness is not positive whether shingles were cut at the same time. Doesn't know what the shingle rate is from San Francisco to Ogden, but thinks it is the same. The O. R. & N. Co. used to have light-draft steamers go up the river as far as possible and get grain and bring it down and load it at Portland, and take it by boat to San Francisco; that is, in territory that was routed by the Shasta route. Didn't know whether they brought wool and hops in addition to grain, but presumed they brought everything.

Rates from Portland to Ogden.

Connected with building of Utah and Pacific in 1898.

(2432) Witness was connected with the building of the Utah & Pacific road south of Milford. It was built in 1898. That line of road was projected 18 or 19 years ago, about 1890. A grade was built from Milford across the Desert to the head of the canyon that runs down to the Meadow Valley Wash. The grade was completed to the head of the canyon, and most of the grading done down the canyon, and the tunnels all built and timbered down nearly to the Meadow Valley Wash. It was then abandoned, and the understanding was nothing more was going to be done with it. Mr. McCune and witness were interested in the construction of the Utah & Pacific in 1898, having a fifty per cent. interest each. They built 66 miles from Milford out to Uvada, and operated it for about two years.

O. S. L. bought road under an option.

(2433) At the time it was built, they had a contract with the O. S. L., giving the latter an option on it for five years. In about two years the O. S. L. exercised the option. The Short Line exer-

cised its option after it became public that Clark proposed to build the San Pedro. A man named Hallenbeck or Hollingsworth talked to witness about the line about the time the Short Line exercised its option. (2434) Witness understood that this man represented the Clark interests. It was a month or two after that the option was exercised. Witness and associates built the Utah & Pacific for themselves. The option to the O. S. L. was given before work was commenced. The old grade was utilized, and 52 lb. steel was used on the line. The steel was obtained from the O. S. L. (2435) The work in 1890 went down nearly to the Meadow Valley Wash, probably five to eight miles this side of Caliente. Witness couldn't say exactly. That was 120 or 130 miles from Milford. In 1898 witness made a contract with the O. S. L. by which he built the road from Milford to Uvada, 66 miles. (2436-2443) Copy of contract between the O. S. L., of the first part, Eccles and others, of the second part, containing the option above mentioned. (2444) The substance of the contract was that witness utilized the old right of way and material, got the rails and the rolling stock from the O. S. L., and the O. S. L. got an option for five years to buy the road, and it exercised the option in about two years, early in 1901. About all there was to it was the laying and surfacing of the track, and the building of the bridges, and to furnish the ties. Had to put the grade in condition.

Option contract.

(2445) The destination of the lumber which moves via Sacramento from Oregon is anywhere from 150 to 200 miles west of Ogden. Didn't know the reason for the change of route from the O. S. L. via Ogden to the Shasta route to Nevada points. (2446) The Nevada points were local to the S. P. Mr. Stubbs said the matter was mostly in the hands of the local man here, Mr. Miller. Presumed that the San Francisco office of the S. P., having this line from Portland to these local points, required traffic to move that way, in order to give the S. P. the long haul. It is 40 cents from Portland to Wells and those points witness spoke of, and 37½ cents from Portland to Ogden. Witness thought the rate war between the boat line and the S. P. was eight or nine years ago, but was not positive.

Change in lumber route to Nevada points.

(2447) It was on several times, and one time lasted all summer. It might have been during the receivership of the O. R. & N. The boat left Portland on Saturday night and reached San Francisco Tuesday morning. (2448) The boats handled everything; carried grain and other things down, and brought sugar back. It was claimed that the little light river boats only drew ten inches of water. This was in order that they might go as far up the river as possible, to bring down the grain. The O. S. L. allowed the taxes on the Utah & Pacific grade to remain unpaid. (2449) Witness thinks the taxes were gotten rid of, but doesn't remember paying them. Thinks they were remitted or something.

Unpaid taxes on Utah and Pacific.

Love.

(2449) STEPHEN H. LOVE.

Salt Lake. Has charge of traffic for Z. C. M. I.

Resides at Salt Lake City. For 21 years employed by the Zion Co-operative Mercantile Institution; in charge of their traffic since 1891. (2450) His total tonnage for 1908 was 16,000 tons, including shipments in, and what he controlled going out. Most of his goods came "from the middle west and Atlantic seaboard—the Atlantic seaboard and some products from the west." Atlantic seaboard business comes chiefly by the Gulf port lines. Before the merger, the U. P. solicited through the Missouri River gateways via the Kanawha Despatch, the Cumberland Gap Despatch, and some other water line that witness didn't remember; the S. P. by the Morgan Line. As a rule, witness used the Rio Grande road west of Denver.

Seaboard traffic.

(2451) Never uses rail lines out of New York, except on shipments that he is in a particular hurry for. Fully ninety per cent. of seaboard stuff moves via the gulf. Witness thought the Morgan Line began to solicit Utah business in 1892 or 1893. The competition between the U. P. and S. P. was keen. Since the consolidation, the Morgan Line is their preferred route. (2452) Witness' traffic from central states and Chicago territory moves over most all the lines, through the Mississippi River gateways and through Chicago —U. P., Burlington, Missouri Pacific, C. & N. W., R. I., and reaches Salt Lake either over the U. P. or D. & R. G. Ships from the west what are known as California products and canned goods from the Columbia River—canned salmon, also some Alaska salmon. The latter comes in sometimes through Portland by the O. R. & N., and sometimes through San Francisco by the S. P. The packers in Alaska virtually control the routing.

Traffic from Central States and other points.

Rate on salt.

(2453-2454) Witness relates conversation in regard to a rate put in on salt in the territory tapped by the Short Line, in which Eccles said he had to do that in order to invite the sheep men to shear along his line in competition with the S. P. Witness cannot do business very far west of Salt Lake City, because the transcontinental rates from New York, Pittsburg and Chicago to San Francisco are much less than the rates direct to Salt Lake, and the California and Portland jobbers can come away east on that account. The rates from those points east are established on a basis, about the same as the rates from Salt Lake out, and therefore they have a big advantage over the Salt Lake jobbers in territory that witness felt was naturally tributary to Salt Lake. Complainant's Exhibit 153 is a comparative statement of rates on Salt Lake, Portland, San Francisco and Los Angeles on a lot of staple commodities; also showing local rate from those points, and also from Portland, to points midway between Salt Lake, coast points on the O. S. L., the S. P. and the San Pedro.

Comparative statement of rates.

The local rates are graded according to distance out of Salt Lake and out of San Francisco. The rate out of San Francisco on the S. P. is graded only in a measure. The rates there are

established more on a blanket idea. (2455) The system of rates is very detrimental to Salt Lake. Competition with the San Francisco jobbers and the Salt Lake jobbers goes over in what is called the Ely country, that is in eastern Nevada. On the Short Line and San Pedro route the distance down the jobbers could go depended altogether on the commodities, the differential being greater on some than on others. (2456-2459) Complainant's Exhibit 153. There are no through rates via the G. N. and N. P. to Butte in connection with the O. S. L., except on the added locals.

(2460-2463) Complainant's Exhibit 154 is a certified copy of petition made by a representative of Senator W. A. Clark and others to the City Council of Salt Lake City, Utah, Sept. 25, 1900; also letter from the defendant, W. A. Clark, dated October 2, 1900, referring to said petition; also report from Committee on Streets, etc., relative to said matter; also ordinance vacating Pioneer Park, and repealing an ordinance dedicating block 48, of plat "A," commonly called "Pioneer Square," in Salt Lake City. (2464-2465) Chapter 49 of the Laws of Utah for 1901, authorizing cities to grant depot sites to railroad companies, is read in evidence. (2466) Mr. Gibbon, the Clark representative, in his argument in support of the foregoing law, stated that the San Pedro would be an independent road. (2467) Mr. Gibbon also referred to the opposition that his Company was encountering from the O. S. L. (2468) Winslow S. Pierce, from New York, and local officials of the U. P. and O. S. L. were instrumental in having Chapter 2 of the Laws of Utah, 1901, entitled, "Railroad Corporations," adopted.

Vacation of Pioneer Park for San Pedro.

Witness relates conversation with Mr. Pierce, in which the latter stated "that they were going to reorganize the Union Pacific Railroad and they wanted to file articles of incorporation in Utah, and it meant a very great deal for the people of Salt Lake—it would virtually make the headquarters of these vast systems of railroads in this city, and a lot of things of that sort;" he also stated what the U. P. proposed to do, among other things, to double track the U. P. from Omaha to Salt Lake, and to build a line to California. (2469) Nothing was said indicating that it was proposed to purchase the stock of the S. P. Co. Witness didn't mean to imply there was any improper influence that suppressed opposition to the bill. Thinks the members of the Legislature were misled into believing the bill was merely a codification of existing laws. Didn't think the members read the bill. (2470) A new bill, which was to a large extent a codification, but had a great deal of new matter in it, was passed two years ago.

Conversation with Mr. Pierce of U. P.

(2471) That bill was introduced before the Legislature in a legitimate way and considered properly—given all the consideration that was necessary. Witness states that the conversation with Mr. Pierce above referred to, was either the first day of the session of the Legislature, or the day before the Legislature convened in January, 1901. Witness was elected a member of the senate of that Legislature the fall before. Witness' attention is called

to the fact that the bill he is talking about and the bill Mr. Pierce spoke to him about was passed in 1897, not in 1901, and that the bill for the incorporation of the Union Pacific Railroad Company, following the reorganization and conferring the vast powers that witness speaks about, was passed in 1897. Witness does not know that Mr. Pierce told him in 1901 that the Union Pacific Railroad was about to be reorganized, but the conversation was along that line. "Q. You testified just now that he told you that the Union Pacific was going to be reorganized. A. That was my impression, Judge. * * * Q. Well, don't you think your memory is bad on that point? A. It may be. I can't remember all of those little details; I don't pretend to; I know there was a general conversation along that line. * * *

Details connected with conversation with Mr. Pierce.

(2472) "Q. Don't you know that in 1901, at the time of this conversation, the receivership had terminated four years before, the company had been reorganized, that headquarters were located in Omaha, and the company had been incorporated under the act of January 22, 1897, which conferred upon the Union Pacific all the powers that were conferred by the act which has been offered in evidence here, except possibly the power to own the stock of lines that were not connecting? You don't know that? A. Well, I was not a member of the Legislature at that time. I know that there was a lot of new matter in the bill which Mr. Pierce introduced. I know that it was vital matter." Upon being further pressed, witness states that he will not insist on the statement he made to the effect that Mr. Pierce told him they were going to reorganize the Union Pacific Railroad Company and put headquarters at Salt Lake. "I know he did say that it meant $25,000 in fees to the State. I know he said that, because that was one of the arguments he used."

(2473) "Q. Well, that statement was made good, wasn't it? The State did get the fees, didn't it? A. I understand it did; yes, sir. * * * Q. You testified here as to what Mr. Pierce said to you. Now, do you mean to say that he said that or that you supposed that that would be the result? (Referring to location of headquarters at Salt Lake.) A. Well, I am not going to swear on detailed statements of that kind, because my memory is not sufficiently strong. Q. Well, you have done it, and I want to know which is correct? A. I don't recall that I did swear to it. Q. You swore here that Mr. Pierce told you that if this bill were passed— A. No; I think if Mr. Severance had asked me at that time if I would swear that he did that, I would say, no; I wouldn't swear to it. Q. Well, you are testifying here. A. Yes. Q. Where do you draw the line between statements which you are swearing to and statements to which you are not swearing on the stand? A. Well, I can't go back ten or twelve years and recall in detail a statement made at that time, and I wouldn't swear to it at all."

(2474-2475) Further examination of witness as to his conversation with Mr. Pierce. (2476) Witness is asked if the bill which he referred to is the one that afterwards became chapter 2 of the Acts of the Utah Legislature, passed at the fourth regular session of the Legislature of Utah, in 1901. He states that he thinks there was more than one bill. "I wouldn't want to say whether that was the particular bill or not." There was more than one bill in which this question was involved. Witness is unable to say which bill it was that he stated was rushed through with such haste. Witness states that he can locate the bill if he has time to look at his files. Counsel states that he can have all the time he wants, and he was requested to find it. Witness thinks that Pioneer Park, the land referred to in the petition of Mr. Gibbon and the ordinance of the City Council and the first act of the Legislature, read in evidence by Mr. Severance upon direct examination, had reverted to the city.

(2477) The San Pedro Company never got possession of that land at all, and it always continued as a park. Testimony as to the title to the Pioneer Park ground that the San Pedro Company was willing to take. (2478) Statement made by Mr. Gibbon about Oregon Short Line thugs was made in the Senate Chamber on the Sunday they had this conversation about the measure that Mr. Gibbon wanted to get through, being Chapter 49 of the Laws of 1901, approved March 14th, 1901. The bill was then being considered in the Senate, having passed the House. "Q. Don't you know that at the time you say Mr. Gibbon spoke of the Oregon Short Line thugs there had been no conflict or controversy on the ground between the Oregon Short Line forces and the San Pedro forces? A. No. Q. You don't know that the San Pedro's engineers didn't go onto that line until the 20th of March, 1901? A. No, I don't know anything about the details of the matter. * * * Q. Do you mean to swear, then, or not, to the statement that you said Mr. Gibbon made with reference to that? A. No; I wouldn't swear to a detailed statement of that sort. Q. Well, you did on direct examination. Do you mean to qualify that statement? A. Well, now, when it comes right down to a detailed statement of that sort, I wouldn't want to swear to the exact language used by Mr. Gibbon with reference to that matter. (2479) Q. Don't you think, then, you ought to be a little more careful in your statement, Mr. Love, as to what you do swear to? You have been swearing to that right along. A. Well, I am making a general statement."

Gibbon's remark about O. S. L. thugs.

The transcontinental rates from the Missouri River to Pacific coast were lower before the construction of the San Pedro than now. The rates, however, to Salt Lake are lower now than then. In those days, however, by private arrangement it was possible to get almost any kind of a local rate outside of Salt Lake, but since the last amendment of the Interstate Commerce Act the situation has been changed. Year in and year out witness thought

Situation as to rates has changed since passage of Hepburn Act.

the rates to Utah in reality were lower then than now, but, so far as the published tariff is concerned, the rates now are lower. The discrimination against Salt Lake in favor of Pacific coast from points east of the Missouri River has always existed for the last twenty years.

(2480) The adjustment of rates as shown by Complainant's Exhibit 153, has existed, generally speaking, for twenty years, maybe longer. "Q. You took Huntington as a point for comparison in one of the statements, or perhaps more, embraced in Complainant's Exhibit 153, and testified specially with reference to that in answer to questions by Mr. Severance on your direct examination. Why did you select Huntington? A. The local tariff of the Oregon Short Line Railroad runs out to Huntington, the local tariff of the O. R. & N. is eastbound to Huntington, and the Salt Lake jobbers, in complaints that we have had up with the railroads in times gone by, have always felt they were entitled to go out in their jobbing business as far as Huntington on the O. S. L. and north on the O. S. L. as far as Red Rock or Dillon, Montana, and west to Elko on the Southern Pacific, and east to Rock Springs, Wyoming, on the Union Pacific, and Grand Junction on the Rio Grande. Q. Do you think you are entirely fair in selecting Huntington as the point for comparison as between Salt Lake and Portland? A. I think so, yes sir. * * *

Salt Lake rate adjustments.

(2481) "Q. Don't you know that Huntington is nearly 100 miles nearer Portland than Salt Lake City? A. I wouldn't be surprised at that. Q. Do you know the distance from Salt Lake City to Arcadia? A. No, sir. Q. You don't know that it is about equidistant between Portland and— A. I only know in a general way that we regard Huntington as being about half way. Q. That doesn't answer my question. My question is, if you don't know that Arcadia is about midway between Salt Lake City and Portland? A. I never checked that up. Q. And that the rates at this midway point—that is, the adjustment of rates —puts Salt Lake City and Portland on an equality, at this midway point? Don't you know that? A. I testified, I think, in my direct examination, that the rates from Portland and from San Francisco and from Los Angeles, as a general thing, were about equal when you struck a midway point. Q. Why didn't you take the midway point, then, in preparing the statement Exhibit 153? A. Because in all our controversies, as I have said, between the railroads and ourselves, the jobbers here have always selected Huntington as the point. Q. And that is 100 miles nearer Portland than Salt Lake City? A. Well, that is all right; I think that is fair. I don't see why they should haul goods to Portland and perform a service of a thousand miles and haul them back and then complain because we talk about a hundred miles farther east."

Witness states that they have been unlawfully doing this for over twenty years and that they have never been relieved from the fourth section of the Interstate Commerce Act.

(2482) "Q. Do I understand you, in your reference to the fourth section of the Interstate Commerce Act, to mean that in your opinion it is unlawful because the railroads are carrying across the continent to San Francisco and other Pacific coast terminals at a lower rate than they carry it to intermediate points without the previous consent of the Commission? A. Yes, sir. Q. You mean it is unlawful in that sense? A. I think so.

"Q. Coming back again to Huntington. You have not shown the relative position of Portland and Salt Lake City, or of Salt Lake City and San Francisco, or of Salt Lake City and Los Angeles, or of Salt Lake City and Sacramento, or of Salt Lake City and Denver, at points equidistant between those cities, on statement Exhibit 153, have you? * * * A. From a mileage standpoint? Q. From a mileage standpoint; yes. A. No, sir; only approximately."

Since 1901, numerous reductions made by S. P. in class rates to points west of Ogden.

(2483) Since 1901 there have been numerous reductions in class rates from Salt Lake to points on the S. P. west of Ogden. There have also been reductions from Ogden west, and rates from Salt Lake, which were formerly made up of the combinations of locals on Ogden, were made the same as from Ogden. The condition out to the Ely country has been much better, so far as Salt Lake is concerned. It is a couple of hundred miles west of Ogden. However, rates from Salt Lake up to points north of Pocatello have been increased, not commodity, but the class rates generally. Doesn't think they were increased to Pocatello, but north of Pocatello. The distributing rates out of Salt Lake are not fair, as compared with the rates from Denver, and California cities, and other cities. (2484) Witness made an examination of this, comparing the rate for a distance of 200 miles out of Salt Lake with the rates out of Denver. He found that for 200 miles out of Denver and Salt Lake City, respectively, the rate per ton out of Salt Lake was between $15.00 and $16.00, and out of Denver it was $9.00. (2485) He testified, however, that the bulk of the jobbing business out of Salt Lake City was handled within 100 miles of that city. Witness couldn't say whether the rates for 100 miles out of Salt Lake were higher than the rates for 100 miles out of Denver, but promised to look it up. "Q. I would be glad to have you look it up, if you can get it accurately; I would like to have the comparison. A. It might not be very accurate. Q. I don't want it unless it is accurate."

Salt Lake rates as compared with Denver rates.

(2486) Witness presents a statement showing fourth class rates approximately 100 miles out of Salt Lake on the different railroads, and for approximately the same distance on various railroads out of Denver. Witness states that he had to take what tariffs he had in his office and was compelled to use the rates out of Ogden for purposes of comparison, but presumed they were practically the same out of Salt Lake. "Q. * * Don't you know, Mr. Love, what the rate is from Salt Lake City to Tecoma?

(2487) "A. No, I couldn't say right off; I couldn't give you that rate in my office. I suppose it is there in the tariffs, but I didn't get back here on time as it was, and I was in a hurry. Q. Don't you know that the rate from Salt Lake City to Tecoma is the same as from Ogden to Tecoma? A. I imagine it is; yes. Q. What is the distance from Salt Lake City to Ogden? A. Salt Lake City to Ogden is 37 miles. Q. Then, you have shown here, in the case of the Southern Pacific, a 59-cent rate for 113 miles, and from Salt Lake City to the same point the rate is the same, 59 cents, for 150 miles. A. Well, I don't think that is material, for this reason: Our rates here are arranged on a certain basis; for instance, Salt Lake and Ogden and Provo are common points. We start on the mileage basis when we get south of Lehi; the rates from Ogden and Salt Lake apply. So if you use the mileage, the rates are the same. For instance, the mileage from Salt Lake to Lehi would only be 31 miles, but it would be 67 miles to Ogden, and the same rate applies. The same is true of the north country. Salt Lake and Ogden are common, north of Cache Junction, I think. * * *

"Q. You were asked to bring in a statement comparing the rates out of Salt Lake City with similar distances out of Denver, weren't you? A. Yes, sir. Q. And you brought in a statement with reference to the Southern Pacific which shows a rate of 59 cents to Tecoma from Ogden, 113 miles, when you know that the rate from Salt Lake City to Tecoma, 150 miles, is the same. A. No, I don't know that; I don't know that the rate from Salt Lake to Tecoma is the same. I have not checked that up. We do very little business at Tecoma and I could not say whether that is true or not, but I imagine it is, for the reason I have given you. (2488) Q. Your opinion is that it is the same? A. That it is the same. * *

Salt Lake rate adjustments.

"Q. * * I understood you to testify upon this same subject before recess; that upon figures compiled by you some time ago it appeared that the rates out of Salt Lake City, on fourth-class, for 200 miles, were about $16 a ton as against $9 for Denver. Did I understand you correctly? A. I think $9 or $9.75, something like that; between $9 and $10 for Denver, and something over $15 for Salt Lake." Witness does business with Blackfoot, Idaho, Idaho Falls, American Falls, Soda Springs—all points on the Oregon Short Line. Witness knows that the rate from Salt Lake City to Blackfoot, Idaho, 195 miles, is 40 cents, (2489) on fourth class. To Idaho Falls, 220 miles, 50 cents; to American Falls, 194 miles, 40 cents; to Soda Springs, 192 miles, 42 cents. Witness does not recall the fourth class rate to Granger, Wyoming.

"Q. Don't you know that the rate to Bryan, which is the next station to Granger, on fourth-class, over the Union Pacific from Salt Lake, is 42 cents, a distance of 200 miles? A. Approximately there. The rates on the Oregon Short Line and the Union Pacific are very much less than on the other railroads. Q. Very much

less than on the other one? A. Yes. Q. You didn't mention that this morning. A. I wasn't asked to mention it. I said that I took six railroads—I think it was six railroads—running out of Salt Lake and six railroads out of Denver and six railroads out of Kansas City and those other towns that I used, and averaged the rate. That was my testimony. * * (2490) Q. So, it is true, then, that the rates on the Union Pacific and Oregon Short Line are very much lower than on the other lines from Salt Lake City? A. Yes, sir, very much lower.

Rates on O. S. L. and U. P. very much less than on other roads.

"Q. How about the Southern Pacific? A. The rates are not so low on the Southern Pacific. Q. Not so low as on the Union Pacific? A. Not so low as on the Short Line; I haven't compared them with the Union Pacific. I say, offhand, I wouldn't say the rates of the Southern Pacific are quite as low. Q. Would you say the fourth-class rate for a distance of 200 miles out of Salt Lake City on the Southern Pacific is 75 cents or 80 cents or anywhere near 75 cents or 80 cents? A. I am inclined to think it would be less than that on account of these new rates that have been published. Q. What do you mean by the new rates? A. Well, the rates have been published within the last two or three years, since that country opened up, up there. Q. You think they are considerably less than 75 cents, don't you? A. I wouldn't say. I would want to look that up. I don't know. Q. Do you still think it is a fair statement that the rates, at least so far as the Union Pacific and the Oregon Short Line and the Southern Pacific out of Salt Lake are concerned, are anywhere near $16 a ton? A. No, sir, it is not fair as to those roads; but we were talking about the general distributing rates out of Salt Lake. Q. Those are pretty important lines around here, aren't they? A. Pretty important. I am inclined to think, by saying that, that the jobbers of Salt Lake have always considered that the rates on the Oregon Short Line out of Salt Lake are fair and reasonable rates for a reasonable distance. We hardly think they are fair when you get a little way west of Pocatello, but up to Pocatello and in that country we think that the rates are very fair. Q. How far does that take you? A. It takes us up into that Idaho country there. Q. 250 miles? A. It is about 250 miles, around there."

Salt Lake jobbers consider O. S. L. rates fair and reasonable for reasonable distance.

Since 1906 the U. P., after the consolidation, published a tariff from Missouri River, and east into that point (Huntington), which made the rates practically common with Salt Lake. (2491) In order for the Salt Lake jobber to get into that territory, he had practically to absorb the local. Witness' competitor there is Missouri River, Denver and Chicago. The tariff referred to put the Salt Lake jobber on the Montana basis, that is to say, he was given the same rates as the Montana people had. "Q. And that resulted in a reduction, didn't it? A. It resulted in a reduction from the east, but it also resulted in a reduction to all this intermediate territory that we were doing business in. MR. SEVERANCE. That is, into that intermediate territory from the east? WITNESS. Yes." The

conversation with Eccles about the salt for sheep was at least ten years ago, probably more.

39 cent differential favor water and rail line.

(2492) Witness didn't mean the O. S. L. was buying and supplying the salt. "Our customers complained it was being distributed through the agents of the Oregon Short Line." There is a 39 cent differential in favor of the water and rail lines to Utah. It used to be 42 cents (first-class rate). (2493) Of the total 16,000 tons of traffic handled by witness, he should say probably a third is from the Atlantic seaboard, but couldn't state positively. In recent years, witness has used the Kanawha Despatch and the Missouri Pacific out of St. Louis. Prior to that he used the Mallory and Morgan lines largely by Galveston. Took up the use of the Kanawha Despatch about a year ago, because the service was bad around by the Gulf ports. Prior to that had been using the Gulf lines since about 1892 or 1893. At first, it moved via New Orleans, thence over the S. P. connection, Texas and Houston Central, by way of Denver. Never used the I. C. route via Chicago. None of it came through Kansas City.

Routes used by witness.

(2494) Also used the route at one time via the Mallory Line to Galveston, M. K. & T. to Junction City, and the U. P. to Salt Lake. Didn't use that route a great deal. That was during the railroad rate war days in the late 90's. From Denver witness used both the U. P. and the D. & R. G., but used the latter more. During the last year witness has moved Kanawha Despatch, C. & O., Missouri Pacific at St. Louis, D. & R. G. and Colorado Midland at Denver and Colorado Springs. Hasn't been using the U. P. during the last year. (2495) When this new route was adopted witness had a through car put on from Newport News to Salt Lake, called the Salt Lake car. Thinks that car comes into Salt Lake tri-weekly. On business all-rail from the Atlantic seaboard, witness usually used the Merchants' Despatch, the Chicago & N. W. and U. P.; occasionally Burlington out of Chicago. Witness' business on the east is solicited by other lines than the D. & R. G. and the U. P.—the Rock Island, the Burlington, C. & N. W., M. & St. P., and some of the eastern lines, the Pa., B. & O., the New York Central; all the lines located east of the Rockies.

Competition between S. P. and Rio Grande.

(2496) Prior to 1901, there was competition between the Southern Pacific and the Rio Grande on business that came into Utah via the Gulf ports. Witness thinks the natural ally of the Rio Grande at that time was the Mallory Line and the Santa Fe, and when they secured business, witness does not think they gave any of it to the Morgan Line. "They were in that respect competitors. Q. Wasn't the Southern Pacific in this position, then, just like every other eastern line—it was trying to get the business, and whenever it could get it, it would send it any way you wanted it, over either the Union Pacific or the Denver & Rio Grande? A. Yes, sir." That is the kind of competition the witness referred to between the U. P. and S. P. If the S. P. got the business, it got a haul by boat to New Orleans or Galveston, and then a haul as far

as some junction point in Texas, and its connections handled it beyond that. If the U. P. got it, their haul was from Denver. If the U. P. secured it from the M. K. & T., the haul was from Junction City, Kansas; if from the Kanawha Despatch, from the Missouri River gateways.

(2497) Witness couldn't state the divisions. The U. P.'s preferential water and rail route was the Kanawha Despatch. Witness' impression is at that time (prior to 1901), the Southern Pacific's preferential line west of Denver was the Rio Grande. (2498) The freight service of the U. P. from the Missouri River, in the matter of time, as compared with ten years ago, is not as good. Witness hasn't shipped his seaboard business that way during the last year, but has divided his middle west business. (2499) Witness' attention called to Chapter 1 of the Laws of 1897 of Utah. That Act was passed long before his conversation with Mr. Pierce, about which he has testified.

Prior to 1901, S. P.'s preferential route west of Denver was D. & R. G

(2499) JOSEPH A. WEST.

West.

Resides at Ogden, Utah. For forty years a civil engineer engaged mostly in building western railroads. (2500) Remembers making surveys southwest from Salt Lake about 1881. Made that survey for what was then known as the Utah Southern Railway Company—Salt Lake & Western, it was called. The survey went a long distance to the north of what was called the Meadow Valley Wash. It was made with reference to a route to be used for a through line to Los Angeles. It didn't reach what is now the line of the San Pedro road, at all, but went parallel with it 100 miles or so to the north. Made a subsequent survey in connection with Mr. J. Pearson Smith. The latter had charge of the line from Milford west, and witness went to Barstow and ran some lines through Death Valley, eastward from there. Mr. Smith's and witness' surveys met at Freiburg Pass, the point to which witness had run a line ten years before. That last survey was made in 1888, for the Utah Southern Railway Company. The Sharps were in charge of it.

Ogden. Civil Engineer.

Various railroad surveys in Utah and Nevada.

(2501) That survey ran north of the Meadow Valley Wash. It was a feasible line. The Utah & Pacific ran from Milford to Uvada, and witness surveyed that line for the Company, and became superintendent of it after it was built. Had charge of operation of the line until the Spring of 1900. Doesn't remember who had charge of the line from then on until Mr. Eccles sold it to the Short Line. At the time witness made his survey, to his knowledge, no survey had been made through the Meadow Valley Wash. At the time witness commenced the construction of the Utah & Pacific, portions of the grade were in very good condition. (2502) There were some places where the grade had not been connected up, and it required considerable work to repair it, and put it in proper condition for the rails.

(2503) Witness made three surveys, one in 1880 or 1881, another in 1888, and then the survey of the Eccles work in 1898. The first was made for the Salt Lake & Western, which didn't at the time own a railroad. The name was subsequently changed to Utah & Southern, and it afterwards became merged into the Oregon Short Line and Utah Northern. The survey in 1888 was made from Boulder Pass, a point on the north boundary of the Tintic Valley, 100 miles from Salt Lake City, and went westward into Central Nevada. Witness' instructions were to go through to California, but before completing the survey he was called back.

Various railroad surveys in Utah and Nevada.

(2504) The survey was about 250 or 300 miles in length. No railroad was ever built on that survey, except down through the Valley, where it followed it for a few miles, and then took up the line on the left. Ran several lines from Barstow, one down by what is called Owl Springs, and down into Death Valley, and a preferable one from Daggett eastward into Death Valley, farther south than the other line. No road was ever built, and no right of way maps ever filed to secure the right of way over those surveys. A line was built up to Amargosa from Daggett, on line surveyed by witness, into the mines up there, by another company. (2505) About 150 miles in length. It is the Burke-Smith road, and runs up through Bullfrog and Rhyolite to Goldfield. The distance from Barstow to Salt Lake by witness' line would be 800 or 900 miles in length, witness thought; nearer 900 miles. From Barstow to Los Angeles is 141 to 145 miles. The third survey, in 1898, was along a line already laid out. Witness didn't change that line. Only did the surveying for the purpose of filing maps in the general land office. (2506) Caliente is in this end of the Meadow Valley Wash. It would be feasible to build a road over the existing line and connect with the line that Mr. Smith surveyed from Milford at a point north of Pioche. The connection would probably be 400 or 500 miles from Salt Lake. To bear off to the north, and go over witness' survey and avoid the Wash, would make the route 150 miles longer. By the other route, which was surveyed from the summit of the Escalante range, going north of Pioche, the difference would be about 100 miles.

Kerr.

(2507) KENNETH KERR.

Salt Lake. Former railroad editor of Tribune.

Lives at Salt Lake City. For four months district passenger agent of the San Pedro at Salt Lake City. Previously commercial agent at Riverside, and prior to that traveling passenger agent. Employed by San Pedro since May 1, 1905. Previously a newspaper man in Salt Lake. (2508) Witness is railroad editor of the Salt Lake Tribune. Took latter position November 13, 1892. (2510-2512) Complainant's Exhibit 155, an article in Salt Lake Tribune of September 17, 1900, entitled "Gibbon has arrived—Vice-President of the Los Angeles Terminal gives details of the Salt Lake road, which is surely to be built, and at once." (2513-2514) Complainant's Exhibit 156, article from Salt Lake Tribune, September

19, 1900, entitled "R. C. Kerens arrives." (2515-2516) Complainant's Exhibit 157, article from Salt Lake Tribune, September 27, 1900, entitled "Confirmed by Clark." (2517-2520) Complainant's Exhibit 158, article from Salt Lake Tribune, October 3, 1900, entitled "Construction will be pushed."

Lawrence.

Salt Lake. Member Utah Senate.

Lives in Salt Lake City. An attorney at law. In 1901 a member of the Utah Senate, and Chairman of the Committee on County and Municipal Corporations. Witness recalls the introduction into the Legislature of the act which finally passed as amended, with the proviso, as chapter 49 of the laws of Utah for that year—1901.

San Pedro legislation.

"Q. State the circumstances under which that bill was introduced and the form in which it was introduced, if you know. A. The measure was originally introduced in the house and passed the house in the form in which the present measure is, down to the (2523) proviso, and came to the senate and was referred to the committee on railroads, and came out of that committee with a favorable report the day or second day following. I asked for recommitment to the committee on county and municipal corporations, as it was affecting municipalities, and it was recommitted to that committee, where the amendment was made." Arguments on the bill were made before witness' committee by Mr. T. E. Gibbon of Los Angeles, and others.

Mr. Gibbon said they were anxious to secure the passage of that measure, so they could get terminal facilities at Salt Lake; that some objection had been raised to a title that the council might give, and that he thought the citizens ought to co-operate in promoting the road, as it meant an independent line to California, in competition with the S. P. His arguments all were that it was an independent road, and meant a great deal for the City of Salt Lake and the people of Utah. (2524-2525) Several railroad statutes referred to as passed at the instance of the O. S. L. and U. P. Companies. The Pioneer block is still a public park. After the amendment in witness' Committee, the plan to use it as a terminal was practically abandoned.

(2525) JOSEPH OGLESBY.

Oglesby.

Salt Lake. Formerly connected with U. P. and Rock Island in traffic dept.

Since 1887 a resident of Salt Lake City. Prior to coming to Salt Lake employed by the O. V. Line—part of the Big Four now —at Indianapolis; also was with the Indianapolis & St. Louis at St. Louis. That is a part of the Big Four, too. With the Vandalia, with the L. & N. at Louisville; with the Kansas City, Fort Scott & Memphis at Kansas City; and from there witness came to Salt Lake with the O. S. L. (2526) In 1888 witness went with the Rock Island, and remained with them until July, 1907. Was with the U. P. from November, 1887, to July, 1888. While with the Union Pacific, witness didn't attempt to work the boat line from Portland to San Francisco, though he knew it existed. Witness

U. P. did not work Portland route.

didn't attempt to work San Francisco business from Salt Lake via Portland. That moved by the Central Pacific. The Southern Pacific had a separate agency in Salt Lake at the time witness came there. At that time the Union Pacific and Southern Pacific were both working for Atlantic seaboard business.

(2527) If the Rock Island secured business, they brought it to Pueblo and gave it to the D. & R. G., or took it to Denver and delivered it to the U. P. Witness worked with the Kanawha Despatch, the Mallory and the Morgan Lines. Worked both the gulf routes and the line by St. Louis or Chicago or Kansas City. Remembers the fast freight service that was on the U. P. before the merger. It lasted six or seven, or possibly eight months. The competition for wool shipments to the east from this region was very active. "Q. How did the Southern Pacific endeavor to move the wool that they could secure? A. The bulk of the wool on the line of our road moved by Sacramento, the Sunset Route and the Morgan Line." The U. P. took it straight east, and delivered it to its friendly connections, who had secured the wool by their own personal solicitation. (2528) Witness' interest was opposed to the Southern Pacific because the latter took it the other way. A good many methods were adopted to secure these wool shipments. "The principal one was that we were able to furnish a man to assist the wool buyer in this way: He would notify me at my office and say, 'I have some wool. If you can send a man to receive it, mark it, weigh it and load it, you can have it over your line.' I would send the man there. That was one of the methods. And there were other methods." The roads endeavored to get the sheep driven to their line, in order to get the business. There was considerable wool in this competitive territory where those methods were adopted. The Southern Pacific did not attempt to move cattle and sheep to the west. They cared only for the wool. The S. P. competed for the wool originating in territory north of its line and south of the O. S. L., the territory extending out possibly 125 miles.

Wool traffic.

(2529) Corinne is on the old line of the Central Pacific that runs north around Salt Lake. The traffic which the S. P. sought from the Atlantic seaboard was competed for by practically all the lines lying east and southeast from this territory, the Rock Island, the Burlington, the C. & M., the St. Paul, the Missouri Pacific, the lines east of the Missouri River and of the Mississippi River, east of Chicago, such as the New York Central and the Pennsylvania. All the lines leading direct to the Gulf and the lower Atlantic ports were trying to get it. (2530) Very little of this traffic came by way of Mobile. The principal gulf ports were New Orleans and Galveston. The S. P. would work the business into Salt Lake over the D. & R. G. or over the U. P. It would depend very largely on how large the shipper was, and how much influence he exerted. If he was a heavy shipper, he could dictate his own routing. There

Seaboard business.

were a good many other agents in Salt Lake, besides witness, and the S. P. agent and the agents of all those roads were trying to get a share of the haul.

(2530) FRED. D. ULMER.

Ulmer.

Salt Lake. Civil Engineer

A civil engineer residing at Salt Lake. From March, 1901, to March, 1902, was employed on the survey of the San Pedro road. (2531) Began work at Uvada, and went southwest toward Caliente for about 215 miles. At start saw nothing of surveying parties or other employes of the O. S. L. Later in the summer of 1901 saw a party at Kirnan's, and in November another party at same point. One party stopped over night going south. Another party was on what they called a joint survey. The joint survey, as witness understood it, was under a court order instructing the two lines to go through the contested points of the Meadow Valley Wash at 20.2 feet distance apart. Witness participated in it. This joint survey was made, witness thought, about the first of December, 1901. Witness was not present at any of the scraps between the contending parties. Up to the time he left the employ of the San Pedro road, the Short Line surveyors were still at work on the California end of the line, separate from his force.

Survey of San Pedro road.

(2532) As witness surveyed southwesterly from Uvada, he adopted almost absolutely the old line of railroad that existed on the ground. The only variation from the original line was of trifling importance, simply a question of distances. It was practically an adoption of the pre-established grade. He found a considerable amount of roadbed already in fair condition, some heavy embankments, and some very heavy cuts. (2533) Found tunnels that were timbered and lined. The old grade continued down to what is known as Clover Valley Junction, now Caliente. From there toward Pioche witness followed the old grade substantially. There were no tunnels; just cuts and fills, and some unfinished work. The greater part of the grade from Caliente to Pioche was unfinished. It existed in sections here and there. Witness had with him a copy of the blue print of the old surveys made ten years before by the O. S. L. (2534) Witness doesn't remember graded work southwest from Caliente. For the first fifteen miles out of Caliente, didn't follow the old survey, but then picked it up and followed it more or less, making revisions, the entire way to the California and Nevada line.

Practically adopted the old grade.

Found tunnels, heavy cuts, and roadbed in fair condition.

Had copy of old survey.

(2536) Witness' understanding of the court order was, in brief, that two separate rights of way of full width were to be located where they could, and in coming together where by the condition of the ground they were driven together, a line for each company was to be located with centers not nearer than 20.2 feet. (2537) The joint survey covered about 125 miles.

Court order as to joint survey.

SALT LAKE CITY, THURSDAY, APRIL 29, 1909, 10:30 A M.

Summerhays.

(2537) JOSEPH W. SUMMERHAYS.

Forestdale, Utah. Hides, wool, &c.

Resides at Forestdale, and his business is hides, wool, furs, plaster hair, etc. His principal market is in the eastern states. (2538) Handles 45,000,000 (?) pounds of hides and wool a year, in and out. Has been in business at Salt Lake since 1883. Has bought wool all over this inter-mountain country, Nevada, Idaho, Wyoming, and some—very little—in Montana. Before the merger his business was separately solicited by the U. P. and S. P. If the business was far enough west, ordinarily the S. P. would move it around by California, but witness understood that when the business was around Kelton and Terrace and Corinne, through that section of the country, they would bill the stuff west, and rebill it east without moving the car. They would get the advantage that way of the long haul, instead of the short haul, but they would send it east over the U. P. "Up to the time that the O. S. L. was built, all the wools in western Utah and Nevada along the S. P. were loaded there. We used to load wool principally in western Utah from Terrace, Tecoma, and Kelton, and after the Short Line was built there was an effort made to run the sheep over the Short Line to Kimama and Minidoka, and that got to be quite a shipping point."

Routing of wool traffic.

Hide shipments.

(2539) Hides were consolidated in Salt Lake, and then shipped east, putting 20,000 pounds in a 36 foot car. There were several ways of shipping hides. Witness had known some cars to go to San Francisco and be billed back, because the rate was less. Sometimes went east direct over the U. P. Didn't know whether any of it ever went over the Morgan Line, or not. Witness buys his plaster hair at Venecia, Cal. Formerly had commodity rates from Montana points to Salt Lake on hides, so he could assemble them at Salt Lake, but those rates are not in effect now. There are commodity rates from Montana to Los Angeles by the San Pedro. Witness' best recollection is that it is $2 on hides. (2540) Hence, Salt Lake now no longer gets any of the Montana hides. Going from Montana common points to Los Angeles at $2, and then the rate on to the Atlantic seaboard is $1.20. This gives the shippers two markets, the California and the eastern market. From Salt Lake to Los Angeles the rate is $1.20, L. C. L. Hides have to be baled going east, but not going over the San Pedro to Los Angeles. On wool originating on the Short Line there are no divisions between the O. S. L. and the D. & R. G., so that the traffic moves east over the U. P. Witness has no occasion to ship from points on the O. S. L. to points on the D. & R. G., and is not particularly inconvenienced by the fact that there is no rate that way.

Rates from Montana to Los Angeles.

Didn't know that no hides had ever moved from Montana to Los Angeles on the $2 commodity rate. (2541) Had no information on that subject. Only knew there had been an effort to get the business, but not whether any was secured. In the old days the hides shipped via the S. P. out of Salt Lake moved over the

O. S. L. to Ogden, and then over the S. P. Doesn't know whether they ever went by the Sunset route. Shortly after the merger, the rate on hides went up. Witness' recollection is that the rate from Salt Lake to the seaboard was $2.30. He found he could ship to San Francisco and pay the drayage there for about 97 cents, and ship thence to New York by water for 70 cents. He laid those facts before the railroad people, and they reduced the rate, making it the through rate from California, plus the rate from Salt Lake to California. This remained in effect until very recently. (2542) Witness' recollection was that the combination rate was $1.94, and was lately raised to $1.96. He is referring to dry hides. It would be inadvisable to ship green hides that way. They would spoil in transit. The basis of the rate from Utah to the east has always been the through rate from San Francisco, plus the rate from Salt Lake to San Francisco. Rates on hides.

(2543) In the past the railroads would give him any old kind of a rate. He could to-day ship wool from Modena to Boston in boxes for $2.38, and can ship the same stuff 80 miles nearer for $2.13. He can also ship hides to Los Angeles for 80 cents, bale it for 15 cents and ship it back for $1.10. The inconvenience is that he is out the time, but he saves $50 or $60 a car. (2544) "Now, if I am at Modena I ship my stuff to Los Angeles or to a certain place down there, and I ship it there for 80 cents a hundred, which is $160. It costs me $30 to bale it. Then I ship it back on a $1.10 rate, which is $220, making a total of $410, and I save $60 a car." The wool is carried to Los Angeles to be compressed. The railroad's agent did that for shippers. Witness hasn't personally shipped to Los Angeles. (2545) His competitors are doing it, and he can do it. Witness thinks the increase on hides just after the merger was from $1.94 to $2.30 or $2.36. Things tightened down after the merger. Witness meant by that, there had been little solicitation. The U. P. agent had been in witness' office twice this year, but not soliciting business at all. The Great Northern (Chicago & Great Western, see p. 2547) agent has been in a time or two. Formerly they would come in every day or so. All kinds of rates in the past. Change in solicitation.

(2546) Witness thought this change in solicitation occurred in 1901, not in 1906. The $1.20 rate to Los Angeles from Salt Lake cost witness 17 carloads of hides last year. The hide men appointed Mr. Runyon and witness a committee, and they waited on the Short Line officials, who, witness is satisfied, did everything they could to restore the $1.54 rate to Los Angeles. (2547) Witness thinks that the rate from Salt Lake to Los Angeles or San Francisco, less than carload lots, should be 75 per cent. of the rate from Salt Lake to the Missouri River, which would make the rate $1.54, instead of $1.20.

(2548) Witness finds it advantageous, instead of scattering his business, to give it to one man and let him look after it, and the agent of the Chicago Great Western has given him very good service. Things have gotten into a groove. Witness does his bus-

iness over the U. P., and, for instance, the Utah Live Stock Company, which is on the D. & R. G., do business over that line. Recently there has been more aggressive competition between those two roads. "Wherever there is a pool, why, you have got to put up with whatever they pool." Witness tried to take his business down to Pueblo, and thence over the Atchison, but the latter's agent said he couldn't take it. (2549) Witness thought the tightening up occurred, not in 1901, but a little later, when the U. P. and S. P. agencies were consolidated. Whatever the rate to the seaboard is over the U. P., it is always the same over the D. & R. G., so the rate was not made by the U. P. and S. P. alone. It was also made by the D. & R. G. Witness doesn't think the merger was to blame. Thinks "the whole push needs renovating, if you will permit that expression."

Attributes changed conditions to merger.

(2550) Witness attributed the changed condition to the merger. The D. & R. G., so far as westbound business is concerned, never had much to say about it, except to acquiesce in whatever pool was made. The bulk of witness' business, however, goes east. 85 per cent. goes east. None of this 85 per cent. goes by way of San Francisco to the east. (2551) Witness ships entirely by the U. P. The U. P. and O. S. L. can give as good, in fact, better service than the D. & R. G., and when witness orders a car he gets it immediately from the Short Line, but it takes four or five days to get it from the D. & R. G. In answer to question that there is no reason why the D. & R. G., with its connections, shouldn't make any rate it sees proper to the east, witness said: "There must be some reason, because they don't do it." (2552) Witness has to wait for a car over the D. & R. G., because he is located on the tracks of the O. S. L., and the former road takes a car out to the Salt Lake Transfer, and the latter apparently leave it there; delay in switching it.

For past few years solicitors of eastern lines have not darkened his door.

(2553) For the last three or four years, or may be five or six years, solicitors of the eastern lines have never darkened witness' doors. (2554) Doesn't remember seeing the solicitors of the connections of the D. & R. G. at Denver and Pueblo, such lines as the Rock Island and the Missouri Pacific. In shipping wool from the main line points of the Union Pacific and points on the O. S. L., witness couldn't get his bills of lading. For instance, the local agent at Evanston said he would have to telegraph to Salt Lake for the routing, and at another time, for example, witness got his bills of lading at Salt Lake for stuff that he had shipped from Fossil. Witness understood that the routing was made over the line from which the car came. For instance, if it was a Chicago & Northwestern car, over that route. Similarly with the Rock Island and Burlington. The cessation of solicitation apparently arose from a general understanding that each road would get its share. The most active man out here that witness knew was Mr. Curtice, of the Nickle Plate.

Difficulty in getting bills of lading at certain points.

(2555) Prior to 1901 shippers could get anything they wanted, and send wool any way they wanted. Witness has seen rates down

to less than $1.50 a hundred. Since 1901 he has shipped some wool rail and lake at the reduced rate, which is five cents off, and when the bill of lading came back, it would show the shipment had gone all-rail, and witness has put in his claim, as per contract, and been granted the amount claimed. Witness thought the merger had had far-reaching consequences, affecting the D. & R. G., the Burlington, Missouri Pacific, and all the lines. They all, gradually following out this process of "evolution," retired from the field. Witness' testimony about shipments from Corinne, Kelton and Terrace being billed to San Francisco and then again east, applied only to wool. (2556) He doesn't know, but thinks the car was billed that way, but was not actually taken to San Francisco. That was along in the 80's. The wool witness has bought lately has gone direct from point of origin to Ogden, and thence over the U. P. Conditions prior to 1901.

(2557) That is the wool which witness referred to as in competition between the U. P. and S. P. That was the only wool in competition between them, so far as witness knew. The hides were assembled at Salt Lake and baled and shipped east, either over the U. P., or, if the cars could be obtained, over the D. & R. G.; or, if witness shipped the hides to Portland, they would go over the Short Line and Navigation Company. He has shipped hides to Portland. Hides assembled at Salt Lake.

(2558) The conversation witness testified to with Mr. Warren, of the Atchison, was an inquiry as to whether he could not make the same rate to San Francisco around by the D. & R. G., that he got over the O. S. L. and S. P. The route witness had in mind was by the D. & R. G., and then down south to a connection with the Santa Fe. West-bound business from Utah common points takes 75 per cent. of the Missouri River rate.

(2559) It would not straighten the matter out, to reduce the rate from the Missouri River to Utah common points so as to make it one and one-third times the $1.20 rate to Los Angeles, because, as Mr. Plaisted of the U. P. had remarked to witness, it would do no good for the U. P. to reduce the Missouri River rate, because the San Pedro people would reduce their rate. Witness thought the argument unanswerable. (2560) Witness thought the San Pedro people had perpetrated a bit of sharp business on the other lines. The San Pedro said: "Why, the rate on green hides is $1.17. On dry hides is $2.54. Green hides weigh heavier. Now, let's give them a blanket rate of $1.20." As a matter of fact, there are no green hides, because they cannot ship them less than carload, but by this arrangement the San Pedro got 35 cents off their dry hides. The hides that go to Los Angeles are not all shipped east. The men that do business in Los Angeles have two markets, the California market and the eastern market. That is the disadvantage the witness is at. The hides may be shipped from Los Angeles either over the U. P., the S. P., or the Atchison. Sharp business of the San Pedro.

(2561) The rate from Salt Lake has been 75 per cent. of the Missouri River rate as long as witness can remember. He has been in business nearly thirty years and cannot remember how long, but Salt Lake rates.

that has been the basis. "Whatever the Missouri River rate was, why, 75 per cent. of that would be the rate—except when we would get a cut." (2562) The rate from Salt Lake to Boston on wool is $2.13. The $1.20 rate to Los Angeles has nothing to do with wool. It applies only to hides. There is no similar rate on wool from Salt Lake, but down the line there is. The wool rate from points south of Tooele is 80 cents to Los Angeles, 15 cents to bale, and $1.10 back to Boston, a total of $2.05. The $2.13 rate from Salt Lake direct to Boston applies to bagged wool. The rate on wool from Los Angeles applies to baled wool, which takes a lower rate. (2563) Witness doesn't think there is any rate on baled wool from Salt Lake to Boston. It is all shipped from Salt Lake in bags.

Kearns.

(2564) THOMAS KEARNS.

Salt Lake. Promoter of San Pedro road.

Has lived in Salt Lake City twelve years. Was interested in the San Pedro road with Senator Clark and his associates. (2565) When the road was projected by Senator Clark and his associates, it was his intention to build it as an independent line. Witness negotiated for the purchase with some people in Salt Lake, for the profiles of the road that had been run before by them, and was subsequently authorized to purchase those maps and profiles. They began at Salt Lake City and ran southwesterly toward Los Angeles. Engineers were immediately put to work to run a profile through.

Genesis of San Pedro road.

(2566) Witness thought the engineers began work at Los Angeles first. Sometime afterwards witness learned that the O. S. L. had concluded to build a line of road to Los Angeles. Witness couldn't say whether the O. S. L. up to that time had made any move to build a line to Los Angeles. Witness' line hadn't conflicted with them at that time. Witness couldn't say whether the Oregon Short Line was working in the field at that time. Doesn't know anything about that. If they had any such intention, he didn't know of it. Witness' predecessors owned a small line from San Pedro Harbor into Los Angeles, which was amalgamated into this system, and they built from there to some point in near Vegas, and afterwards started construction jointly from this end; he thought down from Caliente to where they joined. Witness' company before the O. S. L. joined hands, was building a line from Riverside to Los Angeles. (2567) Previous to the amalgamation of San Pedro interests, witness had run a survey across the desert. Witness once went down to Caliente, which was then the end of the rails, and at that time both the O. S. L. and the San Pedro people had gangs of men at work there building a railroad. Considerable grading had been done by each.

Conflict with O. S. L.

(2568) The two gangs continued at work there until after the decision of the court in Nevada, and the ruling of the Interior Department in regard to the right of way. The Land Office's

Negotiations for settlement.

decision was adverse to witness' interests. Witness was present on one occasion when the negotiations were under way for a settle-

ment of their difficulties. The negotiations that culminated in the contract between Senator Clark and Mr. Harriman extended over a number of months.

"When the first negotiations were opened, I approached Mr. Clark myself to urge him to make those terms after the decision of the Department was against us and we didn't have that right-of-way; and of course then there were many conferences between the owners and their attorneys on different occasions and at different places. (2569) Q. What was Senator Clark's attitude when you approached him and urged him to make the deal? A. He was not at all anxious at that time. * * * He said he wanted to go along a while yet. I told him that he had a good deal more money than his associates, or at least I thought he had, and there was no room in there for two roads, and from a financial standpoint I would like to see one successful road, and I urged him to open negotiations through his solicitors, to see what terms could be made. We were in that box canyon and there was no way out of it except by an air-ship. This other line was some two hundred miles longer—it was not practicable. From a financial standpoint it didn't appear to me that there was anything left to be done, only to put one—— Q. You felt satisfied, did you, that if two lines were built through to Los Angeles, they could not be financially successful? A. I didn't care to put any more of my finances into it—my small pile." Witness knew that two lines paralleling each other to Los Angeles could not be a success financially. There was not a lot of track that was taken into that deal from the Short Line, which was not necessary or even desirable to the San Pedro road for the purpose for which it was organized. Witness wanted to take in a little more.

No room for two roads.

No more of his finances in it.

(2570) He would have liked to take in from Sandy into Salt Lake City, and part of the switches into the main depot here, which he understood the O. S. L. controlled. He felt it was a good thing for the San Pedro to acquire all the track that it did acquire from the Southern Utah, "and a little more; everything south of Salt Lake City." The road that was taken over was not a first-class road, but was "a fair western road." A lot of it was rebuilt, and some of the grades need rebuilding yet. Heavier rails were put down. The road was strengthened and the fills widened. Witness' projected line to Los Angeles was that of a first-class road. They finally built a high-class road. At least, they thought they did.

Finally built a first-class road.

(2571) The contract between Mr. Harriman and Senator Clark was prepared by Mr. Gibbon and others. The profiles for which witness negotiated were made for the Utah & California Railroad Company. It was a company organized to construct a railroad upon the old O. S. L. grade from Milford westward. The maps and profiles which witness secured extended westerly from about the state line, through and into Nevada as far as what was then known as Clover Valley Junction, and covered a partially completed grade extending from there up towards Pioche. The maps

Secured profiles and maps of old Utah and California road.

and profiles for which witness negotiated relate to that old line built by the Short Line, as far as it was built, about 1890, and embraced the tunnels and cuts and fills down to what is now known as Caliente.

(2572) The purpose was to examine that line, and if it was approved, to secure it and build on it. One of the lines of survey ran direct to the upper end of Meadow Valley Wash and down by Pioche to or near Clover Valley Junction. The line actually constructed by the San Pedro Company is shorter than that line. On the other line the grades were higher and the distance longer; heavy construction work. (2573) Witness' company was advised that, as a matter of law, his company could adopt the surveys of the Utah & California Company, and could appropriate that line to the purposes of the new company. The right of way and privilege to run through between Uvada and Caliente were regarded by witness as of substantial value. The attempt to secure that old right of way resulted in a controversy with the O. S. L. In April, 1901, the Department of the Interior decided in favor of the O. S. L. At the time of the decision, the O. S. L. were constructing a railroad from Uvada toward Caliente on the old grade. At the time of the decisions, the relation of the men on the ground had become strained.

Was advised they could appropriate old grade.

Dept. of Interior decided in favor of O. S. L.

(2574) Thereupon, the matter was taken into court. At the time witness went down to the end of the line, he went on an O. S. L. train to the end of the track at Caliente. Witness' company had made a preliminary survey of a line extending from Caliente up towards Pioche, and from there to Salt Lake. That is the line he speaks of as the longer line. It connected with witness' projected line extending across Nevada from Caliente. The San Pedro Company was not in existence at the time witness negotiated for the maps, profiles and surveys. It was not incorporated until after March 21, 1901. Witness couldn't fix the date. (2575) The Los Angeles Terminal Railroad Company extended from San Pedro on the bay, through Long Beach, up to Los Angeles, with a line extending out to Pasadena, and a branch line extending from that line up through Glendale to Verdugo. It has not commenced the construction of a line from Los Angeles towards Riverside until about the time of the incorporation of the San Pedro Company. The purpose of the owners of the Terminal Company was to organize the San Pedro, and afterwards secure right of way and construct a line, but that California construction had not commenced until about the end of March or first of April, 1901. The decision in favor of the O. S. L. had considerable influence on witness and his associates. "Q. Will you just state why the loss of that line influenced you to take the steps which you say you took with Senator Clark? A. Well, we considered it was the only practicable line out of the canyon. We were led to believe, through our solicitors and other influences, that of course we could get possession of that right-of-way, and the decision rendered prospective two lines being

Los Angeles Terminal Co.

built. I had considerable money for a man of my means invested in it, and I knew the only thing to do was to consolidate and build one line. * * * Q. You felt that two lines through there would be not only expensive to construct but also to maintain and operate? A. Well, I didn't want it with my money. Q. Thereupon you began considering with your associates, including Senator Clark, the expediency of making some sort of an arrangement by which one line should go through there? A. Yes, sir."

The only thing to do was to consolidate and build one line.

(2576) At the time of the controversy, witness had become satisfied that the O. S. L. intended to build its line through. It already had a line 326 miles clear to Caliente on the way to Los Angeles, and witness was satisfied they intended to build the remaining 580 or 590 miles. Doesn't think anybody on either side was anxious to build two lines through the canyon. The canyon extended about 125 miles southwesterly from Caliente. (2577) As to what lines could be put through there, witness could not state, but he didn't think more than one would pay the fixed charges.

Witness was satisfied the O. S. L. intended to build its line through.

(2577) JOSEPH OGLESBY—Recalled.

Oglesby.

The fast freight trains of the U. P. from Council Bluffs to Ogden ran about eight months. That was about 1897. His understanding is that it was a 54 hour train. (2578) He had no recollection of a 32 hour freight train. Before that eight months period, the fast freight trains took about 75 or 80 hours. Witness has been out of the business two years and then the trains didn't take as much as 100 hours.

(2579) CHARLES D. MOORE.

Moore.

A civil engineer, for seventeen years residing in Salt Lake. Locating engineer of the San Pedro road. (2580) He first began work for the San Pedro at the state line, and worked south through Meadow Valley Wash. Began at Uvada and worked through the canyons, Meadow Valley Wash, and toward the California state line. Then returned to Salt Lake, and conducted a series of surveys from there to Modena and the state line. Those surveys connected up with the survey from Uvada down practically to Modena. Modena is 276 miles from Salt Lake. A portion of the way there was only one line. Farther on there were two or three experimental lines. Doesn't think any line was ever adopted from Salt Lake. Finished the surveys from Salt Lake to Modena the latter part of 1901. There were also surveying parties in the field, working this way from California when witness went on the road in 1901.

Salt Lake. Civil Engineer.

Surveyed San Pedro road.

(2581) They connected with the surveys made by witness, so that a line was surveyed through and the survey finished in the winter or spring of 1902. Witness located some of the line on right of way that Senator Clark had bought at tax sale. There had been some grading where that was located, from Uvada to Caliente.

through what is known as Clover Valley Wash. There had not been any track laid on that portion of the grade. Track had been laid from Milford down very near Uvada, and a little past there. The construction parties of the O. S. L. were at work below Uvada very soon after witness got there. The grading outfits of the Clark and O. S. L. people arrived there about together. (2582) The O. S. L. were pushing their track forward, and witness was doing what he could to prevent their coming on and was gradually falling back until the track reached Caliente. Witness' graders were working farther down on new work. It was merely a question of resisting this invasion on the upper end. Barricades were put in, tunnels and wire fences erected, and they were taken down and the track moved on. There was some gun play, but no one was hurt. Witness didn't think it was intended to hurt. Both parties were mixed up in it. The sheriffs of the two states were at Uvada, and witness also thought the county attorneys. The trouble lasted a couple of months. Joseph Young was in command of the O. S. L. forces.

Controversy between O. S. L. and San Pedro forces.

(2583) Witness' work was mostly ahead of all this trouble, projecting new lines down the Meadow Valley Wash. He had one party on the Pioche Branch and two parties farther down the canyon. A truce was arranged, and witness received instructions to go on jointly and locate a line under conditions fixed in an order from Carson City. The old surveys crossed and re-crossed a good many times, but the joint survey was at no point nearer than twenty feet from center to center, and didn't cross. There had been independent surveys made, which had crossed each other about 26 times. The two lines under the joint survey were feasible, but very expensive. The single line finally located did not follow in whole either one of these two routes. "Q. Did it follow any original survey that had been made? A. It followed the original survey in a general way, but there were points where a double track necessitated very heavy work which we corrected to reduce that work as over the joint survey." The Meadow Valley Wash is 110 miles long. Witness relocated some portions of the lines that were taken over from the O. S. L. Probably about 75 miles, all told, was rebuilt. All those changes were between Salt Lake and Uvada. It is 296 miles between those points. That amount had been relocated at the time witness left the employ of the road. The rails were relaid and the bank widened. The physical condition of the road was very good, but the rails were lighter than those witness was using. 75 pound rails were substituted for 52 pound rails.

Joint survey.

(2585) It was originally ballasted with the natural earth, and reballasted with rock. The maps witness was furnished with when he went to work embraced a line which was already graded, and the cuts and fills and tunnels practically completed down to Caliente. It also embraced a partially completed line of roadbed from Caliente toward Pioche. (2586) Witness picked up the line on the old

There was a completed roadbed to Caliente, and a partially completed one to Pioche.

grades and ran them out. Checked up the work as he termed it. Witness and his men didn't stay out there very long around Uvada, but proceeded to the front. The Short Line people arrived there with the construction material before witness got there. The O. S. L. found some obstructions in their way, several barbed wire fence barricades, and cuts filled with rocks and boulders, etc. Part of these obstructions were removed by witness' people, acting under their attorney's advice, and the rest were pushed out of the way by the O. S. L. people. There wasn't anything very serious happened up there. The obstruction work ceased about the time the injunction was served in Carson. There was a nominal resistance up to that time, and afterwards everything was peaceable.

(2587) The entire Wash is 110 miles long, but it is not quite that far from Caliente. The track, however, between Caliente and Uvada is not in the Meadow Valley Wash, but in the Clover Valley. Witness then surveyed on towards Los Angeles until he met a party coming up from there, something like a year later. The line witness surveyed between here and Modena is about the same distance as the present line, namely, 276 miles. There was a reconnoissance made for a line extending from Salt Lake to Caliente via Pioche, which was 12 miles shorter, but there was a greater rise and fall in grade, but no tunnels; a maximum of one per cent.

(2588) Commenced work on the joint survey about September or October, 1901. It commenced very soon after the injunction. The joint work continued some eight months. The instructions were that where practicable the line should diverge so as to give each company its full right of way under the Act of 1875, but most of the way the lines converged pretty closely. It was a close proposition to get the two lines through at all and take care of the water. Witness hardly thinks it would have been practicable to take care of the water with two lines. Hardly thinks it is practical to carry the water with one line. The whole canyon is a bad proposition. Although he made the joint survey which he pronounced feasible, it was not one which he would care to recommend. Since the O. S. L. took the property over, a change of about 11 miles was made in the line east or northeast of Modena, to avoid some heavy grades and get a better line.

Not practicable to take care of water with two lines. Canyon a bad proposition.

(2589) Then there was another one near Goss. Thinks changes were made to better grades, not to better alignment. That change was about four miles, and another one of six or seven miles at the Severer River. That covers all that was reconstructed, but not all the changes that were made. (2590-2593) Table of stations from Salt Lake to Los Angeles, showing distances.

(2593) WILLIAM W. RITER.

Riter.

President of the Deseret Savings Bank, at Salt Lake City. Built about 13 miles of the road out west that was formerly called the Utah Western. (2594) It ran from Salt Lake to a place called Terminus. It is not in existence now. Also built the Salt Lake &

Salt Lake. Barker. Built certain Utah railroads.

Western, running from Lehigh Junction, 29 miles south of Salt Lake City, to Tintic, a distance of 54 miles. Surveys were commenced in 1880. The road was finally merged into the Oregon Short Line. The other road from Salt Lake to Terminus belonged to the U. P., and they turned it into the O. S. L. on the consolidation of the interests out here, and it was still in the possession of the O. S. L. when witness quit the service. It was a small, narrow gauge road, and its principal value was in its right of way. The San Pedro Company used part of the right of way. The road from Salt Lake to Milford, when witness was on it, was pretty poor. His recollection was that the first 22 miles had been laid with new steel, and the rest of it was rail of different weight. It was not uniform. It was the average rail in those days, but would be considered very light now.

(2595) The grades were easy. Very little cut was necessary. The Salt Lake & Western had an independent organization, but belonged to the U. P. Witness doesn't remember that it was publicly announced by Senator Clark and his associates that they were about to enter upon the construction of what is now the San Pedro. Perhaps he read a newspaper account, but paid no attention to it. Left the railroad service in 1891.

McDonald.

(2595) JAMES G. McDONALD.

Salt Lake. Manufacturer of chocolate.

For 25 years a manufacturer of chocolate in Salt Lake. Raw material comes from South America, via New York. (2596) Has been importing via New York about one year. Previously had bought the finished product from Milton, Mass., which was shipped to Salt Lake all-rail. The last year has been shipping cocoa beans from the east. They move Morgan, Kanawha Despatch, Union Pacific, Missouri Pacific, different lines. Prior to 1901 witness' imports from the east consisted of the finished product, confectionery. He has done a wholesale confectionery business for 25 years. Ships to California, Oregon, Washington and Colorado, all the western states. His business was formerly solicited by both the U. P. and S. P. Rate to San Francisco on manufactured product is $1.61.

Salt Lake rates.

(2597) The rate from San Francisco to Salt Lake on the same product is 90 cents. Rate on raw material from the east, all-rail, is $2.26; water and rail, $2.03. The through rate to the coast is 85 cents. Manufacturers on the coast would, therefore, pay 85 cents for their raw material, and 90 cents on shipping their finished product back to Salt Lake, a total of $1.75, while witness paid $2.03 water and rail to Salt Lake on raw material, and $1.61 more to San Francisco. Gets his pasteboard boxes from Detroit, Chicago, New York, different points. Isn't posted as to rates, but knows these boxes move to San Francisco or Los Angeles, and then back to Salt Lake. They move over the U. P. and O. S. L., and also the San Pedro. From Detroit shipments move through to Los Angeles, and then back to Salt Lake. The reason for that is to obtain a lower rate. (2598) The rates make it impossible for the witness

to reach out. In fact, almost impossible to do business. They can get the raw material to San Francisco, and ship the finished product to Salt Lake for less than witness can get the raw material to Salt Lake, about 54 cents a hundred less. The cocoa that is shipped to San Francisco moves all-rail, as a rule. The chocolate that witness buys in Massachusetts will not stand water, so there is no water competition on that product. Walter Baker always insisted on a release when his goods were shipped by water, as he declined responsibility.

(2599) The finished product which witness purchased from Walter Baker & Co. moved to San Francisco all-rail for $1.25 a hundred. For a number of years witness has been shipping that product to San Francisco and back to Salt Lake, saving $1.05 a hundred. Walter Baker always allowed $1.05 where the goods were consigned to his San Francisco agent. The rate to Salt Lake direct is $2.30. A reduced rate has just been put in of $1.85 on the finished product, but the rate on beans remains the same. The 90 cent rate on chocolates from San Francisco to Utah may have been put in at the request of the Utah Candy Manufacturers—Sweet and others. Witness imagines, however, that it was put in on account of competition here. "Q. What competition? A. The competition of ourselves." The same rate, however, applies to cocoa "and those people don't handle cocoa." (2600) The chocolate supply, witness understood, had not been coming from San Francisco, but from Massachusetts. Salt Lake rates.

(2601) The high rate to Salt Lake, witness understood, is due to the difficulty in reference to the publication of tariffs. It was formerly provided, in effect, that a rate to an interior point should not exceed the through rate to the coast, plus the local back to the interior point. The Interstate Commerce Commission has ruled that rates could not be published that way any more, but that each tariff would have to show just what the rate was. Before the merger, the S. P. tried to get its business into Salt Lake either over the U. P. or the D. & R. G., bringing it by the Morgan Line to New Orleans or Galveston.

(2602) STEPHEN H. LOVE—Recalled. Love.

Complainant's Exhibit 159, Statement showing the rates for 106 miles out of Salt Lake as compared with those 109 miles out of Denver, the former being 39 and the latter 26 cents a hundred. (2603) Complainant's Exhibit 160 shows the rate on a number of commodities in the fourth class out of Salt Lake, as compared with Denver. The table as originally prepared shows on page 2605 that the average rate per ton out of Salt Lake was $16.55 and the average rate per ton out of Denver was $11.00. A pen has been run through these figures and opposite them in red ink appears $13.24 as the average rate per ton out of Salt Lake and $8.80 as the average rate per ton out of Denver. Under these

figures the following statement in red appears. "The figures in red are correct. S. H. Love."

(2606) "Q. I will ask you if Exhibit 160 is a copy of the statement which you said you had prepared sometime ago? A. It is not exactly a copy of the statement, because I do not recall exactly the commodities that I used." The tariffs used in preparing this statement were the regular published tariffs.

"Cross-examination by Mr. LOVETT: Q. In Complainant's Exhibit 160, the last one about which you testified, as I understand you selected various points. What governed in the selection of those points, Mr. Love? A. I tried to get 200 miles out of Salt Lake and 200 miles out of Denver. Q. Did you take on every line the nearest station 200 miles in distance. A. We tried to average up the mileage, so the total mileage would aggregate about 200 miles. Q. My question is whether in dealing with Salt Lake you took every line out of Salt Lake and selected in every instance the station nearest 200 miles from Salt Lake? A. No, I didn't do that. I tried to average it up so as to make a fair average. Q. But if you are going to prepare a statement showing rates for 200 miles—— A. Well, you can't get exactly 200 miles. Q. But you can get the nearest station to 200 miles distant, can't you? A. I think it would average up the nearest station to 200 miles. Q. I am not speaking about the average. That is just the question I raise—the average that you made. What I want to know is whether you took the station nearest the 200-mile point? A. What I mean by that, Judge, is this—— Q. I am talking about one statement and you are talking about another. I am speaking now about Exhibit 160. Let's stick to that until we finish. Now, the question is whether, in preparing Exhibit 160 and selecting the points out of Salt Lake and out of Denver, respectively, you took every line of railroad, for instance, leading out of Salt Lake and selected on that line the station exactly 200 miles or nearest 200 miles (if not exactly 200 miles) from Salt Lake, in every instance? (2607) A. No, I didn't do that. Q. You selected some other station? A. I tried to average it up so that it would make the mileage balance in both cases as nearly as possible. Q. You did the same thing with reference to Exhibit 159, didn't you. A. Yes, sir.

Salt Lake rate adjustments.

"Q. When you were on the stand yesterday, after lunch, when you brought in the statement that was prepared during the noon recess, and when you say I raised some question about the selection of Ogden instead of Salt Lake for comparison on the Southern Pacific, and I asked you why you took Ogden instead of Salt Lake, you testified that it was because you didn't have the tariff of Salt Lake, didn't you? A. I said in the hurry I couldn't find them, and you asked me whether or not I didn't have all the tariffs here. I said that I had if I had time to look thoroughly for them, but I had very short time to prepare the statement. Q. But the reason you gave for selecting Ogden in that case instead of Salt Lake City was that in the hurry you could not find the tariff from Salt Lake. Is

that true? A. That was true. Q. Now, Mr. Love, don't you know that the rate from Salt Lake to Tecoma, which is the point you selected on the Southern Pacific, is shown in the same tariff and on the same page as the rate from Ogden to Tecoma, which you took? A. The rates which I have were some paper rates that were gotten out some time ago, when the line was first opened out there, and I got the figures myself from the Oregon Short Line office, and that was the only tariff I had in my office at the time. I had to go and get the tariffs to-day in the Bureau office. Q. Is that the tariff you took in making the statement you brought in yesterday? A. Yes. I used some pencil rates—the only thing I had in my office at the time. Q. Then you did not use a tariff at all—you used a memorandum? A. It is a tariff. It is a copy of the tariff. It is authentic. Q. Who made it? A. I did myself. I copied it from some figures. Q. Isn't it a little singular that you would make on your own memorandum the rate from Ogden to Tecoma and not the rate from Salt Lake to Tecoma? A. Why, no; I knew the rate. They had some rates published; the rates used to be published from Ogden and not from Salt Lake.

Salt Lake rate adjustments.

"Q. If you knew the rate, why didn't you put it down on the statement yesterday—the rate from Salt Lake instead of the rate from Ogden? (2608) A. Well, I gave you my reasons for it, and the result is exactly the same as I told Mr. Plaisted yesterday when I got through. That wouldn't change the result. Q. I am not speaking of the result; I am speaking of the fact—that you brought in here, in response to a request for a statement of the rates from Salt Lake, a statement of the rates from Ogden, and you gave as a reason that you couldn't find the tariff from Salt Lake to Tecoma. Now, if I understand your statement, you say that you made your statement yesterday from some pencil memorandum that you had? A. Well, it is a copy of the tariff that I made myself, or a copy of the rates that I got from the Oregon Short Line Railroad some time ago. Q. And you say it is not singular that you should have made this pencil memorandum of the rate from Ogden to Tecoma but not from Salt Lake to Tecoma, when you do business at Salt Lake? A. The rates from Ogden and Salt Lake are exactly the same to these points.

"Q. Why didn't you say that in your statement yesterday? A. I did say that in answer to your question. Q. Why didn't you bring in a statement that showed the rates from Salt Lake when you were asked for the rates from Salt Lake and not from Ogden? A. Because we always regard Salt Lake and Ogden as common, and we never differentiate between them. When we say rates out of Salt Lake or Ogden, a traffic man knows the rates are the same. Q. And yet you brought in yesterday a statement of rates from Ogden to Tecoma and gave as a reason for that, instead of bringing in a statement of rates from Salt Lake to Tecoma, that you didn't have a tariff and you didn't know what the rate was? A. Another reason was that the mileage was shown. I had to get the mileage

from the Guide. The mileage is not shown in the tariff, and the mileage out of Ogden was taken from the Railway Guide. Q. You brought in a statement that showed a 59-cent rate for 113 miles out of Ogden, whereas, if you had brought in what you were asked to bring in, you have shown a rate of 59 cents for 150 miles out of Salt Lake. A. Well, the rate from Salt Lake to a point 100 miles, there is little difference in the two rates."

Salt Lake rate adjustment.

Complainant's Exhibit 159 shows that over the Oregon Short Line from Salt Lake to Cornish, a distance of 99 miles, the 4th class rate is 26 cents; (2609) and that on the Colorado & Southern from Denver to Greeley. exactly the same number of miles, 99, the rate is 15 cents. Those are the actual rates and the actual mileage, according to the tariffs and according to the Guide. So that the Short Line charges witness 26 cents for the same haul that the Colorado & Southern makes out of Denver on the same class for 15 cents. This exhibit also shows that the Union Pacific rate from Salt Lake to Wahsatch, which is a station on the Union Pacific—of course a combined rate—the Short Line and the Union Pacific—they charge witness 30 cents for 113 miles; the Chicago. Burlington & Quincy from Denver to Akron, 112 miles (one mile shorter) only charge 25 cents; and the Union Pacific itself for 115 miles from Denver to Hugo, Colorado, that is two miles longer than from Salt Lake to Wahsatch, charge 22 cents. or 8 cents less than the rate to Wahsatch, which is two miles shorter out of Salt Lake. This exhibit also shows that the rate from Salt Lake to Newfoundland, on the Southern Pacific, for 112 miles. is 45 cents; that the rate on the Chicago, Burlington & Quincy from Denver to Akron. 112 miles, is 25 cents. In each case that is actual mileage and actual tariff rate according to the tariff and according to the Railway Guide.

Out of Salt Lake for the points on Exhibit 160, 200 miles, those rates averaged $16.55—82½ cents a hundred. "Q. * * * I would like to see how you make your calculation on that. (Handing witness a piece of paper.) The first, I say, from Salt Lake to Green River runs all the way through at 75; from Salt Lake to Milford runs all the way through at 62; Salt Lake to Wells, Nevada, all the way through at 73; Salt Lake to American Falls, Idaho, all the way through at 40, and Salt Lake to Curries, Nevada, all the way through at 81. What does that average? A. $16.05. Q. The average per hundred? A. Oh, the average per hundred? Q. That is the way you averaged it, isn't it? A. Yes. 66 cents. Q. Averages 66 cents? A. A little over 66. Q. Well, how do you get an average of over 80 cents in this statement Exhibit 160? A. Have you given me all the figures there are in the statement? Q. I have given you all the figures, as I understand it. A. (After looking at the exhibit.) It looks like there is a mistake there. Q. There is a mistake in your statement? A. It appears that way. Q. And according to the average now, instead of being over 80, you said it is 66 cents a hundred? A. Yes. There appears to be a mistake there, Judge. Q. And it is not even 66, is it? It is 65 1-5, isn't it?

"There appears to be a mistake there, Judge."

A. Approximately. Q. How much is that a ton—65 1-5 a hundred? A. I think you will find a difference in the others, too. Q. Well, let's deal with this one first. How much is 65 1-5 a hundred? A. Well, it is over 12 dollars and something. Mr. SEVERANCE. It figures $13.40. Mr. LOVETT. You and your witness don't agree; he says 12 dollars and something. Q. 65 1-5 a hundred is how much a ton? A. A little over $13. Mr. SEVERANCE. I gave it to you straight. Mr. LOVETT. Yes; you were better than the witness. Q. Then, according to your present calculation your statement Exhibit 160 is wrong by over 20 cents a hundred, isn't it? A. Yes; unless the stenographer has made a mistake in copying these figures off.

Exhibit 160 is wrong.

"Q. Then another question. I notice on that statement that in comparing on the Southern Pacific you take Curries, Nevada. Where is Curries, Nevada? A. On the Western Pacific, isn't it? (2611) Q. On the Western Pacific, yes. A. It is on the Nevada & Northern road. Q. It is on the branch line, isn't it? A. Yes, sir. Q. Where the combination of locals is used? A. Yes, sir. Q. And that is not a fair representative for that distance, is it? A. It is the only access we have to that town. Q. I know, but there is a main line of the Western Pacific, isn't there? A. It doesn't run there. Q. No; but why didn't you take a point 200 miles distant on the Western Pacific? A. The Western Pacific has no tariff 200 miles out of Salt Lake at present. Q. So you took this station, Curries, where there is a combination of locals over the Western Pacific? A. I took the only thing I had. Q. And that is very much higher than any of the others, isn't it? A. Yes, sir. Q. And that raises the general average? A. It does, yes, sir. Q. Do you ever ship anything to Curries? A. Yes, sir; lots of stuff.

"Q. Now, if you had taken the Union Pacific and the Short Line and the Southern Pacific, instead of all the roads out of Salt Lake, the average would be very much lower than even 66 cents a hundred? A. Yes, sir. Of course there are reasons for the low rate on the Oregon Short Line, on the Union Pacific, and on the Southern Pacific, especially on the Oregon Short Line and on the Union Pacific. Q. What are those reasons? A. The reasons are that those rates were put in under pressure, in 1892. When we had a hearing of the Interstate Commerce Commission scheduled for Salt Lake, the railroad people and the business men got together, and under an agreement we were given rates out of Salt Lake to points on the Oregon Short Line and on the Union Pacific. Those rates have never been changed, with the exception of a few instances, from 1892 up to the present time; in a few instances they have been raised. Q. That was in 1892? A. Yes, sir. Q. And was that also on the Southern Pacific? A. No; the Southern Pacific didn't reduce their rates at that time. Q. You testified yesterday that the Southern Pacific had reduced its rates—— A. Yes, sir. Q. Within the last two or three years? (2612) A. Since the Ely country opened up and the smelter was put in there, the rates

Rates to Ely country have been materially reduced.

out of that country have been reduced very materially. Q. That is, Southern Pacific points in Utah and Nevada? A. Yes, sir. Q. And when was that reduction made? A. I think there have been some reductions made in the last few years. Q. Haven't these rates been reduced since 1892? Weren't they reduced in 1908 on the Union Pacific? A. East-bound? Q. Out of Salt Lake; I don't care which bound it was—out of Salt Lake to these points that you have mentioned. A. I don't recall that they were; there may have been some slight changes made. They were immaterial. I believe they were reduced east of Evanston; I think the rates were reduced east of Evanston some.

"Mr. LOVETT. The defendants object to Complainant's Exhibits 159 and 160, because the witness' testimony shows that the figures given are inaccurate. Mr. SEVERANCE. You have not examined him on 159, where he has some comparisons that are actual. Mr. LOVETT. I thought those on 160 were actual. Mr. SEVERANCE. I don't mean actual, but I mean identical. WITNESS. I think that is a clerical error in those rates only. Mr. LOVETT. There is an error, isn't there? WITNESS. Yes, sir. Mr. LOVETT. I don't care what kind it is. Mr. SEVERANCE. Can you find out and be back here this afternoon? WITNESS. I think so. Mr. SEVERANCE. You have not shown that any of those figures are wrong; you have not asked him anything about it. Mr. LOVETT. Well, I have no doubt they are, but I don't know where. Mr. SEVERANCE. Do you want to take this exhibit with you and look it over and come back here in a little while and tell us whether they are right or not? WITNESS. Yes, sir. Any objections to taking these exhibits? The witness left the court-room, taking Exhibit 160 with him.

(Later in the afternoon, after the hearing at Salt Lake had adjourned, the exhibit was returned to the reporter. After the words 'average ton (2,000 lbs.) rate out of Salt Lake,' the figures '$16.55' were stricken out and '$13.24' inserted in red ink. After the words 'average ton (2,000 lbs.) rate out of Denver,' the figures '$11.00' were stricken out and '$8.80' inserted in red ink. This was followed by the notation in red ink 'The figures in red are correct. S. H. Love.')"

McCarthy.

(2613) WILLIAM S. McCARTHY—Recalled.

Fast freight trains.

The 54 hour train between Omaha and Ogden didn't run eight months, as testified to by Mr. Oglesby, but for seven years, namely, from 1897 to 1904. It was known as train No. 19. They had on during the same period a 76 hour train. A 32 hour Portland Special ran only a short time; thinks probably sixty days. It was put on because of the quarrel between the U. P. and the O. S. L., and ran over the Shasta route to Portland. Thinks that was in 1897. (2614) The 32 hours was scheduled between Omaha and Ogden. Witness didn't know whether or not the train lost money. (2615) Witness never loaded any wool on the S. P. west of Ogden. He was con-

tracting freight agent in Salt Lake City. Probably solicited people in Salt Lake, however, for business moving east from points on the O. S. L. west of Ogden. (2616) Never had anything to do with solicitation of wool on the S. P., however. He represented the U. P. "Q. Were you ever detailed to go to the Southern Pacific in connection with the wool traffic? A. No, sir."

Murphy.

(2616) C. E. MURPHY.

Salt Lake. Lumber merchant.

For fourteen years in the retail lumber business at Salt Lake. Gets the majority of lumber from the neighborhood of Portland. (2617) Before the merger the S. P. solicited the business via Shasta route, and the O. S. L. via the O. R. & N. It hasn't moved over the former road of late years. Several years ago it did. Has quite recently bought lumber from the Coos Bay region. That moves by rail from Bay Point, California, to Salt Lake over the S. P. It goes by water from Coos Bay to Bay Point. It it quite an extensive lumber region around Coos Bay. The joint agent doesn't solicit business from Portland, but does solicit eastern business. The Portland business all comes over the O. S. L. (2618) The business which witness testified was formerly solicited by either the S. P. or O. S. L., came from Grants Pass, Oregon, on the line of the S. P. between Sacramento and Portland. Witness couldn't say whether or not the S. P. agents had ever solicited Portland business.

Lumber routes.

Goodwin.

(2619) C. C. GOODWIN.

A journalist of Salt Lake, for 29 years. Senator Clark said at Alta Club Dinner: "We are going to build that road as an independent road, to Los Angeles or San Pedro." An interview was published in the paper, stating that Senator Clark proposed to have a steamship line in connection with the road.

Romney.

(2620) ORSON D. ROMNEY.

Lumber routes.

For twenty years in the lumber business at Salt Lake. Distributes his wholesale business in Utah, Idaho and Montana. Supply comes chiefly from the vicinity of Portland, and moves over the O. S. L. 10 or 12 years ago it moved over the Shasta route. The shippers route the lumber. There are some shipments made very quickly now, and some very slow. Witness' opinion is that in many instances they are slower than they used to be. Some comes through in a week; some in two weeks; and even longer. (2621) Witness thought from Portland via San Francisco and the Shasta route would be nearly twice as far as via the O. S. L., and the grades much steeper.

Merrill.

(2621) GEORGE E. MERRILL.

Salt Lake. Lumber merchant.

For seven years in lumber business at Salt Lake, and five years previously in Wyoming. Wholesales in Wyoming, Nevada, Idaho

Lumber routes.

and Utah. (2622) Supply comes largely from Oregon; some from Washington and California. From Portland it comes over the O. S. L. Never moved any other way from Oregon during witness' time. Has been in a position to know of that movement about five years. Until very recently—it is barely possible that the tariff has been canceled recently, the same rate applied to Ely, Nevada, via either the O. S. L. and O. R. & N., or via the S. P. line, that is, by the Shasta route via Sacramento. Ely is on a branch line in Nevada, 140 miles south of Cobre, where it joins the main line. Cobre is about 140 miles west of Ogden.

(2623) Witness ships to customers on the S. P. direct from points in Washington and Oregon. The Shasta route is open to Nevada points, not through to Ogden, but to stations just over the Nevada line, in Utah. Shipments east of Tecoma, which is just inside of Nevada, 125 miles from Ogden, come by the O. S. L. Witness didn't know whether or not you could now ship to any point west of Ely by the O. S. L. Even when the rate was in effect, up to very recently, it applied a short distance beyond Cobre on the main line of the S. P., and to any point west of that the traffic had to move by the Shasta route. No lumber comes to Salt Lake by the San Pedro. (2624) Lumber comes to Salt Lake by the S. P. from California points. The shingle rate from Portland to Salt Lake is 47½ cents. From San Francisco witness thought the rate was 40 cents. The rate on lumber between those points used to be identical. The rate from Portland now is 37½ cents, and from California common points 40 cents. Lumber from Seattle and Tacoma comes in over the O. R. & N. and O. S. L., and moves to Portland over the N. P. It is very rarely moved to San Francisco by boat, thence over the S. P. On one occasion, within the last two or three years, shingles came from Vancouver by boat to San Francisco, and thence over the S. P. Some lumber comes from Puget Sound by way of Butte and the O. S. L., the Silver Bow gateway.

Murphy.

(2625) FRANK S. MURPHY.

Salt Lake. Lumber merchant.

Since 1895, in the lumber business at Salt Lake. Wholesales into Utah, Nevada and Wyoming. Supply comes from Oregon and California, some from Washington, principally Portland and vicinity. It moves over the O. S. L. (2626) Twelve or thirteen years ago witness used the Shasta route. His Oregon business was then solicited by both the S. P. and O. S. L. Lumber moved over the Shasta route and the D. & R. G. from Ogden. Witness understands that you can not now ship by the Shasta route to Ogden, or points near there. If a shipment originates on the S. P. south of Portland, it must come by the Shasta route to any point on the S. P. west of Ogden, but if it originates at Portland, it can come over the O. S. L. and go as far west as Cobre, on the 40 cent rate. Witness thought the shingle rate from Portland is now 7½ cents higher than from San Francisco.

(2627) They were formerly the same. From Coos Bay, lumber moves to San Francisco by boat, and thence by rail. Witness thought from Portland to Ogden there was 500 miles in favor of the O. S. L. line, as against the Shasta route. The grades are much heavier on the latter.

PORTLAND, OREGON, MAY 3, 1909.

(2629) D. C. O'REILLY. O'Reilly.

For nineteen years a resident of Portland in the towing and lighterage business. Came there from Denver, where he was in the railroad business. (2630) Was formerly employed by the U. P. at both Omaha and Denver. Employed in the freight office in Omaha, and was general freight agent in Denver. When witness came to Portland was traveling freight agent of the U. P. That was in 1891. Remained in its employ until 1894, and after that was with the O. R. & N. for about three years. Part of the time he was general western freight agent of the U. P. at Portland. Ben Campbell was the general western freight agent of the Union Pacific until the receivership, July 4, 1894. Afterwards he was traffic manager of the O. R. & N. Portland. Formerly in U. P. traffic Dept.

(2631) In 1895 and 1896, and possibly later, there was a war of rates between the boat line and the S. P. from Portland to San Francisco. The freight rate got as low as $1 a ton. Witness thought the S. P. didn't absolutely meet the low rate of the water line, but he isn't certain. There was a steady decline of rates for a year and a half. (2632) The passenger rates did not go below $5.00 first class fare each way. There was also a line of boats running to San Francisco from Yaquina Bay. It was operated in connection with the Corvallis & Eastern. That line runs from Yaquina Bay, from Newport, to a place called Detroit, up in the Cascades. It crosses the S. P. at Corvallis and Albany, and crosses the Willamette River at Albany. It runs probably 60 or 80 miles east of the Willamette River. It connected with Portland by boat. Locally this line competed in the rate war that was on, but not between San Francisco and Portland. The traffic in competition between the S. P. and O. R. & N. and the Corvallis & Eastern connections at San Francisco was south-bound, grain and potatoes, and north-bound, general merchandise. Rate war between San Francisco and Portland.

(2633) This moved by boat and by rail. There was also competition for business from San Francisco to Montana points between the O. R. & N. and the Central Pacific line via Ogden. The former line moved by way of Huntington and Pocatello, and by boat from San Francisco. The other line was the Central Pacific and the U. P. and Short Line. Doesn't remember the S. P. shortening their time between Portland and San Francisco to meet the competition of the boat line. Thinks the passenger schedule was in the neighborhood of 36 hours, but his recollection is that passenger time of rail line was not a factor. The boat schedule was 53 to 55 hours. After the rate war was terminated, there was a differen- Montana business.

tial between the boat line and the rail line. (2634) The O. R. & N. were never in the field for business between California and Utah points. Points west of Pocatello were competitive, and the business moved both ways and around by Portland. Thinks in 1894 a steamship line was established in connection with the O. R. & N., called Samuel Samuel's line. Thinks the Dodwell Line succeeded the Samuel's line.

Steamship lines.

(2635) Thinks there were thirty day sailings on the latter. They brought in tea, silk, matting, curios, which moved through the Huntington gateway. The Portland & Asiatic was then organized, and its traffic moves the same way. Traffic from the Atlantic seaboard, while witness was connected with the O. R. & N., reached Portland by the U. P., G. N., N. P. and S. P. The Sunset route participated in that business. The O. R. & N. received that traffic at Huntington from the O. S. L., and at Spokane from the G. N. The N. P. came into Portland over their own rails, and this traffic was solicited by the agents of all these companies. (2636) The competition, witness thought, was active. The Atlantic seaboard business consisted of dry goods, iron and commodities of that character. In witness' time the Portland merchants distributed their commodities to all points west of Pocatello, west of Wallace, and of Spokane. Isn't certain how far south they went, but there is a dividing line down on the S. P. somewhere. There was no part of Oregon that wasn't directly tributary to Portland. The part of Idaho that was reached by the O. S. L. and O. R. & N. was also tributary to Portland.

Seaboard business.

Portland's jobbing territory.

(2637) The competition of the Portland merchants with San Francisco was in a local way. Was principally in the Willamette Valley, and in a general way, of course, on what are called California commodities, they were more or less competitive all over the northwest; and traffic moved up from San Francisco into the Pocatello territory. The Portland jobbers, witness believed, had Salt Lake competition in Southern Idaho. There was also traffic to the Atlantic seaboard that was the subject of competition between these lines—wool, hides, hops, canned goods, canned salmon. In those days it was considered quite important. The traffic now is much larger, because of the growth of the country. Witness' recollection was that the O. R. & N. met the competition of the Sunset route on Atlantic seaboard east-bound business. Business moved out of Portland either through Ogden or by the Sunset to the east, for points west of Pittsburg.

Competitors of Portland merchants.

Competition on east bound seaboard traffic.

(2638) At one time there were three O. R. & N. boats running, and witness thought there was a four day service to San Francisco, and then it was cut down to two boats and a five days service. It changed at different times, according to the existing conditions. During the receivership there was a hitch, and for a time divisions were taken out via Huntington. The U. P. for a time worked traffic into Portland by Ogden and Sacramento or Marysville.

(2639) The O. S. L. and O. R. & N. then worked with the Colorado lines. Witness thought the U. P. also took their traffic, even when the divisions were out. The chief part moved by the Colorado lines, and the U. P. worked with the S. P. That didn't last more than a few months. They made a special offer in the matter of service by the Shasta. The O. R. & N. boats went up the Willamette River as far as Corvallis. They brought in grain, potatoes, hops, some wool. The hops and the wool were in a class of commodities that would move by rail. What came in on the O. R. & N. boats went east via the O. R. & N. The O. R. & N. ran a boat line on the Yamhill River.

Controversy between U. P. and O. S. L.

Hops and wool.

(2640) The traffic that was brought in was traffic that could also move over the S. P.—what you might call eastern commodities. There were some potatoes and grain that the S. P. wouldn't touch. The latter quite largely moved to San Francisco by the boats. The U. P. operated the O. R. & N. prior to 1894. Then there was a receivership, with Mr. McNeil as receiver, and afterwards the O. R. & N. operated its own line. (2642) The rate war between the O. R. & N. boat line and the S. P. was during the receivership. A differential had existed between the passenger rates prior to that, and the S. P. attempted to abolish it. The war terminated by a concession of that general differential and a general agreement as to freight conditions and other matters. The merger made no change in the condition as it existed after the termination of the war. The number of boats and their quality has been practically the same. During the war the passenger rate got as low as $5.

Rate war.

(2643) The Corvallis & Eastern was purchased by Mr. Hammond under foreclosure in 1893. He laid up the boats on the Willamette River in 1896 or 1897, because they didn't pay. The traffic didn't warrant their operation. They were operating from Corvallis to Portland, according to the stage of the water, from all points. Hammond only operated the boats about two years. The Corvallis & Eastern handled north-bound probably 300 or 400 tons a trip. (2644) They made about two and a half trips a month. The south-bound tonnage was about the same. The U. P. worked Portland business by the Shasta only a short time, and the Short line worked strong against the O. R. & N. in Idaho during the same period. It was during the period of disintegration of the U. P. system proper. The Willamette River boats of the O. R. & N. have all been laid up at the boat yard. They have all been wrecked once or twice. Boat operation on the upper Willamette is not profitable. It was a light draft proposition. The river was also narrow and snaggy and swift in places.

Corvallis & Eastern.

Transportation on Willamette River not profitable.

(2645) The low water season continues about three months. It continues anywhere from the middle of October to the 1st of December, sometimes later. The tonnage of wheat since witness' time has dropped from the principal to almost an incidental product, so far as the territory along the Willamette River is con-

Change in traffic.

cerned. The country along the Yamhill River has also changed. Wheat was the principal traffic of the boats in witness' day, which kept the boats alive. (2646) The territory at Wallace was competitive between Portland and Spokane. San Francisco and the east has always done more or less business out through eastern Oregon and Washington. Those competitive conditions have remained about the same all the time. The Dodwell and Samuel's Lines were organized principally for the purpose of taking away the flour tonnage which originated on the O. R. & N. to Asiatic points. The Dodwells had a line which they operated in connection with the N. P. from Tacoma and Seattle to Asiatic points. It was organized for the same purpose. The inbound cargo was not heavy. The service by the Samuel's and Dodwell Lines was a boat about every thirty days.

Purpose of organizing Dodwell and Samuels lines.

Inbound cargo not heavy.

(2647) Out of Puget Sound the sailings were more frequent. From San Francisco there was a big tonnage. Some of the boats out of Portland had limited first-class passenger accommodations. They carried very few passengers. The line was not really known as a passenger line. The bulk of their tonnage was flour milled at local mills. The water line has always fixed the rates between Portland and San Francisco. The principal factor at all times during witness' experience and knowledge in fixing rates between Portland and San Francisco has been the water line. "The water line fixes the rates, the water competition always." (2648) The water competition has not been confined solely to boats operated by the O. R. & N. There have always been tramp schooners. The schooners would carry lumber down, and bring merchandise up, making low rates. They were operated independently and in considerable number all the time. That competition is as keen today as ever. There has been competition for all that territory between San Francisco and Puget Sound by steamer. (2649) Witness doesn't know whether the railroads today meet the schooner's low rates between Portland and San Francisco, or not. As long as witness was with the Company, the O. R. & N. and S. P. had separate agencies (2650) and competed with each other for business. The tramps don't maintain a regular organization, and the permanent line has the advantage. The Dodwell and Samuels Lines maintained Asiatic agencies to solicit business. Mr. Cameron also went to China, as agent of the Portland & Asiatic. Business which Mr. Cameron solicited came from the same ports from which the Pacific Mail steamers sailed. (2651) Such traffic as the P. & A. carried, besides flour, was limited in extent and originated east of the Missouri River. It consists principally of cotton, railroad iron and machinery. Some cotton came up from Texas over the O. R. & N. It also came into San Francisco by the Sunset. The iron and steel came to Portland from Pittsburg territory. Most of the traffic from the Orient was destined to points east of Portland. The Samuel's line was subsidized by the O. R. & N., that is, guaranteed

The water lines, including tramp schooners, have fixed the rates.

Dodwell and Samuels lines maintained agencies in Asia.

Traffic of P. & A.

a certain amount of westbound tonnage, whether it was actually shipped, or not.

Willamette Valley hops and wool.

(2652) Witness understands there has been a change in the hop production in the Willamette and Yamhill Valleys. It goes up and down, but hasn't been abandoned. Most of the wool in the Willamette Valley is cut from small bands of local sheep and goats. Witness is not familiar with that industry at the present time. The

Willamette River boats.

boats on the Willamette are not profitable now. In witness' time they were profitable, even as an independent proposition. They are now practically taken off the Willamette, except to Oregon City. The O. R. & N. runs a boat that far. The Oregon City Transportation Company runs a boat line up the Willamette. (2653) Boats were frequently wrecked on the Willamette, but were raised. It was rather expensive. The O. R. & N. boat service was gradually discontinued, with a gradual decrease of the traffic. The last boat probably taken off last year. This has occurred since 1901. Witness understood Mr. Harriman purchased the Corvallis & Eastern. It has been witness' experience as a railroad man that you had to solicit traffic to get it, particularly competitive traffic.

(2654) Witness knew of no change in the competition between the O. R. & N. and the S. P. as it existed after they stopped quarreling in 1897. During witness' time the O. R. & N. railroad agent looked after the boats. Now the boats have a separate agent and a separate office, a separate soliciting force working in competition with the S. P. The Corvallis & Eastern used to operate as many boats on the Willamette as the O. R. & N. and several years before Mr. Harriman purchased it, Mr. Hammond junked the

Mr. Hammond junked his boats.

boats. (2655) The Corvallis and Eastern has operated no boats since 1900. A man named Young represents the North Pacific Steamship Company at Portland. They operate a regular line of steamers in competition with the O. R. & N. boats and the S. P. There are also tramp steamers. The schooners are largely operated in connection with the mill owners in Portland. (2656) Witness thought at one time the O. R. & N. had a four day service; now he thinks a seven day.

McBride.

(2656) W. C. McBRIDE—Recalled.

Wool traffic from Idaho, Utah and Nev

Witness' railroad experience described. (2657) Now general agent of the D. & R. G. at Portland. Wool and live stock are the principal commodities of the territory in southern Idaho and northern Utah and Nevada lying between the O. S. L. and the S. P. There was competition for the wool business. The competition was when the wool was on the sheep's back, to get the sheep driven from one line to the other. The live stock went by both lines. It moved to the east all-rail. Largely moved to the Missouri River packing houses. (2658) For a short while during 1897 the U. P. moved traffic to Portland via the Shasta route. When witness was at Butte (about 1897 to 1902), California traffic came to that region either via Ogden, S. P. and O. S. L., or via the O. R. & N.

boats at Portland and then rail via Huntington or Spokane, and the G. N. Traffic from San Francisco to Butte via the O. R. & N. was moved from Spokane to Butte over the G. N. They had divisions in connection with the G. N. through Spokane with portions of Montana as well as the N. P., witness believed. Some of the traffic moved to Huntington and then via the Short Line. (2659) The preponderance of the traffic that way moved by the S. P. and O. S. L. In the old days, before the Lucin cut-off was built, the Central Pacific and the O. S. L. ran parallel and very close together for about 21 miles. Witness has known cattle as far west as Caldwell, Idaho, and Halleck, Nevada, to be competed for between the two lines. The wool traffic was competed for as far west as Kelton, about 80 miles from Ogden. Such wool as the S. P. controlled went by way of Sacramento and thence Sunset. (2660) At that time there were no divisions through Ogden either by the U. P. or D. & R. G. There were no divisions prior to 1898 or 1899.

Montana business.

Wool traffic.

(2661) A great many sheep wintered in what was known as the desert west of Salt Lake, and in the spring of the year, as the shearing season approached, they would start north to the summer ranges in Idaho, and the solicitation would commence in order to have them stop and be sheared somewhere near the railroad. There were cattle and horses that originated in northern Nevada and southern Idaho, that might go east over the S. P. or the O. S. L., and over the D. & R. G. or U. P. when controlled by the S. P.

(2662) When witness said there were no divisions through Ogden either with the D. & R. G. or with the U. P., his statement applied only to the wool traffic. They had divisions ordinarily on almost everything.

Burdick.

(2662) A. C. BURDICK.

Portland. Prunes.

Lives in Portland, Ore. Since 1898 in prune business, for the last five years at Vancouver, and formerly at Portland. Ships to all import jobbing points between Denver, New York and Boston. Traffic from Vancouver moves over the North Bank road in connection with the N. P., G. N. or Burlington.

(2663) Before the North Bank road was built, witness shipped by the N. P. and O. R. & N. and G. N. From Portland he used to ship several ways. The S. P. used to take traffic to New York by the Sunset. Traffic from Kansas City they would switch off at Sacramento. The O. R. & N. went by the O. S. L. Since the consolidation of the S. P. and O. R. & N., witness has expressed a preference, and has routed his shipments over the O. R. & N. and Short Line. The solicitor expressed no preference, but said that witness could have his choice as to routes.

(2664) Number of cars witness ships varies according to the season. Sometimes he ships about 12, and sometimes 70 a year. He can ship any way he wants to, without restriction. It is purely a matter of preference. He doesn't know whether the Sacramento route is open to interior points now, because he has not wanted to ship that way.

(2664) E. C. WARD.

Ward.

For the last two months general agent of the Pacific Coast Steamship Company at Seattle. From 1894 to 1901 was in the transportation business at San Francisco. (2665) For 3 years prior to 1901 was the general agent of the O. R. & N. Company at San Francisco. Previous to that was local agent for the same company at San Francisco. Traffic that he secured moved out of San Francisco by steamer to Portland and points east. Montana points are Butte, Helena, Anaconda, Silver Bow, and several other smaller places. Didn't think Great Falls was a Montana common point, but took Montana common point rates on account of being intermediate —intermediate by the Great Northern. Traffic from San Francisco moved to those points over the O. R. & N. steamer lines and thence its rail lines and its eastern connections, also by the Pacific Coast Steamship Company and the G. N. and N. P. through Puget Sound; also over the Shasta route and the N. P.; also by the Central Pacific via Ogden and the O. S. L.

Seattle. Gen. Agt. Pac. Coast S. S. Co.

Montana business.

(2666) Traffic to Montana was largely California products—sugar, canned goods, dried fruits. There was no differential as between the water and all-rail lines. All moved on an equality. Witness thought the water and rail line via Portland had some slight advantage into points between Huntington and down about Boise, but not sure. East of Boise, between there and Pocatello, the rates were about equal, and traffic moved both ways from that territory. The O. R. & N. force in San Francisco consisted of seven, in the general agent's office, two freight and two passenger solicitors. The boats ran every five days, with an occasional freighter additional, when the cargo was sufficient. Three boats, and one in reserve.

(2667) During the rate war, rates got down to $1 a ton, possibly 75 cents a ton on such commodities as salt, once in a while. The S. P. rail rates were down to a basis of $2 a ton, dead weight, witness thought. Witness' recollection was the rate war lasted a year and a half. The traffic by boat north originated as far as witness was concerned at San Francisco, though their real originating points were in the interior. The other steam lines engaged in that controversy, and passenger rates were also reduced. The other lines had very limited passenger accommodations. They operated steam schooners, and could accommodate probably 15 or 20 passengers, while the O. R. & N. boats carried between 200 and 300, when full. The O. R. & N. on commodities moving to Montana, exchanged with the Short Line at Huntington, (2668) G. N. at Spokane, the N. P. at Wallula.

Rate war.

The O. R. & N. steamer line started the reduction of rates. It may have been a year and a half or two years before the S. P. became involved in it. Witness thought probably the reduced rates covered a period altogether of from 1895 to 1897. The passenger rate got down to $5, first-class, and $2.50 second-class. Not sure of the rail rate, but thinks it was $10. The steamer rate included berth

and meals. The rail rate, witness thought, included berth. There was some traffic moving from interior points to San Francisco and thence up by boat from Southern Pacific territory. (2669) Remembers one or two instances in which transcontinental traffic went to San Francisco via Portland and boat. Couldn't handle it that way, as a rule. Remembers moving stoves from St. Louis to San Francisco that way, and some vehicles from eastern territory. Remembers no shipments from Pittsburg. The vehicles came from Columbus, Ohio; some of them from Michigan. Came to Portland over the U. P., some over the Colorado lines, and some over the G. N., all in conjunction with the O. S. L. These shipments by Portland didn't last more than two or three months. It was in 1898 or 1899. Prior to 1895 there was a 25 cent differential, between the boats and the rail line, on the first-class rate. Doesn't recall what it was on carload stuff.

A few shipments via Portland route.

(2670) Thinks the all-rail rate for passengers was $20 first-class, and the steamer $15. After the rate war the differential was six cents on higher classes, less than carloads, and three cents on carloads. On passengers the steamer line had a $12 first-class rate, including berth and meals, and the S. P. $17, which included a Pullman berth. They had a rebate system, charging the passenger $25, and rebating him $7 or $8. In 1898 the railroad rate was as high as $25. The $1 a ton freight rate applied only to north-bound vessels. The south-bound rates were never that low. (2671) The tonnage north was always light compared with the capacity of the ships. The Pacific Coast Steamship Company's ships to Puget Sound competed for all business which went over into competitive territory on the O. R. & N. into Montana. There was also competition locally to Portland by steam schooners. That competition is now fully as keen, if not keener, than it was then.

Steam schooners.

(2672) The steam schooners were run primarily for the purpose of taking lumber south. Got whatever rate they could on north-bound freight. Now the business of the schooners is better systematized, better organized, and the competition more severe. Shipments from the east to San Francisco via Portland moved over the G. N. via Spokane, and the U. P. and Rio Grande lines, and thence up over the O. S. L. His recollection of vehicles moving via Portland was some fifty odd cars altogether; the stoves probably, not over 10 or 12 cars. The reason of the movement was that the rates were then more favorable via Portland. (2673) There was a lower rate from eastern points via N. P. and Pacific Coast Steamship Company to California terminals. It was not a through rate all the way on the stoves, but it was on the vehicles. The rate only applied to those two commodities, and witness thought they also moved pianos at one time. Witness' recollection was that the U. P. would not participate in publication of the through rate, but participated in the movement of the traffic just the same. There were through rates via Puget Sound to the Pacific Coast on these commodities only. Vehicles moved not on account of favorable rates, but on account of some

Shipments via Portland.

restrictions as to the length of the cars on the California line via Mojave.

(2674) Restrictions were due to snowsheds. The rate war terminated in 1896 or 1897, and was not renewed from that time up until 1901. Substantially the same rates continued during that time as had prevailed prior to the rate war, the water lines being allowed a differential. On the northern lines they allowed a fifty foot car for those vehicles, and on the southern a forty foot car. Hasn't heard of the closing of any routes via Shasta or otherwise from San Francisco to Montana common points. The Pacific Coast Steamship Company still carries freight in connection with the G. N. and N. P., and the O. R. & N. rail and steamer is engaged in competition with the Pacific Coast Steamship Company. The Shasta route in connection with the N. P. via Portland still engaged in the business. (2675) Also the S. P. and O. S. L. via Ogden had equal rates to Montana. The situation in that respect to Montana common points is substantially the same as it was prior to 1901. As witness understands it, the S. P. with its connections is still a competitor of the O. R. & N. boat line and its connections, for Montana business. The boat schedule from Portland to San Francisco was about 55 or 60 hours, and the rail schedule 36 hours. When witness was located in San Francisco one train a day ran each way, and the boats had a five days service. The freight schedule between the two places was four or five days. Details as to reduced rates during the war repeated.

Ocean competition.

Water and rail service between Portland and San Francisco.

(2676) The heavier movement of freight between Portland and San Francisco was south-bound, but a higher class moved north. On a general average the revenue on the latter was greater. During the Canadian Pacific differential, that company did a pretty good business into San Francisco from the east. Traffic came pretty generally from all points east of the Missouri River and north of the Ohio. During the differential, the G. N. and N. P. to the best of witness' knowledge did no business into San Francisco by Puget Sound boats. (2677) Once in a while a stray car goes into San Francisco by way of those Puget Sound boats. There are published rates in force that way; also by way of the O. R. & N. boat line. The Pacific Coast Steamship Company boats did not stop at Coos Bay. The Spreckles boats from Coos Bay to San Francisco carried merchandise north and coal south. Witness didn't think they carried lumber, although they may have carried a little.

Can. Pac. differential.

(2678) There are through rates from some points in the east, from Chicago, by the G. N. and its connections to Spokane, thence over the O. R. & N. to Portland and by boat to San Francisco. Rates are also made over the N. P. to Wallula, and thence over the O. R. & N. to Portland and by boat to San Francisco. Prior to 1901, witness never solicited business from San Francisco over the U. P. via Portland. (2679) If anybody had wanted to move freight that way, witness would have solicited it, but never heard of anybody desiring to do so, at equal rates. Never heard of any

Through rates via Portland.

Never solicited freight via Portland for U. P.

freight moving that way, or of any rate being in effect that way during his time. Thought physical situation of roads was as effective as the Vancouver route. The Portland route is shorter than the Vancouver; and in the movement of traffic, distance (unless it is very excessive) doesn't make any difference.

Adams.

(2680) H. M. ADAMS.

Portland. Formerly trav. frt. agent for O. R. & N.

Lives at Portland, Oregon. General freight agent of the Spokane, Portland & Seattle Railroad since it opened for business in December, 1907. It runs from Portland to Spokane. Traffic from the east moves into Portland over that road in connection with the N. P. and G. N. The connecting point up to the present has been Pasco, but commencing to-day business is taken from those two roads at Spokane. Formerly witness was assistant traffic manager of the G. N. at Seattle for two and a half years, and prior to that for three years assistant general freight agent of the O. R. & N. Left that Company in May, 1905. From 1898 to 1902 general agent of the same Company at Spokane, and prior to that for 2½ years traveling freight agent of the O. R. & N. out of Portland.

Rail rates always higher between Portland and San Francisco.

(2681) Went to work for the O. R. & N. in 1897 (?) as a clerk in the baggage department. Left the railroad service in 1890, and re-entered it as a clerk in the ticket office at Seattle—then U. P.—in 1894. Remained a few months, and then came to Portland as a clerk in the general freight office. After that was appointed traveling freight agent as above stated. Witness doesn't recollect that there was ever a fixed differential between the Shasta route and the boat line from Portland to San Francisco. The rail rates were always higher. To constitute a technical differential there must be agreement as to divisions.

Willamette River traffic.

(2682) Witness believed that there was always a difference in the rates, though there was no fixed basis of differential. The O. R. & N. operated boats up the Willamette River to the head of navigation. How far up they went depended on the stage of the water. The boats usually included Corvallis, Albany, Independence, Salem and Oregon City. They never went higher up with regular service. There were some boats above Corvallis periodically, but not a regular service. Corvallis was as far up as any regular service was ever maintained. It was generally a daily service, as long as the freight traffic offered support to that kind of service. Farm products and paper from mills at Oregon City were brought into Portland by those boats. A large quantity of paper and the farm products—potatoes, in particular, went to San Francisco by boat. The through rates on hops to the east applied in connection with the Willamette River boat lines then, just as they do to-day. Hops shipped on the Willamette boats at the time witness was familiar with the traffic, say after the year 1894, could move out of Portland over the O. R. & N., thence either to Wallula on the N. P., via Spokane and the G. N., or via Huntington and the O. S. L.

(2683) The S. P. participated in the hop movement from the same territory via their own line. Witness thought the rates applied on hops both by the Ogden and Sunset routes, but was not positive. The business generally moved via the Sunset. "The hops are not delivered at these common points very largely; some of it is, but a great deal of it originates at local points on the River, and that business was not tributary to the S. P., of course, because they had no through rates in connection with the steamer lines. The business on the rail lines, of course, was tributary to the S. P. and moved largely via their lines." Hops moving from the towns witness has mentioned could move either way, and they were competed for by the two lines. As to lumber from Portland, Colorado and Utah common points, before the merger, witness was not in close touch with it before it began to move through Portland, but, as a matter of common knowledge, the lumber traffic prior to that time moved through Sacramento. In those days lumber also moved to Utah points by the O. R. & N. and O. S. L.

Hops and lumber.

Routing of lumber traffic.

(2684) Thinks it was some time in 1902 that the tariffs were so adjusted that business no longer moved by the Shasta route and Central Pacific to Utah. The rates via Sacramento to Utah and the east were withdrawn, and rates applied via Portland, instead of from the Willamette Valley territory. After that, traffic went to Portland and east over the O. R. & N. and O. S. L. Business was then solicited via Portland, rather than Sacramento. As far as witness knew, all Nevada business from Portland always moved via Sacramento. That exclusive movement continued as far east as Utah common points. There were many routes from San Francisco to Montana common points. After rates were established via Ogden in connection with the Central Pacific and O. S. L., that route was opened; there was an all-rail route via Portland and the N. P. There were the water routes to Portland in connection with the O. R. & N. and the N. P. through Wallula, the G. N. through Spokane, and the O. S. L. through Huntington. There were also routes open by steamer from San Francisco to Puget Sound, and then in connection with both the N. P. and G. N.

Routes to Montana.

(2685) Considerable traffic moved from San Francisco to Montana common points and was actively competed for by these different routes. Witness can remember a long time ago when there was a three or four days O. R. & N. boat schedule between San Francisco and Portland. Now there is a weekly service. Witness' line, with its connections, makes on freight from St. Paul to Portland six days, and Chicago eight or nine days. During witness' connection with the Company, traffic moved from San Francisco to the territory between Huntington and Pocatello by way of the O. R. & N. boat line and the rail lines. During the latter part of that time business to the same territory went over the Central Pacific and O. S. L. At that time there was quite a considerable amount of this traffic. Sometimes the Willamette boats couldn't go even as far up as Salem. (2686) During the low water season the

Navigation on Willamette River.

boats had great difficulty in navigating above the falls at Oregon City. The low water period continued from about August to November. Very often there was a low water period in the winter time. Snags, bars, wreckage, were other difficulties in connection with this navigation. When witness' connection with the O. R. & N. at Portland ceased, in May, 1905, it was still engaged in navigating the Willamette River to a limited extent. (2687) Various lines from San Francisco to Montana common points renamed. All those lines have always been open. There are no rates from San Francisco via the Spokane, Portland & Seattle.

Steam schooners fixed the rates.

(2688) The O. R. & N. boats were in competition with steam schooners all the time, and had to make rates which would get the business, no matter what that rate was. The rail rates were more or less permanent, because required to be published. The rates on hops from points in the Willamette Valley apply via Portland and the N. P., and the N. P. is now soliciting that traffic, that is, rail points on the S. P. to Portland and thence over the N. P. east.

Through rates applied from Willamette Valley via N. P.

Transcontinental rates apply generally from the Willamette Valley territory in connection with the N. P., the same as with the other routes. The rate adjustment applies all the way down as far as Ashland. So a shipper in the Willamette Valley may use either the N. P. or the O. R. & N. lines to the Missouri River and eastern points; also the Sunset route for Atlantic seaboard shipments.

(2689) The rate adjustment applies practically from every point on the S. P. lines in the Willamette Valley, irrespective of whether it comes in competition with the boats or not. In 1902 and thereafter the Willamette River boats did not earn their operating expenses. There was a deficit all the time.

Willamette River boats operated at a loss.

(2690) The boats were used as a feeder to the rail line at an operating loss. Witness thinks it was a coincidence that the operation of the boats ceased about the time of the merger. The traffic was becoming less all the time, and it had become apparent that an individual could operate the boats to better advantage than a corporation, and there was an opportunity to make through rates with the Oregon Transportation Company in lieu of the O. R. & N.'s own service, and still get the traffic for the rail lines; and that is done in connection with Capt. Graham's boats now. Witness' recollection is that hops originating as far south as Eugene, and that even traffic above the head of navigation, could move over the S. P. and thence via the lines out of Portland to the east. Thinks those rates have always been in force.

(2691) The S. P. line via Sacramento and Ogden is no longer open, nor are there any divisions with the Spokane, P. & S. via Portland. Witness is now negotiating for divisions over his line, and thinks he is going to win out. Witness thought the fact that the O. R. & N. had its own line from Portland to Spokane, which was competitive with his line, had some bearing on the question. The O. R. & N. and S. P. are very closely allied and have the same traffic officers in Portland. (2692) Rates on traffic from the east

over the N. P. and the Shasta route apply as far south as San Francisco, but not to points south of San Francisco. Stockton is the southernmost point. Witness' line was opened up to-day, and operates from Spokane to Portland. It is owned and controlled jointly by the G. N. and N. P. The N. P. closes the Puget Sound gateway to the O. R. & N. on traffic from the east. That has been shut all the time, so that the O. R. & N. and U. P. cannot solicit transcontinental freight to Puget Sound points via Portland and the N. P.

Through rates via N. P. and Shasta route.

Puget sound closed to O. R. & N.

(2693) A. B. GRAHAM.

Graham.

Has resided at Portland thirty years, and is engaged in Willamette River transportation. Has been connected with the Oregon City Transportation Company for 22 years. His boats run up as far as Corvallis. In times of high water as far as Harrisburg, about 26 miles farther. 15 or 16 years ago there were about ten boats running on the river. A year and a half ago the O. R. & N. ceased operating boats above Oregon City. They now run one steamer, called the "Ruth" to the paper mills there (2694) which handles only supplies to the mill and the output from the mill. Witness handles a few supplies to that mill, but none of its output. It is thirteen miles by river from Portland, and 15 by the S. P., 14 by Oregon Water Power & Electric Line. The S. P. doesn't reach the mill. They are in the locks and inaccessible even to a team. The product can only come out by boat. Before the merger, the O. R. & N. and S. P. competed for traffic out of river points, the hops and prunes.

Portland. Willamette River transportation.

Product of paper mill can come out only by boat.

(2695) Witness also brought down hops and prunes, and delivered them principally to the O. R. & N. The O. R. & N. allowed witness a certain fixed rate. Presumed you might call it a division of the through rate. Now the hops witness brings down go along when the shipper elects, either the O. R. & N., the Portland-Spokane, the N. P. or the S. P. (2696) There is not as much wheat produced in the Willamette Valley now as formerly. There is more garden truck. There has been an increase in the production of hops which are shipped chiefly to points in the east. It runs from 80,000 to 110,000 bales. A maximum carload is about 150 bales. The average about 75. They go to all eastern points—New York. They go to England; some to St. Louis, and some to Milwaukee. Cannot always navigate as high up as Corvallis. Has gone to Salem daily for the last fifteen years, 73 miles by water from Portland. Salem is a station on the S. P.

River traffic.

Of the ten boats on the river fifteen years ago, three were owned by the O. R. & N., witness had two, the Oregon & Pacific (later the Corvallis & Eastern) two, and the others owned singly. (2698) Witness is the only one of these boat owners now operating on the river. The two boats witness now has draw light 14 and 19½ inches respectively. (2699) The last trip of the O. R. & N. boats above Oregon City witness thinks was about a year and a half ago, but it may not have been that long. (2700)

Boats operating on river.

Fifteen years ago the boats depended largely upon wheat for their traffic off the river. Between the S. P. and the Willamette River, on the east bank as far north as Salem, is operated the Oregon Electric Line into Portland. It runs from Portland to Salem, and takes in all the French prairie country. Formerly, witness delivered only to the O. R. & N., but now delivers to any of the lines out of Portland, practically on equal rates. Rates are higher now than in 1900.

Paper mill traffic.

(2701) Prior to 1900 there was a flat rate of $2.50 a ton. Witness went on a transcontinental basis, in 1901 or 1902, he thought, and the rates are considerably higher. Witness operates two boats daily to Salem, and three times a week to Corvallis. Witness doesn't seek the traffic from the paper mills. It is in large, heavy rolls, and not enough revenue in it. As a rule, it is destined chiefly to San Francisco. (2702) What in O. R. & N. boats moves to Portland, goes out by the same Company's boats to San Francisco, and the Oregon City paper mills send some of it across the river in their own boat to Pulp, and that goes down on the S. P. The S. P. also hauls logs from St. Johns up to Pulp for the paper mill, and they are dumped into the River and floated across to the paper mill. Lack of river traffic has caused the falling off in the boats. Witness at the present time is hauling all the traffic he can get, without restriction as to routes, rates or anything else.

Cause of decrease in river traffic.

(2703) The cause of the decrease in river traffic is due to the improvement of the roads leading from the river bank to the railroad, to the better railroad facilities, warehouses, and also to the less production of wheat. The Willamette Valley formerly produced about 6,000,000 bushels of wheat a year, and now about 2,000,000.

Hops and wheat.

(2704) Witness thought fifteen years ago there were only ten or fifteen thousand bales of hops produced. In 1900 he thought about 80,000, and last year it was estimated at about 100,000. This year there will be 80,000 or less. From 1898 down to the present time, the production has fluctuated with the market demand, the average crop being about 80,000 or 90,000 bales. The Willamette wheat was milled into flour, and then largely exported from Portland. It was also exported from Yaquina Bay to San Francisco. The Willamette Valley now ships in small quantities of wheat from east Oregon for domestic consumption.

(2705) Flour still moves out of the Willamette Valley from the Corvallis mills to San Francisco. Witness handles part of that, in connection with the O. R. & N. boats, and part of it goes by the S. P. by rail. The river movement amounts to about 1,000 tons a year. During the last ten years other people than witness have operated on the Willamette River for a short time, but withdrew because the business was not profitable. This year witness has been shipping flour to San Francisco by the Northern Pacific Steamship Company. Previously by the O. R. & N. boats.

River traffic not profitable.

(2706) The S. P. has been carrying it also right along. The O. R. & N. retired from this ocean traffic about three months ago.

The North Pacific Steamship Company operates a regular line from Portland to San Francisco, with sailings every week, and has been engaged in business for three years, that witness knows of.

(2707) THAD SWEEK.

Sweek.

Portland. Formerly in O. R. & N. traffic dept.

Lives at Portland, Oregon. In 1888 entered the employ of the O. R. & N. in the engineering department. A year and a half later transferred to the traffic department under B. Campbell, the traffic manager. Three years later became city contracting agent. Now, for one year, in the real estate business, and for 2½ years prior to that engaged in salmon packing.

Hops.

(2708) The O. R. & N. and the S. P. competed for the hops in the Willamette Valley prior to the merger. (2709) After the hops were brought into Portland, they would be shipped east preferably over the U. P. They were also interchanged with the G. N. at Spokane. Witness was under the impression the S. P. sent their hops by the Sunset. They didn't work them over the O. R. & N. At that time the tariff rate on hops to the seaboard was $2 a hundred. That was about $4 a bale of 200 pounds. 50 to 60 bales was considered a pretty fair car. Take a large furniture or vehicle car, sometimes you can get in 100 bales.

P. & A. inbound traffic.

(2710) The Portland & Asiatic steamships brought in rice, tea, matting, lily bulbs, curios, silk, camphor, sulphur and jute. Their ports of call were Yokohama, Kobe, Moji for coal, and Hongkong —Shanghai only when there was a certain minimum, 500 tons probably, to go in. Witness didn't think that Nagasaki was a regular port of call, but only when there was a large engagement for that port. Mr. Cameron was the general agent for the Orient.

P. & A. outbound traffic.

(2711) The sailings were about once a month the first year. The boats were under charter, and carried no passengers. Outward bound they took flour principally, also wheat, barley, machinery, tobacco, cotton, cotton piece goods, and various other small items. The machinery came from points east of the Missouri River. The eastern agents of the O. R. & N., witness thought, were also appointed agents of the steamship line, and the latter had its own traveling men throughout the United States. (2712) A great deal of the cotton carried came from Texas and the south central states. From Texas witness thought it came up over the International & Great Northern route or the Frisco lines to Kansas City, or sometimes into Denver, and taken up by the U. P. there. Witness understood that cotton also moved from these Texas points to the Orient by way of the S. P. and Pacific Mail. Tobacco for the Orient originated principally in Virginia and moved westerly, as a general rule, over the U. P. from the Missouri River. Jute was the Pacific coast product, but lately the bulbs, matting, and such, went into the east and south. Sometimes traffic from the Orient was billed through, and sometimes it was rebilled at Portland. Mr. Cameron had authority to issue through bills of lading. The O. R. & N. tried

as far as possible to have control of the routing, to facilitate the loading, sending it out in train loads, in order to make better time.

(2713) It was sent east over the U. P. as far as practicable. Prunes and hops were the principal commodities brought in for eastern shipment by the Willamette River boats of the O. R. & N.

Mr. Campbell's meeting with freight solicitors.

After Mr. Campbell was put in charge of the S. P. business at Portland, as well as that of the O. R. & N., he called a meeting of the soliciting agents of both the companies, at which witness was present. (2714) That was the first witness knew of the U. P. acquiring control of the S. P. (2715) The instructions given at that meeting were that the O. R. & N. representatives were to work in a friendly way with the S. P. representatives. In other words, to work both roads as one system, to work for the greatest revenue for that system. The Atlantic seaboard was to go to the Sunset route, as far as possible without antagonizing anybody, and business west of Pittsburg and Buffalo was to move by the U. P. via Omaha. Witness thought Campbell had a letter from Mr. Stubbs before him at the meeting. The instructions which were given, as above, were contained in the letter.

P. & A. put on to handle flour and wheat.

(2716) The P. & A. had but one traveling man at a time. He was expected to cover the entire east. The steamship line was put on to handle flour and wheat and barley originating locally on the O. R. & N. Other commodities handled were comparatively small in volume. (2717) The space allotted to eastern shippers wouldn't have made up a third of the entire cargo. The eastern agents had to definitely engage their space twenty to thirty days before the sailings. Otherwise the local people were allowed to fill the boat up with flour. The east didn't, as a rule, average a third, but that much was allotted them, and canceled if not filled.

Instructions as to solicitation of traffic.

(2718) Local flour always had the preference. Mr. Campbell's instructions as to the "100% route" simply regarded solicitation. The route was not to be forced upon the shipper. Solicit by the longest haul, and take it any way a slice could be gotten from it. (2720) The O. R. & N. agents would let the Sunset agents get Atlantic seaboard business, if they could. That was a limited amount of business, and consisted chiefly of hops and prunes and canned salmon. That was about all; such articles as could be transferred to the steamer. It cost about fifteen cents a bale to haul hops out of the Willamette Valley to the boat lines in competition with the S. P. That would be in the neighborhood of $3 a ton. The

Rates on hops.

rate then was about $2 a hundred. Of course, refunds were made at that time. The rate was not over 25 cents a bale. Sometimes the hauling service was performed by the farmer, sometimes by the hop man.

(2721) And sometimes by an independent man. The rates had been as high as $2.20. They are now $1.50. In answer to the question that the effect of the merger was to cut out the cartage charge, and make a deduction of $10 a ton, "Well, of course, I don't know when this rate was made $1.50. I wasn't there then. This

other was cut out sometime before." Some of the hop business the O. R. & N. interchanged with the G. N. at Spokane. (2722) The G. N. had agents soliciting hops in the Willamette Valley, and traffic by Spokane was what they secured. The O. R. & N. worked the other way if they could. Prior to Campbell's talk, the O. R. & N. and S. P. took away from each other whatever they could. Portland distributes a large amount of tonnage from the east over a large amount of territory. (2723) The amount which was routed in the east changed as the so-called trusts were formed. The trusts usually routed their shipments. The other shipments were largely routed by the consignee. Witness thought that the American-Hawaiian boats do not touch at Portland now, unless there was some extra large shipment. They take shipments out of Portland by way of San Francisco. The reduction in the rate on hops occurred after the establishment of the American Hawaiian Line. That line was established before the witness left the Company in 1905, and the rate was put down after his departure.

American-Hawaiian line.

(2724) In soliciting on the street witness represented all the Harriman lines. Solicited for the Sunset route, but doesn't recall ever getting a car west-bound into Portland. Might have done so, but doesn't recall it, nor did he receive anything east-bound from Portland merchants. The Sunset into Portland was not a practical route for merchandise. (2725) Outside of hops and prunes, there was very little that moved over the Sunset route, except canned salmon. The time by the Northern lines into Portland is much shorter than by the Sunset. The great trouble with the latter was the time, and the transfer at New Orleans.

Sunset route not a practical one for merchandise into Portland.

(2726) THOMAS McCUSKER (2)

McCusker.

For sixteen years employed by the S. P. at Portland, and about a year as assistant general agent of all the Harriman lines. Remembers the war between the boats and S. P. from Portland to San Francisco. The rates, he thought, went from $2.50 to $5.00 by steamer, and $5 and $10 by rail. (2727) These rates were for first and second class respectively. The second class rail accommodation was a little better than a freight car, and included a berth, the first class a Pullman. The boat included meals and berth. The boat freight rate went down to $1 a ton, and the rail to 12½ cents.

Portland. Formerly asst. gen. agt. Harriman lines.

(2728) Witness thought there was always a regularly established differential between the lines when the rates were maintained. The competition wasn't as heavy without a differential. Witness didn't know whether the boats maintained rates or not. They had a system of rebates on sugar. Lumber moved from Portland to Salt Lake before the merger, usually over the S. P., and also moved by the O. S. L. The two roads competed. (2729) Witness has solicited both for Colorado points and Utah points, shingles from the Cowlitz River, which empties into the Columbia. Shingles moved also by the O. S. L. Before the merger, hops moved largely Sunset.

Lumber and hops.

All Atlantic seaboard hops went Sunset. The Cincinnati hops by Sunset and Gulf, that is, by New Orleans and Q. & C. or L. & N. Hops also moved to Cincinnati by the O. R. & N., O. S. L. and U. P. The line which is now the Corvallis & Eastern formerly ran in connection with boat lines to San Francisco from Yaquina Bay, and got a large part of the business to valley points, say, from Salem south. They had boats on the river, but witness didn't think they did so much business into Portland. As to business which they did from that point, it was competitive with the S. P. and the O. R. & N. and river boats.

Corvallis & Eastern.

(2730) The Oregon-Pacific (C. & E.) handled all classes of merchandise from San Francisco for stores throughout the valley. Remembers a carload of sulphur that came from the Orient to San Francisco, and then by the O. R. & N. boats to Portland, and via Huntington to the east. Witness thought the O. R. & N. had an arrangement with the U. P. that they were not to take business via Portland. (2731) Once when the U. P. and O. S. L. had trouble, the former worked by the Shasta into Portland. That lasted two or three months. The U. P. made extra time to Ogden. Witness remembered one car that was sent from Chicago to Portland in seven and a half days. The S. P. had a four day service from Ogden to Portland at that time. Witness was not positive whether the Sunset ever solicited business from Pittsburg to Portland. From Pittsburg west to Portland traffic came via Ogden and the Shasta. After the merger, the agents solicited Cincinnati business via the U. P. Lumber from Portland to Utah moved over the O. S. L. The divisions were taken out by the S. P.

Trouble between U. P. and O. S. L.

(2732) After the merger, the only instructions witness received were that the boat line was supposed to be separate, and they were not to solicit any business for the boat line, but if they knew of any business going against the boat line, of course, they would try to influence it that way. After the merger, witness continued to solicit for the S. P. rail line between Portland and San Francisco, but if they found anything going by boat, they were instructed to influence it to the O. R. & N. boats. Sweek's statement of Campbell's instructions is correct. (2733) All business west of Atlantic seaboard was to go U. P. The O. R. & N. boats had their agents actively soliciting, but if the S. P. agent couldn't get a shipment by rail, they were to try and turn it to the O. R. & N. boats. The carload of sulphur witness testified to moved about 1890.

Instructions as to solicitation of traffic.

(2734) The S. P. were investigating that shipment of sulphur, because witness understood that they had an agreement that that business would go the other way, via the S. P. to Ogden. Never heard of any other shipment going that way, except the one carload of sulphur. Never heard of any shipment moving locally from San Francisco to points east via Portland.

(2735) Hops, prunes and salmon were the only things that went over the Sunset from Portland east-bound. West-bound, all classes of merchandise moved, except buggies and wagons. After the

Sunset-Portland traffic.

merger, witness solicited all classes of Atlantic seaboard business via the Sunset. Some of it moved by the U. P., too. He didn't get more business, after the merger, by the Sunset than before. Business moved along in about the same channel. The principal-reason was time.

(2736) The volume of business moving by the Sunset didn't change to any appreciable extent as a result of the merger. Hops were bought up, so that at the time there were only four or five, certainly not more than ten, who were really large shippers. It was comparatively rare that the grower himself would undertake to ship. The S. P. had warehouses and mileage books, and forced the hop business via their own lines. Witness recalls the case of a grower, a Mr. Tate, of Hillsboro, who tried to move five cars by the N. P., and he was told to tell him to go to Hell, he couldn't get the cars. (2737) The S. P. wouldn't give him northern cars. They could have gotten them, but they wouldn't ask for them. That was in 1905. Cars were short that year. The buyers had warehouse privileges. They could ship in here to Portland and consolidate into carloads, and the locals were absorbed. That was also true of prunes for a while. They could ship in less than carload into Salem from Brooks, also from Independence, and could consolidate the two shipments and ship out on the carload rate, for the reason that there was a flat rate on hops from all points. Carloads and less were the same. Hops and prunes.

(2738) Sometimes the S. P. competed very strongly for wool, but from the Willamette Valley hops and prunes were the chief business, and that was about the only thing the S. P. could control, either before or after the merger. Witness thought the boats from San Francisco to Yaquina Bay ran for more than a year. The business to valley points was shipped from Albany. On steamer day the S. P. agent there was flooded. Yaquina Bay boats.

(2739) The boats were put out of business by advancing what witness called the "mileage tariff. The basis of rates from inland points was the same as from Portland, so far as the mileage was concerned, and they allowed the Oregon Pacific to ship via Yaquina and Albany at a lower rate than we shipped direct from either Portland or San Francisco." This competition was prior to 1901. Their business was knocked out when the S. P. raised the rates. It was before their receivership, which occurred in 1892 or 1893. After 1901, solicitation of business from Cincinnati to Portland by the Sunset was abandoned. (2740) Formerly as much hops for Cincinnati as possible was forced by the Sunset route, but since the merger they go U. P. Cincinnati is a pretty fair hop market, and there used to be active competition between the O. R. & N. and the S. P. for that traffic. Because of their bulky nature, witness wouldn't solicit vehicles via the Sunset. Witness wouldn't state positively whether vehicles had ever moved from Ohio by the Sunset, but his impression is that they had. Witness thought the Sunset Hops for Cincinnati.

route could get just as large cars as the northern lines, for the purpose of handling furniture, &c.

(2741) Witness thought there was a difference between the northern lines and the S. P., namely, a penalty in the shape of an additional charge was imposed on cars longer than 40 feet, which practically prohibited the business. The difficulty in the movement of large cars is not between Ogden and Sacramento. It is Sunset. Witness admitted the snowsheds might make trouble.

Baumgartner.

(2742) F. P. BAUMGARTNER.

Seattle. Steamship business between Portland and San Francisco.

Lives at Seattle, Washington. Up to two months ago was for eleven years agent at Portland for the California & Oregon Coast Steamship Company, operating a line of steam schooners between Portland and San Francisco, and way ports. There was no other regular line of steam schooners. The Company was organized in 1898, and operated one steamer on the run between Portland and San Francisco. An additional steamer was added about every year until 1903, when the Company had a fleet of nine steamers. Now it has only two. Two years ago steamer property was very valuable, and the Company had an opportunity to sell at a high figure, and sold. In 1898 or 1899 arrangement was made with the O. R. & N. Co. (2743) The latter subsidized witness' company to maintain their rates. That agreement continued in force until about 1903. During the agreement the rates were maintained. The way ports were Coos Bay and Humboldt Bay, commonly called Eureka. From the latter the principal traffic was redwood lumber and shingles. It was handled both to San Francisco and Portland. South-bound was local business for San Francisco, and east-bound business was handled by Portland. The O. R. & N. issued the through bills of lading from Eureka to the east. The S. P. had soliciting agents at Eureka, and endeavored to route lumber for the east from San Francisco. Lumber moved both ways out of Eureka. Witness had a local agent there, and the O. R. & N. traveling agent made occasional trips.

Coos Bay—white cedar.

(2744) White cedar lumber was taken out of Coos Bay, but no shingles. White cedar is peculiar to that region, and is used considerably in the east. It is shipped to the Atlantic seaboard, and also to Chicago. There were boats that were taking that traffic to San Francisco, the same as from Eureka. The S. P. then had no agents at Coos Bay, but have had for the past two years, since they bought the Spreckles line. That cedar business from Coos Bay began about four years ago, and has moved both by San Francisco and Portland.

Space leased by O. R. & N.

(2745) The O. R. & N. guaranteed witness' Company $1,200 a month, whether any freight was carried or not. They had the use of the space, and could load it or not, as they pleased. That was north-bound tonnage only. Since 1903 witness' line no longer maintain the O. R. & N. rates, but made a tariff of their own; (2746) and changed their tariff whenever it was necessary to

get the business. The O. R. & N. line carried freight cheaper than any outside line ever did. Since 1903 the O. R. & N. has competed more strongly for business than it did formerly, especially as to interior business. Prior to 1901, and subsequently, the rates from Eureka to the east have been equal either way. (2747) No change concerning that business took place after 1901 that made any change in the circumstances or conditions. (2748) Witness' line hasn't been operating to Eureka for four years now. The N. P. Steamship Company took their place, so far as Eureka is concerned, after they quit operating there in 1905. From Coos Bay witness' line is not operating south, but up to the time they ceased operating to Eureka in 1905, traffic could get there from or to the east, either way, at equal rates. Sometimes witness' north-bound business was heavier, and sometimes the south-bound. Coos Bay cedar was first shipped east in 1903 or 1904. (2749) The North Pacific Coast Steamship Company began to operate about January 1, 1905. In 1898 the O. R. & N. operated a couple of steamers, and witness one, or two or three, as the lumber business warranted. Since then the steam schooners which had been engaged in business carrying lumber south and merchandise up, have largely increased in number. The N. P. Steamship Company are operating two. In 1906 witness was operating three, four or five at different seasons of the year. The N. P. Co. had soliciting agents, but witness didn't until two years ago.

Eureka rates.

Increase in steam schooners.

(2750) Witness carried lumber south-bound and largely ran light north-bound. Took what merchandise he could get. In 1908 there were probably a dozen steam schooners carrying freight. In 1907 perhaps one or two. In 1906 witness doubts if there were any carrying north-bound freight. The lumber rates were too high to warrant anybody to engage in general merchandise cargo. They couldn't afford to lose the time required in loading, but since the lumber rates have gone down, there have been about nine schooners in addition to the regular liners engaged in trying to carry merchandise from San Francisco north to Portland, and at almost any old kind of rate. Since the contract of 1903 ceased, competition has been absolutely unrestrained on the part of the Harriman lines between San Francisco and Portland. During the past two seasons, the schooners have carried wheat in addition to lumber south-bound. Last year witness thought there were probably eight or ten, perhaps twelve, sailings a month by steam schooners north-bound from San Francisco, in addition to the regular lines.

Merchandise at any rate.

(2751) The regular lines had, the N. P. two, and the O. R. & N. two. In 1898 there were only two, the O. R. & N. and witness' line, and he was subsidized. Fear of the law, on the part of somebody, kept the subsidy agreement from being renewed. On Coos Bay or Eureka business, the O. R. & N. would take up witness' advanced charges, the same as connecting railroads, and collect them at the other end. On San Francisco business they absolutely refused to take up anybody's advanced charges, except the Port-

Payment of advanced charges.

land & San Francisco Steamship Company's. Therefore, unless the freight is prepaid to Portland, witness' line refused to carry it. The declination of the O. R. & N. cut them out of the business. (2752) Witness' line carried passengers as well as freight.

Hurlburt.

(2752) W. H. HURLBURT.

Portland. Formerly pass. agent of U. P. and O. R. & N.

Lives at Portland, Oregon. For the last three years engaged in damming the Clackamas River. Entered the railroad service in 1871 as passenger agent of the North Missouri Railroad, running between Kansas City and St. Louis, now a part of the Wabash. After eight months became traveling agent of the Burlington, in the west, for about a year, and was transferred to Chicago and remained there until 1876. Then went with the Canadian Southern. (2753) Was its western representative at Chicago for two or three years, and then general passenger agent of the road at Buffalo, remaining there until 1883. It participated in transcontinental business, and ran from Buffalo to Detroit, with a branch line into Toledo. It worked into Chicago in connection with the Michigan Central, making a through line from Buffalo to Chicago. At that time witness worked transcontinental traffic in connection with any route west of the Missouri River via St. Paul or Omaha or Kansas City. Through the latter gateway either in connection with the U. P. or the Atchison. The S. P. didn't then participate in that traffic. Later a line was established to San Francisco by way of El Paso. Witness was at Buffalo when that road was established. Most of the western roads then had agents at Buffalo. The S. P. didn't.

(2754) The passenger business moved to the coast by all the various roads mentioned. That was 1881 to 1883. In 1883 witness went to Chicago as the western passenger representative of the Erie, but then had nothing to do with transcontinental traffic. Worked between Chicago and New York. Was working east-bound from the transcontinental lines through to the Atlantic coast. The traffic that witness secured came in over all the lines from the south to the north. Remained with the Erie until 1890, and then went to San Francisco as assistant general passenger agent of the U. P., where his duties consisted chiefly in working the business east-bound over the U. P. The Sunset route was then operating to the east. The Sunset Limited train was put on later. Most of the passenger business to the Atlantic seaboard went by rail from New Orleans.

(2755) The S. P. and O. R. & N. were also competing between San Francisco and Portland. After remaining in San Francisco a year, witness came to Portland as the assistant general passenger agent of the U. P., in charge of the O. R. & N. local business, and continued there until the road went into the hands of a receiver in 1894. Then became general passenger agent of the O. R. & N. under the receivers, and continued as general passenger agent after the termination of the receivership, leaving in 1901. Had jurisdic-

tion over the boat line, as well as the railroad. While the business was decidedly competitive so far as the public was concerned, there was practically no competition so far as concerned the O. R. & N. and S. P. on east-bound business. The latter route was too long, the train service not good, and the expense too great. The practical competition was with the N. P. up to the time that the O. R. & N. connected with the G. N. at Spokane.

No competition between O. R. & N. and S. P. on eastbound pass. business.

(2756) The G. N. then secured considerable business, but witness naturally tried to work passenger traffic by the U. P. It was, however, always the custom to work in connection with the line that brought the business to your attention. That is true everywhere. As to the passenger business for San Francisco, the O. R. & N. agreed with the S. P. upon rates, a differential being given the former. Because of the infrequency of sailings, every five days, the boat line was not competitive with the rail line. At certain seasons of the year the boats were pretty well filled. (2757) Witness remembers the rate war on passenger rates between Portland and San Francisco. It lasted a year, maybe a little over. Rates got as low as $5, first-class, including meals and berth. Meals and berth alone cost $6, so that if a man rode on a pass, he paid a dollar more than if he didn't. The S. P. rates were as low as $10, including sleeper. Principal methods of securing traffic are advertising and soliciting.

Boat line not competitive with rail line.

Rate war.

(2758) The independent boats were not important from a passenger standpoint. The O. R. & N. boats carried from 225 to 350 passengers and stopped only at Astoria, making the trip from Portland to San Francisco in about sixty hours. (2759) The boats ran pretty full from April to November. The Willamette River boats brought passengers from Salem, Albany and Independence. These boats stopped anywhere on the River that you put up the flag. The independent boats were really not passenger boats, and their accommodations were very inferior. Carried only what would be called steerage passengers. (2760) The North Pacific Steamship Company's service is very much improved, and they now maintain a passenger ticket office in Portland.

Independent boats.

(2761) When witness represented the U. P. as assistant general passenger agent in San Francisco, he worked business east over the S. P., and thence either via Omaha or Denver. In the latter case the traffic went east either via Kansas City or Omaha. The S. P. was the initial line, and in any event witness had to work over the S. P. They furnished witness with their tickets, and he reported the sales to them. The S. P. worked closely with witness for that business. The Omaha-Ogden route was the shortest and best, and had the best through car service. The Sunset Limited was established after witness left San Francisco. The S. P. solicited business by New Orleans and El Paso, and via St. Louis. (2762) The bulk of the business out of San Francisco moved by Ogden, probably eighty per cent. From Portland the S. P. was not much of a competitor. It took a day and a half longer to go via Sacra-

80 per cent of pass. business out of San Francisco moved via Ogden.

mento, the time from Sacramento being as long as from Portland, and then there was the additional expense in the way of meals, etc. Very little, except round trip transportation, was sold that way. On passenger business the competition from Portland was entirely between the N. P. and U. P. The Sunset route was the S. P.'s preferred route.

S. P. didn't attempt to stop business going via Ogden.

(2763) The S. P. didn't have their new ships then. (2764) They didn't attempt to stop business from going from San Francisco to Ogden, but accorded the U. P. all possible privileges. The only through train service from Ogden was over the Chicago & Northwestern to Chicago. There was a through tourist car which ran over the Rio Grande, on special days, by the Burlington, and on special days by the Rock Island, but the regular service was over the C. & N. W. from San Francisco to Chicago.

(2765) A passenger can avail himself of just as many of these routes now as he ever could. In fact, there are more routes now. If the S. P. controlled the business, they would work it over their long line, the Sunset route.

Olwell.

(2766) J. D. OLWELL.

Medford, Ore. Fruit and real estate.

In the fruit and real estate business at Medford, Oregon. At present ships thirty to fifty cars a year. Before he sold properties he previously owned, he shipped from 20 to 100 or 150 cars. Has been in business there fifteen or sixteen years. Ships largely to New York and Europe. Crop consists of apples and pears. Ships some pears to Europe, but not so much. Apples move to Europe via New York altogether. Before the merger, traffic went to the Atlantic seaboard by Sacramento largely; now by Portland and the O. S. L. Practically none of it now goes by the Sunset. (2767) Some has been sent by New Orleans, but only where there was a possibility of disposing of it en route. Pears are billed to Chicago, and then possibly diverted from there. Shipments by the Sunset are usually billed to New York, with the idea of stopping wherever convenient. Has never shipped by the Sunset and water lines to New York. It is not ordinarily practicable. One car went that way by mistake six years ago. Shipments by water are too slow for perishable freight. Going south the fruit also encounters warm climates. Everything practically now goes to Portland and then east.

Routing of his fruit.

(2768) Never knew of the N. P. soliciting business. Medford is 300 miles south of Portland. No other line goes in and gets any of that business. The lines east of the Missouri River solicited. The only one of the northern lines who ever solicited was the D. & R. G., but they have stopped. Business is shipped both under refrigeration and ventilation, exclusively in refrigerator cars.

Route via Portland better than via Sacramento.

(2769) The route to Omaha or Denver is shorter by Portland than by Sacramento. Witness regards the Portland route as the most practicable way to ship. The time and the service are better. The distance is shorter, and you avoid the mountain grades. Doesn't

think there has been any change in rates since 1901. The rates are the same from Medford and as far south as Ashland, to the east, as they are from Portland.

(2770) Witness has used the D. & R. G., but the service was not favorable enough for him to continue. The D. & R. G. haven't solicited of late years. Witness thinks the Pacific Fruit Express cars are about equal to the cars he has been using in the past. For apples and pears the northern routes are more favorable than the southern, on account of climate. Shipments of pears are made in August and September, apples principally in October. It is a great deal warmer in the Sacramento Valley than by the northern routes. The time by Portland is quite an improvement over what it used to be by the south.

(2772) A comparatively uniform temperature is maintained in the refrigerator car, but a southern route requires more ice, and also the temperature in the cars increases. (2773) Witness is sure the time between Medford and Omaha is better now than before, but had not figured it out exactly.

(2774) W. W. WILDE.

Wilde.

Engaged in fish and cold storage business at Astoria for two and a half years. Previously chief clerk in the U. P. San Francisco offices. Employed by that Company for eighteen years. Attended Mr. Campbell's meeting after the merger, as a representative of the general agent of the O. R. & N. and U. P. at San Francisco. (2775) The instructions were to work with the S. P. more closely and harmoniously than they had done in the past. Witness didn't think they were given any specific instructions as to territory, but were to work the business as seemed most advantageous to the system taken as a whole. (2776) They were not to offend friendly connections.

Astoria. Formerly with U. P. at San Francisco.

Instructions as to solicitation.

(2777) Before 1901, the U. P. San Francisco agency worked much harder against the Sunset than afterward. Witness ships his fish and cold storage products from the Columbia River by the A. & C. to Portland, and thence over the O. S. L. and U. P. The A. & C. is the line that runs from Astoria to Portland, a part of the Hill system, the N. P.-G. N., the North Bank. The S. P. worked with the U. P. for business out of San Francisco via Ogden.

(2778) As against the Atchison the S. P. worked with the U. P. There is a good deal of business that won't move by the Sunset. From Ogden the business might go either over the U. P. or the D. & R. G. There were divisions both ways. (2779) Most of the eastern lines had agencies in California. All of them were working in connection with the S. P. by way of Ogden. The I. C. also had an agency in San Francisco, but not the other lines leading up from New Orleans.

S. P. worked with U. P. as against the Atchison.

(2780) J. H. KELLY.

Kelly.

Lives at Portland, Ore. From 1890 to 1907 in the employ of the O. R. & N. in Portland and out on the line. From 1894 to

Portland. Formerly in service of O. R. & N.

Boat service.

1901 chief clerk at the dock in Portland, in charge of the transfer of freight from the boats to the cars. The O. R. & N. had the San Francisco line and also the Willamette and Columbia River boats; also for a while steamers to Coos Bay. The latter handled lumber and shingles principally. Doesn't remember whether the lumber and shingles came from Eureka or Coos Bay. The boats called at both places, as witness remembers. (2781) The boats going back took small shipments of merchandise. The boats brought into Portland, hops, salmon, paper, shingles, pickled fish, and lumber. The Willamette boats went to Salem, Albany, Corvallis, McMinnville, sometimes as far as Eugene. A great deal of the traffic brought in from the Willamette Valley was carried on to San Francisco, potatoes, onions and paper. The prunes and hops went east all-rail over the O. S. L. The N. P. got some of it.

(2782) There was a five day service to San Francisco. Its frequency depended on the amount of traffic. For a while there was a three days service. There is now a seven days service. Sugar and canned goods, some merchandise, miscellaneous freight, was received from San Francisco by the boat line, destined to Montana points. It moved out of Portland via Spokane and the G. N., some via Wallula and the N. P., and some via the O. S. L. The boats on the Cowlitz River brought down shingles and potatoes. The latter went to San Francisco, and the former went east. (2783) The Cowlitz River boats were not owned by the O. R. & N. Boats also landed from Vancouver and other places. The three days sailings were in 1895 or 1896. The five days service continued most of the time.

(2784) Since 1897 the population and traffic in this territory has increased. There are probably 100,000 more people in Portland now than in 1897. The traffic from the territory tributary to Portland has also increased. About two years ago a bad accident occurred, in the loss of the "Columbia." Up to that time they had never lost a life. (2785) They also lost the "St. Paul," but prior to that for twenty years the line had never lost a vessel.

Loss of Columbia.

DuFlon.

(2785) P. F. DuFLON.

Portland. Formerly in steamboat business.

Lives at Portland, Oregon. Represents jute houses in Calcutta and San Francisco, at Portland. For four or five years, beginning in 1892, was in the steamboat business at Portland. The original name of his company was the George Dietrich Steamship Company. It was succeeded, to a certain extent, by the North Pacific Steamship Company, and that in turn by the California & Oregon Coast Steamship Company. At that time witness quit. They solicited general freight from San Francisco to Portland, and had a contract with the lumber mills to load lumber back.

Slump in lumber traffic.

(2786) The lumber business slumped, and the boats began soliciting general freight both ways. They didn't solicit passenger business. There was a rate war, and the rates went down to a dollar a ton. The boats lost money after the lumber contract was

lost. (2787) There was a conference with Mr. Woodworth, of the O. R. & N., and the subsidy contract was made that Baumgartner testified about. Mr. Doe took his boats up to Alaska, because he could make more money out of them, and that left witness without any boats. Witness would bring up freight that was destined to points on the North Pacific beyond Portland, but the O. R. & N. wouldn't accept freight, unless it was prepaid to destination. None of it ever went to Montana points. When the contract with the O. R. & N. was made, witness ceased to do business with the N. P. Settlement of rate war.

(2788) Freight only moved to San Francisco from points east of the Missouri River over witness' boats once. It came via the N. P. Witness' boat was five or ten days late, and the shipments had to go by an O. R. & N. boat. The amount of freight was uncertain. Never could tell anything about it. Didn't get business from points on the N. P. That was carried to Tacoma, and sent by the steamship line from there. The O. R. & N. made contracts with the large shippers to handle all their business between Portland and San Francisco. (2789) Almost all kinds of commodities were carried on the boats. The principal commodities were salt and sugar, California canned goods and leather. There weren't any steam schooners when witness started in. His boats were all very old boats, and carried 250,000 to 300,000 feet of lumber. Schooners are now operating that carry 750,000 to 1,000,000 feet. Freight from east to San Francisco by his line only once.

(2790) The subsidy contract originated with witness. It referred only to up-freight. They guaranteed $300 per trip, four trips per month, and had the privilege of taking the space. The up-freight wasn't very heavy, but the contract was made to stop the low rates, so as to get a decent tariff out of the business. It was a losing business all the time witness was engaged in the venture. The only time he made any money was when the dollar rate was in, and he shipped lumber under another name, on the O. R. & N. boats at that rate, and made money. (2791) The O. R. & N. didn't operate to Coos Bay in witness' time. He quit in 1896. Subsidy contract.

(2792) J. ALLEN HARRISON. Harrison.

Lives at Portland, Oregon. Assistant superintendent of the Vancouver & Lewis River Transportation Company, which runs one boat to Astoria and one on the Lewis and Lake Rivers, and one to Vancouver. Has been in the boat business at Portland since 1896. They bring in a very little salmon, also general merchandise, junk, fish, and shingles. The salmon is delivered either to the O. R. & N. or the N. P., as the shipper directs. Very little delivered to the S. P. The canneries directed the routing. The O. R. & N. Portland-Astoria boats also brought in the same kind of traffic. Their boats to San Francisco stop at Astoria. Portland. Boat business.

(2793) Before the merger, boats were running on the Yamhill River. Witness thought the O. R. & N. had a boat there, and Hosford ran a boat in there and Capt. Geer ran a boat. Yamhill River.

Doesn't think that the O. R. & N. has any boat there now. From the Yamhill, potatoes, hops, wheat and general farm products were brought in, practically the same as from the Willamette. About the Spring of 1903 witness' boats became a connecting line with the N. P. at Kalama. Their shipments coming from the east for down-river points then moved by the witness' boats. The O. R. & N. boats turned over their business to their own rails. The Vancouver Transportation Company has been operating boats on the Columbia and Willamette Rivers between Portland and Astoria since at least 1892. Witness sends out freight over the O. R. & N. or N. P. just as it is routed. (2794) No restriction of any kind is placed on his business.

Holman.

(2794) H. HOLMAN.

Portland. Boat business.

Operates a little passenger steamer on the Columbia River, and has been in the steamboat business at Portland for 22 years. For 21 years managed the business of the Kellogg Line, which ran up the Cowlitz River about 80 miles. The boats he now runs are small passenger boats. They carry no freight. Little rural milk boats. The potatoes the line brought down went to San Francisco over the O. R. & N. They were bought by dealers in Portland, and forwarded.

Cowlitz River.

(2795) The Cowlitz flows into the Columbia, 46 miles west of Portland. It is navigable for 45 miles about eight months in the year. The shingles that were brought in that way, not used locally, were shipped east via Salt Lake and Denver over the O. R. & N. or the S. P. The brokers in town handled them. The hops were shipped to the dealers at Portland. Witness has never delivered business to the N. P., either at Portland or at Kalama. The N. P. paralleled his route on the Cowlitz, and he hustled to get business from them.

Paulsen.

(2796) NICOLAI PAULSEN.

Portland. With O. R. & N.

Lives at Portland, Oregon. For the ten years ending March, 1907, witness was employed in various positions in the local freight office of the O. R. & N., at Portland, the last position being chief clerk on the Ainsworth dock. The O. R. & N. boats to San Francisco ran every five days. For about a year they have run weekly. At one time there was a dollar a ton rate to California. Witness remembers particularly that this was true on sugar. Perhaps salt was included. Doesn't remember any other commodity particularly. There was a special commodity rate of $2 on paints and oils for one firm in Portland.

Traffic carried between Portland and San Francisco by boat.

(2797) The line carried chiefly potatoes and flour to San Francisco from the rails to the O. R. & N. Not as much grain as mill feed. Occasionally had shipments of hardwood lumber from the Willamette Valley. A good many box shooks moved at that time. They also originated on the lines of the O. R. & N. at Bridal Veil, near Baker City. There were also box shooks from the factories

in Portland. The boats down the Willamette also brought hops which were shipped east. The dollar a ton rate witness thought was in effect in 1901.

(2798) The rates by water from San Francisco to Portland are cheaper than by rail. The competition is greater now than it was when witness was in the business. The North Pacific Steamship Company has regular sailings, and there are the outside schooners under the George J. Richardson people; two regular lines and a number of steam schooners. The steamers of the North Pacific Steamship Company are very much better steamers than the California & Oregon Coast had. (2799) They have good passenger accommodations, and their freight carrying capacity is larger. They have an office on Third Street, in Portland. They maintain their regular schedule well.

Outside steamships.

PORTLAND, OREGON, MAY 5TH, 1909.

Elmore.

(2800) SAMUEL ELMORE.

Astoria. Salmon canner.

For 28 years a salmon canner at Astoria, shipping all over the United States, and also abroad. Before the merger, all the coast companies, and practically all the connecting lines east, solicited his business. The N. P., G. N., S. P. and U. P. solicited. Witness shipped over all the routes to the Atlantic seaboard. Not very much by the Sunset. (2801) Shipments went by the Shasta, the Rio Grande, the U. P., and the Short Line; also over the N. P., going to Tacoma and Seattle. Sometimes connected with the G. N., sometimes direct to St. Paul. The G. N. traffic goes through the Minnesota Transfer. It reaches the G. N. over the O. R. & N. For a good many years witness has been as large a shipper as any other salmon canner; the largest for Columbia River salmon. Ships annually about 250,000 cases. A case consists of 48 pounds of one-pound tall cans. The rate to the Atlantic seaboard is sometimes $1, sometimes 75 cents. It is now 85 cents. It was made 85 cents after the Interstate Commerce Commission fixed it up, several years ago.

(2802) Salmon reaches the railroad by boat from Astoria. The O. R. & N. had a line, and the Vancouver Transportation Co. another. The N. P. took it at Kalama. The bulk of the salmon on the Oregon side moves by the A. & C. railroad, and on the Washington side by the two boat lines mentioned. Witness' business moves now practically the same as it used to do. In a majority of cases, witness routes his own traffic. Sometimes the customers do it. He divides his business pretty well. Formerly had a leaning to the O. R. & N., because they are closely allied with Astoria. Since the A. & C. came on, they have had their share. The Sunset was not the favorite line to ship over. Preferred the G. N., N. P., U. P. and Can. P. They were more direct. (2803) Witness can ship freight over the Astoria & Columbia River (which is controlled in the interest of the N. P. and G. N.) in connection with the U. P. Has noticed no change in his business since 1901.

Kollock.

(2803) FREDERICK N. KOLLOCK.

Portland. Freight solicitor for Pa. road.

For sixteen years solicitor for the Pennsylvania Railroad at Portland, Oregon. Solicits both freight and passengers. At first had the whole Pacific northwest, Oregon, Washington, Idaho, Montana and British Columbia. Now has only Oregon and Idaho. Solicits hops, lumber, prunes, all sorts of freight in the Willamette Valley. (2804) The S. P. endeavored to route their freight over the Sunset or the Sacramento routes, and the O. R. & N. into Portland by their boats. In high water the competition went up as far as Eugene. After the merger, there was no competition in the valley. Considerable wool moves out of the valley, but witness never worked the wool. What wool traffic he got was generally controlled by parties in Portland. Navigation was seldom open as far south as Eugene. The boats didn't go beyond Albany, except in exceptionally high water.

Wool.

(2805) In those days more or less traffic moved into Portland by the S. P., and out over the O. R. & N. Now Mr. Graham operates a boat line as far as Corvallis. Since the merger, there are no longer two sets of soliciting agents. Witness' facilities for getting business are substantially the same as they ever were. In securing traffic to or from the Atlantic seaboard, witness shows no partiality. He has two gateways, one at St. Louis, and Chicago, but is perfectly neutral on account of his connections. There is no change in the movement of traffic since the merger. (2806) Now the Harriman line sends the traffic whichever way equipment is supplied, and the general freight office decides. A good many hops go Sunset, and some come up to Portland and go east over the other lines.

Is neutral as between his Chicago and St. Louis gateways.

Crichton.

(2806) E. W. CRICHTON.

Portland. Boat business.

Since its organization in 1891, connected with the Columbia River & Puget Sound Transportation Company. Holds office of Secretary and Treasurer. From 1891 to 1903 they had a line of boats on the Columbia River between Portland and Astoria. Between 1901 and 1903 a line between Portland and The Dalles, and from 1892 to the present time a boat on Puget Sound between Seattle and Tacoma. The latter is a small boat that takes passengers across in a few minutes from one town to the other. Prior to 1901 witness brought salmon into Portland. From 1891 to 1903, when they sold out, they carried salmon to Kalama for the N. P. road. From 1894 to 1901 they made a contract with the S. P., and carried salmon for them. (2807) The salmon for the S. P. were picked up at Astoria and way points. It was delivered to the S. P. at Portland. The O. R. & N. carried their own salmon. The S. P. salmon was destined to eastern points, Boston, New York, Philadelphia, and some to New Orleans and Memphis. Witness thought also to Cincinnati and Pittsburg. He received $1.25 a ton for carrying it to Portland, and the railroad absorbed the steamship

Salmon traffic.

charge. Delivered salmon to the N. P. only at Kalama. Brought some pickled salmon to Portland once or twice for the N. P.

Cancelation of relations with S. P.

(2808) Complainant's Exhibit 161, page 2808, is a letter dated December 13, 1901, to the Columbia River & Puget Sound Navigation Company, from the S. P., canceling all arrangements for interchange of business. After that, witness delivered no salmon to the S. P. (2809) Witness' line solicited freight in connection either with the S. P. at Portland or the N. P. at Kalama. The O. R. & N. also had solicitors. The O. R. & N. had a line on the Columbia River, and also the Vancouver Transportation Co. had a boat.

(2810) The Vancouver Transportation boats didn't carry salmon at that time. They had no transcontinental connection. After witness sold out, they took his place, and carried to the North Pacific. Before that, they had no traffic connections with the O. R. & N. or the S. P., that witness knew of. The bulk of the salmon out of there moved in connection with the O. R. & N. or the N. P. The A. & C. Railroad was completed sometime in the 90's, and was in operation some time prior to 1901. (2811) That road carries the bulk of the salmon now for the N. P. They have side tracks into the canneries, and they took the Japanese section hands to help load cars, so as to compete with the deck hands on the boat, taking salmon off the floor of the cannery; so, after the construction of the A. & C., the competition was really keener than before. After the S. P. arrangement was canceled. the O. R. & N. boats handled the S. P. salmon. The A. & C. did business with all three roads. (2812) The effect of Exhibit 161 was to cut off the business from witness' boat line. It didn't affect the ability of the canner to send his business either way. He could then ship by the O. R. & N. boats to the S. P. rails, or by the A. & C. to the S. P. The U. P. and S. P. agents quit competing at the time of the merger.

McGuire.

(2812) HUGH McGUIRE.

Portland. Paper business.

Engaged in the wholesale paper business in Portland since 1892, the Pacific Paper Company. Before the merger, witness' business was solicited by the separate agents of the S. P. and O. R. & N. (2813) His fine paper he gets mostly in Massachusetts. Receives freight aiso from Wisconsin, Ohio and Michigan. Has shipped from Mass. by the Sunset. Has shipped also from the same region by the U. P. and O. S. L. Now he is solicited by the U. P. system, but not by the Sunset. At present a large part of his traffic is moving by the American-Hawaiian, that is, the Atlantic sea coast shipments from as far back as Ohio. Doesn't ship very much by the lake and rail connections. Divides it between the North Bank and U. P. Plays no favorites.

(2814) Doesn't want to ship by the Sunset route. The time is too long. Never shipped any great amount that way. Never moved anything on the Sunset route at equal rates. Ships over the U. P., N. P., G. N. and Can. P. The rail routes are all satisfactory

and furnish ample facilities. (2815) The Sacramento route and Sunset route do not appeal to witness. Uses the American Hawaiian because it is cheaper. If he were going to use water route, he would choose the American Hawaiian or the lakes. There is not as much personal solicitation now as there formerly was. (2816) There are not as many street men for the gateways between Chicago and Omaha and Minneapolis. At least, witness doesn't see as many solicitors as he used to. Is solicited by the Can. P. and N. P., and occasionally by the G. N., but doesn't ship much by the G. N. Doesn't recall ever shipping by Sacramento.

Nash.

(2816) WALLACE NASH.

Lincoln Co., Ore. Legal adviser of Ore. Pac.

Up to a year and a half ago lived in Portland, and previous to that in Corvallis. Now lives on a ranch in Lincoln County, 130 miles from Portland. Before living in Portland resided in Corvallis. Was 2nd Vice-President and legal adviser of the Oregon Pacific, the predecessor of the Corvallis & Eastern. A member of the English bar before coming to this country, fifty years in all. For thirty years a member of the bar of Oregon, ever since coming out here.

Route of O. P.

(2817) The Oregon & Pacific ran from Yaquina Bay to Corvallis, thence across the Willamette Valley to Albany, thence up along the Santiam Valley into the timber region of the Cascades, a total length of 131 miles. The line was platted entirely across Oregon, and the right of way secured across the state to a point called Ontario, on the Snake River, and some construction work was done at the east end, in the valley of the Malheur, and also in the passes of the Cascades, which governed the route. There is no line up the Malheur River now. There is one sixteen miles from Vale to Ontario, paralleling that river. The Oregon & Pacific construction work began about 1884 or 1885, and continued until about 1888. $200,000 worth of rock work was done in the canyon of the Malheur River. Where the construction work stopped, there was about a quarter or a half mile in the heart of the Cascades, which was the vital point of the pass. The rock work was done there, and about a quarter of a mile or so of rails laid there, to hold the pass. At the present time the road is in the heart of the timber region of the Cascades, and from that point to where it emerges from the timber on to the plain lands of eastern Oregon, the timber resources in the region are enormous.

Resources of country adjacent to road.

(2818) Between the point where the surveys emerged from the mountains on to the plain lands of eastern Oregon, to the eastern boundary of the state, there are about 675,000 acres of irrigable land, besides the dry farming land on either side, and the stock ranges. There is a very large amount of dry farming land. The surveys run for 200 miles through the stock ranges, and the yield of stock is not only very large, but can be increased almost indefinitely. Witness was connected with the operation of the Corvallis & Eastern until it went into the second receiver's hands

Corvallis & Eastern.

in about 1892. It at first was a friendly receivership, in 1890. In 1892 the receiver sold the road, and thereafter witness had no connection with it. It was purchased by Bonner & Hammond, of Missoula, Montana, for $100,000. Hammond operated the road for some years, and formed the Corvallis & Eastern Company. He sold out the majority of the stock to the Huntington Estate. Witness had some negotiations for the purchase of the stock up to the close of the year 1906 or 1907. (2819) It now forms a part of the S. P. system. They had not acquired it in 1906. Witness first heard of it when he was coming west from New York, where he had gone in an attempt to acquire the road. Witness thought the first steamship was acquired when the road was opened from Yaquina Bay to Corvallis, in 1887, and within a year two other boats were put on, so that there was a three boat service between Yaquina Bay and San Francisco. The boats were of considerable size. During the year 1888-9 the company carried 24,000 tons of wheat and other cereals out over the Yaquina bar, and there was a corresponding amount of incoming traffic from San Francisco. The incoming freight ranged from 80 to 200 tons a trip, the trips being every five days. The north-bound cargoes consisted of sugar, hardware, general merchandise, machinery, etc. There were large docks on Yaquina Bay that cost several hundred thousand dollars to build. Those docks are not there now. When witness first took hold of the affair, it was a harbor that had a low water depth on the bar of between 12 and 13 feet, with a rise of 7.6 feet.

Boat service.

(2820) An expenditure of $600,000 by the Government has increased the water on the bar at low tide to between 15 and 16 feet, and the main obstructions in the channel have been removed. Witness' company also maintained a line of three good-sized river boats to Portland. Two of them carried about 300 tons, and the other about 180, and that line was maintained during all the time that the railroad was operating on the Willamette River. They were new boats, built especially for the purpose, two costing $26,000 each, and the other $22,000. They connected with the railroad either at Corvallis or chiefly at Albany. The ranges in central Oregon that could be tapped by the C. & E. are both cattle and sheep. Probably from 100,000 to 130,000 cattle are driven every year from those ranges southerly to Montague on the S. P., and a large proportion, from a fourth to a third, driven east to Ontario and points on the O. S. L.

Boats on Willamette River.

(2821) Out of the 20,000,000 pounds of wool raised in Oregon annually in the last few years, about 17,000,000 pounds came from eastern Oregon, largely on those ranges. The sheep are sheared on the ranges, and the wool is largely delivered at Shaniko, where the wool sheds are the largest in any of these states. The wool is brought to Shaniko by wagon trains. It converges there from a very large area of country. The cattle and sheep are driven 150 to 200 miles, as a fair average, before they can reach a rail-

Wool.

road. The territory in there, without a railroad, is in the neighborhood of 300 miles each way, that is, east of the Cascade range. There is no other railroad penetrating the Cascade range from the west, leading into that country, except the S. P., which runs south. There is no west railroad, except the O. R. & N. at the extreme north. The C. & E. stopped some 25 or 27 miles west of the pass. There is no line of the S. P. penetrating that country from the west.

O. R. & N. branches.

(2822) The O. R. & N. has constructed several stub lines into the wheat regions of the northern tier of counties of the state, the Columbia Southern running south a distance of 71 miles, and another road that runs to Condon, which is farther east, a length of about 40 miles; also a line to Heppner. (2823) There is a road that runs from Baker City, the Sumpter Valley road, independently owned. It is a connection of the O. R. & N. There is a line into Tipton from Baker City. No other line penetrates the country witness has mentioned. Roads are now being constructed into the Klamath country, away to the west from the region witness is speaking of, but still giving these counties railroad connection. That Klamath line leaves the S. P. at Weed, Cal., and runs up somewhat parallel with the Shasta route on the other side of the mountain. The territory that witness spoke of, that is without a railroad, is entirely in Oregon. Witness doesn't know what became of the Willamette River boats. Thinks after Mr. Hammond bought the road, they were sold.

C. & E. steamship traffic.

(2824) The C. & E. operated steamships from 1888 to 1892. Upbound, they used to carry 80 to 180 tons of merchandise. Going down, they were generally full. Their carrying capacity was about 1000 to 1600 or 1700 tons. At the time of the receiver's sale, the Oregon & Pacific owned those three good-sized river boats, also an ocean going iron steamer, with a carrying capacity of about 1000 tons. (2825) Witness understood Mr. Hammond subsequently sold the steamer for about $40,000. Witness thinks her cost was considerably over $100,000. The length of the constructed railroad was, at the time of sale, 131 miles. There were good stations, equipment, and telegraph line. The sale included the uncompleted work done in advance of construction. The warehouses have disappeared at Yaquina, and the main dock is in such a dilapidated condition that witness didn't consider it a dock at all. Mr. Hammond didn't operate the steamship nor the steamboats for any length of time.

Cost of C. & E.

The bonds on the road amounted to a little over $8,000,000. The actual expenditure of cash at this end was $4,250,000 for the road and its equipment. (2826) The $8,000,000 covered the whole thing, but the $4,250,000 was the amount that passed through witness' hands in reference to the railroad, and didn't include the vessels. Mr. Blair and other rich men in the east owned the bonds of the road, and stated over their own signatures in "The Oregonian" that they intended to complete it.

(2827) During the friendly receivership, receiver's certificates aggregating something like $300,000 or $400,000 were accumulated. The road was first sold through Governor Hughes, of New York, who represented the bondholders, for $200,000, but the Court refused to confirm that sale, and it sold a few months afterwards for $100,000. The bondholders investigated the property, and declined to bid. The bondholders lost everything. They could never be got together, to make a purchase.

Receiver's certificates.

Bondholders lost everything.

(2828) Although Mr. Hammond was able to furnish money to construct the Astoria & Columbia River road, he didn't extend the Corvallis & Eastern, but sold off the boats and stripped the road, and sold a majority of the stock to the Huntingtons. They didn't extend it, either, though they held it to 1906. (2829) From 1902 to 1906 the property was in the hands of people who could have extended it, but they didn't. The elevation of the range country witness mentioned varies from 2000 to 2900 feet. The road runs through the depression, and is about 2000 feet. Harney Valley varies from 2000 to 2600 or 2700 feet in altitude. (2830) When the road came out of the mountains, it turned mainly south, and left Prineville off to the northeast. The character of country south of Prineville, extending east from 10 miles east of the Deschutes River and 10 miles south of Prineville, is broken and rough. There is no water on it. On some of the old maps it may be called the Oregon Desert. (2831) Witness' knowledge of this country discussed.

Topography of country.

(2832) The altitude of the pass through the canyon at the end of the Corvallis & Eastern is about 4700 feet. The grade from the end of the present road to the crossing was slightly over two per cent. There is a good deal of snow. The timber that witness testified about isn't peculiar to this section, but extends up and down the Cascade Mountains practically to the southern end of Oregon. (2833) The road penetrates that timber now, but its earnings have always been very limited. A large part of the timber is in the Government reservation. When the road was built, it was in private hands, and the timber could have been cut. Now the timber can only be cut through permission from Washington.

(2833) WILLIAM HANLEY.

Hanley.

Resides at Burns, Oregon, 350 miles southeast of Portland, (2834) 150 miles from railroad. Engaged in cattle business. His Ontario shipments, which are probably the largest, in association with M. K. Parsons, of Salt Lake, a combination trading account, run probably from 10,000 to 25,000, may be 30,000 cattle a year. Also ships some dry cows to Winnemucca, Nevada; that is, 250 miles from Burns. Ontario is 150 miles, and is on the O. S. L. Witness ships to almost every point north and east, some going to Canada, the Missouri River, Nebraska, Kansas, and formerly into Colorado.

Burns, Ore. Cattle business.

(2835) From Ontario the cattle go over the O. S. L. and U. P. At one time also over the D. & R. G. Ceased to have that privilege three or four years ago. Previous to that sold a good many cattle in Colorado. Some years we sold the biggest part of our cattle, especially cow cattle, there. The northern country is a special steer country. The northern grasses are really the only grass country that turn cattle off the range good enough to go to slaughter. Closing the Ogden gateway to the D. & R. G. cut off witness from that territory. The business varies with different years. Sometimes it becomes a fever with them, but Colorado was really a special country on she-cattle. (2836) Mr. Parsons supplied his own interests in Colorado, and some years has purchased as many as 10,000 cattle from Oregon for Colorado. Cutting off the D. & R. G. closed witness' cattle market to a considerable extent.

Routes to cattle ranges.

(2837-2842) Witness describes various feasible railroad routes into the ranges, and the character of the country. (2843) Whether the cattle lose weight, or not, in being driven a long distance, is a matter of time and skill in handling. Common stock cattle are apt to gain, while cattle fattened for slaughter would lose. There are no wheat raisers in that region. (2844-2849) Discussion of railroad building and character of the country continued. (2850) Since 1901 only the Siskiyou County Branch of the S. P. and the Ontario line have been built. (2851) The Arlington-Condon Branch was built in 1904 and the Pilot Rock Branch in the last two years, and the Vale Branch in the last four. The Ontario Branch is 16 miles in length, the Pilot Rock 16 or 18, the Condon a little over 40. The O. R. & N. have a whole lot of branches up in eastern Washington. Witness understood that those branches in Washington were built with Portland capital, although the country around Portland was neglected.

Branch lines.

Baldwin.

(2851) T. M. BALDWIN.

Prineville, Ore. Banker.

Has been for 22 years in the banking business at Prineville, Oregon. Owns some ranches about that place. (2852) It is 65 miles from the nearest railroad station, namely, Shaniko. It is 120 miles from The Dalles, which used to be the shipping point of that section. That part of Oregon consists of high tablelands and valleys watered by the streams. The products of the country are hops, wheat, barley, rye and vegetables. The country is principally devoted to stock raising, cattle, horses and sheep. There are some six million acres in the county. The stock is driven to Shaniko for shipment principally. Some are driven south. There is considerable shrinkage in driving cattle so far to the railroad. Witness thinks it would amount to 75 or 100 pounds per animal on fat cattle. There is considerable timber in that country, mostly yellow pine.

Products of interior Oregon.

(2853) Prineville is on Crooked River, 20 miles from the Deschutes River, into which it empties, the latter flowing into the Columbia. There are several irrigation projects in that country, but not by the Government. The Deschutes Irrigation Power Com-

Irrigation projects.

pany has about 300 miles of mains and laterals. They have almost 87,000 acres under water. Alfalfa, grain and vegetables are raised. A good deal of those lands have been taken up. The grain has to be hauled by team, if it is taken out at all, but doesn't think any grain is produced for export. Those lands are 70 to 80 miles from railroad. In the northern part of the county is a belt of land from which wheat is exported, but it is not under irrigation. That is dry-farming. There are upwards of 250,000 acres in that belt. The wheat is hauled to Shaniko and to Prineville, but all that goes out of the county goes to the former place. (2854) The hauling costs from 20 to 50 cents a bushel. Prineville is a place of 1400 inhabitants. The Deschutes Company has had their water on this land for the last two or three years. About 50,000 acres are under cultivation. Doesn't think there are 1000 acres in alfalfa under the Bend irrigation scheme. Everything that can be put into alfalfa is now in alfalfa, but there are several thousand acres additional that could be put under water. Alfalfa.

(2855) There are 25,000 or 30,000 acres in alfalfa in the Crooked River Valley. The land in the bottom sells from $50 to $100 an acre, and up at Bend the land is held at from $40 to $60. The land isn't cleared. It is covered with junipers and sage brush. This Bend country is about 3,500 feet in elevation. (2856) They are liable to have frosts every month in the year. The alfalfa is sold locally to feed stock, at from $5 to $8 a ton. An acre raises from five to seven tons, and costs about $1.00 a ton to put it in stack. At the head waters of the Crooked River there is quite an area of country that is devoted to stock raising, because of the natural grasses and alfalfa.

(2857) Between Agency Plains and Shaniko the country is broken some by hills, but the valleys are quite productive. The valleys are narrow. Shaniko is on a high plateau, 3,800 or 3,900 feet and drops from there down into the Antelope Valley, to 2,200 feet. The town of Antelope is six miles from Shaniko. (2858) The drop is in the last two miles. The country on the Shaniko hill is all unproductive. The last 15 miles of the Shaniko land is good for grazing only; too rocky for wheat. There are 20 miles of that character of country immediately south of Shaniko. Immediately south of Prineville is The Desert. Going west from Prineville, after you leave the Crooked River Valley, you go down 12 miles, and then climb up on top of the table-land, which is without water. Topography of country.

(2859) In addition to the Bend irrigation scheme, there is water on it on the west side of the Deschutes. The Squaw Creek Irrigation Company has redeemed about 10,000 acres, and the Columbia Southern Irrigation Company about 27,000. West and north of Prineville you run into the fringes of the Blue Mountains, after crossing The Desert. On top of the table-land you run into the Blue Mountains; a very broken country. Witness doesn't think the Condon or Heppner lines could be extended. Witness thought the most practical route for extending the O. R. & N. line would

be up the Deschutes. It is a rocky canyon about 135 miles long. (2860) And you have to cut your way out of rock most of the distance. It is a narrow, deep canyon, and in some places the rock rises 2000 feet, almost sheer up from the river level. The country tributary to it is not at all productive until you get to the mouth of Trout Creek, 80 or 90 miles up. Just east of the Deschutes River, the Columbia Southern runs parallel with the river 70 miles; practically covers all the wheat country; and west of the Deschutes River is the Great Southern Company, owned by Mr. Heinrich, which runs into the country about 15 miles, and taps the country which might be tributary to the Deschutes on the west. The line last mentioned is only 15 miles out of The Dalles. It is entirely inaccessible from Prineville. Land selling from $40 to $60 an acre would, under proper state of cultivation, be worth $100 near a railroad. The remainder of the 50,000 acres, of which witness testified 1000 were in alfalfa, are being cleared and brought under cultivation.

Products and transportation facilities.

(2861) Grain and vegetables are raised. The grain is too far from a railroad to export, and is fed to stock. Sheep are driven to the Columbia River. Most of them are shipped from Shaniko. There is quite an active demand for all the hay and grain raised. Sheep are shorn on the ranges, and some of the wool is hauled 150 or 200 miles. The hauling costs half a cent to one and a quarter cents per pound, depending upon the distance. The annual clip is three or four million pounds, and is hauled to Shaniko. The wool is raised in the territory extending from the Cascade Mountains to the Blue Mountains, and (2862) south to Prineville. The sheep go to the Cascade and Blue Mountains for summer range. The sheep are on foot practically all the time.

Wood.

(2862) C. E. S. WOOD.

Portland. Former army officer.

Came to the northwest in 1875, as a Lieutenant in the regular army, and since has been practicing law at Portland. (2863) As an army officer, witness campaigned all over the eastern part of Oregon and Washington. (2864-2866) Witness describes the country.

(2867) The Deschutes River has the most even flow of any river in the United States, and the greatest water power, many times more than Niagara Falls. It represents 9,000,000 tons of coal a year in power, and witness didn't think that ought to be destroyed by either irrigation or railroads, or anything else. (2868) There are at least four lines in eastern Washington, the N. P., G. N., O. R. & N., and the Can P. The C. M. & St. P. is also coming in by arrangement. From where the Harriman system forks at Granger, going to San Francisco and Portland, witness estimated there were fifty odd million acres, thirty million in Oregon alone, without railroad facilities. (2869) Witness' clients, Lazard Freres, of New York, Paris and San Francisco, for thirty odd years have owned 863,000 acres in Oregon. Location described.

Grimes.

(2871) WILLIAM GRIMES.

Marshfield, Ore.

Resides at Marshfield, in southwestern Oregon, on Coos Bay Harbor. (2872) The S. P. and the Oregon Coal & Navigation Company each run a boat to San Francisco, and the former, as well as the North Pacific Steamship Company, each run a boat to Portland. The "Eureka" also runs from San Francisco to Coos Bay, to Eureka and to San Francisco. Marshfield has a population of 5068. Its industries are coal and lumber, dairying, horticulture and agriculture. There is one railroad owned by the S. P. Co., running from Marshfield to Myrtle Point, on the Coquille River. The road under Mr. Spreckels was surveyed through to Roseburg on the S. P. A road is also partly constructed from Drain to Coos Bay.

Industries of Coos Bay country.

(2873) There are about 80 to 120 miles of partial construction, consisting more particularly of grades. The steel is laid only a mile or two. The partial construction took place in the spring of 1907. Since then nothing further has been done. No part of it is operated. (2874) Witness saw Mr. Harriman with reference to completing the road, and he said he would send somebody to report on the traffic possibilities.

Railroad between Marshfield and Myrtle Point.

(2875-2879) Complainant's Exhibit 162, a report by W. H. Holabird upon traffic possibilities for a standard gauge railroad between Drain and Marshfield, Oregon, made by direction of E. H. Harriman. (2879) Complainant's Exhibit 163, letter from Chamber of Commerce of Marshfield to J. Kruttschnitt. (2880) Complainant's Exhibit 164, Mr. Harriman's reply. (2881) Complainant's Exhibit 165, Chamber of Commerce's reply. (2881-2) Complainant's Exhibit 166, Mr. Harriman's reply. (2882-3) Complainant's Exhibit 167, Chamber of Commerce's reply. (2883-4) Complainant's Exhibit 168, Mr. Millar's reply.

Transportation facilities.

(2884-5) Lumber goes out of Marshfield mostly to San Francisco and to foreign points. Sailing vessels come in and take it to San Pedro and south. (2886) Dairying products are carried into Marshfield by gasoline launches. Nearly all the farmers own them. There are also some coal mines. The coal is carried out by steamer. The S. P. mine coal for their own use. There are other coal mines there that furnish the local market. There is a big coal field. (2887) The two lines mentioned are the most feasible, but witness thought there could be other lines from the S. P. to Coos Bay. Transportation conditions have improved since the Harriman people have purchased the railroad from Spreckels. The Drain-Coos Bay line was started in the fall of 1906 or the spring of 1907. Lumber was then considerably higher.

Lumber business.

(2888) They have been milling lumber for 20 or 25 years on Coos Bay, may be longer. That is the bulk of the tonnage out of Coos Bay. The country is heavily wooded, and it costs from $30 to $200 an acre to clear it. For ten or fifteen years past the tide lands that are susceptible of cultivation, have been used for dairying pur-

poses. After this road was started and well under way, the contractor failed. (2889) The construction company is going through the bankruptcy court.

(2890) Mr. Smith, who was talking to Mr. Harriman about building the road, owns between 100,000 and 200,000 acres of timber land, worth from $20 to $50 an acre, or an investment of from $5,000,000 to $10,000,000 of timber alone. Mr. Simpson also has a million or two in value. (2891) Mr. Harriman desired a four per cent. guaranty on the actual cost for ten years. (2893) The timber tributary to the main line of the S. P. now is more than enough to supply any prospective demand. (2894) The S. P. boat to Portland and San Francisco each runs once a week.

Flanagan.

(2895) J. H. FLANAGAN.

Marshfield, Ore.

For forty years a resident of Marshfield. The principal resources of Coos Bay are timber and coal. They claim 400 square miles of coal, lignite, in Coos County. It has been marketed now for fifty years, principally in San Francisco. They claim 70 billion feet of timber tributary to Coos Bay. (2896) Until recently the logs were all brought by river, and some by tide water. Now spurs are being built into the timber, and it is brought to Coos Bay over the Spreckels road. It is a great dairy region. Coos Bay has a population, including Marshfield, of 8,000 or 10,000 people. That includes the farmers, mill employes, and coal miners. Present condition of construction on the Drain branch described. Witness thought its construction was begun in 1905.

Products of Coos Bay County.

(2897) The Drain branch never secured any rights of way on Coos Bay. Witness understood one-tenth of one per cent. was the heaviest grade on the proposed road. Timber on the stump at Coos Bay is worth from $1 to $2.50 a thousand. $70,000,000 would be a conservative estimate for the tributary timber. The Elijah Smith Company owns about 100,000 acres, 40,000 of which is timber. Doesn't think the timber alone would be worth $1,500,000. That would include all their holdings. The C. A. Smith Lumber Company owns close to 200,000 acres. The timber on that alone is worth probably $5,000,000. (2898) The Simpson Lumber Company owns 30,000. Their holdings are valued at $1,500,000, including their mill. These three men at Coos Bay represent in timber holdings probably $8,000,000. The stumpage along the Columbia River is worth $2.50 to $3 a thousand.

Timber values.

United States v. Union Pacific Railroad Company, et al.

DEFENDANTS' ABSTRACT OF TESTIMONY.

TESTIMONY FOR COMPLAINANT.

VOLUME VII.

SAN FRANCISCO, CAL., MAY 10, 1909.

(2899) FRED F. CONNOR. Connor.

Lives at Berkeley, Cal. Has been employed by the C. M. & St. P. at Winona, Minneapolis, and Dubuque, Iowa; next with the G. N. at San Francisco; then for two years with the C. M. & St. P. again; and from July, 1894, to February, 1898, general agent of the O. R. & N. at San Francisco. After that, with the Panama Railroad for six years. Now in business at 1148 Harrison St., San Francisco. (2900) After leaving the Panama Railroad, was freight traffic manager of the Pacific Coast Steamship Company until September, 1907. Remembers rate war between the O. R. & N. boat line and other boat lines, and the Shasta route, between San Francisco and Portland. In 1894 when witness entered the service of O. R. & N. the competition on the ocean was in the nature of steam schooners going north after lumber, that cut the O. R. & N.'s north-bound rates to Astoria and Portland, and a flat rate of $1.50 and afterwards $1 a ton, north-bound, was established to meet their competition. That continued for something over a year. McNeil, the receiver, visited San Francisco, and found that the steam schooners really needed a north-bound cargo on account of weather conditions, and that the kind of fighting they were doing was unnecessary, that they had to have the cargo anyhow, and the matter of rates cut very little figure. An understanding was reached, by which the schooners would take some north-bound cargo as ballast, to keep the schooner down by the head; regular rates on the ocean being re-established.

San Francisco. Traffic man.

Steam schooners cut north bound rates.

(2901) In the meantime, the Shasta route had reduced its rates, he thought, to $1.30 first-class. The S. P. had never taken any particularly active part in the traffic between San Francisco and Portland, and they made a level rate of 12½ cents per hundred

pounds all classes, with two commodity rates of 7½ cents on sugar and salt. 7½ cents a hundred is $1.50 a ton, as against the water rate of $1 a ton. The S. P. was notified of the intention to advance rates, but declined to change its rate, because of some unsettled differences with the O. R. & N. river lines on the Willamette River.

Settlement of rate controversy.

Finally the differences were settled, and the O. R. & N. advanced its rates to 45 cents scale of rates. Previous to the cut, it had been 75 cents. He thought the railroad rate was advanced to 51 cents, first-class scale, L. C. L., maintaining a differential between the rail and ocean line of six cents on L. C. L. and three cents per hundred on carloads. That differential was in effect when witness left the Company. Witness' recollection was that the railroad got very little freight during or prior to the rate war. Doesn't know how it has been divided since.

Railroad got very little traffic prior to or during rate war.

(2902) The trouble in the Willamette Valley between the S. P. and O. R. & N., which witness referred to, was competition between Willamette Valley points and Portland, and some on through to San Francisco. The traffic that came through to San Francisco was chiefly grain and potatoes.

Montana traffic.

(2903) The boat line carried traffic from San Francisco to Montana points in connection with the N. P., the G. N., and for some points via the O. S. L. This traffic was transferred from the boat at Portland, and again transferred at Spokane, Wallula Junction or Huntington. Presumes the S. P. carried business to Montana via Ogden and the Utah Northern. This traffic consisted of California products, like wine, dried fruit, sugar, and canned goods. The boat and rail lines had no differential on interior rail business. Rates were the same either way. (2904) Didn't know whether any of this traffic went by the S. P. to Portland and then over the N. P., but presumably it did not, as that was a circuitous route.

Boat passenger business.

The boat passenger business was heavy during pleasant weather. Witness thought there was a three days service when he first joined the Company, for a short time, and then it was changed to a five days service. The S. P. at that time had one passenger train a day. Passenger rates were cut during the rate war to $5 and $2.50 for first and second-class, respectively, by boat. The O. R. & N. boats stopped only at Astoria and Portland. The same rate applied from San Francisco to both points.

Cut rate only applied to through business to Portland.

(2905) The cut rate on the Southern Pacific passenger business applied only on through business to Portland—not to interior points. The passenger had to go to Portland to get his draw-back, or rebate. They publicly advertised that they would carry passengers on those terms. This was done as a method of protecting the intermediate business. Cannot say because of the rate war traffic moved from the interior locally either to Portland or San Francisco in greater volume than it did before, in order to take advantage of the reduced rates. (2906) Witness didn't think the differential that was established between the two lines was sufficient to pay the local in from some of the interior points, and

make the rates equal with the main line. Under objection that the tariff was the best evidence, witness stated that during the rate war the S. P. tariff stated that "the rates herein named are not considered reasonable or fair, but are forced by unreasonable competition on the ocean, and will apply between or to and from the points named only, and not to or from intermediate points." Some such clause as that. Transcontinental traffic moved at equal rates to San Francisco via the Pacific Coast Steamship Company, when witness was in its employ, in connection with the Canadian Pacific, the G. N. and N. P. The traffic consisted of general merchandise from Missouri River points and east, and flour and grain from the western points on those lines.

(2907) Traffic from New York reached the Isthmus by the Panama Railroad Steamship Line, at the time witness was employed by it, and came up the west coast over the Pacific Mail. There was a traffic contract between the Panama road and the Pacific Mail, under which the business moved. Panama route.

(2908) It was dated December 18, 1895, and ran for five years. Witness didn't see the later contract, but understood there was one, made in 1902. During the time the first contract was in force, the Panama route had a scale of class rates which was $1.80 first-class, and was forty per cent. less than the all-rail rate on the same kind of traffic. There were also a few special commodity rates. All other commodity rates were 20 per cent. on carloads, and 30 per cent. on L. C. L., less than transcontinental rail rates. The Pacific Mail received 45 per cent. of the through rate between San Francisco and New York, and the Panama Railroad the balance. There was very little cutting of rates, and then only to secure enough traffic to give the ships sufficient cargo. Rates.

"If running a little light out of New York, our people would make some slight reductions to attract a little more business. Eastbound, the Pacific Mail had the prerogative of making the rates, and no cuts were made from here east unless the same condition prevailed—that they were shy of cargo." Freight shipped from the east to San Francisco by the Pacific Mail and the Panama road during that time, consisted of general merchandise, iron perhaps being the heaviest—iron and oil; paper, groceries, canned-goods, hardware, books. They handled very little millinery and boots and shoes, but handled a great many pianos. The traffic eastbound consisted of California products, principally wine and canned goods. Character of traffic.

(2909) It was the duty of witness while connected with the Panama Railroad as Pacific Coast agent, to do whatever he could to advance the interests of his company. He had a territory reaching to the north as far as Vancouver and to the south as far as Valparaiso; he looked after the Central American and Mexican business, and business across the Isthmus. Used to go down to those countries once a year and make coffee contracts and other contracts, Territory served.

to secure the bulky freight originating at these points and to secure the traffic coming from Europe to those west-coast points.

The attitude of the Pacific Mail Steamship Company in reference to securing traffic for this route was fair. Their solicitor was in ill health when witness went with the company, and it so happened that their steamers from San Francisco were full with cargo offerings which he booked to the extent that it was not necessary for him to go on the street and solicit more business, because if he did, he would have more than he could carry; so he didn't go. The P. M. steamers from San Francisco carried freight destined to local points reached only by their lines, out of which they got a better revenue. They had a steamer every ten days, and witness worked very harmoniously with the P. M. people, so that he might get as much space on their steamers as he could. When the P. M. were getting more local traffic than usual, he had to be active to get that business for the interests of the Panama Railroad. The P. M. averaged about ten or eleven stops between San Francisco and Panama. Their schedule was made so that a steamer leaving on the 8th of the month would make certain stops, ten or eleven; the steamer leaving on the 18th would make certain other stops aggregating about the same number, and also the steamer leaving on the 28th. So that some of the minor ports to the south were served only about once or twice a month, while some of the larger ports were served by every steamer.

Pacific Mail service.

(2910) The first stop south of San Francisco was Mazatlan, Mexico. The reason why witness said he had some trouble in getting space was because at times Central American ports take quite a little traffic from San Francisco, in flour, and that fills up pretty fast, and the shippers of flour and sometimes of lumber, would anticipate quite a way and would get refusal of certain space. To offset that, witness was obliged to go after the wine shippers and get their orders in as far ahead as he could, to see that they were not shut out three or four days before sailing. The wine moved from here in about two seasons, for about two months moving freely. At other times waited for orders from New York to ship. So, when witness found that necessary he merely kept in touch with his shippers, so that he could take care of all the business they had to go, without having them shut out by the ingeniousness of flour shippers to Central American points. The P. M. boats had freight and passenger accommodations, and had been on the coast quite a while. The same boats are running still, except that several have been wrecked. The boats were probably 15 or 20 years old at the time witness was employed by the Panama Company. Presume some were even a little older. "They were considered good ships, good carriers, but were expensive to operate, expensive to load and unload." He thinks the P. M. have bought some boats, to replace the vessels that have been wrecked, but not new ones. At the time witness entered the employ of the Panama Company, the

P. M. averaged out of San Francisco, New York cargo aggregating 250 to 275 tons every ten days.

(2911) And 600 or 700 tons west-bound. In two or three years witness increased this average to 800 or 900 tons, east-bound, per trip, and 1200 to 2000 tons west-bound. West-bound freight would accumulate at the Isthmus, to be carried forward as the P. M. ships were able to take it, and at the same time reserve space for their local freight. Sometimes a ship would leave Panama for San Francisco with a full cargo of New York freight. At times, when freight was moving freely, it got ahead of Pacific Mail's capacity. Witness tried to induce the P. M. to put on more steamers, in order to keep up with the Panama Company. They finally did, under the second contract. Between the expiration of the first contract, in 1900, and the making of the second contract in 1902, witness chartered and operated vessels on the Pacific Coast for the Panama Railroad. He then had a sailing from San Francisco about every three weeks.

Nature of Pacific Mail traffic.

(2912) He carried barley and asphaltum. Once in a while was able to load a vessel full of that and send it down. Chartered vessels named. He carried large quantities of wool at that time, which previously had never been carried in any quantity to speak of; also rags and dried hides, bulky freight, which was not desirable for a small boat like the Pacific Mail to handle; light, but very bulky. That kind of traffic can be handled only to advantage with big carriers. You can store wine about six tiers deep without risk of crushing the lower tiers, and then you can only put light bulky stuff on top. There wasn't room on the P. M. steamers for the light stuff. After the P. M. service was re-established, they increased the number of sailings, so that they had one a week, so as to coincide with the Atlantic service, and that continued until witness left. He thinks there is a ten day service now. The second contract made no change in rates, except to abolish some of the commodity rates on such articles as wool and dry hides. Witness had made some very low rates to attract that bulky stuff, and in order to enable him to load the big ships he had chartered. When the P. M. went on, and witness operated under the second contract, that (2913) was no longer desirable. "Hops, for instance, are very bulky, very light stowage, and we abolished the rates in effect at that time for that purpose."

Rates.

Pacific Mail boats carried from 2000 to 3000 tons. The second contract established the same rates as the first, but the P. M. agreed to put in certain lower rates to help out witness in connection with matters to which he had committed himself. This indicated that a state of harmony existed. (2914) Witness remembers the transcontinental lines some time previous to 1893 rented certain space in the Pacific Mail boats for transcontinental business, but doesn't know the details. The Pacific Mail then operated on both sides of the Isthmus. (2914-2926) Exhibit 169, Contract dated June 11, 1902, between the Panama Railroad Company and the Pacific Mail.

(2926) The San Francisco merchants put on a line to operate in connection with the Panama Railroad Company in about 1893. A little over two years later, in 1895, it was superseded by the agreement between the P. M. and the Panama Railroad.

American-Hawaiian line.

(2927) The American Hawaiian line was instituted while witness was with the Panama Railroad. It took the place of the so-called clipper line of sailing vessels. These ships were steamers, and moved through the Straits of Magellan. The old clipper ships had gone around the Horn. Witness had left the Panama, he thought, before they established the Tehuantepec Line. The American Hawaiian ships at first stopped at San Francisco, but afterwards operated up to the Sound, because they had developed quite a little traffic from New York to the Sound, which previously had been turned over at San Francisco to connecting lines. They could also get their coal cheaper up there, and pick up salmon that was available for transportation to New York. (2928) Traffic via the Panama route destined to Portland and Puget Sound was transferred at San Francisco to the O. R. & N. boats and the Pacific Coast steamships, respectively. The northern boat lines got as their share of the through rate a percentage of the "west of New York proportion, subject to a minimum." In most cases it was lower than the local rates. Witness testifies as to difficulties he had in getting the P. M. boats to go up to the pier and take freight at Panama. They refused because they considered the wharfage charge too high. This was, however, only a short time prior to the termination of the five-year contract, and that put an end to the dispute.

(2929) When witness was connected with the C. M. & St. P., he noticed that the S. P. solicitors were never to be depended upon when he solicited transcontinental traffic in connection with them. That is the only way he has of knowing that they may have preferred the Sunset route. Under objection, as hearsay, witness said that, eliminating the Tehuantepec and Panama routes, the Sunset route carried most of the Atlantic seaboard business, while the more interior or western business originating in Chicago territory came by the Central Route. "It was understood that the Sunset Route catered more for the Atlantic seaboard business than any of the other transcontinental lines. It was (2930) a route over which they took special pains to make good time, and did make good time. While I was soliciting New York as well as other transcontinental traffic east-bound and west-bound, I ran against the strong competition of good service via the Sunset, which so far excelled the service that could be had via Chicago or other transcontinental lines that we really had to throw up our hands to the Sunset." That was in 1893 and 1894. (2930-2931) Soliciting agencies of various lines mentioned.

Good service on Sunset.

Lines that solicited traffic via El Paso or Ogden.

(2932) As solicitor for the C. M. & St. P., witness, worked with the U. P., and from Ogden over the S. P. The N. W. did the same. The Burlington and Rock Island worked more particularly with the

D. & R. G., as they had long lines to Denver, and thence via Ogden and the S. P. west. That is also true of the M. P. (2933) The Texas & Pacific worked via El Paso with the S. P. The M. P. worked southern California business in connection with the T. & P., because they were sort of family lines. (2934) The Rock Island had not then extended its lines to El Paso. With all these lines working for business which they had to deliver to the S. P., witness didn't know whether it was necessary for the S. P. to actually solicit business via Ogden. They were all working for their own lines, but incidentally had to give the business to the Southern Pacific. "We couldn't get around that." Witness understood that no lawful rate could be made to California without the assent of the S. P. The operation of the line on the Pacific coast by means of chartered vessels was unprofitable to the Panama Company.

They were all working to give business to the S. P.

A strike proved a very expensive factor. (2935) That is one of the chances you take in the operation of steamships. Did no coastwise business. None of the ships were wrecked. They made no intermediate stops. The line operated a year and a half. The boats described. (2936) The local rates were much higher than the proportion of the through New York rate. The O. R. & N. boats gave the American-Hawaiian Company better divisions than they did the Panama Company, and witness went to them to get it adjusted, and that is the reason he knows there were divisions in with the Panama Company, but he doesn't remember how great the traffic was. (2937) That was about 1900. In 1894, when witness was with the O. R. & N., he negotiated an arrangement for divisions on traffic from the Atlantic seaboard via Panama. The traffic was chiefly manufactured goods, and there would be from 20 to 75 tons, sometimes 100 tons, come in every ten days. The business moved to Portland mainly, and to Astoria. Sometimes a package would come along for an interior point.

Portland business via Panama.

(2938) The principal Montana common points would be Butte, Helena, Great Falls, Deer Lodge, and that territory. Most important local points along the line of the G. N. or N. P. were Missoula, Billings. The business from San Francisco to Montana common points moved both by Portland and the O. R. & N. to Spokane, over the G. N. and to Wallula in connection with the N. P. The O. S. L. was used mostly in the Anaconda and Butte business. When witness was connected with the O. R. & N., that company preferred to handle business via Spokane, because it got better divisions on its longer haul, but if they had run across business in connection with a N. P. man, would be loyal to him and work it his way. That is customary in railroad practice. (2939) Didn't know of any S. P. business moving to Montana by way of Portland. It went by Ogden. That would be the best route, but he has no positive knowledge as to the S. P. agent's instructions. What witness refers to as the Utah & Northern, was then a narrow gauge road, and is now a part of the O. S. L. from Ogden

Montana common points.

to Butte and other points in Montana. (2940) The S. P. could ship to Montana points via Portland and the N. P., but they get a larger revenue via Ogden, and better service, too, both shorter and quicker, and easier grades, witness thought. "Q. I believe you have testified on your direct-examination that the so-called war in rates between Portland and San Francisco commenced between the O. R. & N. boats and the steam schooners. A. Yes, sir. Q. When was that? A. I will say that the conditions of competition were very sharp when I joined the O. R. & N. in July, 1894, and found it necessary to make a great many reductions in our regular rates to meet that competition, and it was that continuous reduction and the issuing of special rate advices that caused the irritation and made it necessary to finally adopt, in a year or so afterwards, a flat rate of a dollar. Q. There were a good many of those steam schooners plying between San Francisco and Portland at that time? A. There were not. There were two. There was one for a while, at the beginning of my time with the O. R. & N. The steamer 'Truckee,' afterward the 'Alice Blanchard,' which is now the 'Chico,' I think, unless she has changed again, and solicitors or men working upon a commission basis with the (2941) owners of the vessels, had induced those owners to permit them to solicit cargo north-bound, and they agreed to carry it and deliver it and pay the expenses of loading and discharging and damages, if any, the solicitors getting a commission upon the amount of business they secured. We tried to get the steam schooners to desist from this character of irregular competition, because the solicitors had no interest whatever in the cost of transportation, merely taking the business at whatever rate they could get."

Rate war.

Irregular competition of steam schooners.

It is the north-bound merchandise carried by them that cuts any figure at all. At the time of this restoration of rates that witness testified took place in 1895, the steam schooners set up the condition of their north-bound traffic; that as the machinery was all in the stern of the vessel it left the bow very high, and they needed that cargo to bring the head of the steamer down so they could get through in a northwest wind; that it would be better for the vessel and better for the time, and that 100 tons would be sufficient perhaps to give her proper trim. An agreement was made between the O. R. & N. and the steam schooners whereby the latter would get that much cargo, and after that they got that much cargo. The schooners limited themselves to that quantity. They played fair, so to speak. They kept their part of the agreement. (2942) The water rates as between Portland and San Francisco were always fixed as the result of competition between the O. R. & N. boats and the steam schooners rather than as between the O. R. & N. boats and the Southern Pacific Railroad—they always were up to the time of that rate war. "The Southern Pacific prior to that, you know, never had, apparently, an eye open on that traffic. Q. Never ceased attempting to meet the water rate, did they? A. No, sir, their rate was $1 30, first-class, and they had no great number of

Agreed cargo for north bound schooners.

San Francisco-Portland rates always fixed by competition of boat lines.

S. P. did not meet water rate.

commodity rates in there. It was simply a tariff without any use for it. I understood at that time that they did not want that traffic, did not consider it desirable. And we never considered the Southern Pacific a competitor for that traffic until this rate war took place, and then, as I say, it came about through the Willamette Valley difficulty. * * * Q. And you don't know just what conditions were existing at the time? A. Nothing more than that the Southern Pacific, on account of the ocean war, probably saw their opportunity to line up and get a tariff in there at less than—well, it is a figure-head anyway. They were not carrying any freight before that on that line, and they didn't expect to carry any freight after that, but they were to be reckoned with and the restoration of rates would be their time to discuss the Willamette situation." The O. R. & N. never carried any considerable amount of freight between San Francisco and Portland in competition with the boat line. (2943) Their interest was mostly in the passenger way—not freight.

Cargoes of O. R. & N. boats.

North-bound, the O. R. & N. boats carried sugar, salt, canned goods, dry goods, groceries, general merchandise, and California products. All the year round they were less than the south-bound cargoes. During the winter months the cargoes were short, but the balance of the year they were full, going north. Grain and flour constituted the bulk of the south-bound traffic, also small lots of lumber, some iron, paper, and potatoes. (2944) While the Panama Company operated its own Pacific Coast boats, the Pacific Mail didn't exchange business with it. (2945) Under the second contract, the Pacific Mail got a fifty per cent. division, instead of a 45 under the former contract. There were divisions in with the O. R. & N. boats on certain traffic from the Orient to Portland via San Francisco, but not very much moved that way. Once a year there would be a bunch of it come along. The N. P. had divisions in with the S. P. from St. Paul to San Francisco, also from outside points like Fargo, Jamestown, and Grand Forks, and all through there. They took oranges up over that route. The O. R. & N. boats usually made better time between San Francisco and Portland than the freight by rail.

Divisions of N. P. with S. P.

Time of boat and rail service.

(2946) The boat time was 52 hours. The Shasta route freight took five, six or seven days. The railroad gave a daily service. "Q. You stated that previous to the rate war the Southern Pacific line to Portland had not figured in that competition for Portland business. How was it after the rates were adjusted? Did they carry freight traffic to Portland? A. I can't tell now of any material quantity of traffic that they carried, excepting such as would arise from the shipper in San Francisco having an order, for instance, for several little lots to go to points reached via Portland. His dray could load up and take at one trip to the Southern Pacific freight-yard enough freight to fill his dray and he would have half a dozen packages for Portland as well as for other points that had to go that way and couldn't go any other.

Carriage of freight by S. P. from San Francisco to Portland after rate war, merely incidental.

In that way there would creep into the Portland business a few packages. I get this from the fact that I would catch business going that way, and I would go to the shipper and find out why I didn't get it, and he would explain it to me that way—not that he intended to ship on the Southern Pacific to Portland, but it wasn't worth while to make a special trip down to the Oregon dock with it." (2947) Montana business handled by the S. P. always moved by way of Ogden. At the time witness left the O. R. & N. in February, 1898, though the receivership had ended, it was still independent of the U. P. (2948) When witness was with the G. N. in San Francisco, traffic moved there over that road from St. Paul; all classes of freight. It moved over the G. N. to Butte, thence over the Utah & Northern to Pocatello, and, if in carloads, in order to avoid transfer, it went east to Green River, then back through Ogden on account of the broad-gauge line that way. A year or so afterwards the line from Pocatello to Ogden was standardized, and it came that way.

S. P. handled Montana business via Ogden.

Toll.

(2948) H. G. TOLL.

San Francisco. Formerly clerk for S. P.

Clerk of the Western Pacific at San Francisco. (2949) Previously occupied various clerical positions with the S. P. The last four years of his employment, ending in 1905, was chief clerk in the general freight office. Previous to 1901, the S. P. endeavored to route Atlantic seaboard traffic, that is, from points east of Pittsburg, by the Sunset-Gulf route.

(2950) The S. P. moved business from the central states through New Orleans or via El Paso, also by way of Ogden. There is quite a large volume of business from Ohio moving by way of New Orleans. (2951) At that time the routing of shipments from the east to San Francisco merchants was controlled at San Francisco. Witness prepared a statement showing the earnings of the line west of New Orleans, in contrast with those west of Omaha. The purpose was to show by which gateway the greatest revenue would accrue to the Harriman interests. This statement was sent to the soliciting force, and they were instructed to send traffic over the route that would afford the greatest revenue to the Harriman interests. From New York the solicitation was always Sunset. (2952) Witness' best recollection is that from Ohio River points, Cincinnati and Louisville proper, the greater revenue was afforded by the New Orleans gateway, and north of the Ohio River there was greater revenue via Omaha.

Statement showing which gateway afforded greatest revenue.

Montana and Idaho business.

(2953) Competition between the S. P. and O. R. & N. was rather keen on Montana and Idaho business before the amalgamation, the former working both by Portland and Ogden, but chiefly by Ogden, and the latter from San Francisco by boat to Portland, and thence by rail. Their connection with the N. P. was at Wallula, and the G. N. at Spokane. After the merger, the rates west of Pocatello were materially advanced from San Francisco over the S. P. and Oregon Short Line. He thought they were not

changed from Portland. (2954) The substantial part of the S. P.'s Montana business moved via Ogden. The service was better and the distance shorter. (2955) Both before and since 1901, the S. P. has preferentially solicited Atlantic seaboard business via the Sunset. Prior to 1901, business originating north of the Ohio River moved chiefly through the Ogden gateway. As to business through Ogden, the S. P., witness thought, was neutral as between the D. & R. G. and the U. P. From points south of the Ohio River, the bulk of the traffic for San Francisco moved via New Orleans and El Paso. That was because the lines serving that territory had their long haul into New Orleans. Among those lines, for instance, were the L. & N. and the Q. & C. Route; they were the principal lines at that time. Those lines drew the business down to New Orleans instead of that same business being drawn through a northern gateway; (2956) because most of that business was tributary to their rails, and they in that measure controlled the routing of it. In other words, they were in a position to force the business that way. That was the natural commercial gravitation of the business. "Q. And then, since you prepared this tabulation, you say instructions were given to the Southern Pacific solicitors to employ solicitation in favor of certain directions. With respect to this business that originated south of the Ohio River, did the instructions to the Southern Pacific agents direct them to follow what you say was the line of natural commercial gravitation? A. They did." The conditions as to the movement of that freight north and south of the Ohio River are substantially unchanged—prior and subsequent to 1901—with the exception that the New Orleans gateway did handle a portion of the traffic from points north of the Ohio River. The substance of that traffic went through the northern gateway. The larger portion of it went through the northern gateways. That was the natural condition. The U. P. also solicited the Atlantic seaboard business actively.

Prior to 1901, business originating north of Ohio river moved via Ogden.

The lines serving territory south of the Ohio had long haul to New Orleans, and the traffic moved that way.

Business moves along natural lines.

(2957) Very little of the business from points south of the Ohio River moved over the U. P. They didn't make much effort to secure that business, except in territory contiguous to St. Louis. "They may have gone down into Kentucky for whiskey shipments, a short distance south, but they did not reach very far." The S. P. solicited business out of St. Louis via New Orleans, and the U. P. via Ogden. After the U. P. secured control of the S. P., there was a slight difference in the movement of freight from Central Freight Association territory, and a larger portion now comes through the Omaha gateway, whereas it was actively solicited before through the New Orleans gateway. The Central Freight Association territory is territory lying east of Chicago and East St. Louis, and west of Buffalo and Pittsburg and north of the Ohio River. The business originating along the lines of the L. & N. and the Q. & C., which was taken down to New Orleans through the influence of those lines, was the subject of solicitation

U. P. did little to secure business south of Ohio river.

by the S. P. agency. The consignees controlled the routing in very many instances.

(2958) Their routing was generally respected. The tabulation prepared by witness shows that in respect to points south of the Ohio River a larger revenue was derived by the U. P.-S. P. system where the haul was by the southern route. Witness has no personal knowledge of the extent and character of the U. P. solicitation of Atlantic seaboard business, but practically every line running west that does not belong to the seaboard is a competitor of the Sunset route. The Santa Fe is a competitor, the Rock Island and all the Iowa lines, and all the Western Association lines. The trunk lines from far east are competitors; from the Middle they are not so much so for the reason that their revenue into New York is about the same as if it came west. Ever since 1901 there has been an extensive, active, powerful, and keen competition by the all-rail lines against the Sunset-Gulf for that very business. In other words, that business has not ceased to be competitive because of the so-called elimination of the U. P. "Q. Now, assuming, provisionally, that the Union Pacific was a factor in the competitive struggle prior to 1901, any business resulting to the Union Pacific from its competitive efforts would be business enjoyed also by the Southern Pacific, would it not? A. From Ogden west, yes, sir." (2959) The U. P. could not make a price or a rate for that transportation without the consent of the Southern Pacific.

Competitors of Sunset.

U. P. could not make a rate without consent of S. P.

Transcontinental rates were made in meetings in which the S. P. was a dominant factor. Each line has to concur in the making of through rates. (2960) To get from Ogden to Omaha, the lines leading between those points had to agree with the S. P., so that the question of rates worked both ways, but more strongly the other way, because there was only one line west of Ogden and several between Ogden and the Missouri River. On business into Portland, the S. P., O. R. & N., N. P. and G. N. had a voice. In fixing a rate by El Paso, other lines like the T. & P. had a voice.

Graham.

(2961) ROBERT G. GRAHAM.

Oakland. Formerly Sunset solicitor.

Lives in Oakland. In the roofing-slate business for six or seven years. Previously solicitor for the S. P., the Sunset and the D. & R. G. Immediately before leaving the railroad service was for three or four years with the road last mentioned, and prior to that with the S. P., being six years freight solicitor for the Sunset route, and about five years as assistant at Market Street, San Francisco. Solicited traffic for the Sunset originating in New York, and also from California points to New York territory. (2962) His solicitation covered traffic originating in what is called New York territory; as far west as Pittsburg, perhaps, and New England. Witness solicited over the Sunset territory all rail, Cincinnati and south of the Ohio River. That traffic moved via New Orleans if they could get it. "We hauled whiskey from Louisville, you know; manufactures from Detroit," by way of New Orleans. Never

worked any business from Chicago via New Orleans. "Chicago and St. Louis were barred." We did not touch that territory at all. The U. P. was soliciting that business in competition with the Sunset, but the Atchison was the strongest competitor. Next to them, the central lines did most of the soliciting, the Milwaukee and the T. & P.—a bunch like that. By the central lines witness means those terminating at Omaha and Kansas City.

Never worked Chicago or St. Louis business via New Orleans.

(2963) H. W. ADAMS.

Adams.

Traffic manager of the Pioneer Fruit Company at Sacramento for the last year. Formerly commercial agent for the Rock Island-Frisco system since 1891. (2964) The S. P. worked south of the Ohio River, Cincinnati and Louisville, and those points, by New Orleans. Didn't work actively north of Cincinnati. "Of course there was some business that they would get from points north. * * * Occasionally there would be a car of some merchandise go that way, that probably was not solicited by them; simply routed that way by the influence of some one, probably the shipper, perhaps the consignee." (2965) A majority of the shipments from the east to San Francisco points were routed on the coast by the purchaser. Witness found the U. P. a strong competitor from points east of Chicago and up through Michigan. From Cincinnati and that region, the U. P. solicited the business, but witness didn't think they were getting a large share of it. A very small percentage moved from the seaboard all-rail, exclusive of the Santa Fe. The Santa Fe got a good deal of seaboard business all rail. Didn't notice any difference in the U. P. and S. P. solicitation in common territory after the merger. They were active all the time. Always have been. Would take business from any point they could get it.

Sacramento. Formerly Com. Agent for R. I.

No difference in U. P. and S. P. solicitation after 1901; always active.

(2966) The Rock Island-Frisco system had various gateways to California; through the Missouri River, the different Colorado gateways, and after the El Paso route was completed, in connection with the E. P. & S. W. through El Paso, also in connection with the T. & P. by Fort Worth. All this traffic ultimately reached its destination over the S. P. Witness had two lines, one to Denver and one to El Paso. The El Paso route was opened something like ten years ago. Northern California business was worked through the northern gateway, and traffic for Los Angeles and the southern portion of California through the southern gateway. (2967) It is a general rule with solicitors to work for the greatest revenue. Virtually all the competition for California business between the rail lines, outside of that between the S. P. and the Atchison, is between the connections of the S. P. east of Ogden and El Paso. These competing lines all turned their California business over to the S. P. either at Ogden or El Paso. All of those roads were competing with each other in the solicitation of the buisness. "The Union Pacific was a competitor of the Rock Island, and the Rio Grande and its connections outside of the Rock Island were com-

Rock Island had various gateways to California.

Competition for California business was between connections of S. P. east of El Paso and Ogden.

petitors of ours; the same way with the Sunset-Gulf route—it was a competitor of ours."

(2968) Such business as witness controlled at San Francisco for northern California would be sent through Ogden, and for southern California would be sent through El Paso, the service being better and the revenue, of course, better. His system in that respect was something like the S. P. He had two different gateways. Except that the S. P. had a very much longer haul by the Sunset than it could get by way of Ogden. And so far as the S. P.'s attitude toward this transcontinental business was concerned, it was a question of division or most revenue, as it was with witness. "It was a question of getting the longest haul we possibly could." Remembers that there was a blanket rate on oranges from California to Missouri River points, and all points east, of $1.25, and afterwards of $1.15 per hundred pounds. Some of the oranges moved through the El Paso gateway by the Rock Island to Kansas City and Chicago, and thence to the Atlantic seaboard. Some also moved through the Ogden gateway over the U. P. to Chicago, and thence to the seaboard. The S. P. made the same rate north and south. (2969) The U. P. didn't participate in earnings from traffic that went via the Sunset. U. P. couldn't make a rate to or from California without the concurrence of the S. P. (2970) But the S. P. could, independent of the U. P., with the concurrence of the D. & R. G. Doesn't see any reason why the U. P. shouldn't make a rate to San Francisco via Portland, without the consent of the S. P.

Mere question of longest haul with S. P. and R. I. both.

U. P. could not make rate without concurrence of S. P.

(2971) As between the direct rail line into San Francisco and the line via Portland and by boat down, witness said if the latter was dependent on his business, it wouldn't last. He never heard of any business moving from California to points east of the Missouri River by way of Portland and the U. P. (2972) Witness remembered that traffic had moved over the Canadian Pacific on a differential to San Francisco, but didn't know whether the amount was large or small. That is a longer line than via Portland. If the U. P. put on a differential by Portland, they probably would attract a certain class of business that way. That differential would naturally have the effect to put down rates all along the line. After the Can. P.'s differential was abolished it practically withdrew from that business.

Never heard of business moving via Portland route.

(2973) The Can. P. has no line south of the Canadian border. If the U. P. took business to Portland, it would then be as far from San Francisco as at Ogden. It is about 800 miles from Ogden to Portland. Witness doesn't see where the U. P. would gain anything by working the Portland route. It would be apt to bring about a demoralized condition. The S. P. could retaliate by diverting to the D. & R. G. any business they controlled themselves. Witness presumed that would be a natural thing for the S. P. to do. (2974) The consequent injury to the U. P. would be much greater than the benefit derived from working the Portland line. If the

U. P. would gain nothing by using Portland route.

rates were put down all along the line, the U. P. would thus make the S. P. suffer by the reduction in rates over the Sunset route. If a demoralized condition resulted, each company could hurt the other very much, so that it would be a foolish thing for them to do. The Sunset route is very much longer than the all rail line. The bulk of the traffic from New York goes that way, because it gives the better service, so, if the U. P. wished to work the line via Portland, they would "have to give the service or equal rates."

(2975) H. E. LOOSE.

Loose.

San Jose. Dried fruits.

For twenty years engaged in shipping dried fruit from San Jose. Ships from 100 to 400 cars a year. Atlantic seaboard business moves principally Sunset; some Santa Fe, and some U. P. From San Jose it reaches the Santa Fe at Stockton. It goes over the S. P. tracks to Stockton; (2976) also over the S. P. to reach the U. P. S. P. shipments moved Sunset-Gulf by way of Galveston. Of late years hasn't shipped anything via Ogden and the D. & R. G. Ten years ago shipped that way. It is now difficult to get cars that way. The difficulty arose principally after 1901. Witness was advised by the S. P. that unless he wished to have his fruit transferred, he could not get the equipment for that route if it was not available. Could not move a Harriman line car beyond Ogden, except over the U. P. Prior to 1901, both the U. P. and S. P. solicited witness separately.

Equipment.

Solicitation of his business.

(2977) The S. P. solicited via Sunset for Atlantic coast points, and all-rail for Pittsburg, Cincinnati and Louisville via New Orleans. The U. P. solicited via Ogden to all points east of the Missouri River. Witness didn't apply to the D. & R. G. agent for cars. He couldn't. Nor did he know that under the Harriman line pooling arrangement the payment of mileage was avoided, and that the cars of each Company were at home on the tracks of the other. When the S. P. accumulates a number of foreign cars, they force witness to load them, he thought, in order to avoid paying mileage and get the cars off the system. Not necessarily, but ordinarily, these cars are sent over the line that owns them. Occasionally witness has received orders to load D. & R. G. cars, and they go over the D. & R. G.

(2978) That is, the S. P. will send them that way, if ordered to do so. Often witness makes requisitions for D. & R. G. cars, and the S. P. says they haven't any. Witness cannot say that he was ever solicited by S. P. agents for Chicago shipments. "The S. P. and U. P. seem to say Ogden gateway, and if they have any equipment that way we load it that way." Prior to 1901, witness doesn't recall being solicited by the S. P. as to the route over which Chicago shipments should go, though he shipped a considerable amount to Chicago. Prior to 1901, he remembers the S. P. soliciting for Pittsburg shipments. (2979) Solely via New Orleans. Made considerable shipments to Pittsburg. Cannot say definitely he was solicited by S. P. agents for Pittsburg shipments from 1893 to 1901,

but it was during the early period. Remembers there was a time when the S. P. worked that territory strong.

Clifford.

San Francisco. Formerly with U. P. traffic dep't.

(2980) CHARLES CLIFFORD.

Lives in San Francisco. Was the last general agent of the U. P. at Cincinnati, and left when it was consolidated in July, 1901, after having been there a year and four months. Previous to that was for a year and a half at Butte, Montana, and previously, from 1902 to 1908, in Mr. Munroe's office at Omaha and Council Bluffs. After leaving Cincinnati, came to San Francisco. (2981) Business from Cincinnati to Portland went over the U. P. and the O. S. L. Practically all went via Omaha rather than Kansas City. To San Francisco the business went either via Omaha or Kansas City. Witness' territory at Cincinnati covered all the country east of the L. & N. line, part of Tennessee, and Indiana as far north as Indianapolis, from the gas belt, Muncie, Marion, and those places, and as far north in Ohio as Columbus; also in Virginia, part of Kentucky east of the L. & N., including Louisville, Lexington and Frankfort; also the State of Tennessee. General merchandise moved west to California from those points, chiefly carload shipments.

Not much traffic for U. P. south of the Ohio.

(2982) The territory south of the Ohio is not very productive for the U. P. Whiskey was the largest commodity. There was also considerable tobacco. A considerable part of the traffic from south of the Ohio River, destined for the Pacific coast, moved by Kansas City and St. Louis. From Louisville, whiskey and a great many wagons were shipped. That business was pretty well divided between Omaha and Kansas City gateways. Points north of the Ohio shipped vehicles, machinery, and from Cincinnati, a good deal of whiskey and different kinds of glass articles.

East bound traffic from coast.

East-bound traffic from California or Oregon consisted of dried fruit, canned goods, beans. Hops also moved to Cincinnati from around Portland. (2983) Hops moved O. R. & N. and O. S. L., U. P., C. & N. W. or Milwaukee, or C. B. & Q., any line into Chicago. Out of Chicago over the Big Four, Pa., or Monon. The S. P. agent at Cincinnati was also soliciting. Didn't think the S. P. agency at Cincinnati covered quite as much territory as the U. P. agency. The S. P. agent solicited via New Orleans.

(2984) From Marion and Muncie and Gas City a great deal of glass moved. Columbus is quite a vehicle town. Dayton is a manufacturing town. The rates were the same from this territory both over the U. P. and S. P. After leaving Cincinnati, witness was for five years agent of the U. P. at San Francisco. When witness first came to San Francisco in August, 1901, the business through the Ogden gateway as between the U. P. and the D. & R. G. east of Ogden, was divided about 35% to the U. P. and 65% to the D. & R. G. These divisions were due to abnormal conditions. The U. P. was maintaining rates, and the D. & R. G. was not. After the rates were put on a parity, the U. P. led. (2985) The S. P. favored the U. P. at Ogden. The U. P. general agent at San

Division of business at Ogden as between U. P. and D. & R. G.

Francisco was the claim agent. That had been the case for years, in order to put the U. P. and S. P. on the same basis. Settling claims promptly made the U. P. stronger. The S. P. was then routing its business as far as it could via New Orleans. Witness states that he has seen the circular showing the revenue accruing west of Omaha and New Orleans on all rail business, with instructions that business be solicited through the gateway giving the Harriman lines the most revenue. "Q. Will you state what it was as far as you remember? A. It took the rates from—I think the minimum rate of 50 cents to the higher rate, showed the revenue accruing west of the various junction points. That is all there was to it. Q. Applying by the different routes? A. Yes, sir."

(2986) Witness saw it in San Francisco and had a copy of it in his office. When witness represented the U. P. at Butte, the S. P. had a traveling freight agent there. The O. R. & N. had an agent there. The S. P. man worked east-bound California traffic into Montana, and the O. S. L. man worked coast business as well as eastern business. There was quite a tonnage from San Francisco to Butte. The principal distributing points in Montana to which the same rates apply from San Francisco are Butte, Helena, Anaconda and Deer Lodge. The traffic reaching those points from California was chiefly sugar, also canned goods, beans, dried fruit, citrus and deciduous fruits. Solicitation between the two agencies was then very active. The S. P. moved the traffic preferentially by Ogden, but also via the Shasta route to Portland, and the O. R. & N. to Wallula Junction with the N. P.; also via Huntington and the O. S. L. (2987) The O. R. & N. naturally from San Francisco worked their boat line. They had to, to get their share of the business. They took the long haul on it to Huntington or to Spokane. Divisions were in through all those various gateways while witness was at Butte.

Montana business.

(2988) At St. Louis and Kansas City there were other lines that could take Pacific coast freight to its destination without passing it over the U. P., namely, the Santa Fe, the Missouri Pacific in connection with the Santa Fe to Pueblo, or the Rio Grande and the Ogden gateway with the S. P.; the Rock Island by El Paso; the Burlington to Denver; several lines. Or the freight could go southward out of Louisville or Cincinnati over the Q. & C. or the I. C., or the L. & N. to New Orleans. It was competitive traffic, and assuming the entire elimination of the U. P., it would still remain highly competitive. The St. Paul and Burlington were soliciting freight from those points. From Cincinnati freight over the U. P. moved Chicago and Omaha or Peoria and Omaha. Excluding the U. P., it could also move by the Santa Fe from Chicago or Kansas City, or the D. & R. G., the Burlington, Rock Island and S. P.; also the Missouri Pacific.

Lines to coast from St. Louis and Kansas City.

(2989) The competitive territory above referred to, assuming the U. P. was eliminated altogether, would still be gridironed with competitive lines. Any of this competitive business passing over

No business went via Portland route.

the U. P. must pass over the S. P. to San Francisco, or to points south of Portland. None of the business went via Portland and the boats down. Witness was not instructed to solicit business that way, and there were no rates and divisions that way. Witness was for about 25 years in the service in San Francisco, Cincinnati and the general office at Omaha. During those 25 years knew of no solicitation of business from this territory north and south of the Ohio River, via Portland and the boats to San Francisco. Knew of no business going that way, except an occasional car that was misrouted. (2990) That was not a natural or practical railroad route. The Pacific Coast Steamship Company handles business from the east by Seattle and Tacoma, but not by Portland. Witness knows of no physical reason why business couldn't be handled via Portland and the O. R. & N. boats, as well as by Seattle and the Pacific Coast Steamship boats. The Portland route is just as practicable as via the Can. P. and by boat from Vancouver. Wouldn't care to ask a friend of his to ship from Chicago to San Francisco by Portland at even rates, but would if there were a differential in effect. There is a large traffic moving from the Atlantic seaboard to points in the middle west, moving by boat and rail during the open lake season, at a lower rate.

Not a practical route.

Traffic via the lakes.

(2991) That business is actively competed for by the all-rail lines as against the boat and rail line. A large traffic into Puget Sound is carried through the lakes in the open season. There are much heavier boats on the lakes than the steamers between San Francisco and Puget Sound. There are lots of boats on the lakes engaged in traffic in connection with the rail lines out of New York, handling a tremendous tonnage. Witness didn't know how the amount of business handled by the Can. P. on a differential compared with the all-rail business through Ogden. The traffic via Vancouver was eliminated when the differential was withdrawn. (2992) Witness meant the territory east of Chicago and St. Louis was gridironed with railroads, not the territory west.

SAN FRANCISCO, CAL., TUESDAY, MAY 11, 1909.

Havens.

(2993) C. R. HAVENS.

Berkeley, Calif. Dry goods.

Lives in Berkeley, Cal. Vice-President of Murphy, Grant & Company, wholesale dry goods dealers. Buy their merchandise through New York office and wholesale into California, Oregon, Washington, and a little in Idaho, Arizona, New Mexico and Nevada. Bulk of the business comes from New York via the Sunset-Gulf Route. Has been in the business since 1878, and thinks they have used the Sunset route from the time it was established. The Sunset route was established in 1883. Prior to that, witness wasn't familiar with the traffic. Latterly he has shipped some by the Tehuantepec line. (2994) It takes them about 45 days from New York. The Sunset about 18 days. Witness'

Uses Sunset route.

traffic from the middle west comes all-rail, but from New York the Sunset is witness' route. Has also used the Panama route in connection with the Pacific Mail. Doesn't know whether the latter has solicited the business or not. The New York office does the routing. Witness presumes his shipments to Portland move both boat and rail. The consignee routes it. (2995) Shipments to Boise move by way of the O. R. & N. One or two shipments up into southern Idaho went either by Portland or by Ogden, whichever way a saving could be made. There were only one or two shipments witness recalled where he had to figure anything of that kind. Couldn't say whether any of his traffic to Boise had ever moved by Ogden.

(2995) A. L. SCOTT. Scott.

In the hardware business at Burlington, Cal., (2996) since 1882. Imports from Pittsburg and the seaboard; also considerable from Chicago and that region, and as far west as St. Louis and Iowa; chiefly, however, from Pittsburg. Wholesales into California, Nevada, Oregon, Washington, the western part of Idaho, from Boise City west, and the western half of Arizona. Brings goods from the seaboard and Pittsburg territory by all-rail, by Tehuantepec, Panama. Has shipped largely by the Sunset route in previous years. All-rail shipments over the Santa Fe, the S. P. and the Gould lines. Has shipped over the U. P. via Omaha. Has shipped from Pittsburg and Cincinnati via New Orleans, all-rail. Burlington, Calif. Hardware

(2997) The rate via Panama fluctuates automatically with the all-rail rate. There is an agreed differential. That has been true for some time. Witness doesn't know how long. Thinks it went into effect after the change in the Panama route took place. The Pacific Mail runs on the Pacific side and the Government steamers on the other. The boats of the former are generally called a lot of tubs. There is no comparison between them and the ships of the American-Hawaiian line. The latter are first-class, up-to-date, cargo, oil-burning ships, with proper facilities for handling cargo. (2998) Witness' traffic is solicited at the other end, and witness doesn't know anything about it. Previous to 1901, the S. P. was anxious to get business via New Orleans, and the U. P. over the other route. Has shipped from Chicago by way of New Orleans via the Illinois Central. There never was any great tonnage moved that way, because witness didn't buy a great tonnage in Chicago. The products that moved that way were carloads of freight that came from the Chicago territory. Has shipped to Boise via Ogden. Did so at one time largely. Back in 1893 used to ship everything by Ogden. Afterwards the tariff was canceled, and witness had to ship by Portland. Panama rate fluctuates automatically.

(2999) Witness took his drummers off that territory, as it was unprofitable. Now ships from Boise west. Traffic to Boise and vicinity goes by water to Portland, and that rate was not met by the Ogden route, but the tariff over the latter was canceled. To the Idaho business.

best of his recollection, the rate was the same either way, and the tariff via Ogden was canceled in order to move the freight by Portland. The rates between Portland and San Francisco are higher now than formerly—now twenty cents, where it used to be 15½c. The rates were raised the 1st of April of this year. Witness' impression is that the Panama Railroad is opened up to any ships on the Pacific that will take a cargo, but a merchant cannot wait for tramp ships.

(3000) The Panama Railroad also interchanged business with foreign ships operating on the Pacific coast, which carried business between foreign ports. Witness thought the American-Hawaiian ships carried from 5,000 tons up, many of the vessels carrying 10,000 tons. Their average tonnage to San Francisco is 5,000 tons each. The tonnage of the Pacific Mail here per month, with all their vessels, is something like 2,400 or 2,500 tons. The Ogden tariff was canceled, to the best of witness' recollection, five or six years ago. (3001) The Pacific Mail carries all the tonnage that the Panama Railroad Company gives to it. The American-Hawaiian Steamship Company is a through line from New York by the Isthmus of Tehuantepec. The eastern ship unloads at Salina Cruz or Coatzacoalcos. The freight is then taken across the Mexican Railroad at the Isthmus and the American-Hawaiian ships operate on the Pacific side also. They operate boats on both sides and have a lease from the Mexican Government to carry their tonnage across. (3002) With regard to the S. P. tariff that was canceled, witness meant to testify that the S. P. tariff via Ogden into Idaho had been canceled. "In connection with the Short Line from Ogden up, and in connection with the O. R. & N. out the other route via Portland, with the Short Line from Huntington over to Pocatello." Couldn't say whether that cancelation was after the consolidation of the U. P. and S. P. traffic departments.

American-Hawaiian line.

Cooper.

(3002) J. H. COOPER.

San Francisco, Ass't. Manager Pac. Coast S. S. Co.

Assistant manager of the Pacific Coast Steamship Company at San Francisco, since 1907. (3003) Prior to that was general freight agent from 1902, and connected with the line since 1887. At one time the O. R. & N. boats sailed every five days. Now the sailings are every seven days. His line doesn't make Portland.

Ports served.

The ports of call are Puget Sound ports, including Victoria and Vancouver, British Columbia, southeastern Alaska, Nome, in its season, St. Michael, Mazatlan, and the gulf ports—Mexico to Alaska, including all the larger ports on the California coast, San Francisco, San Pedro, Eureka, and San Diego. Mazatlan, Mexico, is his most southerly port. At the time of the rate war, his Company was operating a boat from San Francisco to Portland, really under the management of the O. R. & N., so far as traffic was concerned.

(3004) The O. R. & N. had the management of that boat (the "State of California") for over ten years. She was one of the two

boats witness previously spoke of as operated by the O. R. & N. Doesn't recall that the O. R. & N. had extra boats. Thinks during the war rail rates were cut to 12½ cents, possibly 10 cents. At the same time there was rather a demoralization in ocean rates to Puget Sound. The Pacific Coast Steamship Company was cutting rates on occasional steamers against steam schooners, and it didn't affect the rates to Puget Sound really at all, except on interior business. On the latter, the Puget Sound lines had to equalize the rates via Portland. That continued during 1895 and a portion of 1896. Transcontinental freight moved by witness' line in connection with the G. N. and the N. P., principally from the middle west. (3005) By middle west witness means "Chicago territory and the—well, largely from points on the lines of the Great Northern and Northern Pacific." An occasional car moved from Pittsburg, but only to a limited extent. The boats took that traffic from the N. P. at Tacoma, and the G. N. at Seattle. His boats have never made Portland under their own management. He carried quite a tonnage of transcontinental freight on the Canadian differential, probably 300 tons or so on every steamer, running every five days. It consisted of miscellaneous merchandise originating everywhere east of the Missouri River. His line participates in business from San Francisco to Montana in connection with the N. P. and G. N. Has been interested in that business for fifteen years or longer. The S. P. via Ogden and the O. R. & N. via Portland, also compete for that business.

Demoralization of ocean rates.

Transcontinental traffic.

Montana business.

(3006) From San Francisco to Portland that traffic has moved both all-rail and by boat. The N. P. and G. N. solicit that traffic in San Francisco. So does witness' company. Although merely a guess, witness assumed that more of that traffic went via Ogden than via Portland. Witness carries from San Francisco to Puget Sound freight brought via Panama, and has done so for many years. The amount of freight via Panama has much decreased in the last ten years. That is because of the American Hawaiian steamers. It may also be due to the fact that the all-rail lines are taking more of it, because of greater activity and better service. The Pacific Coast Steamship Company is now operating four steamships between San Francisco and Puget Sound, with sailings twice a week. (3007) Two of the ships are of 2,500 tons; two others of 2,200 and 1,800 respectively. The larger steamers make the trip in 55 hours, the smaller in 65 to 68 hours. Have one more regular steamer now than eight or nine years ago, but in the past has had extra steamers running, freighters. The transcontinental freight hauled from points east of the eastern terminals of the G. N. and N. P., and thence south by the Pacific coast boats is very limited. Seldom gets any freight from the Atlantic seaboard territory. During the rush a few years ago, witness handled more freight, because the direct lines were hardly able to take care of it temporarily after the fire. Under normal conditions he handles a

Carries very little transcontinental freight.

very small amount from points east of the eastern termini of the G. N. and N. P.

Steam schooners.

(3008) There are half a dozen steam schooners running regularly between San Francisco and Tacoma, and Seattle and Portland. At the present time they carry more freight than when lumber rates are high. They are more active when lumber cargoes are scarcer and rates lower. If witness' recollection is correct, the rate war was brought on by the steam schooners making a low rate. The North Pacific Steamship Company is a line controlled by Dowe & Co. It is not a line of steam schooners. It operates passenger and freight steamers between San Pedro and San Francisco and Portland, and between San Francisco and Eureka. Witness thought one steamer running between Eureka and Portland.

North Pac. S. S. Co.

(3009) He thought at the present time it operated three steamers. It has been operating between here and Eureka for a number of years, and between San Francisco and Portland, and southern California and Portland, at least four or five years. It has been actively soliciting freight at those points. There are other steam schooners operating between San Francisco and Portland. They have been operating for a great many years, and were operating there in 1901. Witness thought the water rates had been somewhat advanced during the last year or two, since the management of the O. R. & N. steamer line was separated from the rail line. Witness doesn't think the steam schooners have cut the rates for some years. "They have fixed the rates—cut the rates on individual articles." From San Francisco the tonnage to Portland is not particularly heavy, and witness didn't think the steam schooners would carry very large quantities of merchandise. His guess would be that if you include cement, salt and articles like that, it would amount to 40 or 50 per cent. of the total tonnage. (3010) Witness thought the O. R. & N. had been furnishing a seven days service for the last two years. He also thought the Can. P. differential was withdrawn in 1898. It was ten per cent. off the rail rates. (3011) Under the differential the bulk of the business moved by the direct lines. The volume of traffic carried by the Can. P. into San Francisco was a small portion of the business. Since the withdrawal of the differential, the amount handled by the Can. P. is infinitesimal.

Other steam schooners.

Can. Pac. differential.

Watkins.

(3011) A. A. WATKINS.

San Francisco. Stoves.

(3012) For 45 years connected with W. W. Montague & Company, dealers in stoves, tinware, plumbing goods, tiling, etc. His shipments from the east come from New York, Boston, Philadelphia, Pittsburg, Cincinnati, Chicago, Milwaukee, and Louisville. Shipments have come both by rail and water for the last fifteen or twenty years, both by the S. P., U. P. and Santa Fe. Prior to the fire, some by Panama, and since the fire by the American-Hawaiian. Traffic from the Atlantic seaboard came some by the Sunset-Gulf and some all-rail. From Pittsburg and that vicinity, it came over

Routing of his business.

the S. P. chiefly by the Sunset-Gulf. West of the point where the rail rates to the seaboard are absorbed by the Sunset route, a small portion of the traffic came all-rail by New Orleans. It came that way from Pittsburg and Wheeling. (3013) That traffic consisted chiefly of sheet iron. From New York to San Francisco by the Panama route took thirty days; the Sunset route about twenty; the all-rail route about the same. The service via Panama was very unsatisfactory. The goods were damaged. The American-Hawaiian service is very good. Stoves are shipped all-rail. They won't stand rough handling.

(3013) C. M. GOODALL.

Goodall.

San Francisco. Formerly in steamship business.

Member of the firm of Goodall, Perkins & Company, merchants. (3014) For many years the firm were general agents of the Pacific Coast Steamship Company, and had superintendence of the O. R. & N. Co.'s ocean division, from 1882 until about 1900, when the Pacific Coast Steamship Company withdrew the "State of California." When the Pacific Coast Steamship Company first went on the route in 1887, the Oregon S. S. Co., the predecessor of the O. R. & N., was operating two ships, and the Pacific Coast S. S. Co., one ship. At the time the O. R. & N. connected with the N. P., or a year or two before that, making a transcontinental line to Portland, the Pacific Coast Steamship Company operated two boats, and the O. R. & N., two. Shortly after the road was opened, business fell off so that it dropped back, first, to three ships, and then to two ships, one operated by each of the companies, and finally, when the "State of California" was withdrawn, the O. R. & N. put on a boat in place of it.

Steam schooners increasing tonnage.

(3015) The steam schooners have been increasing their tonnage. They have a single hold, carrying about two-thirds of their cargo, namely, lumber, on deck. You could not well load them to their capacity with merchandise, unless you put a deck load on. They have been increasing their size the last few years, but eight or ten years ago they would carry perhaps 500 or 600 tons under decks. They didn't have divisions in with the railroads. 75 per cent. of the traffic carried by the O. R. & N. boats, witness thought, was local to Portland. 25 per cent. went beyond. Witness' firm retired from the management of the Pacific Coast Steamship Company in 1902. They control the Oregon Coal & Navigation Company, which runs one steamer from San Francisco to Coos Bay, taking merchandise up and coal back. They own a coal mine, and the boat brings down their own coal, occasionally a little lumber and produce. Loads what merchandise and passengers he can get going up. The S. P. has a freight boat which runs irregularly between San Francisco and Coos Bay. The other boat that formerly ran on the line now runs from Portland to Coos Bay.

Coos Bay boat.

(3016) That is a passenger boat. The S. P. makes the same rates on merchandise from San Francisco to Coos Bay that witness does, and there has been no change since he began running the boat

thirteen years ago. "Of course we operate entirely as a coal proposition; so that we are like the steam schooners that are going after lumber. What we take up in passengers and merchandise is just that much gained. We are not depending for a living on the merchandise." The tonnage carried on the Canadian differential, witness should say, was very small compared with the tonnage a city of the size of San Francisco should have. (3017) They participated in the division of the through rate. The bulk of the traffic moving under the Can. P. differential was light bulky stuff. There was some iron. They naturally took a high class freight rate, but witness thought the bulk offset the class as a general thing. The railroads could use a furniture car for this light stuff, instead of an ordinary car, but the steamers had only just so much cubic capacity.

Can. Pac. traffic.

McCartney.

(3018) H. M. McCARTNEY.

Berkeley, Calif. Asst. Engineer Western Pac.

Lives at Berkeley, Cal. Assistant engineer of the Western Pacific. Made three surveys under three different companies, of what now constitutes the San Pedro. The first in 1889 and 1890 for the O. S. L. and Utah Northern. These surveys began at Milford, Utah, and extended to the Nevada-California line. There were other surveys into California, but not what are called final locations. This survey was followed by construction, which began January 1, 1890, and continued until October 14. During that time the greater portion of 115 miles from Milford to Caliente, Nevada, was graded, and track laying had begun at Milford. 7 3-4 miles of track were laid, of which 3½ miles were finally surfaced. A 30 mile branch from Caliente to Pioche was also partially graded. All work south of Milford was stopped October 14, 1890. The 7 3-4 miles of track was subsequently taken up. (3019) Witness doesn't know when.

Surveyed San Pedro routes.

It was done before 1896. In 1896 a company was organized in Salt Lake City, called the Utah & California, of which witness was chief engineer. Witness reads list of men interested in the company. George Q. Cannon, of Salt Lake, was President. Witness then called on the receivers of the U. P., and the latter said that they were not opposed to the building of the new road, and agreed to furnish copies of such maps, profiles and notes as witness desired.

Utah and California.

(3020) These were furnished, and the Utah & California paid for same. Witness resurveyed the same old line. No construction work was done, and the enterprise was abandoned. On March 26, 1901, he started a third survey from the place where the old grade crossed the Utah-Nevada line, about 75 miles from Milford. At this time the track had been laid as far as the state line. There is a little station there, called Uvada. The third survey was made on behalf of the San Pedro road.

(3021) The survey reached Caliente April 2, and Pioche on Arpil 7. On April 8, witness started the survey down the Meadow Valley from Caliente, there being then no grading south of that point. This survey was continued until July 10, when it

reached the Nevada-California line. After witness left Uvada, construction was started along the old grade by the San Pedro. The O. S. L. contested this work, and the matter was fought out in the courts, resulting in a decision adverse to the San Pedro, and their grading forces were withdrawn. Witness was then ordered to make a survey through some other pass, so as to get over the rim of Salt Lake Basin, without touching any of this old grade, and a line was located through a pass called Miller's Springs, practically adjoining what are now the stations of Modena and Caliente. Very little grading was done on this line. That didn't go through the Meadow Valley. It might be called "a side hill line" versus a drainage line. Contest of O. S. L.

(3022) After the location had been started from Caliente southward, construction work was commenced at Caliente on May 6, 1901. On May 14, another camp was put in fourteen miles south of Caliente. On May 23, a contract for sixty miles southward from Caliente was let and the contractors' forces were scattered at various places over this sixty miles. All this work was stopped November 9, 1901. The grading or construction work done up to that time ran into tens of thousands of dollars. It was altogether grading, no trestles and no track. An agreement was then reached with the O. S. L., and a joint survey was started about November 15, and was carried on, as witness recalls, to completion, each party locating his own line, and by agreement not coming within twenty feet of the line of the other party, the San Pedro taking the right hand side of the canyon going south, and the O. S. L. the left. The joint survey was completed some time in the spring of 1902, and later in the year witness was ordered to disregard both these lines, and to put in a final location on the best line the country afforded, and this line was graded and the track laid on it. (3023) The joint survey extended to Bird Springs Pass, Nev., in the vicinity of the California line. That is all desert country. The final line disregarded the joint survey both in the canyon and on the desert. Witness' recollection is that the San Pedro up to the time it was stopped in November, 1901, had spent in the vicinity of $100,000.00. Joint survey.

(3024) The San Pedro, while the work in Nevada was going on, was also surveying a line across Utah, but that never got all the way through. It didn't get half way down. When witness first began his survey, the O. S. L. had no surveyors at work there. Witness saw no one until May. He started March 26. (3025) Mr. Eccles and his associates laid the track on about 75 miles of grade which had been made in 1890 from Milford to Uvada. Witness never saw this until 1901. It was then run independently. The O. S. L. had not taken it over. So far as witness knew, the O. S. L. took possession in April, 1901. When witness went to work on this survey he had the old profiles, maps and field notes that the Utah & California Company had used in 1896. They were furnished to witness by Mr. Whittemore. Witness didn't see any collision

Right of way purchased.

between the respective forces. He was ahead with the survey. (3026) Previous to the abandonment of the joint survey, the San Pedro had bought right of way through the various pieces of land in Meadow Valley. They had bought none in Utah, that witness knew of. The country as a rule was almost uninhabited; all public lands.

Work done by U. P. in 1889 and 1890.

(3028-3029) Witness describes work done by the U. P., or, rather, the O. S. L. and Utah Northern, in 1889 and 1890. The reason for suspending the work on October 14, 1890, was the failure of Baring Brothers of London. (3031) The San Pedro road was incorporated March 21, 1901. (3032) The last line that witness surveyed was run so as to correctly locate and define and embrace in the proposed right of way, the old grade, tunnels and improvement work that was done by the Short Line in 1890. The same is true of the surveying done by witness on the line from Caliente to Pioche. (3034) The line which witness surveyed, avoiding the O. S. L. line, he found difficult and expensive. The

Distances.

line south from Caliente through the Meadow Valley Wash is through a canyon for a little less than 70 miles. The total distance to the Moapa River is about 75 miles. The total distance through the canyon, north and south of Caliente, is about 105 miles, that is, from Pioche to Moapa. From Uvada to Caliente is 40 miles, and from Caliente to Moapa, 75.

(3035) In making the second survey from Caliente southwesterly, witness paid no attention to the survey of 1890. There had been no work done on that line southwesterly from Caliente. (3036) The principal difficulty in the canyon was that the Meadow Valley Wash stream interfered with the construction of the road, one line or the other being in the bed of the stream. The greater part of the canyon is narrow. It goes down in places to 200 feet. Probably 100 feet of that would be channeled, and it is crooked. The walls are precipitous in many places. The predominant grade is 79 feet to a mile, and when you get water running over a 79-foot grade, it means the devil to pay with the railroad. The 70 miles south from Caliente is a nasty place. Remembers Mr. Moore stating that the building of two lines in there meant "mutual disaster." The line finally located was much more satisfactory than either of the preceding surveys. (3038) The side hill line that witness referred to was a feasible line. It would cost about as much as the original O. S. L. did in there. It was located for the purpose of avoiding any collision with the other people.

Canyon is narrow and in places 200 feet deep.

Grade of 79 ft.

Building of two lines "mutual disaster."

Shepard.

(3039) A. D. SHEPARD.

San Francisco. Formerly with S. P.

Lives in San Francisco. General manager of the Pacific Improvement Company at San Francisco. His first railroad experience was with the Erie Railroad in New York, then with the Central Pacific, and lastly with the S. P. With the two last named companies from 1874 to 1901, and at the time he left their employ, the general freight agent at San Francisco. (3040) Remembers

when the Sunset-Gulf route was established in 1883. The policy of the S. P. from that time on, was to work Atlantic seaboard traffic via New Orleans by water. It gave better time than the all-rail lines, averaging 18 to 20 days, and witness thinks he remembers a cargo that went through from New York to San Francisco in 14 days. Sometimes the all-rail line did as well, or better, and sometimes four or five days longer. Competition was very active with the rail lines. Sunset route.

(3041) Occasional shipments came to San Francisco from points north of the Ohio River via New Orleans and the Sunset route, but very seldom. "Q. From what regions? A. I have known shipments by special order moving from Chicago, but that was very seldom and a long time ago. Other shipments moved from Cincinnati, and some moved from Pittsburg, but they were exceptional." Witness doubts if that route was much longer in mileage than the other rail lines, but it was longer in time. Doesn't think that the Sunset-Gulf's time from interior points east of Pittsburg and Buffalo was any better than, if as good as, the all-rail lines. Traffic moved in large volumes, however, both ways. (3042) The Sunset fast freight train was put on when the boat line was first established, in 1883. Remembers a Sunset Limited passenger train by advertisement. Never rode on it. They would not accept passes. Witness' understanding was that it ran from San Francisco via New Orleans and the Seaboard Air Line to Washington. When the boat line was first opened, the S. P. ran special trains, in order to carry the cargo through in one lot. Later, a regular schedule was established for operating convenience, and the cargo handled in the same way. Shipments from north of Ohio river seldom came via New Orleans. Sunset Limited.

(3043) The fact that the entire Sunset line was under a single management was a very strong factor in enabling the line to give good service, and for that reason witness compared it with the Canadian Pacific. The all-rail lines, and particularly those west of the Missouri, have improved their physical condition very much in recent years. The S. P.'s interest in transcontinental traffic as between the Ogden and Sunset routes was largely a matter of divisions. Except as against the Atchison, the S. P. practically always controlled the rail rates from the east to California. Such competition as existed between any other railroad companies and the S. P. and the Atchison was competition between the connections of the S. P., east of Ogden and east of El Paso. (3044) The U. P. couldn't make a rate to California without the concurrence of the S. P. After witness left the Company, the Galveston Harbor was opened, and freight was brought from New York to Galveston, as well as New Orleans, by the Atlantic lines. S. P. interest as between Ogden and Sunset routes largely a matter of divisions. U. P. could not make rate without concurrence of S. P.

(3045) California freight was loaded in special locations in the steamer, and unloaded in train lots, and carried through to California in unbroken transit. These matters were important factors in speed and service. The U. P. could make a rate via Portland into San Francisco, without the concurrence of the S. P.

The S. P. could not make a rate into Cincinnati or Pittsburg or Chicago, without the concurrence of its connections, and a very large traffic for California originates in all those places. There is a heavy tonnage from Pittsburg and Chicago. (3046) The S. P., the route through Ogden, and the Sunset route, and the Atchison, were all trying to get all the traffic they could. The U. P., S. P. and Santa Fe all had their solicitors working the three routes, and a flood of other companies, trunk lines and all. (3047) If the S. P. couldn't get traffic by the Sunset, it would undoubtedly seek to send it by way of Ogden. The Sunset was the first route, the next the Ogden, and "every effort was made to move freight that way." When an S. P. soliciting agent found he could not move freight by his own line, he stepped out and told the connections—the U. P. connection at times, because they were very friendly. What he could not control, some other favored agent might control. Never heard of an instance of the U. P. trying to handle transcontinental freight by Portland. It may be possible some shipments came that way, but witness never considered it a transcontinental factor. It was an out of the way, unnatural route.

If S. P. couldn't get traffic via Sunset it would seek it via Ogden.

Never heard of U. P. using Portland route.

(3048) Able management had something to do with the Sunset's good service, and that had something to do with getting the business, as well as solicitation. In answer to the question that the U. P. by using the Portland route could have reduced rates through this whole territory, if for any reason it was not well treated by the S. P., witness replied: "That would depend something upon the eastern connections of the Union Pacific." The U. P. couldn't make all the reductions they pleased, from the Missouri River west, without regard to eastern connections, because there might not be any divisions agreed on with those eastern connections. The U. P. could have reduced the rate from the Missouri River via Portland, and given the eastern connections the same amount as formerly, but the latter might have demanded more. The divisions with the S. P. west of Ogden might have been such as not to have paid the U. P. to move freight for San Francisco via Portland. The divisions by Ogden and the Missouri River were 54 and 46.

U. P. could not reduce rates via Portland without consulting its eastern connections.

(3050) S. P. agents were endeavoring to move seaboard traffic by the Sunset. It likewise had agencies in Cincinnati, Denver, Chicago and everwhere, trying to move freight via Ogden. The latter "was always their preferred route, with the exception of the Sunset from the Atlantic seaboard. They moved practically little or no freight to California via New Orleans, except from the Atlantic seaboard." Witness' experience in San Francisco was that very little tonnage came from Cincinnati, or any interior point, via New Orleans. The great bulk of it came via Ogden, and they were moving everything they could that way. (3051) The U. P. was, of course, strong north of the Ohio River, "but the S. P. agents were moving freight primarily via Ogden from all that territory, as I have already said. The movement from Cincinnati and Pitts-

S. P. moved practically no freight via New Orleans except from seaboard.

Great bulk of traffic for interior points came via Ogden.

burg and all the interior country via New Orleans was but nominal at the best, and as a rule was only by people who preferred to move their freight that way because they had plenty of time on their hands and didn't care very much as to when it would arrive. The time was slow and it was irregular; it was very unsatisfactory because the roads north of New Orleans were not giving good service, as a rule." Witness was at one time joint agent with the Texas & Pacific at El Paso. Very little traffic moved through El Paso to San Francisco, because the T. & P. was then in poor shape for handling it.

Rail route via New Orleans very unsatisfactory.

(3052) If the U. P. had used the Portland route on San Francisco business, the S. P. could have diverted its east-bound business to the D. & R. G. at Ogden. The S. P. in connection with the D. & R. G. and the eastern connections of the U. P., could have made it very disastrous for the U. P., if the latter had used the Portland route. Witness always looked upon divisions as a voluntary act upon the part of any company. The special value and utility of the Sunset-Gulf route was directly related to unity of management and entirety of route. (3053) It was not practicable railroading to move freight from San Francisco to Ogden and thence to Portland. "I have already said that it was possible to move freight from the east via Portland and water to San Francisco; it is a matter of transportation, the same as moving freight from New York by the Canadian Pacific to Vancouver and boat to San Francisco. It reserves the proposition as on the Sunset Route." The Canadian Pacific was never an important factor, and witness doesn't think their differential created a demoralization in rates.

Special value of Sunset route was unity of management and entirety of route.

(3054) The arbitrators of the Canadian differential decided, two to one, that it should be taken out, because it was not at a disadvantage as compared with the Sunset or the all-rail routes. Canadian Pacific had no disadvantage as compared to the Sunset route, or the all-rail route, so far as witness could see. "Q. Or they had no disadvantage as compared with the Portland route except they were perhaps a little longer? A. Practically so, yes, sir. No, I will modify that. The Portland route was at a disadvantage because it did not have a continuous line of its own. The Canadian Pacific practically did have a continuous line of its own from the Atlantic seaboard via Vancouver to San Francisco, and practically upon the same basis with the Sunset. The Union Pacific, while it may have had a rail and a boat line from Omaha to San Francisco, yet it had to depend upon its eastern connections, which was a decided disadvantage. As between the two routes, the Portland route would be entitled to the differential." Witness always understood that the Can. P. controlled a line into Chicago. (3055) It is not necessary to own a road to make it a preferred line. The connections of the U. P. were very powerful and turned a large amount of business over to that company at Omaha.

Dollar.

(3055) STANLEY DOLLAR.

San Francisco. Shipping business.

Witness is engaged in shipping business at San Francisco—the Dollar Line, running on the coast and to the principal ports in the Orient. (3056) Has never had through rates in connection with the transcontinental roads. Has been in the Oriental business about seven years. Has three ships at present, sailing every ninety days, carrying general cargo. Has had negotiations with the San Pedro, with reference to establishing through rates with them. An agreement was drafted, but the negotiations which lasted several years, fell through. It was proposed to make San Pedro the Dollar Line's principal port in America. It was to be left opitional with the ships, whether they were to make San Francisco as well as San Pedro. (3057) The negotiations with the San Pedro ceased in 1907, about the time of the requirement of the Interstate Commerce Law for publication of through tariffs from point of origin in Asiatic ports to destination in the United States.

Negotiations with San Pedro.

Rulofson.

(3057) A. C. RULOFSON.

Berkeley, Cal. Represents eastern manufacturers.

Lives in Berkeley, Cal. Represents some large eastern manufacturers at San Francisco, Cal. (3058) Was connected with Baker & Hamilton, the hardware company, from April, 1870 to 1904. The S. P. solicited their business from the seaboard and Pittsburg, and that region, via the Sunset-Gulf. The U. P. via Ogden. Witness also used the Panama route, and originally shipped by sailing vessels around Cape Horn, and freight he was in a hurry for, by the Pacific Mail via Panama. The latter was then operating on both sides of Panama. Also shipped by the American Hawaiian through the Straits of Magellan. Witness left Baker & Hamilton before the Tehuantepec route was opened.

(3059) He had some shipments from points in the middle west by way of Portland into San Francisco. They were experimental, very unsatisfactory, and were discontinued. They were some Bain wagons from Kenosha, Wis. Witness doesn't know why they went via Portland. The wagons were much chafed, and witness doesn't think any settlement of the claim for damage was ever obtained. The U. P. never solicited freight that way. Prior to 1901 some of his traffic came from Cincinnati and Pittsburg via New Orleans. Heavy hardware, nails, and probably barbed wire. It came over what was called the Cannonball Line, and some Q. & C. (3060) Witness remembered the Can. P. differential, but not more than 2½ per cent. of his shipments came that way.

Williams.

(3060) J. P. WILLIAMS.

San Francisco. Agent Panama Railroad Co.

Since May, 1907, agent of the Panama Railroad Company at San Francisco. Previously, for five years, agent of the Pacific Mail, and previously with the St. Louis & San Francisco. The Pacific Mail is the only western connection the Panama Railroad has. (3061) There is a nine days schedule from Panama to San

Francisco at present. Nine or ten stops between the two points, and the voyage takes about 25 to 30 days, between Panama and San Francisco. The Panama Railroad steamers on the Atlantic are better than the Pacific Mail. They have also six day sailings, and make the trip between New York and Colon in six days.

Service between San Francisco and New York via Panama.

(3062) At times witness secures more east-bound cargo from San Francisco than the steamers can move. The steamers are booked full of cargo and coast cargo, principally the latter. The time between New York and San Francisco is about the same as it was when witness first went with the Company, some years ago. It averages about 45 days. The Tehuantepec route about 30 days. It is 47 miles across the Isthmus, and the train can run across in a couple of hours, but it takes four to six days to get the freight discharged, and carry it across, and get it loaded again. When the Panama Railroad had its own steamers, the time was 30 to 35 days.

Prentice.

(3063) E. H. PRENTICE.

San Francisco. Formerly with S. P.

President of the Phoenix Desk & Chair Company, of San Francisco, for 2½ years. Previously district freight and passenger agent S. P. Co. Continuously connected with the S. P. Co., directly and indirectly, from 1878 until two and a half years ago.

Prior to 1901 S. P. worked bulk of business from Pittsburg territory via Ogden.

(3064) Referring to the period prior to 1901, the S. P. agency in San Francisco endeavored to work freight from the Atlantic seaboard east of Buffalo, by the Sunset-Gulf, and from Pittsburg and that region, some by New Orleans, but the bulk, at the request of consignees in most cases, via Ogden. Where the S. P. controlled the routing, they didn't send it by New Orleans from as far north as Pittsburg. They did from Cincinnati and immediate vicinity. Very little business moved from Pittsburg by New Orleans on account of time. Business from Cincinnati moved over the Q. & C. and L. & N. All classes of traffic. Traffic from Indianapolis was worked by Cincinnati, the bulk of the traffic from Indianapolis was L. C. L., and Mr. Connor had a merchandise car out of Cincinnati. That car was established seven or eight years ago.

Meeting of agents with Mr. Sproule after merger.

(3065) After the merger, Mr. Sproule called a meeting of the soliciting agents, and said that Mr. Harriman had purchased not the control, but an interest in the S. P., and as far as the S. P. agents were concerned, they were to be known as S. P. agents and to work for that Company, and, of course, he said "You don't want to throw any business away; watch our best interests in this matter." He gave no directions with regard to relations with the U. P. forces. "He did not say to me or any one there to solicit business, after this so-called merger, for the Union Pacific Railroad." He mentioned that the Union Pacific had agents located in all the principal cities of California as well as eastern agents, and left the impression with witness that he was to refer these matters to their representatives in San Francisco. (3066) Doesn't think anything was said about calling the attention of the U. P. to business which might come under the observation of the S. P. forces, and

which might move by the U. P. and S. P. together, and thus yield a larger revenue for the whole system, rather than by the S. P. alone. "Q. What was it you said that he said about referring certain matters to the Union Pacific agents? What were the matters to be referred? A. In soliciting business, take it in San Francisco here, I solicited business for the Southern Pacific Company and left the routing very largely blank, and generally put the Union Pacific agent or representative (I knew them all here) on to the fact that so-and-so had freight to ship. Sometimes I would post the Iowa lines as well, and very often that freight was referred, in many cases by me personally, to our eastern representatives, for business reasons." Previous to the merger, the S. P. was impartial as between the U. P. and D. & R. G. Solicited wool shipments from Nevada to the coast to a certain extent. That traffic moved by the Sunset-Gulf from as far east as Kelton, Utah, on account of the rates. Doesn't recall any wool going over the U. P. from Nevada. None over the O. S. L. and its connections, that he knew of. He had no opportunity to see the tonnage of wool shipments out of Nevada.

Notified U. P. of business. Iowa lines as well.

(3067) At the meeting above referred to, nothing was said about the territory from which business originating was to be called to the attention of the U. P. agencies, because all the officials at the meeting were familiar with that work. Sproule had no reason for calling the meeting together, except to verify the newspaper statement. From Pittsburg, and north and west of Pittsburg, prior to 1901, the bulk of the freight moved by Ogden. Witness didn't know whether the Cincinnati package car was running when he left the service of the Company in 1906, but he thought not. (3068) Doesn't think the package car was a great success. It was never made a feature of. It was left to Mr. Connor in Cincinnati. Nine out of ten of those large concerns in Pittsburg routed their own freight. Witness knew the gross revenue from traffic carried from the east by New Orleans was greater for the S. P. than via Ogden, but didn't know what the expense was.

Package car from Cincinnati not much of a success.

(3069) The route over which business, secured as a matter of personal equation moves, depends a great deal upon where it originates. "Lots of business I got from the southern states, you know, and naturally routed that by New Orleans because it gave us the largest revenue." Business north of the Ohio River, say Pittsburg business, moved over the central routes; principally, of course, the U. P. and S. P. and the Santa Fe and the Rio Grande. "Q. Why did that business move by the central routes rather than by the New Orleans route—that Pittsburg business which you succeeded in attracting to some extent by your own personality? * * A. In soliciting business, one of the first questions of a consignee or those interested in the freight, is to ask about time and service. Can we get cars? What time do you make? That is one of the first questions they will always ask us. And naturally we study this time question. As far as moving freight from Pittsburg by

Reasons why traffic from Pittsburg territory moved via central routes.

the Ogden gateway is concerned, I know for a fact—at least I will modify that and say I am quite sure it was better than by New Orleans, because we always had trouble in getting the service over the lines north of (3070) New Orleans, that is, good service notably the Queen & Crescent and the Louisville & Nashville and those lines; they were rather slow. The Sunset was always all right. They always made very good time from New Orleans." The business that witness personally secured, he himself suggested should be shipped from Pittsburg and Chicago territory via Ogden. Those conditions obtained prior to 1901, as well as since. Witness thought the shippers of the heaviest freight out of Pittsburg were always in a hurry. Doesn't recall securing any freight from Pittsburg by New Orleans. Knows of very little moving that way. Connor solicited from points in the neighborhood of Cincinnati by New Orleans.

Witness always suggested Ogden route for Chicago and Pittsburg territory.

(3071) A. E. GILLESPIE.

Gillespie.

Secretary of the Pacific Machinery Dealers Association, at San Francisco, for five years. It was his duty to arrange for the consolidation of machinery from eastern points to bring to California in carload quantities, principally from New York, Chicago and Cincinnati. The S. P. agent acted for witness at Cincinnati. (3072) There was a great deal of difficulty in getting freight out of that point, in consolidating cars for several years, and it was only in 1905 that witness was able to get his first consolidated cars out of there. Some concern in Cincinnati was given the Dealers Association's Power of Attorney, and Mr. Connor arranged the consolidations. Mr. Connor routed the cars, and they came both by New Orleans and Ogden. Witness requested that they be sent U. P. because the service was better. The service on the Sunset route began to be so bad that witness could get no information as to the location of cars, and finally told the S. P. agent that thereafter shipments must be made via U. P. That seemed to satisfy Mr. Luce's office. The U. P. agent also solicited the business, and when they were advised it was moving by New Orleans, they didn't make any objections. His business from the Atlantic seaboard was not sought by the U. P. solicitors in San Francisco as they understood it was coming Sunset.

San Francisco. Consolidates machinery shipments.

(3073-3074) On January 1, 1909, the rates on machinery were raised 10 cents a hundred, which made quite a little additional cost to the consumer. The purchaser has to stand that. The carload rate was formerly $1.40. It is now $1.50 a hundred from all points east of the Missouri or Mississippi. The Pacific Machinery Dealers Association comprises 22 members, leading jobbers in San Francisco, and was organized in 1903.

(3074) W. D. SANBORN.

Sanborn.

General agent of the Burlington route at San Francisco for 24 years. Employed by the Burlington for 39 years. Previous to

San Francisco. Gen. Agent Burlington route.

1901, the S. P. endeavored to route Atlantic seaboard traffic Sunset-Gulf. The U. P. solicited the same traffic by Ogden. Witness also solicited it and delivered to the S. P. at Ogden and U. P. at Denver, also to the Atchison. (3075) Previous to 1901, the S. P.'s first choice was Sunset-Gulf, second choice Ogden-U. P. Its attitude toward the D. & R. G. was friendly. There has been no difference in the ability of the Burlington to secure transcontinental traffic since 1901, as compared with before. He is just as successful in getting as large a volume by Denver as before. At Denver some is turned over to the Colorado Midland, some to the D. & R. G., and some to the U. P., and some to the Santa Fe. There is "a little more difficulty" in getting east-bound traffic now than before 1901. The S. P. worked Sunset-Gulf as strong as ever first choice, and the U. P. second, and the U. P. cars are all over the coast, ready for use. "We can get business that way, but we have got to rustle for it." Before the merger, the S. P. were more favorable to the U. P. than to the D. & R. G. on east-bound business. At the same time "They would give the Rio Grande pointers."

Burlington just as successful in securing traffic as before 1901.

S. P. worked Sunset first choice, U. P. second.

(3076) The U. P. probably turned over to the S. P. twice as much business as the D. & R. G., and it is customary in railroading to reciprocate favors of that kind. It is hard to tell whether the preference of the S. P. for the U. P. at Ogden has caused any diminution in the percentage of the east-bound tonnage that the Burlington has been able to secure, as business is growing all the time. Witness hardly thought his tonnage had kept pace with the increase in the total tonnage.

U. P. turned over twice as much business to S. P. as D. & R. G. did.

Lang.

(3076) GEORGE LANG.

San Francisco Formerly with U. P.

In the automobile business. From 1888 to 1906 was employed by the U. P. Started in its service at Spokane, Washington, and after four and a half years was transferred (3077) to Portland, in charge of passenger matters there. After three and a half years was transferred to Salt Lake. 2½ years later returned to Portland, and from Portland to Los Angeles, where he represented the U. P. for 2½ years. Was at Portland in the passenger business from 1895 until they closed the office. The S. P., O. R. & N. and O. S. L. all had separate offices at Portland at that time. Solicited freight in San Francisco from 1902 until the fire. (3078)

Sunset Limited.

The Sunset Limited was a first-class train, and the first-class sleepers only went as far as New Orleans. On certain days it carried tourist sleepers that went through to New York. The train called the "Washington Sunset," witness thought, referred to tourist sleepers. Passenger traffic frequently goes one way and returns another.

(3079) Getting the passenger business is a question of getting after it, advertising. Getting in contact with the business. Witness booked a great deal of European emigrant business. The other lines did the same thing, from Atlantic ports to the Pacific coast. They were usually booked from the European port, right

Passenger business from Europe.

through. People in this country would send the tickets over to Europe, and bring their friends or relatives over. There is also some second-class passenger traffic back to Europe. It is a continuous business during all seasons of the year. It moves by sea from New York, Philadelphia, Baltimore, Boston, Quebec and Halifax; some of it moves from gulf ports, New Orleans, Galveston and Mobile. (3080) The advertising would call attention to time, service, through cars, and all that; scenery also.

(3080) R. G. GUYETT. **Guyett.**

Lives at Palo Alto. Insurance broker. In that business since January 1, 1904. Previously chief clerk for the U. P. from September, 1892, at San Francisco, and for a year or two before that was ticket agent for the U. P., entering their employ in May, 1891. (3081) Prior to 1901, 35 to 45 per cent., some months probably 50 per cent., of the passenger business moving through Ogden, went U. P. After 1901, it gradually increased, and the U. P. received possibly as high as 55 per cent. Presumes the change was caused by the friendly attitude of the S. P. Before 1901, the S. P. was neutral, as between the Rio Grande and U. P., as far as witness could learn. Local agents in handling tickets are able to influence the routing of passenger traffic to quite an extent. During the years he was with it, the U. P. put out every possible effort to secure passenger traffic. The solicitors went after prospective passengers, whether there was one passenger or 100.

Palo Alto, Cal. Formerly with U. P.

Passenger business through Ogden.

(3082) The same policy was pursued by the S. P. Witness thought the "Sunset Limited" was put on about 1897 or 1898, possibly before. It was largely advertised, by billboards, posters, newspaper and magazine advertising, and travel by that route was worked by soliciting agents. During the winter months, owing to climatic conditions, they secured a substantial business that way. The European emigrant business was handled largely by the various "European-Italian agents." Witness thought that business was all handled by the agents themselves on a commission basis, and they worked it as they saw fit. There was probably a uniform commission paid by the different roads for that business.

Sunset Limited.

(3083) There was quite a volume of west-bound emigrant business, but not a considerable business back to Europe. It went back as second-class. The winter tourist business was west-bound and was solicited at the other end. The Santa Fe and S. P., witness thought, divided up the business from the Los Angeles territory pretty generally. The U. P. had an agency at Los Angeles working that business, and received a small share, but had to work hard for it. (3084) Business from Los Angeles over the U. P. went S. P. to Sacramento, or else the coast line through San Jose and Ogden. The S. P. got a haul of about 500 miles from Los Angeles to San Francisco, and about 830 miles from San Francisco to Ogden.

Emigrant and tourist business.

McEwing.

(3084) JOHN McEWING.

Oakland, Calif. Formerly with O. R. & N.

Lives in Oakland, Cal. Traffic manager of Dunham, Carrigan & Hayden Company, wholesale hardware. Previous to that went on the street for the O. R. & N. in 1898. The office was absorbed by the U. P. in 1901, and he continued in the joint employ until 1906.

Montana and Idaho business.

As solicitor for the O. R. & N., he worked business to Montana points preferably through Spokane, in connection with the G. N. or the Short Line by Huntington, or lastly N. P. by Wallula, as the latter gave the shorter haul. The traffic moved to Portland by boat. (3085) The N. P. competed for that business. They preferred to take it via Tacoma, but secondly via Wallula. The S. P. worked it via Ogden, and some through Portland in connection with the N. P., mostly through Ogden. The traffic consisted chiefly of wine, canned goods, dried fruit, sugar and salt. The competition was active on an equality of rates. Traffic destined to points in the vicinity of Boise, Idaho, the O. R. & N. worked via Portland, the S. P. via Ogden. Prior to 1901, witness was not working freight business for the U. P. Business between Portland and San Francisco was then being sought both by the Shasta route and the boat line, but not very actively by the S. P. They carried very little freight between San Francisco and Portland. They didn't get very much. The boat line had much the best of it.

S. P. didn't carry much freight between Portland and San Francisco prior to 1901.

(3086) The latter had a differential rate, a five days service regularly, with sometimes in the winter season, when grain was moving south very heavily, an extra vessel. The extra freight steamer didn't carry passengers. Witness thinks the service is now weekly. The traffic of witness' present firm moves largely by the American-Hawaiian and Panama. The Tehuantepec route takes from 25 to 40 days from New York. It will average 31 or 32 days. Panama is ten days slower. Some commodities are cheaper by Panama, and others by Tehuantepec. The Panama has a differential over the all-rail rates, and the American-Hawaiian makes rates entirely ignoring those conditions. The Panama rate is the transcontinental rate, less 30 per cent. off L. C. L. and 40 per cent. off carloads, with the exception of a few commodity rates. They have about a dozen commodity rates out of New York, on which there is an absorption that seems to have no reference to the transcontinental rates.

American-Hawaiian and Panama routes.

(3087) Witness ships all-rail. Doesn't use the Sunset-Gulf route. When he uses any boat line he uses the American-Hawaiian or the Panama route. The American-Hawaiian Line has solicitors, but they never call on witness. Business witness moves that way is controlled by the rates, and not by solicitation. Sometimes witness ships more by Panama; sometimes, more by Tehuantepec—about half and half, he should say. The Panama line absorbs the local rates into New York, just as the Sunset route, with the exception of those commodity rates witness referred to. There are a dozen commodity rates they publish on which there is no absorption; that

Rates.

is, net. New York proper. While from some other points they were absorbed up to 20 cents, maintaining a minimum of 40 cents, witness thought. In jobbing the goods east of here, the rates break even over about Winnemucca, or close to that point in Nevada, about 400 miles. Witness doesn't see that the recent increase in rates has affected his business.

(3088) The increase applies to the goods that he handles. If the goods are sold f. o. b. San Francisco, the increase is paid by the manufacturer, unless he adds that to the cost; otherwise witness presumed it was paid by the consumer. About 50 per cent. of witness' business moves all-rail. The Panama route takes half of witness' water business. "Q. That is doing pretty well for a bunch of tubs, isn't it? A. Pretty well." At the time witness was soliciting, the Shasta Route got very little of that business, most of it went by the boat lines between here and Portland. That was on account of the differential and on account of the time. "We were making Portland in about 52 to 54 hours by passenger steamers, making passenger time, while I never knew a shipment—and I placed a good many of them that did move all-rail—to make it in less than 4 days and from there up to 7 and 8, more likely to be 7 and 8 than to be 4." The railroad didn't actively seek the business, as a rule. Business into Montana points and Idaho via Ogden went over the O. S. L. to Butte. Witness thought the S. P. was a fairly well managed railroad at that time.

Reasons why traffic between San Francisco and Portland went via boat line.

(3090) W. N. ROLPH.

Rolph.

Lives in San Francisco. Secretary of the Griffith Derney Company, (3091) handlers of canned goods, fruits and salmon. Ships both to the east and abroad, principally from San Francisco and other California points. Also a good many shipments from Puget Sound. Shipments to Europe go around the Horn. Occasionally ships to Europe by rail to the Atlantic seaboard. That depends on market conditions. When there is a high price for canned goods in Europe, and they want them in a hurry, they order them overland. Last season witness shipped entirely via Sunset-Gulf, and thence by steamer from New York. Until two years ago, witness made most of his eastern shipments over the Santa Fe. Since then he has been shipping quite a lot via Ogden. Uses the Tehuantepec route very little.

San Francisco. Canned goods.

Routing of his business.

(3092) It takes about 30 days to New York via American-Hawaiian line. Ships very little to Montana. Uses the Pacific Coast Steamship Company, and the N. P. or the G. N. at Puget Sound. Has never shipped into Montana by the S. P. Gets the canned salmon principally from Alaska, also from Puget Sound. The O. R. & N. boat line has now a weekly service, two boats. Formerly had a five days service. They bring very little salmon. From the Columbia River salmon is shipped direct east out of Portland. He uses the Panama route very little. Avoids shipments by water on account of the uncertainty of getting car num-

bers on the bills of lading, and the time in transit. Recent increase in freight rates affects witness' commodities, 10 cents a hundred pounds. The rate on canned goods was advanced from 75 to 85 cents. (3093) He doesn't handle dried fruit. It is the California producer of the canned goods that has to stand the advance in rates.

Morse.

(3093) C. R. MORSE.

Berkeley, Cal. Sec. Am. Trading Co.

Lives at Berkeley, Cal. Secretary of the American Trading Company. Exports and imports everything. Exports principally lumber, wheat and flour, and imports principally sulphur from Japan, bags from Calcutta, burlaps and other jute fabrics. Lived in Japan from 1896 to 1902. (3094) Most of the shipments from Japan went via Suez. Occasionally had shipments to San Francisco, but very seldom has shipments acr s the continent. Thinks the P. M. and P. & A. had solicitors in Japan. Shipped only by the P. M Ships at times to Portland by the P. & A. The only shipments by the P. & A. are bags, and so on, from India, and sulphur from Japan. Thinks the P. & A. runs direct to Portland. Occasionally they stop at San Francisco first. Doesn't remember any San Francisco shipments going over the P. & A. and from Portland down by boat. (3095) Occasionally small shipments went to New York via Portland, but very little.

Jacobs.

(3096) ISIDOR JACOBS.

San Francisco. Canning business.

Lives in San Francisco. President of the California Canneries Company, and of the Napa Cannery Company, at San Francisco. Until last year his traffic moved to Europe by sailing vessel, but a large quantity last year went overland via New York. Some went by the American-Hawaiian, and also by a French line from here. Large quantities by sail, also. Traffic to the Atlantic seaboard now goes by the American-Hawaiian and some overland. Prior to 1901, seaboard traffic went mostly by the Sunset. Practically all of it. The Sunset-Gulf agents then made a greater effort to get the freight on that route than any other line. The U. P. had a soliciting agent at San Francisco at that time and solicited witness' traffic. (3097) His shipments originate in San Francisco and at Napa, but he didn't have the latter cannery in 1901. Has never used the Panama route. His product can be shipped just as well by water as by rail. The American-Hawaiian service is very good. Freight from New York goes through in 21 days. The all-rail service has been as low as 14 days, and has been as high as three months, but the latter is very unusual, due to congestion. That was year before last. As a rule, he figures on 19 days to New York.

Water and rail service.

Michaels.

(3097) C. F. MICHAELS.

San Francisco. Druggist.

Wholesale druggist, connected with Langley & Michaels since 1886. Distributes into western Nevada and California. (3098)

Has shipped very little of recent years to Oregon points. Formerly did. His supplies originate principally on the Atlantic seaboard, but also considerable in the middle west. His seaboard business comes principally Sunset-Gulf, but all water as well. Shipments from Cincinnati have occasionally in the past come by New Orleans, but as a rule come over the northern route. Also ships by the American-Hawaiian line. Has not used the Panama route for a good many years, because of inferior service, irregular time, poor handling. The American-Hawaiian is much better in time and quality of service. Formerly, when witness shipped to Portland, his traffic moved both boat and rail, principally by boat. (3099) Four or five years ago used the rail more than boat, because the service was better. After the fire the rail service was very inferior, and that is largely the reason witness is not doing business in Oregon now. Four or five years ago he could get goods into Portland in about three to four days by rail. Last year it took two weeks. Years ago the sailings of the O. R. & N. were from three to five days. Latterly, they have been five days. Transcontinental rate has been slightly increased on drugs lately. Carload rate increased 10 cents per hundred pounds, and a short time previously the same increase on L. C. L. The former is now $1.50. 70 per cent. of the drugs and medicines consumed on the Pacific coast originates on the Atlantic seaboard. Chicago takes the Atlantic seaboard rate, and witness thought that the remaining drugs originated at Chicago, Cincinnati and St. Louis, and points west of Buffalo. Also gets some drugs from Detroit—Park Davis, and big houses like that. Has more breakage by the Panama route than all-rail. (3100) The time also considerably longer.

Routing of his business.

(3100) T. B. SETTLE.

Settle.

Traffic manager of Horst Company—hop business. Hops originate in California, Oregon and British Columbia. Some in the Willamette Valley. Two years previously was employed in the Auditing Department of the S. P., and was then in a general way familiar with the way traffic moved. Willamette Valley hops witness buys are shipped mostly to Europe, via U. P. Years ago hops moved from that region by the Shasta, Sacramento and Ogden; also by the U. P. No hops move by the Sacramento route now. (3101) None of the hops witness buys in the Willamette Valley move to the seaboard by the Sunset. He has had cars move that way. Hops can be comfortably handled in boats, so the Sunset route is a satisfactory kind of route for hops. Ships quite a few to Milwaukee. They go by the U. P. and C. M. & St. P. To St. Louis, the majority go by Kansas City and the Wabash or the Missouri Pacific. Has had cars go via New Orleans and the I. C. Has shipped a few cars to Cincinnati. The last ones went via New Orleans and the I. C. and the B. & O. S. W. None of his freight from the Willamette Valley moves by the D. & R. G. now from Ogden. (3102) One car left Mount Angel, on the S. P. near Salem, that

San Francisco. Hop business.

Routing of hops

the consignee wanted moved by the D. & R. G., but for some reason or other witness' routing instructions were ignored. Witness afterward found out that the instructions were left off by the man who routed the car. It moved over the U. P. The U. P. and S. P. solicitors now call on witness for business very seldom. They don't solicit his business. All of the business goes S. P. or U. P., so there is hardly any use for them to do so. For British Columbia, witness' business moves Can. P. There are not nearly so many grades over the U. P., O. S. L. route, as via the Shasta and the Sierras. The former has the advantage both in grades and distance.

Sunset's time not good from Oregon.

(3103) Very few of witness' Oregon shipments go Sunset, because the time is not very good from Oregon. The all-rail routes are shorter in time and distance, and much quicker. The shipment to Cincinnati via the Sunset was made because it is necessary to divert hops a good deal, and by sending it through New Orleans witness had the privilege of diverting it on the Sunset at the through rate. Shipments via Ogden over the U. P. can be diverted until they reach Council Bluffs. Beyond Council Bluffs there can be no diversion.

Rumpf.

(3103) FRANK J. RUMPF.

San Francisco. In charge of traffic of Wine Ass'n.

In charge of traffic of California Wine Association since 1894. Employed by that Company since 1889. (3104) Sometimes the traffic is routed by the consignees, sometimes by the Association. The monthly shipments aggregate about 1,500 cars. Cooperage supplies, and so on, move west-bound, the cooperage iron coming from Pennsylvania, oak from the gulf states. His east-bound freight originates principally at Winehaven in Contra Costa County, on the bay shore of San Francisco. Doesn't have charge of the west-bound shipments, and doesn't know how they move. Shipments to the east move over all the lines. Witness has made it a practice to favor all the local agencies of the railroads. Ships via Ogden, El Paso, Mojave; occasionally by water to Seattle and Tacoma, and out over the northern lines.

Routing of his business.

(3105) Some years ago shipped considerable by way of Vancouver and the Can. P., on a differential. The traffic was destined to St. Louis, Chicago, St. Paul, Milwaukee, Cincinnati. Doesn't remember whether any shipments went that way to the seaboard. Occasionally ships east by Panama. Such shipments consist of 50 gallon barrels. Hasn't shipped any case goods by Panama for some months, first, on account of the irregular schedule, second, scarcity of space in the P. M. boats, third, rough handling down at Panama and Ancon. Have shipped both cases and barrels by Tehuantepec. They went through in splendid condition. Ships to Montana points. The consignees generally route such shipments, and they are sent sometimes all-rail, and again by way of Seattle and Tacoma.

Montana business.

(3106) Very little has moved to Montana by way of the O. R. & N. boats to Portland. There is only one way for all-rail shipments, S. P. to Ogden and then the O. S. L. The last car witness

shipped north all-rail was the latter part of February or the beginning of March. That moved N. P. from Portland. That route has always been open to witness. Witness finds that the N. P. has secured most of the business in the northwest territory, including Montana common points. It moves via Tacoma chiefly, by boat. The car shipped north in February or March went on account of the number of washouts, &c. Witness intended shipping it by way of the Pacific coast, but the N. P. at that time, being blockaded by snow, he had to make arrangements to let it go by rail from Winehaven, and it went Shasta route to Portland and then by the N. P. Shipments to Portland proper generally go by the first steamship out. It may be the San Francisco & Portland, or an independent boat. Ships case goods that way, and gets satisfactory service. (3107) Five or six years ago shipped some to Portland by all-rail, but only where the consignee favored all-rail shipments. He respects the consignee's requests.

(3107) CHARLES S. MOSES.

Moses.

Thirty years in the wool business at San Francisco. The wool originates principally in California. Some of it in Nevada and Oregon. It is shipped to Boston, the great wool market of the U. S. From Nevada witness thinks his shipments move by the Sunset. That is true most of the way through Nevada. Some of the business may go the other way. He doesn't know. Sunset shipments go by boat from New York to Boston. Some of the wool business from Nevada may go east over the U. P. He doesn't know. (3108) His impression is that it goes Sunset, but he may not be correct about it. Hasn't shipped any to the east by boat from San Francisco for a great many years. Out of Portland his shipments go chiefly over the Short Line, U. P. and other roads. None of it goes Sunset. Hasn't for 12 or 15 years. Doesn't know whether any goes via Sacramento or not. He has not shipped from there this year. Couldn't say whether he had shipped any via Sacramento in the last few years.

San Francisco. Wool business.

(3109) THOMAS DENIGAN.

Denigan.

In the wool business forty years. Handles chiefly California wool. Doesn't get any wool from Oregon. Buys and sells locally. The wool that he packs and ships himself, generally goes by Sunset out of San Francisco. (3110) Very seldom ships from Los Angeles. The facilities there are not good for compressing and packing. Doesn't buy wool in Idaho and Montana; very seldom buys any in Nevada. From interior points in Nevada, it is shipped east in sacks. From Oregon, that is, the outer regions, also in sacks. At other points, Portland for instance, they pack all their scoured wool and a great deal of grease wool, too. Witness bought largely of wool in 1905. Thinks he shipped perhaps a million and a half pounds from the Lakeview region. That all went by the Sunset. Lakeview is on the Shasta route, perhaps 500 or 600 miles from

San Francisco. Wool business.

Routing of his business.

San Francisco. Witness corrected himself, that the wool came from Reno—that narrow-gauge road that runs up to Alturas. In the Lakeview country he has had wool dumped at Agra and Montague, and shipped from there, but it generally comes from there to San Francisco in bales.

(3111) Those towns are on the Shasta route. The Lakeview wool that witness spoke of has generally for the last five years found its way to Reno, and witness takes it for granted has been shipped from there Sunset-Gulf, but he doesn't know. Has never shipped to the east from eastern Nevada or northern Utah. Doesn't know of any shipments of wool made recently by the S. P.-U. P. line to Boston. As far as witness has ever had to do with it, it has all moved Sunset.

Koshland.

(3111) M. S. KOSHLAND.

San Francisco. Wool business.

38 years in the wool business. Ships mostly to Boston. The wool under the jurisdiction of his branch house in San Francisco originates chiefly in Nevada, California and Oregon. Doesn't handle wool in northern Utah. That is handled by the Boston house.

Routing of his business.

(3112) His Nevada wool moves by the Sunset. Hasn't gone the other way in the last few years. Four or five years ago it did. The wool from Nevada is brought to Sacramento, and then sent over the Sunset route around to Boston. Idaho wool is handled by the eastern house. Willamette Valley wool is shipped either over the N. P. or the O. S. L. None of it comes south by the Shasta route. Formerly some out of Portland came around via Galveston by the "Sunset-Gulf." That was 13 or 14 years ago, and at the same time witness also shipped by the other routes. Has also shipped by the Panama route, but not very extensively. It was simply a matter of getting cheap stowage. From New York wool shipped via Panama moves to Boston either by the Metropolitan Steamship Line or by rail.

(3113) That steamship line ordinarily runs in connection with the Sunset. Wool from California is always shipped in compressed bales. The same is true of shipments from through rate points in Oregon. It is compressed at Portland, Pendleton, Shaniko, Arlington and Heppner. The majority of the wool growers dispose of it in the west. There are exceptions. It all depends on the market. Much the greater part of the Oregon wool originates east of Portland on the O. R. & N. lines. All, except the Willamette Valley wool, which is a small portion of the Oregon production. At the time witness shipped by the Sunset, 13 years or more ago, from the Willamette Valley, he was friendly disposed to them. Very often his travelers, who attend to the shipping, would have friends who solicit these lines, and ask for the freight and succeed in getting it routed that way. He thinks that route is still open, but he has never been approached for freight that way in recent years. The N. P. or U. P. is much the shorter route out of Oregon.

(3114) The San Pedro road carries wool to be packed in transit at Los Angeles, and that route is being used very largely from Utah

points, within ten miles of Salt Lake. The Nevada wool all originated on the line of the S. P., and moves to Boston Sunset. Four or five years ago, witness shipped the other way, by Ogden and U. P. There were rates in both ways. Wool originating at local points on the S. P. was then moved easterly through Ogden. More recently witness has shipped by the Sunset. Sometimes witness has occasion to change his routing, and he could do it here through the S. P. office while it was in transit. He supposed that would be true shipping the other way, so long as it was on the U. P. Doesn't move any wool from the Willamette Valley by the Sunset route now. (3115) All goes via Portland, either N. P. or O. S. L. He has an agent there who attends to the routing. The wool is carried to Portland to be pressed. The bulk of the Oregon wool is not raised in the Willamette Valley, and very little of that comes to Portland at all. From Pendleton it moves either by the N. P. or U. P., but witness thinks the bulk of the Oregon wool moved O. R. & N. During the past 13 or 14 years, witness has shipped the bulk of his Oregon business as he does now.

Wool movements.

(3115) JULIUS WOLFF.

Wolff.

Twenty years in the canned goods and dried fruit business at San Francisco. (3116) Ships principally from Napa and Santa Clara Counties. Prior to 1901 the S. P. endeavored to route seaboard traffic Sunset, and the U. P. also sought the same business. His shipments to the seaboard do not, as a rule, move all water. They move chiefly all-rail or Sunset. Shipments to Europe move via New York, as a rule, and go all-rail. When witness speaks of moving by rail, he includes the Sunset route. Hasn't shipped anything by the Panama route for five or six years. Didn't like the service.

San Francisco. Canned goods and dried fruit.

(3117) Has shipped by the American-Hawaiian line. It is a trifle better, but not as good as the all-rail. Time is a factor. The Panama route takes thirty days to New York, sometimes forty. Has routed considerable business to the east by way of the D. & R. G. from Ogden. Has done so recently. The proportion of business witness gives that company is very small compared to what he formerly gave them. That is due possibly to a matter of preference, possibly a matter of convenience. He cannot always get cars that are suitable to go that way, without delay. Thinks he had better luck getting cars to go that way years ago. Ships canned fruit and salmon to Montana points. That business goes from San Francisco via Ogden. Years ago, before the merger, the buyers used to favor shipments via Portland and over the N. P. and the O. R. & N., but witness always preferred shipping them by Ogden. Over the latter route the goods go through in the same car, without transfer. (3118) The buyers in those days sometimes compelled witness to ship by Portland. Witness didn't know why. He thought the rates were the same both ways. Prior to the merger, the witness thought S. P. sought to route business to the east

Routing of his business.

Montana business.

by the Sunset. Where they couldn't get it that way, they then tried to get it by Odgen.

Rosenberg.

(3118) ABRAHAM ROSENBERG.

Berkeley, Cal. Dried fruit.

Lives in Berkeley, Cal. For sixteen years a shipper of dried fruits at San Francisco. Assemble the shipments at various points in California. Sometimes shipped from the points where they are grown, without assembling. (3119) Prior to 1901, the S. P. solicited witness' business for the Atlantic seaboard for the Sunset; and the U. P., for the Ogden route. The competition between the companies was active, "not so much on seaboard business as intermediate territory—Chicago, Indiana, Ohio." On figs, comes in competition, in the eastern markets, with Smyrna; on nuts, with Spain and France. There has been a raise of ten cents per hundred in freight rates recently. Doesn't know who has to stand the increase. There are so many factors entering into that, witness is not competent to answer. (3120) The S. P. is a part of the two routes witness referred to as competing, and must concur in the price at which the U. P. offers to sell transportation from San Francisco. The rates have been equal by the two routes since 1886. If the business went by New Orleans, the U. P. received no revenue. Witness is not interested in the division of the rate.

S. P. must concur in through rates via U. P.

Lipman.

(3121) H. R. LIPMAN.

Berkeley, Cal. Dried fruit.

Lives in Berkeley, Cal. About twelve years in the dried fruit business. Connected in business with the preceding witness. Divides shipments up amongst the various roads. Ships quite largely by the Tehuantepec line. That takes 25 to 36 days, an average of about 30 days, to New York. All-rail 18 to 20 days, this last year. Ships practically nothing by the Pacific Mail. The service is not satisfactory. Warehouse in San Francisco is on a S. P. spur track. Ships some from Ogden over the D. & R. G. Has had no trouble in getting cars to ship over that line this past year. Prior to that, it was rather difficult at times to get equipment for that routing.

Routing of his business.

(3122) Has had charge of this branch for four years, and probably the first three years he had more or less trouble getting cars from the D. & R. G., but nothing of any special note. Can route traffic over the D. & R. G. in S. P. cars. Thinks he has had no trouble in doing that. If he couldn't get a D. & R. G. car, he has usually been able to get an S. P. car, after taking it up with the assistant general freight agent. He didn't know that it was necessary to do so, but he has usually done so, and been given the necessary authority. In shipping over the U. P., it is not necessary to get a U. P. car. Shipments to Montana sometimes go by the Pacific Coast Steamship Company, care of the N. P. or G. N. at Seattle. Doesn't think he has shipped any of late years to Montana either via Portland or Ogden and the O. S. L. (3123) Doesn't recall any O. R. & N. agent has solicited his Montana business.

(3123) A. E. FISK.

Fisk.

Employed by the C. A. Smith Lumber Company, whose main office is in Minneapolis. They have saw mills and offices at Marshfield, Oregon, and a planing mill and distributing yard at Bay Point on the Bay of San Francisco. Offices at Marshfield and Coos Bay, Oregon. Their mill at Marshfield is cutting between 250,000 and 300,000 feet a day. It is one of the most modern mills in the country. There is a very large body of timber tributary to Coos Bay.

San Francisco. Lumber business. Mills at Marshfield, Ore.

(3124) Lumber is shipped out by steamers and sailing vessels. The Lumber Company for the last fourteen months has had a boat of its own. Previously they shipped on chartered vessels. The S. P. has a boat running between Coos Bay and San Francisco. She carries chiefly coal south-bound, and is not a passenger ship. Her name is the "Czarina." The other boat that the S. P. bought from Mr. Spreckles, the "Breakwater," has carried small lots of lumber, but is not a lumber-carrying vessel. Lumber is chiefly carried on deck. There is no rail connection between Marshfield and the outer world. A small railroad runs out of there, but does not connect with the outer world. His products are sold in California, and some in Nevada. (3125) There is a white cedar that grows at Coos Bay, used in certain classes of work in the East. Some of it has been used for interior finish. That particular kind of cedar is not grown in other places. It is a rather rare wood. The Simpson Lumber Company also has saw mills on Coos Bay; also there is a North Bend saw mill. Those are the only ones that are running there at present. The former is quite a large concern, their two mills cutting from 150,000 to 160,000, and the North Bend mill about 50,000.

S. P. boat to Coos Bay.

White cedar.

(3126) J. G. MELVIN.

Melvin.

Lives in San Francisco. Since June, 1906, traffic manager of California Fruit Canners Association. Previously, from 1901, employed by the S. P. There are 22 or 23 canners in the Association. Ships canned goods and dried fruits all over the world. (3127) Shipments to the eastern part of the U. S. move via Ogden, by the "Santa Fe," via El Paso by the "Sunset-Gulf," the American-Hawaiian and Pacific Mail. Has known some instances where it has gone Sunset all-rail. Doesn't ship to any great extent by Panama. That route doesn't compare favorably with the Tehuantepec. It takes longer in transit, and the P. M. requires goods to be corner strapped in order to get a clean bill of lading, and that adds an additional expense. It is not required by the American-Hawaiian or Sunset-Gulf line. Witness' shipments to Montana move via Portland over the O. R. & N. and the Short Line, and also over the N. P., and also via Ogden. Some of these shipments go by rail to Portland, in connection with the O. R. & N. and the N. P.

San Francisco. Traffic Manager Canners Ass'n.

(3128) The U. P. organization solicits these shipments via Ogden in connection with the O. S. L., and they also work the

Portland route in connection with the O. R. & N. The N. P. works for the business by the Shasta route, and also by the Pacific Coast Steamship Company. Bulk of Atlantic seaboard business moves by boat via Tehuantepec. The rail shipments are equally divided between the all-rail and the Sunset gulf. Some of it goes by the Pacific Mail boats. Witness routes most of his own shipments.

(3129-3130) J. O. BRACKEN.

Testimony immaterial.

Ray.

(3130) W. S. RAY.

San Francisco. Stoves.

In the wholesale and retail stove business since 1872 at San Francisco. Makes quite a number of stoves, and buys the balance in Massachusetts. (3131) Shipments from Massachusetts now come U. P. and C. P., but they have come by Sunset; some by the American-Hawaiian. Has never used the Pacific Mail for stoves, but has for other goods. Sent quite a number by the American-Hawaiian before they started to cross Tehuantepec, but finds the service is not as good now as it was before on account of crossing the Isthmus. Has shipped quite a number of stoves by the Sunset. Has shipped sheet iron, &c. from Pittsburg. Usually ships from there U. P. and C. P. He may have tried a car from Pittsburg a long while ago via New Orleans, but that is not his ordinary way to ship. Quite a number of years ago he patronized the Santa Fe, and now ships a few local shipments, but not full cars that originate around Chicago. Doesn't use the Sunset route now for stoves, because they come in better condition all-rail. They don't have to be transferred. There is the same objection to the Sunset as to the Tehuantepec. (3132) The transfer naturally breaks the stoves up, although they are crated to obviate the breakage.

Routing of his business.

Harriman.

(3132) E. H. HARRIMAN (2).

Testimony in Minnesota vs. Northern Securities Co.

Testimony given by witness in the case of State of Minnesota vs. Northern Securities Company, et al., at the hearing held in New York, November 21st, 1902, and sworn to before the Special Examiner November 24th, 1902.

On or prior to May 9th, 1901, witness had, acting for the railway interests that he represented, acquired certain stock in the Northern Pacific Railway Company, amounting in round numbers to about $78,000,000.00 par value. (3133) In September or October, 1901, negotiations looking towards the acquisition of the N. P. holdings acquired by Mr. Harriman, were opened up between J. P. Morgan & Company and witness. They continued about a month or six weeks, possibly two months, before being finally consummated. Witness had many talks in regard to the matter with Mr. Bacon of J. P. Morgan & Company. He had talks with nearly every member of the firm. They never disclosed to witness whether they were acting for themselves or somebody else. Before the negotiations were finally closed, it was understood that witness was

Negotiations with J. P. Morgan as to sale of N. P. stock acquired prior to May 9, 1901.

to take some stock in a company to which this stock was to be transferred.

Witness didn't learn what company was to take it until practically at the time that he received the stock of that company in exchange. "I can't say that there was any understanding at the beginning of the negotiations for a settlement of whatever difference we might have in regard to that stock, whether it was to be taken by them or by a holding company, or how it was to be paid for. It was only towards the end, when the thing crystallized, that the suggestion was made that payment should be made partly in cash and partly in a holding company stock. I think it was just toward the end of the negotiations, when we were considering whether we would break away or get together on it. * * * (3134) There never was anything on their part, it seems to me, that would lead me to infer that they were to turn that stock over to a holding company. Towards the end, when the matter crystallized, and when we were very nearly at the end of our tether, they offered to pay for these shares, in the stock of a holding company so much and so much in cash. Now, there was nothing said as to whether they would turn this stock over to a holding company or whether they would hold it themselves; but they would give us that holding company's stock in part payment." Witness learned that several days before the stock was delivered; he doesn't remember just when; perhaps two or three days; it may have been within three or four days, or perhaps two days. He first learned that this stock was to be delivered to the Northern Securities Company, when it was delivered. His recollection is that was the first he knew about that. He thought they first made a proposition to him to make payment for this, or part payment for it, in the stock of some other company towards the end of the various conferences and negotiations, as he said; within a few days, perhaps, of the time the thing was absolutely closed.

No understanding at beginning as to holding company.

Towards the end, offers made to pay in shares of holding company.

First learned that delivery was to be to Northern Sec. Co. when delivery was made.

(3135) "Q. I suppose when you acquired the stock you supposed you had acquired a controlling interest in the Northern Pacific? A. Practically that is what we thought." They contended that they had the right to retire this preferred stock which he held, without his consent. He thought steps were taken to retire it, before the negotiations were ended,—that action had been taken to that end. "Q. The record shows that the action taken to retire the preferred stock was on November 13, 1901. A. It was about that time, then. MR. YOUNG. And the record shows that your sale was closed after the 15th. WITNESS. Then, I say it was practically about that time." He first learned that they intended to retire the preferred stock when the action was taken. Up to that time he supposed he had a controlling interest in the N. P. by his holdings. "Q. And why were these negotiations pending, then, looking toward a settlement of your disputes, if you had started in to buy a controlling interest in the Northern Pacific and supposed you had it, and no questions were raised about that retirement? A. Well, of course it was stated to us that this preferred stock could

Steps taken to retire preferred stock.

Common talk that preferred stock could be retired.

be retired. Q. Who made those statements? A. Everybody. It was published in the papers. Statements were made by the directors and by people connected with the company, and published in the papers. I think you will find public statements were made at that time, that that was the intention. But of course the actual steps taken for that purpose were not taken until about the time we made our trade. And if they hadn't been taken and it hadn't been retired, we probably would have been in control.

(3136) "Q. You understood, then, during these negotiations and prior to the time you closed the transaction—— A. That there was a probability—— Q. ——that there would be an effort made to retire that stock without your consent? A. A probability of it, yes. Q. Did Mr. Morgan, or any of the representatives of J. P. Morgan & Company, with whom you negotiated, state to you that they intended to do that? A. I imagine they did. I don't remember just what— Q. Well, that was one of the principal inducements that led you to finally surrender your holdings, was it not? A. Practically. Q. When did this discussion regarding the retirement of the preferred stock first come up, as you remember it? A. I think in the summer of 1901. Q. So you had that in mind, when negotiations were first opened between yourself and the firm of J. P. Morgan & Company, of course? A. I presume that was one of the influences. I don't know whether I had it in mind or not. I didn't know just what we would do." At the time he finally consented to accept in part payment for his holdings, stock in a holding company, did not insist upon any basis on which any other stock of the N. P. should be acquired by that holding company. He finally agreed to turn in his holdings and receive from the Northern Securities Company upwards of eighty-two millions in stock of this company. He knew at that time on what basis this holding company was to take in other N. P. or G. N. stock, viz. on the basis of $115 for the N. P. and $180 for the G. N. He made no request or demand that they should not take any of the stock of either of these companies at a higher rate than that. "Q. Did you understand that they would not? A. I did not. Q. Were you willing to surrender your holdings to a company and allow it to determine whether they would exchange their stock with some other holder for twice the amount that you were getting? (3137) A. Not if I supposed they would do it. But there was no stipulation. Q. Well, you understood they would not? A. I don't think the thought crossed my mind."

Probability of retirement inducement to give up his holdings.

Terms of exchange.

"The statement was made to me that they would put this Northern Pacific stock into a holding company and give us—not this Northern Pacific stock, but that they would give us in part payment a holding company's stock on the basis of 115 for Northern Pacific, and, if Great Northern were taken in, on the basis of 180 for Great Northern. They didn't state how much they were going to take in or how little they were going to take in; nor did I ask them to

stipulate that they would not take any more than a certain amount, or to agree to take a minimum amount. The statement was simply made that they were going to form a holding company or had formed a holding company and would pay us in this stock, and that those were the terms on which it was to be bought." He doesn't think the statement was ever made to him that if they took in any other stock than what he would surrender to the holding company, they would take it on the basis of 115 for the N. P. and 180 for the G. N. "It was a simple statement that they were going to exchange these shares of Northern Pacific and Great Northern on such a basis, and that they would make us part payment in that stock. Q. That is what I want to get at. They told you, then, that certain of the holders of the stock of the Great Northern and the Northern Pacific were going to exchange their stock for the stock of the Northern Securities Company, on the basis of 115 for the Northern Pacific and 180 for the Great Northern? A. They didn't say certain ones were, but they were going to form this holding company, and that they would pay me in the holding company's stock, which stock should be issued on that basis. They didn't say that they had agreed to exchange certain stock." Witness understood from their statement that the basis of exchange, if any was made, was 115 and 180. He was not consulted at all regarding the formation of this holding company. He didn't know where it was going to be organized; and had nothing to do with it. (3138) He was not consulted about the retirement of the preferred stock either. "Q. Did you make any inquiries regarding who were to be the officers of the holding company, or where it was to be incorporated, or the amount of its capital stock, or anything of that kind, before you agreed to accept its share in part payment for your holdings? A. I don't know that I made any inquiries. I presume there was considerable talk about it, but I don't remember that I made any inquiry from anybody. Q. Do you remember any statement made by persons with whom you negotiated, or by Mr. Hill or his associates, who ultimately formed this company, as to where it was to be incorporated, or the amount of capital stock, or its officers? A. All I remember is just as I have stated; a statement made to me that if this trade went through they would pay us in the shares of a holding company which would issue its stock in exchange for Northern Pacific at 115 and Great Northern at 180. And I agreed to take so much of that stock in exchange for the shares of the Northern Pacific we held—all the Northern Pacific we held. Q. But you made no inquiries as to where the corporation was to be formed or the amount of its capital stock? A. I knew, of course, the amount of the capital stock; but I didn't go into the particulars of the formation of the company at all. That may seem strange. But, in the enormous transactions we have done here, we simply have faith that the man who is doing the thing is doing it properly, or else we don't negotiate or trade with him.

Not consulted about formation of holding company.

All he remembers is that they would pay in shares of holding company—N. P. at 115, G. N. at 180.

"Q. Did you finally consent to surrender your holdings on the basis on which you did, because you had made up your mind they would carry out the determination you had heard expressed, to retire the preferred stock, and thus take away from you the controlling interest in the stock of the Northern Pacific? A. I think I recollect pretty clearly that from our standpoint we thought it was better for us to accept that price for our stock than to go into a legal contest. Q. And you understood that if you did not do that, you would have a legal contest on that question? A. Well, we took it for granted, naturally, action having been taken determining to retire the preferred stock. Q. Well, action was not taken to retire the preferred stock until your negotiations had nearly reached a conclusion. A. Yes, but they had not reached a conclusion. Q. That is, you waited until the very last moment to see if they would do what you understood they would do. A. Well, we were very patient. Q. Then, if such action had not been taken you would not have surrendered your stock? A. I don't know. That is a condition we did not have to meet. I don't think I could answer that question fairly, nor do I think (3139) it is exactly a fair question; because the board of directors might have determined (if they had not done it) to have sold our shares for less. Q. Well, you were acting on behalf of your company largely by yourself at that time, I suppose? A. Largely. Q. And your actions were guided by what you have stated? A. By what I found, the surroundings, yes."

Thought it better to make trade than have legal contest.

When he began buying this stock for his company or companies, he did it with the expectation of acquiring control in the N. P. or an influential voice in the management. He knew that he had a majority of the combined stock of the N. P. after he got through with his purchases, and would continue to control that company unless they retired the preferred stock, or unless he sold it. Of course, he knew, during these negotiations, that Mr. Morgan and Mr. Hill, and the stockholders of the common stock of the N. P. who were co-operating with them or allied with them, claimed to control the N. P. by virtue of a majority of the common stock. He doesn't remember that they claimed to him during these negotiations that they had such majority of the common stock. That was the general talk. He doesn't think it was necessary for them to even make the statement. It was known by everybody. "I think it was not necessary for them to make that statement to me, because among the other statements, as I say, about the retiring of the preferred stock, was a statement made and published in the papers. Q. And they never disclosed to you for whom they were acting until the transaction was ready to be closed? A. Do you mean Morgan? Q. Yes. A. Do you mean the exact company? Q. Yes. A. My recollection is that he did not. In fact I don't think this transaction was closed until practically the very minute the payment was made. I think there was considerable discussion and dispute as to the final payment, and about—I don't remember now whether it was the amount to be paid or whether it was the

Influential voice in management.

Mr. Morgan did not disclose exact company for whom he was acting until payment was made.

amount of stock to be delivered; I think it was the amount of stock to be delivered. They supposed we had somewhat more stock than we really had.

"Q. When did you have your stock transferred on the books of the Northern Pacific Railway Company in the name of yourself and Mr. Pierce? (3140) A. I don't remember. It must have been some time before that. Q. It was prior to the annual meeting in October, wasn't it? A. I think so, yes. Q. And you had all your holdings transferred at that time? A. Practically all. I don't think it was all; I think nearly all was though. There may have been some of the stock held out; I don't remember. Q. During these negotiations, did the representatives of J. P. Morgan & Company, with whom you dealt, tell you that unless they organized a holding company and this stock was turned over to such holding company that the transaction would not go through? A. No. I don't think any such statement was necessary. Q. Well, was any such statement made? A. I don't remember that the question ever came up. This was a running negotiation, and it was difficult to tell what either side would do. I think until practically the last minute I didn't know what I would do."

(3140) JOHN W. CHAPMAN.

Chapman.

San Francisco. Hardware. Formerly rate clerk of O. R. & N.

For two years manager of the Pacific Hardware & Steel Company, at San Francisco. Previously connected with the O. R. & N. and S. P. at Portland. (3141) In 1904 witness went to Portland in the department of R. B. Miller, general freight agent of the O. R. & N. The latter afterwards became general freight agent of the O. R. & N. and S. P. lines in Oregon when the offices there were consolidated. When witness first went in there he was in the rate department, answering rate questions, and rate and tariff clerk, and after that took charge of the rate and tariff department. The rates were made by the traffic officials and turned over to the rate and tariff departments to handle the details. Miller made all kinds of rates—through and local rates. The joint rates between the Southern Pacific and the O. R. & N. were made, of course, after conference or correspondence with the San Francisco office. Miller also made through rates between Portland and eastern points; that is, by conference with the other carriers interested. After the offices were consolidated, witness had to do with the making up of tariffs on both lines. "Q. Southern Pacific clear through to the east, the O. R. & N. clear through to the east, as well as local tariffs? A. That is correct, yes, sir. Well, the tariffs all the way through to the east were not made by us. They were published by the Trans- (3142) continental Freight Bureau. Of course we did publish some tariffs on lumber and such like."

Making of rates.

The tariffs to Salt Lake, Utah, via Sacramento, were taken out before witness went to Portland. The rates to Salt Lake from Portland by the O. R. & N. were lower than the other way. Of course, you could move business the other way by the combination of locals.

Rates from Portland to Salt Lake.

Lumber from the Willamette Valley moved to Salt Lake via the S. P. to Portland, and the O. R. & N.—O. S. L. On Atlantic seaboard business the S. P. has always expressed a preference for its Sunset-Gulf route. "Business originating in other territories, they have not really expressed themselves between the El Paso and the Ogden gateways." Ships to Portland both by the S. P., the O. R. & N. steamers, and other steamers.

Routing of his business.

(3143) Ships to southern Idaho by steamer to Portland and O. R. & N. and O. S. L. Ships nothing to Idaho by Ogden, on account of the rates. There has been no material change in the rates to southern Idaho by Ogden since witness has been in the hardware business. Ships stuff in from the east by Panama, also the American-Hawaiian line. The time in transit from the factory in the interior points around Pittsburg or New England to San Francisco averages 65 or 70 days via Panama. The time in transit from New York is approximately 45 days. From New York to San Francisco by Tehuantepec it is about 28 days—you might say 30 and 37 days. One steamer on the Pacific side will bring two cargoes from the Atlantic. There is no difference in the length of time required to get the goods to New York, and get them loaded on the ships either by the Panama or the Tehuantepec route.

(3144) The American-Hawaiian boats are large steamers of about 12,000 tons, modern vessels equipped to handle heavy pieces of material. The P. M. boats are much smaller and older, and there are classes of freight they cannot handle. Structural material and large size plates, for instance. The P. M. boats sometimes spring a leak coming up the coast. They have had bad luck lately. The iron that cannot be shipped by the P. M. is a class of traffic, the largest percentage of which moves by rail.

LOS ANGELES, CAL., MAY 15, 1909.

Whittemore.

(3145) CHARLES O. WHITTEMORE.

Los Angeles. Lawyer. One of the incorporators of San Pedro.

Practicing lawyer since 1884. Has lived in Los Angeles a year and a half. Previously lived at Salt Lake. Was General Attorney for Utah and Nevada of the San Pedro Co. until July 1, 1907. Was one of the incorporators. It was incorporated March 20, 1901, for the construction, maintenance and operation of a road from San Pedro Harbor in California, through Nevada to Salt Lake City, and the construction of branch lines.

Property acquired prior to organization of San Pedro.

(3146) Previous to the incorporation, the promoters had acquired the Los Angeles Terminal Railroad property in California. That is about all that had been done in an active way. Certain maps and data which had been collected by the Utah & California Railway Company, and certain rights acquired by them in the location of a line of railway from Utah toward California were acquired by the gentlemen who were interested in the enterprise of organizing the San Pedro. That was a month or two prior to the incorporation of the San Pedro. They were acquired while the San

Pedro was in process of organization. The Los Angeles Terminal Railroad Company owned a line extending from Los Angeles to East San Pedro, and from Los Angeles to Pasadena, and a short branch line to Glendale, a suburb of Los Angeles. The first active work by the San Pedro Company was about April 19, 1901, when it took over the rights of the Utah & California to the right of way and grade from Uvada to Caliente, which was then known as Clover Junction, and from Clover Junction to Pioche, and assumed the active work of locating and constructing railroad grade in Nevada. On April 6th witness employed Mr. Deal, and sent him down with a force of men and teams, but that was done on behalf of the Utah & California.

First work.

(3147) About April 6th or 7th, 1901, a force of men was put on the old grade extending from Uvada to Clover Junction (now Caliente) to repair the grade and take possession of it. At that time no steps that witness knew of had been taken by the O. S. L. to take possession of that grade. Witness went down to Uvada the day following the commencement of work by the U. & C. When witness arrived on April 7th, he found the O. S. L. had assembled some construction material, and had a force of men laying track on this grade, on the Utah side of the state line. They had about 500 feet to lay before they came to the state line. Mr. Deal was at work at the Nevada line, and from there into Nevada. Mr. McCartney had been down over the line under witness' direction, doing some preliminary work, but he doesn't think any surveys had been made by the San Pedro. That was two or three months before. Witness had gone over the grade with Mr. McCartney, with a view to acquiring the old grade and right of way for the San Pedro when it should be organized. The O. S. L. continued to lay their tracks along the grade, and "we did all we could to oppose them and keep possession of the grade." (3148) In opposing them "we adopted pretty nearly every device that we could think of. We filled in the cuts with brush and timber and took possession of these tunnels; and they, in turn, as their track would be extended, having a very much larger force of men, would remove the obstructions and go ahead with their work. * * * Up to the 19th of April (1901) all our work was done in the name of the Utah & California Railroad Company (or Railway—I don't remember which.)"

Attempt to take old grade.

O. S. L. were laying track.

Opposed work of O. S. L.

O. S. L. removed obstructions and went ahead.

Witness thinks it was the 19th of April that the San Pedro Company took charge of the work themselves, or it was taken charge of in the name of that company from that time on. Witness remembers a suit brought in the United States Circuit Court for the District of Nevada, in which the Utah, Nevada & California Railroad Co. was complainant, and the Utah & California Railway Company and others were defendants. Witness was a defendant in that suit and also acted as one of the counsel for the defendants. The subject of litigation in that suit was the railroad grade that had been constructed from Uvada to what was then known as Clover Junction and from Clover Junction to Pioche, and the question of right of

Litigation over old grade.

way for railroad purposes from Clover Junction southwesterly to the Nevada-California state line, through the State of Nevada. It is about 175 miles from Clover Junction or Caliente to the California-Nevada state line.

Pleadings.

(3149-3164) Complainant's Exhibit 170 is a copy of the Bill of Complaint in the case of Utah, Nevada & California R. R. Co. vs. The Utah & California Ry. Co., the suit about which witness testified supra. (3165-3181) Complainant's Exhibit 171 is the answer of the defendant, the San Pedro, Los Angeles & Salt Lake R. R. Co. to the Amended and Supplemental Bill of Complaint in the same case. (3181-3213) Complainant's Exhibit 172 is the Amended and Supplemental Bill for Injunction and Relief in the same case. (3213-3223) Complainant's Exhibit 173 is the Amended Answer to the original Bill in the same case.

(3223) Complainants secured a Restraining Order upon the filing of the Bill after hearing. Witness was present at the hearing at Carson City, where the question as to whether the complainant should have a temporary injunction or restraining order was argued.

Temporary injunction against San Pedro.

(3224) As the result of that argument, the complainant, the Utah, Nevada & California, secured a temporary injunction restraining the defendants from interfering with the complainant in the occupancy of the grade from Uvada to Clover Junction, and from Clover Junction to Pioche. That is the case in which Judge Hawley wrote the opinion, which is reported in 110 Federal Reporter. Prior to the restraining order, and while this controversy was going on, the San Pedro Company was engaged in the survey and location of its line of railroad from Clover Junction southwesterly through the Meadow Valley Wash to the Nevada-California line. It had acquired the right of way over lands owned by private individuals, and maps were in course of preparation, for the purpose of securing a right of way over the public lands.

Complainant's Exhibit 174 is a copy of an affidavit of J. K. W. Bracken, who was acting as right of way agent for the San Pedro. It is sworn to on the 22nd of June, 1901. Witness remembers that the San Pedro road acquired through Mr. Bracken, the lands he mentions in the affidavit, either by deed or contract. Witness' recollection is that the affidavit was prepared under his direction and that it states substantially all the facts relating to the acquiring of the right of way.

(3225-3228) Complainant's Exhibit 174. (3229) Beginning at the end of the grade at Caliente, which was the subject of the temporary injunction, the San Pedro had acquired various rights of way over private lands for a distance of four or five miles. For a distance of five or six miles south from Caliente there were a number of ranches, in fact almost one continual line of private ownership, or private possession at least, and the San Pedro had negotiated with the occupants of these several tracts of land and had acquired, either by contract or deed, right of way for railroad purposes over the lands. The construction of a grade was started, connecting

Right of way of San Pedro over private lands.

with the grade in dispute, and it was extended through the Culverwell ranch, probably half or three-quarters of a mile, and then at other points through private lands beyond there. "At the dividing line between the old grade and the new grade we put up a barricade and a notice that that grade was the property of the San Pedro Company, and warning people to keep off." When the O. S. L. reached that point they ran their track-laying machine through the barricade, and started to lay track on the grade that the San Pedro had constructed. Witness submitted affidavits showing these facts to Judge Hawley, and on his ex-parte motion granted an injunction to the San Pedro, restraining the Utah, Nevada & California from interfering with the San Pedro in the location or construction of its line from Clover Junction to the Nevada-California state line, that is through the Meadow Valley Wash.

O. S. L. enjoined.

(3230-3232) Complainant's Exhibit 175-A. Restraining order of Judge Hawley, dated April 27th, 1901. (3232) Complainant's Exhibit 175-B. Temporary injunction, dated July 22nd, 1901. (3233) Complainant's Exhibit 175-C. Restraining order of Judge Hawley, dated August 9th, 1901.

(3235) After obtaining the restraining order above referred to, the San Pedro went ahead with its work below Caliente, and the work of the Utah & Nevada to California, below Caliente, was suspended. A joint survey was then arranged for by a conference of the representatives of the two companies. (3236) The old grade didn't extend below Caliente. That was from Uvada to Caliente, and thence north to Pioche. There were tunnels on it between Uvada and Caliente. The San Pedro made a line of location from Salt Lake southwesterly, for a considerable distance, and then preliminary surveys had been made in Nevada, running a preliminary line westerly from the line of the O. S. L. practically all the distance. Mr. McCartney located the preliminary line that left Uvada and Modena to the east, and obviated all tunnel work. Witness thought it would have been very much more expensive construction, but it avoided all tunnels. That line would have connected up with his line from Caliente on through the Meadow Valley Wash, and would have avoided all of this disputed right of way between Caliente and Uvada.

Joint survey arranged.

(3237) Up to the time Senator Clark announced at the dinner of the Alta Club, in Salt Lake, that he intended to build the road to San Pedro, no steps had been taken by the O. S. L., that witness knew of, looking to the construction of a line of railroad, in the same direction, unless it might be the construction of a piece of road from Milford to Modena by the Utah & Pacific. That was several years before. The gentlemen with whom witness was associated procured a tax title to this old grade from Uvada to Caliente, thence to Pioche.

O. S. L.'s activities began after Senator Clark's announcement.

(3238-3261) Complainant's Exhibit 176, Amended and Supplemental Bill of Complaint of Utah, Nevada & California R. R. Co. against John Simpson and others, as County Commissioners of

Tax litigation.

Lincoln County, and Amended and Supplemental Petition and Complaint in intervention of the San Pedro Company, and the decree and findings of the Court in the same case. The answer in the foregoing case was sworn to June 1st, 1901; the complaint some day in May, 1901, the decree on the 29th of June, 1903; and the court in the decree recites that the San Pedro Company, by C. O. Whittemore, its attorney, asks leave of the court to withdraw its original and also its amended and supplemental petition and complaint of intervention, which permission was granted. That was the 29th of June, 1903, after the settlement had been arrived at between the San Pedro and the O. S. L. It was done pursuant to agreement and stipulation with other parties in the case, after all the differences had been disposed of.

O. S. L. survey completed first.

(3262) The San Pedro Co. was engaged in the location of a line of railroad south of Caliente, and the Utah, Nev. & Cal. were also engaged in locating a line through, and owing to the greater activity of the engineers of the Short Line, their survey was completed much ahead of the survey of the San Pedro, and when they offered their maps for approval to the Secretary of the Interior a protest was made on behalf of the San Pedro. The matter never reached a hearing, though some testimony was taken. Neither of the maps which had been prepared were finally accepted by the Department. All of those maps were withdrawn and new maps filed of a subsequent survey made by the San Pedro. (3263) The first thing that attracts witness' attention was the wonderful rapidity with which the O. S. L. survey was made. Part of the distance a surveyor's chain was attached to the back end of a wagon. The San Pedro surveyors had been out from Caliente eight or nine days, and the surveys in Utah and Nevada overtook and passed them the first day. The latter survey was in the nature of a relocation of an old survey. Deal and Mendenhall were a firm of railroad contractors who did some work for the San Pedro Company. They continued their work in the Meadow Valley Wash after the injunction was obtained against the Utah, Nevada & California. Their contract covered about 60 miles of grade from Caliente southwesterly, which would take it entirely through the Meadow Valley Wash.

Utah and Cal. maps.

(3264) Witness didn't think he had obtained the stock of the Utah & California Co. for the rights which they claimed, but merely a conveyance of those rights. The U. & C. had some maps and profiles filed in the Land Office at Carson City, under the Act of March, 1875. Thinks their articles of incorporation were not filed in Nevada until witness started these negotiations, about April 15, 1901. The articles of incorporation of the U. & C. were amended, so as to give it the right to own a railroad in Nevada, along in April or May, 1901. The old maps were filed without having complied with the laws of Nevada.

(3265) There was a contest before the Land Office as to whether the U. N. & C. maps covered the Uvada, Caliente and Pioche line,

and the maps of the U. N. & C. and the old O. S. L. & Utah Northern maps, and the maps of the U. & C., were considered by the land officers, and Mr. Williams announced that the purpose of the incorporation of the U. N. & C. in 1898 or 1899 was to complete the construction of the line through. (3266) Witness knew at the time that he was negotiating for the Utah & California maps that a claim was being made by the Utah, Nevada & California Company for the same right of way, for the purpose of building a railroad on it. Before the vote of the Board of the Utah & California Company was had on the 9 day of March, 1901, witness was advised of the claim of the Utah, Nevada & California and the Short Line Company to that roadbed, and the vote passed for witness' appearance before the register and receiver was for the purpose of resisting the claims made by the promoters of the San Pedro Company. (3267) As a result of the hearing at Carson, the local land office, the register and receiver on the 5th of April, 1901, decided in favor of the U. & C. An appeal was at once taken to the Secretary of the Interior and on April 24, 1901, the matter was decided in the Department of the Interior, and the decision of the local land office reversed.

Witness advised as to claim of Utah, Nev. and Calif. to roadbed.

The decision of the local Land Office as well as the decision of the Secretary of the Interior set forth the opinion of the United States Circuit Court, District of Nevada, in the case of Utah, Nevada & California Railroad Co. against Utah & California Ry. Co., et al., are offered in evidence and are set forth on pages 3267 to 3272.

(3273) Witness plowed a furrow through the grade, and dug quite a trench by the Nevada-Utah line, to keep the O. S. L. from laying their track, and protested against their right to lay track on the grade in Nevada; also put barricades of various sorts below, on the grade. After the injunction, witness let the O. S. L. remove the barricades. (3274) Witness' occupancy of the grades was made in the name of the U. & C., and the corporate action amending its articles was not taken until after his entry upon the grade. Witness had a man at Uvada probably 30 days before he started, and kept him posted as to what was going on. The articles of the San Pedro were filed March 20, 1901. Organization effected the day following. The O. S. L. ran its construction train against the barbed wire fence at the Culverwell ranch, August 4th or 5th, witness thought. (3275) Witness thought the transfer of the proposed line from the O. S. L. and U. N. to the U. N. & C. was made some time in April or May, 1901. "Q. But it also claimed, did it not, that the Utah, Nevada & California board of directors adopted the line of survey delineated upon its maps and profiles, filed in the land office at Carson by it, made on May 9, 1901, and that the vote of adopting that line of survey from Caliente southwesterly was made by the board of directors of the San Pedro Company on its behalf on the 22 of May? Those were the claims of the respective parties, were they not? A. I don't remember the dates, but that is substantially my recollection." At any rate, the claim was by the

Filing of San Pedro articles.

Adoption of survey of Utah, Nev. and Cal.

Utah, Nevada & California that their board of directors had voted first and made the first adoption. That was the gist of the controversy as it existed at that time, and the basis of the action of the different people. While the San Pedro was procuring rights of way from some of the ranchmen southwesterly from Caliente, the O. S. L. was doing the same thing. The O. S. L. also had some parties of workmen down there, staking out work and laying out work and doing some work. There were two grading forces, somewhere southwesterly from Caliente, at the same time. In some places witness' people encroached on the Short Line right of way as claimed by it, and in some places the converse was true. In other words, there was a mix-up of the work all the way along down the Meadow Valley Wash. Both parties were active in claiming the whole thing, each one claiming for himself.

O. S. L. was also procuring right of way from ranchmen.

San Pedro encroached upon O. S. L. right of way.

(3276) The O. S. L. party hastily checked up the old survey on the ground. They didn't pretend to chain that thing, except to fix angles and P. C.'s and P. T.'s (point of curve and point of tangent), but the engineer swore to an affidavit on the map that it represented an actual survey on the ground. He was one of the men who originally made the survey. Because of the alleged insufficiency of the survey, the protest was filed by witness on behalf of the San Pedro Co. No final decision was ever reached in respect to the matter, either in the Land Dept. or in the courts. The O. S. L. negotiated with Culverwell, and on his refusal to concede them a right of way, they brought suit to condemn. (3277) At the time they smashed down witness' fence, they had not acquired a right of way, except so far as the survey across the land would give them a right. From about the time the controversy began, the right of way men of both companies were securing right of way wherever they could get it, entirely through the Meadow Valley Wash. One road would get it one place, and another in the next place, and so on, and in some places both companies had it through the same piece of private ownership.

San Pedro protest against O. S. L. survey.

Clark.

(3277) J. ROSS CLARK (2).

Statements in affidavit filed in Carson City.

In June, 1901, witness made an affidavit to be used in the Federal Court, (3278) in the controversy at Carson, stating that the San Pedro had been organized in good faith, for the purpose of constructing the lines of railroad mentioned in its articles of incorporation, and that there had been paid in, in money and property, $2,501,600; that the authorized capital stock was $25,000,000, which it was proposed to sell; that since its organization it had acquired the terminal facilities in the City of Los Angeles testified to by Mr. Whittemore. Witness thought that those terminals cost approximately $75,000 or $100,000. The entire capital stock of the San Pedro is now issued.

Los Angeles terminal facilities.

(3279) The terminals were acquired with the Los Angeles Terminal Railway Company, not in addition to it. In the affidavit of witness already referred to it is also stated that since the organiza-

tion of the corporation there has been expended in carrying out the purpose for which it was organized more than $500,000 in cash in addition to the amount expended in purchasing said property of the Los Angeles Terminal Railway Company. And then witness speaks further on of having purchased a lot of steel rails and cars and some right of way in California. The $500,000 referred to included whatever had been purchased up to that time, including lands adjacent to the depot, the right of way secured on the line between Los Angeles and Riverside and whatever cars that had been paid for. Additional expenditures.

They had also contracted for about 8,000 tons of steel and some of it had been delivered; not all of it. The affidavit further states the company has adopted plans and specifications for the laying of a main track between Salt Lake City and the Bay of San Pedro, of rail to weigh not less than 75 pounds per yard, upon a thoroughly well ballasted and constructed track so that its said line when completed between the city of Salt Lake and the Bay of San Pedro shall make and constitute a high-speed through line, and that affiant believes that the said plans and specifications will result in the said corporation possessing the best constructed (3280) and safest line of railroad west of the Rocky Mountains. At the time those plans were adopted they provided for the construction of a line over the Cajon. The plans mentioned in the affidavit contemplated a through line to be constructed by witness to Salt Lake City. Plans for main track.

The affidavit further states that witness proposed to relay the line between Los Angeles and San Pedro with heavy rails, and that he had completed reballasting 22 miles, and laid down five miles of new track. Witness states these facts to be correct, and that the line between Los Angeles and San Pedro was entirely rebuilt, the banks widened and new rails and ballast put down. The affidavit further states that the corporation has surveyed 110 miles of its proposed main line from Los Angeles toward Salt Lake and has definitely located 90 miles of the same and has secured nearly all of the right of way for 30 miles thereof from Los Angeles toward Salt Lake, and is now engaged in securing right of way with all convenient dispatch and will continue the work of securing the same. Survey of main line.

The 110 miles therein referred to would extend to about 60 miles beyond Riverside, some point between Riverside and Barstow. 90 miles would take them to the summit of the Cajon Pass. The statements made in the affidavit were correct as the facts existed at that time. The 30 miles of right of way commenced at Hobart Junction three miles below the passenger station of the S. P. here running east. It was located in different places. The affidavit further states that the corporation had purchased 50 ballast cars, one steam shovel and unloader, several hundred flat cars and that it had actually begun the work of construction upon the new portion of its main line between (3281) Los Angeles and Salt Lake, and proposed continuing the construction of the same as fast as the Equipment purchased.

line was located and the right of way secured. The affidavit in that respect represented the actual facts as they existed at that time.

Ties purchased.

The affidavit also stated that they had ordered about 300,000 ties, a large number of which had been delivered and that it was engaged in placing almost daily orders for material and equipment. That statement was also true. The affidavit further stated that the surveyors of said corporation had surveyed about 140 miles of the line west of Salt Lake, and that surveyors were actively engaged in carrying on the work of locating the said line; and that there were four complete surveying parties in the field. Those statements were also true.

Intention to complete road.

The affidavit further stated that the stockholders of said corporation were men of large means, and affiant believed that they had entered upon the prosecution of the purposes for which the corporation was organized in good faith and with an honest intention of completing said railroad and branches. Witness states those facts were also true. The affidavit was made to be used in the controversy at Carson City, and was so used. (3282) At the time of making the affidavit there had been no track laid east from Hobart.

Gibbon.

(3282) T. E. GIBBON (2).

Senator Clark's Salt Lake speech.

(3283) Remembers a speech at Salt Lake, at which Senator Clark stated he intended to build the San Pedro as an independent road. Witness first met Senator Clark in 1899. At that time witness was Vice-President and General Attorney of the Los Angeles Terminal Railway Company. The stockholders, who were St. Louis people principally, had asked him long before that, to do anything he could toward promoting the line of railroad to Salt Lake City. Through Mr. Ross Clark he brought the matter to the attention of Senator Clark.

(3284) By the Autumn of 1900 the matter had taken definite shape, and the Senator had determined to take the leading part in organizing the proposed corporation to build the line from Los Angeles to Salt Lake. Thinks it was in the Autumn of 1900 that he had negotiations with the City Council of Salt Lake, to secure possession of what is called Pioneer Square.

Representations of witness to City Council of Salt Lake.

(3285) Witness represented to the City Council that the intention was to build an independent line, a line which would be competing with the S. P. The Los Angeles Terminal Railway Company was originally incorporated with the idea of securing terminal facilities, which were to be used by the U. P., which at that time it was supposed was to build a line into Los Angeles. An ordinance was passed, in 1890 or 1891, naming the U. P. as the beneficiary. (3286-3287) The U. P. surveyed down through Nevada, and built the line south of Milford, and did some grading and tunnel work in the state of Nevada. After that they did no further work toward building a line from Salt Lake to Los Angeles, that witness knew of. In 1899 witness talked to Mr. Harriman at Seattle about extending the U. P. line to Los Angeles, but it didn't result in any-

thing definite. That was after Mr. Harriman had perfected the organization of the U. P.

NEW YORK CITY, JUNE 10, 1909.

(3287) T. H. ROSSBOTTOM.

Rossbottom.

Secretary Panama Railroad.

Employed by Panama Railroad since 1887. Now Secretary and assistant to Vice-President. (3288) Exhibit 177, Statement of tonnage, 1898 to 1908, both ways, between New York and San Francisco via Panama. From the expiration of the contract with the Pacific Mail Co. in 1893, the Panama Company operated a steamship line on the Pacific in connection with the North American Navigation Company, up to the contract of December 16, 1895. Then, when that contract expired in 1900, the Panama Company operated a steamship line of its own on the Pacific coast until the contract of 1902 was made effective. Since then Pacific business handled exclusively by the P. M.

(3289) Has no relations with the French line running from San Francisco to Panama, but has a through billing arrangement with the Kosmos Line, a German line, but, of course, the Panama Company could not carry San Francisco cargo in those steamers, because they are operated under a foreign bottom. You cannot ship goods from one American port to another in other than American bottoms. There is no other line of boats, of American register, except the P. M., running from Panama to San Francisco, and has been none since the Panama Company took off their own line. Notice of the cancelation of the contract of 1902 was given January 12, 1905, and the contract was terminated July 12, 1905, by the Panama Company. Since then business with the P. M. has been done practically on the same basis, with the exception that the exclusive privilege given to the P. M. to operate between San Francisco and Panama on through business, was canceled. The exclusive privilege was canceled, but there is no other line, so that the arrangement is practically exclusive. There has been no change in actual relations.

Cancelation of contract with Pacific Mail.

(3290-3291) Exhibit 178, letter from Pacific Mail Steamship Co., to Panama Company, notifying latter that six months from February 12, 1909, they would no longer be governed by the terms of the working agreement carrying freight on a through rate of 40 cents per hundred pounds, or $8 per ton, of which the P. M. received, after deductions for loading and unloading, &c., $2.35 per ton for the haul of over 3,000 miles to La Boca. (3292) The proposition referred to by Mr. Schwerin in the foregoing letter (Exhibit 178) was that he would establish a direct line from Panama to San Francisco, if the Panama Railroad would, instead of giving him 50% of the through rate, guarantee him a net return of $5 per ton. By net return, witness meant over and above wharfage and cranage charges at La Boca. La Boca is now called Balboa. It is on the Pacific side of the canal zone.

Notice of Pacific Mail.

Various contracts.

(3293-3310) Complainant's Exhibit 179 is Contract of December 16, 1895, between the Panama Railroad Company and the Pacific Mail Steamship Company. Witness didn't know when the P. M. became a part of the Panama route. The Panama route to the Pacific coast was opened in 1850. A contract was made with the P. M. in 1872, so that the P. M. has been a part of the route at least since 1872. (3311-3316) Complainant's Exhibit 180, Supplemental Contract between Panama Railroad Company and Pacific Mail Steamship Company, dated June 11, 1902. (3316-3321) Complainant's Exhibit 181, Contract of October 1, 1872, between Pacific Mail Steamship Company and U. P. R. R. Co. (3321-3325) Complainant's Exhibit 182, Agreement between the Transcontinental Association and the Pacific Mail Steamship Company, dated October 1, 1889.

Change following cancelation of contract.

(3325) The only change after the cancelation of the contract of 1905, was that business with Central America and Mexico was worked with the Kosmos Line, as well as with the P. M. There is no change on San Francisco business. Previously all business had been done with the P. M. The Panama Railroad Company in 1905 gave notice to the P. M. Company of terminating the arrangement made in 1902. That was after the Government acquired control of the Panama Railroad. But, notwithstanding that notice, practically the same arrangement was continued by mutual agreement, without any contract for any definite period. There was no change at all in the arrangement after 1905 from that provided by the contract of 1902. Witness worked for San Francisco business after 1905, and up to date exclusively with the P. M. Business with Central America and Mexico was worked with the P. M. and also with the Kosmos Line. There was that change; but that did not affect the San Francisco business. It did, however, affect the P. M.

Foreign lines admitted as connections of Panama railroad, on Central American and Mexican business.

Under the contract of 1902 witness worked all business for the Central American and Mexican ports with the P. M.; whereas, after 1905, he admitted foreign lines as connections to handle the business to Central American and foreign ports. (3326) He understood the question of the defendants' counsel to refer only to San Francisco. That is what he had in mind. The arrangement has been worse for the P. M. since the notice of 1905 than under the written contract before; because they had some competition after 1905. "Q. They had pretty active competition for the Central American and Mexican business? A. Only one year. The Kosmos Line has only been granted through-billing privileges about one year. * * * Q. Didn't it do business before that? A. Not with the Panama Railroad. Q. But for the last year, at least, foreign lines have been accorded through-billing privileges for Central American and Mexican ports by The Panama Railroad Company? A. One foreign line. Q. Yes; one foreign line. And that was, of course, at the expense of the Pacific Mail? A. Undoubtedly."

The Panama Railroad Company in 1905 notified the P. M. of the termination of the contract of 1902; and under that contract of 1902

the Panama Railroad Company worked exclusively with the P. M. for Pacific coast business, including Central American and Mexican ports, as well as San Francisco. Since 1905 the same arrangement with respect to the interchange of business between the Panama Railroad Company and the P. M., as that provided by the contract of 1902, has continued, except that the Panama Railroad Company (3327) has admitted another line to the Central America and Mexico business with the P. M. "Q. The question just now was whether this arrangement that Mr. Schwerin, by his letter of February 18, 1909, gave notice of terminating was not the same arrangement that the Panama Railroad Company undertook to terminate in 1905, except that it is worse for the Pacific Mail, in that the Panama Railroad Company is now doing business to Central America and Mexican ports with the foreign line? A. No; I don't see that it is any worse for the Pacific Mail. Q. Don't you think that the present arrangement is worse for the Pacific Mail than that under the contract of 1902? A. Undoubtedly if they had exclusive privilege over the Panama Railroad. Now they have not. Of course, in that sense, if that is what you are driving at—— Q. That is what I mean. A. Yes."

Under 1902 contract Panama Co. worked exclusively with Pacific Mail.

(3327-3329) Panama R. R. Co.'s letter, dated March 1, 1909, in reply to Exhibit 178, set forth. (3329-3330) Pacific Mail Steamship Co.'s letter of May 18, 1909, in reply to foregoing. (3331) Letter of May 13, 1909, from Panama Company to Pacific Mail. (3331-3332) Panama Company's reply, dated May 24, 1909, to Pacific Mail Co.'s letter of May 18, 1909. (3332-3333) Pacific Mail Steamship Co.'s reply of May 25, 1909. (3333-3334) Pacific Mail Steamship Co.'s letter to the Panama Company, of February 18, 1909. (Same letter set forth, pages 3290-1.)

Correspondence.

(3335) Witness has not been advised if there has been any change in Mr. Schwerin's notice of termination of the existing arrangement. He has received advices that Schwerin has agreed to have his traffic men and the Panama traffic men get together previous to the expiration of the notice, on August 13, and see if some plan cannot be recommended to the Secretary of War for a continuance of relations, and when that plan has been submitted to the Secretary of War, the P. M. has agreed to give him sixty days to make up his mind. (3336) Panama Company makes the rates from New York to San Francisco, and the P. M. from San Francisco to New York. P. M. has a voice to this extent, that the Panama Company cannot go below $8 a ton, unless they absorb the difference out of their own proportion, that is, the contract of 1902. The same is true of the P. M. on shipments the other way.

Plans for continuance of relations.

(3337) The larger part of the Panama Company's cargoes southbound is material and supplies for the Panama Canal Zone; northbound the Panama Company is absolutely dependent on the Pacific coast cargo, so it could afford to carry business from Panama to New York a great deal cheaper than the P. M. could carry it from San Francisco to Panama. Everything carried northward, except the

Panama's southbound cargoes.

cost of handling, means just so much gain to the Panama Company. A large business from Europe is delivered by the Panama Railroad to the P. M. If on the morning of sailing, the Panama Company receives word from the Washington office, or the Commission, that they are obliged to have supplies furnished promptly, the Company makes room for them; otherwise no preference is given to Canal business over commercial business. (3338) The P. M. out of their half pays to the Panama Company 80 cents a ton for wharfage, and 10 cents a ton, if they want to make use of the Panama electric cranes, rather than their own windlass. They usually take advantage of the cranes. The practical result is the P. M. gets $3.10 a ton, and the Panama Company $4.90.

Payments by Pacific Mail to Panama Co. for wharfage, etc.

(3339) In the operation of a steamship line, the wharfage is always considered part of the steamship expense, no matter to whom they pay it. (3340) The P. M. boats stop at no place in California, except San Francisco. Witness doesn't think the Kosmos Line does either. They certainly don't in connection with the Panama route. They may with the Tehuantepec route. They interchange with the latter route. Traffic moves to Colon from Galveston, New Orleans, and Baltimore, as well as from New York. That, however, is not destined to San Francisco. It comes in on foreign steamers, which cannot carry port to port freight. The Panama steamers are the only American registers into Colon. All the port to port business goes over the Panama Company and the P. M. exclusively. The P. M. takes 21 to 24 days from San Francisco to Panama, and the Panama ships from 5½ to 6½ days from New York. The distance from New York is 1,976 miles, and from Panama 3,200 miles.

Time.

(3341) Doesn't think the Panama Company has ever received any business destined to New York from the Kosmos Line, from Mexican and Central American ports. Most of the business is to Hamburg, London and European ports, so that the only interest the Panama Company has in the business is the rail haul. (3342) The P. M. has a good local business to Panama, merchandise consigned to the local merchants there. Doesn't think there is very much for the Isthmian Canal Commission. Notice from the Panama Company to the P. M. Co. of January 12, 1905, canceling contract of 1902. (3343) After the issuance of this notice, and before it became effective, the working agreement with the P. M. was formed, which witness testified to.

Service and cargoes.

(3344) Panama ships leave New York for Colon every six days. The P. M. ships sail from Panama to San Francisco three times a month. Once in a while they skip a departure, as they did at the time they lost one of their steamers about three months ago. That ten days' schedule has been in operation about three years. Previous to that there was a weekly service. For the last three months the Panama steamers have had full cargoes south-bound. Previous to that, for about a year, they sailed with half cargoes. Cargo is made up of material and supplies for the canal and freight

for Central American and Mexican ports, and also for San Francisco and South Pacific ports. On Central American and Mexican business, Panama Company interchanges traffic only with the P. M. The Kosmos Line brings some cargo to the Panama Railroad from Central America to Europe, but the Panama Company has carried no freight for Central American or Mexican points, which has been delivered to the Kosmos Line. Kosmos line.

(3345) Delivers none to the Kosmos Line, unless the consignee so requests, and no such request has yet been made. If no directions are given by the shipper, the Panama Company can deliver the freight to whoever it chooses. The purpose of the $8 rate was to try to force cargo that way, in order to give the Panama Company a north-bound load. Witness didn't consider that an extraordinarily low rate. When they operated their own line, they established rates as low as $6 a ton from San Francisco to New York. That was in 1894 or 1895. That wasn't an all-round rate applicable to everything, but only to special articles. There are only about half a dozen commodities coming from San Francisco to New York. The majority of them are goods that take the low rate. The Panama Company lost money on the Pacific Coast Steamship line, because they ran a direct line between San Francisco and Panama, but the earnings of the railroad and of the steamship line on the Atlantic helped to reduce the loss on the Pacific. "Q. In doing that part of the business that the Pacific Mail does now, you lost money on it, didn't you? (3346) A. Yes." On the Atlantic side the steamships paid the Railroad Company wharf charges of $35 a day. Witness thought that was less than the P. M. paid on the Pacific side, but the amount depends on the cargo brought to the ship. An arithmetical computation on a vessel carrying 2,000 tons, taking a week to unload, showed that the charge at La Boca would be $1,600 as against $245.00 at Colon. The terminals at Panama lose money. Rates. Panama Co. lost money on its Pacific Ocean line.

(3347) The accounts are not kept separate for the ports at Colon, but the investment is not so large as at La Boca. The Panama ships on the Atlantic side are now on a profitable basis, but generally, up to last year, they were unprofitable. The railroad has always been profitable, except possibly from 1893 to 1895. Coal for the steamers on the Pacific coast is enormously expensive, as compared with the price on the Atlantic. There hasn't been any great scramble by American lines to take business on the Pacific coast at the 15½ cent rate. The Panama steamers make no stop between New York and Colon. The division of 27½ per cent. to the steamship line on San Francisco business would be $2.20 a ton. Out of that the Panama Company has to pay stevedoring at both ends, and port charges at Colon, the wharfage charges at Colon being $35.00 a day; and also has to pay whatever terminal expenses there are in New York. (3348) "Q. So that, even taking out the 90 cents as Judge Lovett did from the $4.00 accruing to the Pacific Mail leaving them $3.10, they have $3.10 as against your steamship Coal very expensive on Pacific side.

line $2.20, and out of the $2.20 you have to pay your wharfage charges? A. Yes." The commodities moving from San Francisco to New York are few in number. They consist of wine, canned goods, lead, wool, rags and horns: The ships of the Panama Company that didn't make money ran direct from San Francisco to Panama. They did not have the advantage of the Central American and Mexican business enjoyed by the Pacific Mail. On the Government's supplies shipped from New York for the Panama Canal the rate is $4.50 a ton; but most of the goods are delivered now at Colon by the contractor. On that the Panama Company gets as low as $2.25 a ton and as high as $5.50 a ton.

Rate on Government supplies.

Division of rates.

According to this division made by the Panama Railroad Company between its ships and its rails and its wharves, the Atlantic ships of the Panama Railroad Company get about 11 cents a hundred (3349); but out of that they have to pay their wharfage. "Q. So, if I am correct in assuming that the proper figure is, according to your statement of the wharfage at Panama of $3.10 net to the Pacific Mail, the Pacific Mail gets 15½ cents a hundred for the haul of 3,200 miles from San Francisco to Panama, and the Atlantic boats of the Panama Company get 11 cents a hundred for the haul of 1,976 miles from New York to Colon? A. Yes." (3349) The $8 a ton rate mentioned in the correspondence is applicable only to traffic moving from San Francisco to New York. The minimum rate west-bound is $9 a ton, the rates west-bound being figured on a basis of a percentage below the rates of the transcontinental railroads; 30% and 40% on L. C. L. and carloads respectively.

(3350) The percentage was changed from 20% and 30% respectively about a year and a half ago, at the instance of the Panama R. R. Co. It found it could not get enough business on the smaller differential. The American-Hawaiian rates average about the same as the Panama. In some cases they are lower, and in some higher. The Panama Railroad stock is owned by the Government. It is part of the Panama Canal purchase. (3350-3351) Letter of February 15, 1909, from Panama Company to P. M. (3351-3352) Letter from Panama Company to P. M., dated May 13, 1909.

White.

(3352) FRANK W. WHITE, (2).

An employee of the Interstate Commerce Commission, who has already testified.

Various exhibits giving information as to rates and tariffs.

(3353) Complainant's Exhibit 183-A is a statement showing class rates from Portland to San Francisco, from April 3rd, 1888, to date. Complainant's Exhibit 183-B is a supplement to statement No. 1688, showing emergency rates between Portland and San Francisco, effective December 1st, 1895. Complainant's Exhibit 184 is a copy of tariff showing rates between San Francisco and Portland, effective December 1st, 1895. It is the emergency tariff mentioned in Exhibit 183-B. Complainant's Exhibit 185 is the tariff that supersedes the one that was just offered in evidence and is a tariff

naming rates from San Francisco to Portland, effective December 15th, 1895.

(3354) Complainant's Exhibit 184. (3355) Complainant's Exhibit 185. (3356) Complainant's Exhibit 186 shows rates between San Francisco, Sacramento, Stockton, Marysville, Oakland, 16th Street and San Jose and Utah common points, effective December 12th, 1887. The pages attached are instructions from the general office of the Southern Pacific Company to its agents in California. (3357-3358) Complainant's Exhibit 187 is a special tariff on canned fruit and vegetables from Portland, Astoria and San Francisco to Salt Lake City, Montana common points and Union Pacific Eastern Terminals, effective June 29th, 1888, filed with the Commission by the Oregon Railway & Navigation Company.

Various exhibits giving information as to rates and tariffs.

(3358-3360) Complainant's Exhibit 188 is a Transcontinental Association west-bound tariff, effective January 15th, 1891, from common points east of the 97th Meridian on roads in that Association, and points east thereof on roads with which that Association has agreed basis of division, or from which arbitraries or local rates are allowed east of Association's eastern terminals, to San Francisco, Sacramento, Marysville, Stockton. It is the tariff that contains notice of the abrogation of the Canadian Pacific differential.

(3361) Complainant's Exhibit 189 is a statement showing the rates on wool, in grease, carloads, minimum weight 20,000 lbs., from points on Oregon Short Line R. R. to New York, all-rail, in comparison with rates from points on Southern Pacific System, via El Paso and Sunset-Gulf Routes, except as noted. Complainant's Exhibit 190 is a statement showing rates on classes, and two commodities, between Portland and Ogden and Salt Lake City, via O. R. & N. and O. S. L., in comparison with rates via Southern Pacific Company, west-bound. (3362) The effect of the first foot note on Exhibit 190 is that after May 15, 1901, the rates shown there no longer apply from Utah common points to Portland, but there was substituted for them the Colorado rate, which was much higher—that is by the Southern Pacific, the rates on the Short Line remained the same.

(3363) Complainant's Exhibit 190. (3364) Witness selected potatoes and rough onyx, in addition to the classes, in making up the statement, because the commodities in the tariffs at that time were not carried through for a sufficient length of time, with the exception of the two that are there. "In fact it was easier for me to put them in than anything else, that is all. MR. LOVETT. Were there no rates on post-holes in that tariff? WITNESS. None that I saw." (3364-3365) Complainant's Exhibit 191 is a statement showing rates on classes between Portland and Colorado common points via O. R. & N. and O. S. L. in comparison with rates via S. P. It applies both ways. From July 20, 1898, until January 1, 1909.

(3366) Complainant's Exhibit 192 is a comparative statement of the east-bound rates between Portland, Salt Lake City and Ogden,

from March 20th, 1899, to December 8th, 1908, over the Southern Pacific on the one hand and the O. R. & N. and O. S. L. on the other. On May 15th, 1901, the rates were canceled by Supplement 63 to Southern Pacific Company, I. C. C. 1390. That seems to have taken out the rates, with the exception of the lumber rate. It remained in at 40 cents as against 37½ cents by the other line, from December, 1907, but that 40 cent rate by the Southern Pacific has not been in effect since 1905, or witness thought 1903.

Various exhibits giving information as to rates and tariffs.

(3367) The rates were canceled, effective May 15, 1901, by Amendment 2 to S. P. I. C. C. No. 1683, which is tariff on lumber and articles shown therein, from stations on S. P. and other points to Utah points. September 26, 1901, all rates on lumber and articles of lumber named in tariff and amendments, from points in Oregon to points on the line of the U. P. and O. S. L. in Utah, were withdrawn. "Combination of locals govern." That is Amendment 4 to the same tariff. Exhibit 192, in so far as it refers to a lumber rate by the S. P. of 40 cents, December 1, 1900, is defective in that it does not state the time that it was taken out. (3368) Complainant's Exhibit 192.

(3369) Exhibit 193, Statement showing class rates from New York to Colorado common points, sea and rail, via Norfolk, Va., from May, 1899, to date. Witness has checked up the rates shown on Exhibit 193 with the rates by the gulf routes to Colorado common points shown on Complainant's Exhibit 81-D (see page 872), and the rates are the same. (3370) Exhibit 194 is a statement showing class rates from New York to Colorado common points, via sea and rail, via Savannah, from June 1, 1904, to date. (3371) It is stipulated that the sea and rail rates to Utah common points through Norfolk, Newport News, Portsmouth, Va., Savannah and Brunswick, Ga., and Charleston, S. C., are, and for at least fifteen years have been, the same as through the gulf ports. Complainant's Exhibit 195 is a statement showing rates on ore and concentrates (carloads) from stations on Phoenix & Eastern to Humboldt, Arizona, in effect February 3, 1906,

Exhibit 196, Statement showing rates on ore, concentrates and copper matte, carloads, from stations on Phoenix & Eastern to Humboldt, Arizona, in effect June 1, 1907, and September 10, 1907, as noted. The rates in Exhibit 196 superseded those in 195, the rates in Exhibit 195 having been canceled on June 13. (3372) Complainant's Exhibit 196. Exhibit 197 is S. P. tariff through rate, No. 740, showing rates on wool in bales from points on the R. G. W., Ogden to Thistle, Utah, and points between, also Nebo and Salina, Utah, and points between, to New York, Boston and Philadelphia, effective June 15, 1894, filed by the S. P. Co. Exhibit 198 is a duplicate of the tariff just described, filed by the Rio Grande Western Railway four days later. (3373) Complainant's Exhibits 197 and 198. (3374-3378) Exhibit 199, certain tariffs on wool in bales, filed by the Rio Grande Western, for an easterly movement from points named there, to the east.

NEW YORK, FRIDAY, JUNE 11, 1909.

(3378) FRANK W. WHITE (2) Testimony Resumed. White.

Attention called to error in Exhibit 81-E, which should read, the foot-note to 81-A, instead of 81-D. The transcontinental rates concerning which witness prepared statements, include the following lines: Can. P., G. N., N. P., U. P., (including with it the O. S. L. and O. R. & N.), and also the U. P. line in connection with the Central Pacific to San Francisco, the Atchison, and the Sunset. Wherever the rates do not apply to certain points, the exceptions appear on the statements. (3379) In Transcontinental Freight Bureau west-bound tariff No. 1-G, I. C. C. No. 375, effective January 18, 1904, there is an exception on the front page, as follows: "The rates provided herein will not apply to points in California by Canadian Pacific, Great Northern or O. R. & N. in connection with the S. P. via Portland."

Various exhibits giving information as to rates and tariffs.

(3380) Another exception reads: "Rates provided herein will not apply in connection with the S. P. Co., Pacific System, to points in southern California south of Stockton, Lathrop, Tracy and San Jose, on shipments routed via Portland or East Portland, Oregon." And still another (exception 2): "The rate provided herein from points east of Chicago, Ill., or south or east of St. Louis, Missouri, will not apply to points in California by Northern Pacific Railroad by Portland, Oregon, in connection with the Southern Pacific." Rates provided herein will not apply to Portland. At the foot of Exhibit 81-D, page 873, there is a statement on page 3 of Amendment 1 of I. C. C. No. 1, effective June 24, 1897, which reads as follows: "Except as hereinafter provided, the authorized rates to California points will apply (to San Francisco only) from territories," which are then specified.

(3382) Exhibit 183 embraces only class rates. There are also many commodity rates from Portland to San Francisco. As a general rule, more tonnage moves under commodity than under class rates. Witness differentiates between rates between a point and rates from and to points. "Between" applies both ways; "from and to" applies one way. (3383) Exhibit 183-B was in effect only fifteen days. Witness doesn't know how long the one that superseded it was in effect. The Commission has no record of its ever being canceled. It may be in effect yet, as far as witness knows. (3386) Referring to Exhibit 196, the Santa Fe canceled the joint tariffs between the Phoenix & Eastern, and it is referred to in Exhibit 195. Witness didn't look to see whether or not the P. & E. made a through tariff with the S. P., reaching smelters on the latter, at the time the joint tariff with the Santa Fe was canceled, but thought prior to that time no through rate with the S. P. had been made.

Application of various rates.

(3387) Witness wished to amend his testimony to the effect that S. P. I. C. C. 1184 applied by all western lines, by saying that

neither the G. N. nor the N. P. were parties to it, and therefore it does not apply over those routes. (3388) That is, it applies over the S. P. and D. & R. G., and over the U. P. in connection with the O. S. L. and O. R. & N.

Application of various rates.

This Transcontinental tariff witness is testifying about is Transcontinental Freight Bureau I. C. C. 375. "Q. I will ask you to read into the record the statement on this tariff under the head of 'Application of rates to San Francisco via California, via Canadian Pacific Railway, Great Northern Railway, Northern Pacific Railway, and Oregon Railroad & Navigation Company in connection with steamer lines.' A. On page 2 of Transcontinental Freight Bureau, I. C. C. 375, I find the following: 'Application of rates via Northern Pacific Railway, via Portland, Oregon, and Southern Pacific Company (Shasta route). The class and commodity rates named herein, from Chicago and common points north of the Terre Haute & Indianapolis Railroad, Mississippi River and Missouri River common points, north of the Missouri River, including St. Louis and Kansas City, will apply via the Northern Pacific Railway via Portland in connection with Southern Pacific Company (Shasta Route) to points on Southern Pacific Company's lines north of and including Lathrop, Stockton, San Jose, and Tracy, California.' Q. Now, read this one. [Indicating.] A. 'Application of rates to San Francisco, California, via Canadian Pacific Railway, Great Northern Railway, Northern Pacific Railway and Oregon Railroad & Navigation Company in connection with steamer lines. Except as hereinafter provided, the authorized rates to California points, as carried on pages 42 to 105, inclusive, will apply (to San Francisco only) from territories Nos. 1 to 6, inclusive, defined on pages 3 to 11, inclusive, via the Minneapolis, St. Paul & Sault Ste. Marie Railway and Canadian Pacific Railway to Vancouver, B. C., care of Pacific Coast Steamship Company; via the Great Northern Railway, Seattle, Washington, care of Pacific Coast Steamship Company; via Great Northern Railway, Spokane, Washington, Oregon Railroad & Navigation Company, by Portland, Oregon, and steamer; by the Northern Pacific Railway, Tacoma, Washington, care of Pacific Coast Steamship Company; by Northern Pacific Railway, Wallula Junction, Washington, Oregon Railroad & Navigation Company, Portland, Orgeon, and steamer.' Shall I read the exceptions? Q. Yes.

"A. Exception No. 1: 'Rates as above provided will not apply by the Great Northern Railway or Northern Pacific Railway from points in the Missouri River or Mississippi River territories south of the line of the Chicago & Alton Railway, Kansas City to Clark, Missouri, and Wabash Railroad, Clark, Missouri, to St. Louis, Missouri.' (3389) Exception No. 2: 'Rates as authorized herein will not apply on locomotives, cars, extra heavy machinery or other unwieldy or bulky articles, freight in bulk, explosives, combustible freight, or any freight which the law prohibits passenger steamers carrying.' Q. Now, what are the territories embraced in Nos. 1 to 6? MR. LOVETT. What is the number of the tariff he has been reading

from? MR. SEVERANCE. What is the number of that tariff you are reading from? WITNESS. That is Transcontinental Freight Bureau No. 375, I-G. Q. What are those territories that are included in Nos. 1 to 6, mentioned in that statement? A. Territory No. 1, Missouri River common points territory. Territory No. 2, Mississippi River common points territory. Territory No. 3, Chicago and common points territory. Territory No. 4, Cincinnati, Detroit and common points territory. Territory No. 5, Pittsburg, Buffalo and common points territory. Territory No. 6, New York, Boston and common points territory.

Application of various rates.

"Q. What are the rates mentioned on pages 42 to 105? Is that the whole schedule of rates—California terminals? A. They are what are called the terminal rates. It does not include the intermediate rates. Q. I mean the rates to Califoria terminal points. A. Yes, sir. Q. All the rates, page 42 to 105, are the ones mentioned in that note? A. Not all the rates; no, sir. Q. What are the exceptions—in general, say? A. There are some rates on pages 106 and 107 that apply from additional points, designated in groups A, B, C, and D. On pages 110 and 111 are rates from New York, Morgan Line pier and the Mallory Line pier via—that would be the Gulf routes." The all-rail rates to California terminals, or all-rail together with steamer from Puget Sound or Portland, are shown on those pages 42 to 105—practically all the rates there are, are shown there. "There are some special commodity rates in back here that would apply." That is substantially all the class and commodity rates. That tariff was effective January 18, 1904, and remained in effect up to January 1, 1909. (3390) Witness understands the phrase "To San Francisco only," which occurs in some of the provisions of the tariff that he has just read, to limit that tariff to San Francisco only so far as all transcontinental business to or from California points, passing through Puget Sound ports, or through Portland, and thence by water, is concerned. He did not mean to include transcontinental business handled by the N. P. in connection with the Shasta Route.

COMPLAINANT'S EXHIBITS.

Ownership of stock by defendants.

(3391-3396) Complainant's Exhibit 200. Stipulation setting forth the ownership of stock in the U. P., S. P. and Santa Fe by the individual defendants, and the firm of Kuhn, Loeb and Company. (3396) Stipulation as to the ownership of stock by H. C. Frick in U. P. and S. P. (3397-3403) Complainant's Exhibit 201—being memoranda prepared by J. C. Stubbs, "showing method used to divide (distribute) transcontinental freight rates, namely: arbitrary allowances for river and bay transfer, and the distribution of the remainder by percentages—illustrated by application to a rate of $1.00 per 100 pounds—from each of several important shipping points (which are representative points for a group) to San Francisco."

Distribution of transcontinental freight rates.

Stipulation as to testimony of R. P. Schwerin.

(3403) "MR. SEVERANCE. It is stipulated that R. P. Schwerin, whose testimony given before the Interstate Commerce Commission under date of January 29, 1907, has been, by consent, incorporated in the testimony in this case, has been obliged to leave New York, and so cannot be produced as a witness at this hearing, would, if present, testify as follows: 'Since the date of my testimony before the Interstate Commerce Commission under date of January 29, 1907, there has been no change whatever in the operation of the steamers between San Francisco and the Isthmus of Panama. On the line between San Francisco and Portland, the service has been changed from a five days' to a seven days' service, but the aggregate tonnage of the two steamers on the seven day service is greater than the two steamers previously operated under the five days' service. That as between San Francisco and the Orient there has been no change in the operation of the steamers of the Pacific Mail Steamship Company or the Japanese line, except that the Japanese line has replaced two of its smaller boats with newer and larger ones. That the Occidental & Oriental Steamship Company is being liquidated, and the one steamer which was chartered and operated by said Occidental & Oriental Steamship Company, in 1907, between San Francisco and the Orient, is now operated on the same route, on behalf of its owners, with the Pacific Mail Steamship Company as agents. There has been no change in the routing of the homeward business as between connecting rail lines at San Francisco.

Changes in steamship service.

New ships for San Francisco-Portland line.

"MR. LOVETT. It is stipulated that in April, 1909, contracts were made by the Union Pacific Railroad Company with the Newport News Shipbuilding & Dry Dock Company for the construction of two first class passenger and freight ships, of about 3,800 tons each, for operation between San Francisco and Portland by the San Francisco & Portland Steamship Company, either through ownership or under charter, such ships to be delivered in January, 1910. MR. LOVETT. It is stipulated that the testimony of Alex. Millar, as contained in the printed record of the testimony, at page 232, to the effect that the Southern Pacific Company owned a portion of the stock of the Occidental & Oriental Steamship Company, is inaccurate, but the exact relations of the ownership of that stock to the Southern Pacific Company may be covered hereafter by further stipulation or by testimony. MR. LOVETT. It is stipulated that there shall be substituted for the testimony of Alex. Millar, at page 232 of the printed record of the (3404) testimony, to the effect that the steamers 'Aragonia' and 'Numentia' were owned by the Union Pacific Railroad Company, the statement that they were, at the time mentioned in his testimony, chartered and operated by the Portland & Asiatic Steamship Company. MR. LOVETT. It is further stipulated that William Mahl, comptroller of the Union Pacific Railroad Company and Oregon Short Line Railroad Company, if called as a witness, would testify that the Union Pacific Railroad Company and Oregon Short Line Railroad Company have disposed of all of the

Millar's testimony as to "Argonia" and "Numentia."

Sale of Northern Pacific and Great Northern stock by U. P. and O. S. L.

stock of the Northern Pacific Railway Company and Great Northern Railway Company formerly owned by them, and at this time neither the Union Pacific Railroad Company nor the Oregon Short Line Railroad Company owns, directly or indirectly, any stock of either the Great Northern Railway Company or the Northern Pacific Railway Company; and it is further stipulated that said Mahl would also testify that neither the Southern Pacific Company nor the Oregon Railroad & Navigation Company has ever owned, directly or indirectly, any stock of the Northern Pacific Railway Company or of the Great Northern Railway Company. MR. LOVETT. It is further stipulated that R. S. Lovett was elected a director and a member of the executive committee of the San Pedro, Los Angeles & Salt Lake Railroad Company to succeed William D. Cornish, deceased, and that the said R. S. Lovett still occupies such offices. * * * MR. LOVETT. It is stipulated that the Empire Construction Company, the Los Angeles Terminal Land Company, and the California Improvement Company have been wound up and dissolved. MR. LOVETT. It is stipulated that the fast train service for citrus fruit from Los Angeles to Chicago, referred to in the testimony of J. Ross Clark and R. E. Wells, taken before the Interstate Commerce Commission in 1907 and read into the record in this case, has never been resumed.

R. S. Lovett succeeded Cornish as director of San Pedro.

San Pedro auxiliary companies dissolved.

Citrus fruit service not resumed.

"There is no Complainant's Exhibit 202."

(3405-3416) It is stipulated that the original of the articles of incorporation of the San Pedro, Los Angeles and Salt Lake R. R. Co. was filed with the Secretary of State of Utah, March 28th, 1901; with the recorder of Lincoln County, Nevada, April 8th, 1901; with the Secretary of the Interior, April 30th, 1901, and approved by the Department of the Interior on June 4th, 1901; also that it was filed in California and in various counties in said state at the dates stated in the answer of said company. Complainant's Exhibit 203. Articles of incorporation of San Pedro, Los Angeles and Salt Lake R. R. Co.

Filing of articles of incorporation of San Pedro.

(3417-3423) Complainant's Exhibit 204. Contract between San Pedro, Los Angeles and Salt Lake R. R. Co., and the Pacific Fruit Express Company. (3423-3433) Complainant's Exhibit 205. Articles of association of Union Pacific R. R. Co., with amendments. (3433-3438) Complainant's Exhibit 206. Articles of incorporation of the Oregon Short Line R. R. Co., with the only amendment thereto. (3439-3462) Complainant's Exhibit 207. Articles of incorporation of the Oregon Railroad and Navigation Co., with amendments. (3462-3465) Complainant's Exhibit 208. An act of the General Assembly of the State of Kentucky, incorporating the Southern Pacific Co. with the only amendment thereto.

Articles of association of various companies.

(3466) It is stipulated that J. H. Manderfield, district freight agent of the San Pedro, would, if sworn as a witness, testify that the statements contained in his letters of March 10 and March 15, 1909, addressed to S. H. Babcock, Commissioner of Traffic, introduced in evidence with the testimony of said Babcock at page 2396,

Statements and divisions prepared by William Sproule.

are true. Counsel for the defendants states that he is unable to produce statements showing the divisions and instructions to agents, prepared by William Sproule, freight traffic manager of the S. P. at San Francisco, testified to by the witness Tool (?). Complainant's Exhibit 209, copy of statement showing special rates on salt and sugar between San Francisco and Portland, between August 1, 1895, and May 11, 1904, as shown by S. P.'s tariff on file with I. C. C.

Apportionment of expenses.

It is stipulated that the Chicago office expenses of J. C. Stubbs are apportioned between the U. P. and S. P., of which he is the Traffic Director, on (3467) the basis of interline traffic earnings available for the last twelve months, i. e., the May expenses are apportioned on the basis of earnings for twelve months ending March 31st; that J. Kruttschnitt's office expenses are apportioned among the lines of which he is Director of Maintenance and Operation, on the basis of revenue train mileage for the current month; that the Texas lines operated by companies whose stock is owned by S. P. do not pay any portion of the office expenses of either the said Stubbs or Kruttschnitt, but that the S. P. (Pacific System) as between the S. P.'s and U. P.'s lines pays the proportion that on the basis above stated would be chargeable against the Texas lines.

Complainant rests.

United States v. Union Pacific Railroad Company, et al.

DEFENDANTS' ABSTRACT OF TESTIMONY.

TESTIMONY FOR DEFENDANTS.

VOLUME VIII.

CHICAGO, WEDNESDAY, JULY 14, 1909.

Defendants begin the introduction of their testimony.

Defendants' Exhibits 1 to 8, inclusive, consist of correspondence between R. S. Lovett and Kellogg & Severance, in regard to statistics to be prepared by the General Auditor of Union Pacific and Southern Pacific Systems. They were introduced in evidence in connection with the testimony of C. S. Stebbins, on pages 1873 to 1885, inclusive, Volume 4. There is no defendant's exhibit number 9.

(3469-3511) Defendants' Exhibit 10, being bill of complaint filed in Circuit Court of the United States, for the Eighth Judicial District of Nebraska in the case of Oliver Ames, Second, and Samuel Carr, Executors, of the Last Will and Testament of Frederick L. Ames, deceased, and Peter B. Wycoff and Edwin F. Atkins, Complainants, v. The Union Pacific Railway Company, and others.

(3511-3512) Defendants' Exhibit 11, being answer of Union Pacific Railway Company to bill of complaint, Defendants' Exhibit 10. Answer dated October 9, 1893. (3513-3516) Defendants' Exhibit 12, being order dated October 13, 1893, appointing receivers, in same suit. (3517-3546) Defendants' Exhibit 13, being Decree of Foreclosure in same suit. (3547) Defendants' Exhibit 14, being order confirming sale in same suit.

(3548-3551) Defendants' Exhibit 15, being the assignment, dated Jan. 17, 1898, by Louis Fitzgerald and Alvin W. Krech of their bid to the Union Pacific Railroad Company. (3551-3568) Defendants' Exhibit 16-A, being deed from William D. Cornish, Special Master, and others, to the Union Pacific Railroad Company, date January 22, 1898, made pursuant to the decree of foreclosure, Defendants' Exhibit 13.

(3568-3574) Defendants' Exhibit 16-B, being third report of sale made by the Special Master in the foreclosure suit of the United

States against the Union Pacific Main Line in the Circuit Court of the United States for the Districts of Nebraska, Colorado, Wyoming, Utah and the Southern District of Iowa, dated January 27, 1898, together with exhibits A, B, C, D, and E, thereto. (3575) Defendants' Exhibit 16-C, being decree, dated January 31, 1898, of the Circuit Court of the United States for the Districts of Nebraska, Colorado, Wyoming, Utah, and the Southern District of Iowa, confirming the Special Master's Third Report of Sale, Defendants' Exhibit 16-B. (3576-3602) Defendants' Exhibit 17, being copy of decree of foreclosure rendered in the Circuit Court of the United States in and for the District of Nebraska, dated July 29, 1897, in the suit last mentioned. It is stipulated that similar decrees were rendered in the same suit by the Circuit Courts of the U. S. for the Districts of Colorado, Wyoming and Utah and the Southern District of Iowa. (3603-3604) Defendants' Exhibit 18, being order, dated November 6, 1897, confirming Special Master's first report of sale to Louis Fitzgerald and Alvin W. Krech, Purchasing Trustees of property sold pursuant to decree of foreclosure, Defendants' Exhibit 17. (3604-3607) Defendants' Exhibit 19, being an assignment by Louis Fitzgerald and Alvin W. Krech of their bid under the decrees of foreclosure in favor of the United States, above set forth, except the bonds in the United States-Union Pacific Sinking Fund, bought by them at such foreclosure sale. (3608-3623) Defendants' Exhibit 20, being deed from William D. Cornish, Special Master and others, to the Union Pacific Railroad Company, dated January 22, 1898, conveying all the property bought by Louis Fitzgerald and Alvin W. Krech, Purchasing Trustees, at the sale above mentioned under the decree in favor of the United States, except the bonds in the United States-Union Pacific Sinking Fund. (3624-3637) Defendants' Exhibit 21, being decree of the Circuit Court for the District of Kansas, dated July 30, 1897, foreclosing a lien in favor of the United States against that portion of the Kansas Pacific Railroad therein described. It is stipulated that an ancillary decree of foreclosure substantially in the form of Defendants' Exhibit 21 was duly filed and rendered in the U. S. Circuit Court for the Western District of Missouri.

(3637-3638) Defendants' Exhibit 22, being decree, dated February 17, 1897, of the Circuit Court of the United States for the District of Kansas confirming sale by Special Master to Winslow S. Pierce and Alvin W. Krech, under decree of foreclosure, Exhibit 21. (3638-3641) Defendants' Exhibit 23, being the second report of sale, dated May 12, 1898, made by the Special Master in the foreclosure suit, together with Exhibits A and B thereto. (3642-3644) Defendants' Exhibit 24, being order, dated May 13, 1898, confirming second report of sale made by the Special Master in the suit last mentioned. (3644-3647) Defendants' Exhibit 25, being assignment, dated April 8, 1898, by Winslow S. Pierce and Alvin W. Krech of their bid at the last mentioned sale to the Union Pacific Railroad

Company. (3647-3656) Defendants' Exhibit 26, being deed from William D. Cornish, Special Master, and others to Union Pacific Railroad Company, dated April 19, 1898, conveying property sold under the decrees of foreclosure in favor of the United States, Defendants' Exhibit 21 and similar ancillary decree.

It is stipulated that the mortgages referred to in Defendants' Exhibit 21 were foreclosed, the property covered thereby sold on February 17, 1898, to Krech and Pierce and subsequently conveyed to the U. P.

(3657-3692) Defendants' Exhibit 27, being decree of foreclosure rendered on the 30th day of July, 1897, by the Circuit Court of the United States for the District of Kansas in the case of Russell Sage, et al., v. The Union Pacific Railway Company, et al. Stipulation as to substantially similar ancillary decrees in other jurisdictions. (3692-3693) Defendants' Exhibit 28, being order confirming sale to Alvin W. Krech and Lawrence Greer, of property foreclosed pursuant to Defendants' Exhibit 27 and other similar decrees. (3693-3696) Defendants' Exhibit 29, being assignment by Krech and Greer of their bid to the Union Pacific Railroad Company, dated March 21, 1898. (3697-3720) Defendants' Exhibit 30, being deed from William D. Cornish, Special Master, and others, to the Union Pacific Railroad Company, dated March 22, 1898, conveying the railroad property, with its appurtenances so purchased by said Krech and Greer.

(3721-3745) Defendants' Exhibit 31, being decree of foreclosure rendered in the case of Russell Sage and George J. Gould, as Trustees, v. The Union Pacific Railway Company, et al., for foreclosure of Denver Pacific Railway & Telegraph Company's First Mortgage. Stipulation as to similar ancillary decree in another jurisdiction. (3745-3746) Defendants' Exhibit 32, being order, dated March 14, 1898, confirming sale to Alvin W. Krech and Lawrence Greer of property foreclosed pursuant to Exhibit 31 and similar ancillary decree. (3746-3749) Defendants' Exhibit 33, being assignment dated March 21, 1898, by Alvin W. Krech and Lawrence Greer of their bid for property sold to them under decrees in suit last mentioned. (3749-3776) Defendants' Exhibit 34, being deed from William D. Cornish, Special Master, and others, to Union Pacific Railroad Company, dated March 22, 1898, conveying the property sold under the Denver Pacific Railway & Telegraph Company mortgage.

(3777-3792) Defendants' Exhibit 35 being Articles of Consolidation and Agreement between The Oregon Short Line Railway Company, The Utah & Northern Railway Company, The Utah Central Railway Company, The Salt Lake & Western Railway Company, The Utah & Nevada Railway Company, The Ogden & Syracuse Railway Company, The Idaho Central Railway Company, and the Nevada Pacific Railway Company, dated July 27, 1889, and filed in the office of the Secretary of State of the State of Utah, August 1, 1889.

Stipulation as to sale under foreclosure of the railroads of the O. S. L. and U. & N. Ry. Co. (the consolidated company described in Defendants' Exhibit 35) and subsequent conveyance to the O. S. L. R. R. Co., March 16, 1897.

Stipulation as to sale under foreclosure of railroad of Oregon Ry. & Nav. Co. and subsequent conveyance to The Oregon R. R. & Nav. Co., August 17, 1896.

(3793-3804) Defendants' Exhibit 36, being agreement, dated February 1, 1899, between the United States of America, the Central Pacific Railroad Company and Messrs. Speyer & Co.

(3805-3829) Defendants' Exhibit 37, being first, a notice, dated February 20, 1899, to the holders of bonds and shares of Central Pacific Railroad Company; second, plan of readjustment, dated February 8, 1899; and third, readjustment agreement, dated February 8, 1899. (3829-3834) Defendants' Exhibit 38, being Articles of Association of Central Pacific Railway Company, dated July 26, 1899.

(3834-3839) Defendants' Exhibit 39, being Agreement, dated July 29, 1899, between the Central Pacific Railroad Company and the Central Pacific Railway Company. (3839-3851) Defendants' Exhibit 40, being agreements of lease between the Central Pacific Railroad Company and the Southern Pacific Company.

(3852-3854) Defendants' Exhibit 41, being indenture made August 1, 1899, between Southern Pacific Company and Central Trust Company of New York, subordinating lease to lien of Central Pacific Railway Company's first refunding mortgage. (3855-3857) Defendants' Exhibit 42, being indenture made August 1, 1899, between Southern Pacific Company and United States Trust Company, subordinating lease to lien of Central Pacific Railway Company's three and one-half per cent mortgage.

(3858-3877) Defendants' Exhibit 43, being collateral trust mortgage of the Southern Pacific Company to the Union Trust Company of New York, trustee, dated August 1, 1899. (3877-3882) Defendants' Exhibit 44, being copy of supplemental mortgage, dated December 29, 1899, from Southern Pacific Company to Union Trust Company of New York, trustee.

United States v. Union Pacific Railroad Company, et al.

DEFENDANTS' ABSTRACT OF TESTIMONY.

TESTIMONY FOR DEFENDANTS.

VOLUME IX.

NEW YORK CITY, FEBRUARY 15, 1910.

(3890) J. C. STUBBS (3).

Stubbs.

Witness is Director of Traffic for the U. P. and S. P. Systems, Vice-President of S. P., U. P. and O. S. L.; in railroad service since early part of 1869. After some previous experience in United States Military Railroads, he first entered civil railroad service as foreign voucher clerk at Columbus, Ohio, with the Pittsburgh, Cincinnati & St. Louis. In September, went to California as Chief Clerk of General Freight Agent of Central Pacific Railroad and in latter part of 1871, or early part of 1872, was appointed Assistant General Freight Agent, there being no principal, and performed the duties of General Freight Agent from that time on, being made General Freight Agent a year or two later. In 1882 or 1883 was made Freight Traffic Manager of the Central Pacific Railroad, then the lessor of the S. P. Railroad. About 1885 was made General Traffic Manager, this covering passenger as well as freight traffic, and later was made Vice-President. In 1901 was called to Chicago as Director of Traffic of the U. P. and S. P., and has been such ever since.

His railroad experience.

The U. P. and Central Pacific were first connected in joint business in May, 1869, forming the first through line of railroad between the Missouri River and the Pacific Ocean. The S. P. which had been completed to Deming, New Mexico, and the Santa Fe, which had been completed westwardly to the same place, joined at Deming in 1881. (3891) The S. P. was completed into El Paso, and the Galveston, Harrisburg & San Antonio Railroad was completed easterly from El Paso and was joined at Sierra Blanca, about 90 miles east of El Paso, by the Texas & Pacific, which then took trackage rights from Sierra Blanca to El Paso over the G. H. & S. A., in the latter part of 1881, thus giving the T. & P.

Completion of transcontinental lines.

a line, by joint use, from Sierra Blanca into El Paso. At that time there was not a through line from New Orleans. But later on the G. H. & S. A. was extended farther East, and at the same time was built west from San Antonio, joining in the latter part of 1882, or very soon after January 1st, 1883, at Devil's River. This made the through line to New Orleans. The G. H. & S. A. connected at Houston with the Texas & New Orleans road, which ran to the Louisiana-Texas line, connecting with the Louisiana Western which ran to a connection of the Morgan's Louisiana & Texas Railroad at what was then known as Vermillionville, but now as Lafayette—making the through line to New Orleans.

Later on, in the summer of 1883, the Rio Grande Western was completed to Ogden, Utah, to a connection there with the Central Pacific, and that, with the Rio Grande Western, the Denver & Rio Grande, and the several lines reaching eastwardly from Denver or westwardly to Denver made another through line.

Construction of California lines.

The S. P. of California, as it was then known, built from Mojave, California, to Needles on the Colorado River. Some time in 1883 it was connected there with the Atlantic & Pacific, built westwardly from Albuquerque. In 1884, possibly in the early part of 1885, this Needles branch was leased to the Santa Fe. (3892) In 1885 the Santa Fe, or people representing those interests, acquired the Southern California, or California Southern, as it was called—one time by one name, and again by another—which was built from Barstow to San Bernardino. This gave the Santa Fe and Atlantic & Pacific, by use of the Needles line to Barstow, a through line to San Bernardino. The Santa Fe then contracted with the S. P. for trackage rights from San Bernardino into Los Angeles, later on building from San Bernardino into Los Angeles—thus giving them a through line from the Missouri River into Los Angeles.

Santa Fe through lines to Los Angeles.

Santa Fe through line to San Francisco.

Before the completion of the San Joaquin Valley Road the Santa Fe by traffic contract for the interchange of business made a through line to San Francisco with the S. P. from Mojave by the use of the S. P. rails from Mojave to San Francisco—that is my recollection. I think the contract gave the Santa Fe rights alternately to take trackage rights over the line from Mojave into San Francisco upon certain notice, but they never exercised that option. In 1898, I think, the San Joaquin Valley road was constructed by private parties from Stockton to Bakersfield and about the time of its completion, or possibly before, it was purchased by the Santa Fe interests. Very soon after, the Santa Fe contracted with the S. P. for the joint use of its line from Mojave to Bakersfield, and this gave the Santa Fe a through line under their own management to Stockton, and later on they completed their line from Stockton to San Francisco Bay—practically San Francisco—so that in 1900, the Santa Fe had its own independent line to San Francisco Bay and also to Los Angeles and Santa Monica.

The O. S. L. and O. R. & N. were connected at Huntington in 1884 as a through line. The N. P. was completed to Tacoma in 1883, and to Portland, Oregon, about the same time. (3893) The G. N. was completed to Seattle in 1892 or 1893. In 1902, the El Paso & Northeastern—the corporate title under which that road was built—was connected with the Rock Island, making another independent line into El Paso. The C. P. was completed to Vancouver in 1887. The St. Paul was completed in 1909, and the Western Pacific quite recently.

Completion of O. S. L., O. R. & N., N. P. and G. N.

Before the opening of the U. P.-S. P. all-rail route, transportation between the East and California was by steamship and rail over the Panama Route; steamships to Colon on the Atlantic side, the Panama Railroad across the Isthmus to tthe Pacific side, and then steamships into San Francisco; also by Clipper ships around Cape Horn. The result was that the Pacific Coast trade was almost wholly with the Atlantic Coast cities, the credits and connections of the Pacific Coast jobbers were made with the jobbers of Atlantic Coast cities. The fact that there was quite a wide difference between the cost of transportation—rates and other considerations—via the Isthmus and via Cape Horn, led the merchants to divide their traffic. They would ship somewhat of every kind of goods needed to complete stocks, all of their high class, very valuable merchandise, against which interest and insurance ran heavily, by steamers which ran twice a month.

Route before opening of U. P.-S. P., all-rail.

This service was objectionable on account of the transfer on the Atlantic side from ship to car, and on the Pacific side from car to lighter, and lighter again to ship. But the major portion of the tonnage, especially heavier commodities, staple goods, went by all-sea route via Cape Horn. In that day everybody that brought goods in by sea, even from a domestic port, was called an importer. The result was that the importers had to carry very large stocks, practically a six months' stock on the sea and a six months' stock in store, depending upon the Panama service to make good any deficiencies in their orders. The Panama service averaged about 45 days for freight and 26 days for passenger service. (3894) The Clipper ship service via Cape Horn ranged from 90 days—(made once I believe by the Young America) to 180 days, the average being about 120 days. Goods moved in large quantities because, as I recall, the ship sailed regularly, only about one every two months.

Panama service objectionable.

I was not on the Pacific Coast when the railroad was opened, did not get there until 1870, but became familiar with what had been done after I got there. The first tariff, as I remember, from New York to San Francisco, was on the scale of $8.00 for first class, reduced in 1870 to $6.00 per cwt. first class. The railroads got very little business. The merchants were wedded to their connections, customs and traditions, and the adjustment of their business to the use of the sea. The jobbers thought that the longer routes gave them considerable advantage because it took a good

First tariff, all rail route.

deal of capital to carry the large stocks made necessary by the use of the sea routes; so when the railroad was opened, the first proposition they had to face was that anybody that would ship a carload could get the lowest rate at the time. The result was that they were not very friendly to the all-rail line and they got very little business. If we reduced our rates, reductions were made by the sea; and it was finally decided that by an open tariff at that time we could make no headway in developing the traffic by rail. Out of that condition, what is popularly known on the Pacific Coast as the "contract plan," was evolved.

Merchants not friendly to all-rail line.

Merchants had been dividing their business, as I have said. They would ship a certain portion via Panama, and a much larger part by clipper ship; and they shipped more or less by rail, after the road was opened. But the cost of transportation to the merchant differed according to the route that he used; and knowing that he would assort his business; he would use the railroad only as a matter of convenience, and use the Panama very much in the same way, except that the Panama route took a larger share than the railroads did. But most of his goods went by sea. We proposed to the merchants that if we could have a guarantee of all their business for one year, we thought we could afford to make a rate that would make it profitable to them to use the all-rail route. This proposition was taken up, one by one, with the principal jobbers; sat down with them, examined their bills of lading, their insurance policies, their invoices, so as to actually determine the cost, all things considered, of the use of the three routes and the volume of tonnage that they sent over these three routes. (3895) And upon the results of that examination we based an offer to them of an all-rail rate that we would guarantee for one year. I think that explains it in a general way. One by one the principal jobbers fell into that; at San Francisco and at Sacramento, and I think all the principal importers of Portland—two or three did, I know. Before we got through with it we practically had all the importers under contract, except one firm in San Francisco which never came in. These contracts were individual. They showed different rates on the same article, for the same service, for different merchants; because we found the widest sort of discrepancy by the ships, and we had to deal with each merchant by himself considered. But after we had operated for possibly a year, and got the majority, if not nearly all, of the merchants under contract, we then took up these contract rates and harmonized them, and made a common list, and published that common list of rates; and thereafter that common list of rates was applied to everybody—large or small shipper—who would undertake to enter into a contract to ship exclusively by rail for one year, and it was published. At the same time there was another general tariff very much higher—in fact the regular tariff that was in existence before we began this contract plan, which was applied to the shipments of merchants or anybody

Contract rates.

that was not under contract. My recollection is that this contract plan began in 1878.

On account of the total destruction of all our records in the San Francisco fire of 1906, I haven't any means of determining just what the date was, and the U. P. records unfortunately have been destroyed too. I think it ran until after 1883, more or less. Of course this was initiated over the U. P. and Central Pacific—the original line. As the Santa Fe line, and the T. & P. line, and the Rio Grande line, were respectively opened up, they adopted the contract plan. But when these lines multiplied, it became burdensome; we couldn't handle it very well; and it became obnoxious to the shippers, because the only way it could be handled was to bill the goods at the general tariff and refund by voucher the difference between the general tariff and the contract tariff. So along about 1883, possibly 1884, it was abandoned. But this list of contract rates, which I have described to you, became the basis for the open rates. I might say it was practically adopted, although there may have been eliminated some of the very low rates that were taken under contract, because of the compensation derived from the higher class of goods which the same merchant would ship.

Contract rates abandoned.

(3896) I might add that what I have explained was not the whole and sole influence in requiring the abandonment of this contract plan. In the meantime the rapid growth of manufacturing industries west of the Allegheny Mountains, the opportunity afforded by the all-rail lines for the Pacific Coast merchants to make connections in that territory, very much increased the proportion of the tonnage, or shifted a large share of the tonnage that originally was produced on and shipped from Atlantic Coast cities to the more westerly points. I might illustrate by saying I think I can recall that, at the outset, all the stoves that went to San Francisco went from Troy, N. Y.; and it was not long after the opening of these roads until they began to ship from the west, until now they mostly go from St. Louis. And the same thing is true of boots and shoes, and very many things. That reduced the force of sea competition on a very large proportion of the traffic that was shipped to the Coast, where formerly the sea competition was absolutely controllable. Of course the further west we got from the Atlantic seaboard, the less forceful, although it was influential in determining the rate—the less forceful the sea competition was.

New trade centers in middle west.

The so-called Sunset Route was opened in the early part of 1883, I think in February. The "Sunset Route" is the term applied to what we call the S. P.'s line made from New York to San Francisco. Originally it was made by the use of the Morgan Steamship line of vessels from New York to New Orleans; Morgan's railroad to Lafayette; and, as I have described it, the Louisiana Western, the T. & N. O., and G. H. & S. A. and the S. P. That was called the "Sunset Route"—an advertising feature. Those lines were connected up, I think, at Del Rio, in the

Sunset route opened—defined.

latter part of 1882, and the roads were ready for operation very soon after the first day of January, and the arrangements were completed for the through service, and I think the line opened in February.

Reasons for its initial success.

The time for opening the Sunset Route was very propitious. I think it owes its initial success to the conditions that existed at the time. Under this contract plan that I have described, all the business was overcharged; not only that, but the lines east of Chicago, particularly, and in some measure, east of the Missouri River, look with some—not disfavor, but they lacked interest in the California business; it was comparatively small; they subordinated it to their own service; that is, the trunk lines would put it aside in favor of their business, which they considered to be more profitable, for Chicago and the middle west. The Iowa lines, as we called them, were not so bad, but they did much the same thing.

All-rail service bad.

(3807) So the service was very bad. The movement ranged from 30 to 45 days. On much of the freight we didn't do as well as the Panama Steamship Line did. And, as I stated, it was all overcharged, and the people were very much exasperated. They had gotten sort of used to the contract plan, and had found holes in it, and were ready to smash it; but they were aided in that desire and purpose by the bad service that was being performed by the all-rail routes. When the Sunset Route was opened, no one had very much fear of a part water and a part rail line. And it was opened at lower rates than the all-rail rates. The all-rail lines did not pay any attention to it, but when the arrangements were completed for the opening of that line, the S. P. officer went back to San Francisco, he told the merchants there that he had been cussed and blamed for the bad service on the all-rail line, and he denied any responsibility for it, and that he now had a route under one control from New York to San Francisco and he was going to prove to them that what he told them was true; asked them what service would be satisfactory to them, and they told him what they thought, that it was not so much quick time, but they wanted regular time, so that when the goods left New York they would know within a day or two when they would be on their shelves. So the line was opened, and they were fortunate enough to make what was then extraordinary time—short time; to-day it would be called extraordinarily long time—18 days from New York to San Francisco, and 22 or 23 days in the opposite direction. Overcharges were paid promptly, and loss and damage claims were settled immediately; and the merchants were tickled to death. The result was, it was not very long before a very large share of that business was on the Sunset Route.

Regular, rather than quick time, preferred.

The matter of loss and damage claims had been a very great objection so far as the all-rail lines were concerned, and has been always and is so today, nothing irritating merchants so much as delay in the settlement of their claims. The Sunset Route, the rail line west of San Antonio and practically west of Houston, was

Prompt settlement of claims.

new and there was very little business on it, compared with what there is today, and so of the Morgan line from New Orleans west. So the New York business taken for California practically had a free undisturbed movement from New Orleans to San Francisco. The cargo was gathered on the wharf in New York, and the ship arrived in 6 days at New Orleans, as against some times 6 days from New York to Chicago. The ship arrived in the morning, the cargo was on the cars that evening and on its way west, so without any extraordinary speed, the free course, lack of interruption, enabled a 16 days' time without any extraordinary expense. I think those were the conditions that enabled us to perform the service with such facility.

Free, undisturbed movement of through traffic.

(3898) The several links on the line, like the Morgan Railroad & Steamship Line, Louisiana Western at the outset, T. & N. O. G. H. & S. A., and the S. P. west of El Paso, had separate operating offices, and very shortly the entire line east of El Paso was put under one general manager, but the traffic, so far as the through traffic was concerned, was under one officer. And the effect of it was, as far as this through business was concerned, to have practically a solid line from New York to San Francisco; all the parts were cohesive and all the officers of the constituent roads were sympathetic, really inter-dependent in their relation to the common owners; so that, so far as this through business was concerned, these lines were operated as one line just as effectually as the several divisions of the Northwestern, or the Union Pacific, over which a Division Superintendent presides, are operated as a through line. The manifests of ships were sent by rail to San Francisco from New York and would be in San Francisco about the time the ship arrived at New Orleans. This was quite an advantage. The ships landed at Algiers, opposite New Orleans, and the California cargo was loaded so as to go out of the ship first, loaded in cars, always a train-load, sometimes two or three, and the trains at that time were run solid through to San Francisco.

Through traffic placed under one officer.

The paucity of the business on the rail lines made that possible; I mean made it as little expensive to do it in that way as it would be to do it in another way—as to mix the cargo with local freight. As regards the effect of the unity of management on the Sunset as against the diversity of the management on the all-rail service in accomplishing prompt and satisfactory settlement of claims made by shippers, you couldn't safely settle the claim for overcharge, or for loss and damage, by the U. P. and the Iowa Lines and the Trunk Lines, without first tracing for the purpose of locating the responsibility for the loss or for the damage, and getting authority —except for this part of the overcharge created by the difference between the contract rate and the open rate. It took an average time of about six months to get a claim for loss or damage settled; sometimes it was two years. On the Sunset, in contrast with that, it was settled immediately.

Effect of unity of management.

(3899) There was a very considerable share of the New York business that moved out by the Sunset Route, so much so that in the summer of 1883 the Trunk Lines especially awoke to the fact that they had lost considerable business, and the California business began to appear more valuable in their eyes than they had ever pretended that it had been previously; and they protested against the differential rate—the lower rate which was being made by the Sunset Route, and which was founded on the fact that there was insurance for the sea voyage. The result was the adoption by the Sunset Route of the all-rail rate and the issuance by it of an insured bill of lading. But that did not for the time being very much affect the business which had settled on the Sunset Route; the Sunset continued to take quite a considerable portion of that business for some time.

All-rail rate adopted.

It was in 1885 or 1886 that we made the connecting line arrangement, pro-rating arrangement, with the Santa Fe, after they had acquired by a lease and purchase contract the ownership or control of the S. P.'s Needles Branch. Immediately after they had established this through line in connection with the S. P., with the option, never exercised, to take trackage rights, they demanded a share of the through traffic, and wished the other lines that were concerned to guarantee them that amount. Those lines thought their demand too great, and the result was the very severe freight war of 1886, lasting several months.

Cause of rate war of 1886.

"Q. Will you explain to what extent, and how and why it would be the fact, that the lines terminating in California, the Southern Pacific in the first instance, subsequently the Atchison upon its advent into California, came to dominate the trans-continental rate situation on California business? A. From the very beginning of my connection with this business, which was in 1870, by common consent (I don't recall and do not think there was ever any formal agreement either oral or in writing) the handling of that business, suggestion as to rates, nomination of the rates, between Pacific coast points and all eastern territory, was (3900) practically left with the Pacific Lines."

Pacific lines always nominated rates.

As long as the U. P. and S. P. roads constituted the only line west of the Missouri River, these rate conditions were handled jointly by the officers of the U. P. and Central Pacific. After the Santa Fe was completed in 1881, the result was that practically the matter was left in the hands of the Central Pacific people. At that time they had the deciding voice; and in fact that did continue up until this time that I speak of, when the Santa Fe got into San Francisco with its own line, or into Los Angeles with its own line. After that time the Santa Fe had just as much voice in making the rates to and from California, as the S. P. or the Central Pacific; but there has been no time since 1881 when any rate, all-rail, could be made to California without the consent of the Central Pacific, the S. P., or the Santa Fe. I would like to make an explanatory statement. I sometimes use the words "Central Pacific," and some-

After its completion to San Francisco, the Santa Fe had an equal voice in making rates.

times "Southern Pacific." It may confuse you. Up until 1885 the Central Pacific was the lessee of all these lines, and the business was conducted in the name of the Central Pacific. In 1885, after the organization of the S. P. Company, it took all of the lines and the S. P. was the one. It was "Southern Pacific" after 1885, and "Central Pacific" before.

Relations of "Central Pacific" and "Southern Pacific."

The Central Pacific people had the line from Ogden to San Francisco, and from San Francisco to El Paso and New Orleans; the constituent lines had various names, for instance, the S. P. R. R. of California, the S. P. R. R. of New Mexico, the S. P. R. R. of Arizona. These things are a little confusing, but that was the situation. Prior to the advent of the Santa Fe into California, the T. & P. connected with the S. P. line at El Paso, and the D. & R. G. with the Central Pacific at Ogden; they were merely connections; they did not have any lines into California.

The Transcontinental Freight Bureau was a bureau of which all these lines west of the Missouri River were members. It was (3901) adopted for co-operation on questions of classification and various questions that would arise. When it was in session, the rate questions were usually submitted to vote and decided by vote; but, notwithstanding that, even during the sessions of the Transcontinental Freight Bureau, there has never been a time that I know anything about, up to a quite recent time, when any rate measure would pass against the objections of the Santa Fe and the S. P. But if either one of them voted for it, either one of them had the power to make it effective.

Transcontinental freight bureau.

As a matter of fact no through all-rail rate could be made from the Missouri River or east to California without the consent of the S. P. in the first instance, and subsequently, upon its advent, without the consent of the Santa Fe; nor could any all-rail line, as a physical matter, be made into California except over the rails of the S. P. or the Santa Fe, without constructing it. The Santa Fe forms a line under one management from Chicago, and could do as it pleased in the making of an all-rail rate—it didn't have to ask anybody; the S. P. had its own line all the way through to New York and could do as it pleased. The U. P., or the Rio Grande, or the Rock Island, or the T. & P., could not of its own motion or by independent action make such through rates as I have been speaking of here.

Rate-making power of S. P. and Santa Fe.

The U. P., practically speaking, could not make such a through rate by the use of the rail line to Portland and the O. R. & N. steamship lines from Portland to San Francisco—that is, they could not unless they disregarded every consideration of profit or self interest; of course they could make the rate. It was an impracticable route. They could not do it in this sense: that the U. P.'s own separate (3902) and individual interests would restrain it from doing anything of the kind, would render the doing of anything of that kind a costly thing. It would cost more than it would make, in other words. It is one thing to make through rates on paper

The route to San Francisco via Portland, was a paper route only.

and another thing to make practical and operative through rates; and that route for business on and east of the Missouri River, so-called route, rail to Portland and steamer from Portland to San Francisco, "has never been anything but a paper route."

Panama, Cape Horn and Tehuantepec routes.

The Panama Route, the Clipper ships via Cape Horn, and later the Tehuantepec Route, practically controlled the rates to the Coast in the sense that whatever rate was made all-rail must be made with due regard to the cost of the movement via the sea route. The Panama Route had never more than 3 steamers a month, —ordinarily 2 steamers a month each way; the clipper ships sailed every 2 months, sometimes oftener but the undertaking was to have regularly a vessel every 60 days; later on, the American Hawaiian Steamship Company undertook to dispatch one steamer a month via the Straits of Magellan; and the clipper ships around the Horn were superseded by these steamships in 1900 I think. Later on there was the Tehuantepec Route.

The Mexican Railroad across the Isthmus of Tehuantepec was constructed and then the American-Hawaiian Steamship Company contracted with that line to furnish it service, and they abandoned the Magellan Route and now work in connection with the Tehuantepec. I think the Tehuantepec Route had the effect relatively to the Panama Route or the clipper ships of carrying more tonnage. It is pretty difficult to answer that question because the general volume of tonnage has increased so largely and we have not the best evidence as to just what tonnage they are carrying, but my impression is that there is more tonnage relatively moved via the Isthmus of Tehuantepec.

Completion of N. P. and G. N. had no effect on California business.

(3903) The effect of the completion of the N. P. and the G. N., so far as California business was concerned, was not noticeable. The transportation by those companies was particularly to the North Pacific Coast—Portland, Tacoma, Seattle, Spokane. The effect of the Canadian Pacific on the California business was not appreciable. They made a dash at it by undertaking to carry a differential in their rates to San Francisco, 10 per cent. lower than the rates of other lines, and took some business, not a very considerable amount, but were called upon by the other lines to withdraw their differential. The matter was arbitrated, and they withdrew the differential, and since then they have not been a noticeable factor in the business.

As to the U. P., it has had a line of late years from Kansas City through Cheyenne, and from Omaha through Cheyenne, to Ogden, Utah, connecting at Granger with the O. S. L. which it owned. At Ogden it connected with the Central Pacific. The Central Pacific formed its line for California.

Central Pacific formed U. P.'s California line.

As to the territory which the Central Pacific or S. P., as they have been termed here, opened up to the U. P. by that rail connection at Ogden to California: "The Central Pacific runs from Ogden through Sacramento and Stockton to San Francisco and also to San Jose—the original Central Pacific line. At Roseville Junction,

Territory opened up to U. P. by S. P. rail connections.

which is eighteen miles east of Sacramento, there runs north the Central Pacific's California and Oregon line up through the great Sacramento Valley, a very productive valley, on the east side of the Sacramento River. At Sacramento it connects with what was originally known as the California Pacific, a road that serves the southern part of the Sacramento Valley, (3904) reaching the Bay of San Francisco—it is really the Straits of Carquinez at Benicia, and also on the other side of the mountain there at Vallejo, where it connects with the very productive Napa Valley, running up to Calistoga and also across to the Sonoma Valley. The original line from Sacramento continues then down to Stockton, and a few miles west of Stockton, at Lathrop, it connects with the San Joaquin division. That is a line up the San Joaquin River, on the east side, to Goshen, and there connects with the Southern Pacific, which continues on through Bakersfield, over the Tehachapi, to Los Angeles. A few miles beyond Lathrop, on the west side of the San Joaquin River, another line goes up the San Joaquin Valley, serving the west side of the San Joaquin Valley, connecting with the main line which I have described, the southerly line, at Fresno and Tulare."

That is the line that diverges at Tracy. "Then it continues on down and crosses the original Western Pacific, crosses through the Livermore Pass into the Alameda Valley, a very rich valley, where its original San Jose line at Niles deflects and goes south to San Jose, and it also continues into Oakland. At Tracy it also has a line following the river and the Bay of San Francisco into Oakland. In other words, the Central Pacific and its connections opens the entire productive territory of California to any connection that it has at Ogden." Except to the points I shall name, none of this interior country that I have described can be reached by the sea through Portland or Puget Sound or by the other sea routes, without the use of either the Santa Fe rails or the S. P. rails. "The exception points are points that are on the Bay of San Francisco, the City of Stockton, which is on the San Joaquin River, to which there is limited steamer transportation, and the City of Sacramento to which there is steamboat service, and possibly Marysville. I doubt very much whether the Feather River is navigable to Marysville now, but it was at one time. MR. DUNNE. I think not."

Central Pacific only rail connection U. P. had.

The Central Pacific is the only rail connection the Union Pacific had at the time we are talking about—1901. I suppose today it might make a connection with the Western Pacific. In respect to through rates, through billing, through cars, through train service into this California Territory, the Union Pacific was absolutely dependent upon the Central Pacific; its position was that of an intermediate carrier—connection of this line; it seems to me that is obvious. (3905)

Analysis of Portland-San Francisco route.

The U. P.'s "paper route" by way of Portland and the ocean to San Francisco is as follows: "The Union Pacific line from Omaha to Granger, the Oregon Short Line, which is owned by the Union

Pacific, from Granger to Huntington, and then the O. R. & N. railway from Huntington to Portland, and what was, at the time of this so-called merger, the O. R. & N. steamers running between Portland and San Francisco. The service, of course, over the all-rail line was daily. The service between San Francisco and Portland was, I think, a steamer every five days. The distance from Omaha, the eastern terminus of the Union Pacific, is greater to Portland over the line that I have described than the distance from Omaha to San Francisco over the Union Pacific and Central Pacific which I have described. The freight undertaken to be moved via Portland to San Francisco by whatever route it chooses, when it gets to Portland has yet to travel more than one-third of the distance from the starting point to San Francisco via the Union Pacific. It takes more time, under ordinary conditions, that is, equal conditions by both rail lines, to get into Portland than it would to get it to San Francisco. It would have to wait at Portland the arrival of a steamer because the steamer goes only every five days, against a daily service all-rail into San Francisco; subject to the additional transfer, subject to the perils of the sea, which it would not be by the all-rail route; the disabilities of that line as compared with the all-rail being probably represented by five days additional service or additional time employed. I think that is rather less than more than the average additional cost. Additional handling, which while it may be said is entirely at the cost of the carrier, is a thing that the shippers take into account because they would rather have their goods in good condition than to have a claim. And these disabilities are common and well known and are such that no shipper would use that line without some compensation, and there is no way to compensate, that I know anything about, except in the rate, and of course the competitors of the Union Pacific for San Francisco business would not permit it to make a lower rate by that route than they make. In other words, it is practically a no thoroughfare—has been, generally recognized so.

Its disabilities known to shippers.

"Q. Do you carry in your memory, or have you a memorandum of, the year when the Union Pacific operated the Short Line and the O. R. & N. to Portland as part of its system? A. I think in 1888 they thought they had them, but there was some court proceedings which intervened, so that in 1888 the Navigation Company went into the hands of the Receiver. I think it did not get out of the hands of the Receiver, so that the Union Pacific got practical control of it, until along about 1896—it may have been 1898, but in the meantime, during that period, I think it was recognized and treated, so far as its relations to the public were concerned, as a solid line, Union Pacific line from Omaha to Portland."

(3906) Assuming that the U. P. controlled the Short Line and the O. R. & N. as early as 1889, I know—while having no connections with those properties at the time—that the O. R. & N. operated steamers between San Francisco and Portland at that time and has, in fact—either itself or its predecessors—all the time

since I know anything about the business until the present organization was made.

Although my railroad experience began in 1870, I have never known that route by Portland and the ocean to San Francisco to be operated as a through route and worked as a through route. "Perhaps I had better explain. Of course it is pretty well known that I have been practically at the head of the freight department for the Central Pacific interests since, certainly, 1872, and perhaps more intimately associated and connected with the industrial development of California than any other railroad man in the country. In all that time I have never known any business to move or to be worked through the influence or endeavors of the Union Pacific, even of the Union Pacific's own representatives in San Francisco, via the Portland gateway to or from points on or east of the Missouri River. Of course I was alert in watching the interests of the Central Pacific as a connection of the Union Pacific, but it was so manifest to me that the Union Pacific interests lay in connection with those of the Central Pacific that I do not think I ever apprehended any attempt upon their part to use the other lines for San Francisco business. There may have been sporadic cases when business moved that way; there may have been an occasional jag of freight gone that way for some reason or other, but never had I occasion in all this time to enter a protest or to inquire or to say anything about that line to a Union Pacific officer. I was quite certain in my mind that it would not be a profitable venture upon the part of the Union Pacific, and I never had any reason to believe that the Union Pacific officers did not hold the same view."

No San Francisco business moved via Portland route.

Use of Portland-San Francisco route by U. P. would have been against its interests.

The Rio Grande Western road connected with the Central Pacific in 1882 (I think it was) at Ogden. Whereas the U. P. had only the rails of the Central Pacific upon which to move into California, the S. P. had two connection at Ogden—the U. P. and the D. & R. G.—as far back as 1883. If I were to assume hypothetically that the U. P. should really (3907) and substantially have made in the past, the attempt to use the Portland route, why, very naturally the officers of the Central Pacific and the S. P. would have resented it, would rightfully have assumed that the U. P. was undertaking to divert traffic from the Central Pacific, and in every way that they knew how, if they could not prevail upon the U. P. to stop it, they would have endeavored to counter upon the U. P. They would have diverted traffic from the U. P. They were not dependent upon the U. P. The Rio Grande had very powerful connections at Pueblo and Denver, such as the Missouri Pacific, the Rock Island, the C. B. & Q., the Santa Fe, all of whom, so far as Colorado common points were concerned (which would represent one-half of the service of the U. P. to Ogden) were eager for this business and of course would have cooperated in any endeavor to get the larger portion of the business that way. The very large territory, locally, which I have described, productive territory, consuming territory, of California, of course would have been closed to the U. P. road, except

upon what they could have done by solicitation against the active endeavors on the part of the S. P. or the Central Pacific to send it the other way. I don't know whether that makes it very clear to you, but in my own mind I think that statement itself would be sufficient to illustrate to any traffic man that they would have sewed the U. P. up very quickly.

"Q. Now let me see if I get your mind. Do you mean that these conditions would result even though the Southern Pacific did not take out the through route with the Union Pacific, did not close the gateway, did not disturb the status quo at all so far as through arrangements with the Union Pacific were concerned? Was the Southern Pacific sufficiently influential to deflect the business without extinguishing the through arrangement with the Union Pacific? A. No doubt about it. Perhaps I had better tell you a story. * * * After I came to Chicago and was put in charge of the Union Pacific system as well as that of the Southern Pacific, I was in New York and had occasion to call on Mr. Gould, president of the Missouri Pacific, who at that time had acquired the Rio Grande. I had very pleasant relations with him. When I sent in my card he invited me to come into his office at once, and when I got in there I found the traffic officers of the Rio Grande with him. They were discussing how the relations of Mr. Gould to the Rio Grande could be made (lawfully of course) useful to (3908) the Missouri Pacific, and suggestions were made that they could arbitrarily divert the traffic to the Missouri Pacific. They went on discussing it in my hearing as though I were not present. I said, 'Mr. Gould, pardon me, I would not do it that way if I were in your place.' He said, 'How would you do it?' I said, 'I would not say anything about it publicly; I would not make any public demonstration at all; I would just tell these boys that you would like to have that business go as much as possible over the Missouri Pacific line.' He looked at me and said, 'By God, that's what you have been doing to me by Ogden, isn't it?' Now that is all that was done in that way. It only illustrates the value of the sympathy and the cooperation of a connecting line. It can hardly be expressed in language, hardly be made manifest to a layman, one who is not acquainted with the practical operation and close relationship between shippers and carriers. But possibly it would be a sufficient answer to your question to say that I think there would be no doubt to any traffic officer in the room or anywhere, as there is no doubt in my own mind, that under conditions which have been described if the Union Pacific had undertaken to divert traffic for San Francisco and San Francisco Bay, which is the only traffic they could have used the Portland route for, under these peculiarly unfavorable conditions undoubtedly the Southern Pacific Company could have made it so costly to the Union Pacific, and in a lawful way, too, that they would have been sorry that they had any such line as a steamship line from Portland to San Francisco. Now I not only

Power of S. P. to deflect business.

Value of sympathy and cooperation of connecting line

Use of Portland route could have been made costly to the U. P.

think so, but I think the Union Pacific officers thought so—knew so, and that is the reason they didn't try it."

(3909) It did not need any clairvoyance to read the mind of the U. P. officers on the situation I have been describing, not a bit. There was substantial difference in the situation of the U. P. and Can. P. so far as the Can. P. having no available rail connection was concerned—a vital difference. The Can. P. had no other way to get into San Francisco or to California but by the use of the sea route from Vancouver. The U. P. had the very best way that was open to any line to get into San Francisco bay and the city of San Francisco and, in addition, to all the valuable and populous territory, productive territory, that I have described. The N. P. and G. N. have had through rates into San Francisco in connection with the Pacific Coast Steamship Company. Whether they have every worked it or made any earnest endeavor to move business that way, is best shown by the fact that they have never taken enough of the business that way to attract any attention or call for any protest or objection. They have never in any substantial sense done the business, but I am referring now to what we call the movement to or from the Missouri River and east, including St. Paul. By way of matters of fact illustrating as reasons the nonparticipation of these Northern Lines in any substantial sense in this San Francisco or California business—in the first place they have never taken any noticeable tonnage that way. Whether they have worked for it on the idea that they had a practicable route, I can only infer from the fact that they have not taken much business and they knew that as well as anybody else, and they had not made much effort to do it simply because they thought the effort would be unavailing.

Difference in situation of U. P. and Can Pac.

Effect of N. P. and G. N. through rates to San Francisco not noticeable

(3910) There are three ports on the Pacific Coast, each of them served by a strong, independent, well-officered line—Vancouver by the Can. P., Seattle by the G. N. and incidentally by the N. P., and Tacoma by the N. P. If one of these lines operated a steamship line from its port to San Francisco, I assume the others would feel compelled to put on steamship lines from their ports. Manifestly there is not business enough there to support three steamship lines. They could not very well combine or run one steamship line serving all three ports, since they are competitors all fighting for the business and the steamship would have to make all three ports to load cargo. I need not elaborate that—anybody could see that it was almost impracticable. Their takings of business would be limited almost wholly to what business they brought in from the East, and for San Francisco Bay points. The steamship line would depend practically on their transcontinental service for support. I can say from what I know of the business that it would not support even one steamship. In reference to the Sunset Route, part water and part rail, and as to why that route was comparatively successful in contrast with the others via Puget Sound:

Three steamship lines necessary for the northern railroads.

(3911) "It seems to me it is obvious. In the first place, the Sunset Route mixed water and rail line, as has

Sunset under one management.

already been explained, is a solid line, a line that so far as traffic and operating conditions are concerned, as I have explained, is under one management and control. In the second place, the steamship service is the initial service, and the initial point is the City of New York, which, with the communities within lighterage limits, furnishes by far the most productive port, from the point of supply, in the country, if not in the world. The ships moving from New York to New Orleans would draw from this immensely productive market or these productive markets not only traffic for San Francisco and San Francisco Bay points, but a very large tonnage for New Orleans, Louisiana, Texas, even Oklahoma, Mississippi, southern California as well as intermediate points between southern California and San Francisco and all of the interior of California, that I have described. They all contributed to the tonnage that would safely, economically and profitably to the carrier be moved by the steamships from New York to New Orleans. The result was that always three ships a week, according to my recollection, and sometimes four, were dispatched, and there have been seasons when there has been a ship despatched every day, I believe. The ships, as I have explained, were loaded just as a car is loaded for distribution of local freight. The freight that must come out first is the last put in; the freight for California was loaded in last and came out first, and so the opportunity was given for the prompt and expeditious movement over the line. Now it seems to me that that would be obvious to anybody as a distinct and complete answer to any suggestion that because the mixed water and rail line via New Orleans or Galveston was measurably successful, that a mixed water and rail line via Puget Sound ports, with the steamship service on the delivering end of the line, would be equally successful. Now, there is another feature to this; I think I gave it already. The Southern Pacific Company, the Central Pacific Company, is the home line, well understood. It is like the Northern Pacific at St. Paul. * * *

Sunset route serves very large productive territory.

"It is not only recognized as the home line, not only the popular line, notwithstanding seasons of apparent great unpopularity, but the people have a pride in it. Moreover, the merchants of San Francisco are dependent upon the Southern Pacific, whose lines extend into the interior, opening up the consuming territory which supplies their trade, for the facilities of transportation; they are more or less dependent upon the Southern Pacific as they are not upon any other carrier, not even the Santa Fe. In fact they have always called upon the Southern Pacific for any new movement, new construction, new facilities, anything and everything that promised to improve the mercantile or commercial conditions, the opening (3912) up of new territory for them. In other words, the Southern Pacific is California's baby, you know, in a certain sense, and they will nurse it when they won't nurse any other line, and they will spank it when they would not spank anybody else. Now

S. P., California's baby.

while that is a sentimental reason it is a very powerful reason why the Southern Pacific Company controls traffic for its line, for a line understood to be Southern Pacific line, all the way through, against any other influence that can be exercised."

Blye's tables.

In respect to the tables in the record appearing in the testimony of Mr. Blye, pointing to the falling off in the Sunset Lines' percentages of New York traffic, they began to decline in 1891, I think, and Blye's records show it was less than 79 per cent. in 1895, less than 69 per cent. in 1896, less than 48 per cent. in 1897, 41 per cent. in 1898, 40 per cent. in 1899, 43 per cent. in 1900 and 39 per cent. in 1901. There was a decline from 79 to 39 between 1895 and 1901, and if there is any suggestion that the falling off in the Sunset percentages is to be imputed to the so-called "merger" it looks to me that the recapitulation of those figures would meet it. These percentages cover not only California but Asiatic business, British Columbia business, all Transcontinential territory which on the Short Line is west of Kuna, and on the Southern Pacific Line west of some point near Corinne. The decline from 79 to 39 is explained by very natural conditions.

(3913) "The growth of the northwest was very rapid, much more so than California; the increase of traffic to the northwest was more rapid and relatively greater in bulk than it was to California. The completion of the Atchison, Topeka & Santa Fe road had stirred the trunk lines to greater endeavor; their activities were such that a larger share of the traffic went that way, all-rail, than formerly went that way; in fact there was scarcely any commercial or industrial condition but what contributed to the relative—not the actual but the relative decrease in the movement via the Sunset route. These facts were known to Mr. Spence, who succeeded Mr. Hawley, in 1901. The percentages were no longer useful; they did not show the facts that we wanted to know, in one sense, and in another sense they showed too much—showed against the Sunset Route, when, as a matter of fact, the difference, the falling off, was only partially a decrease in the tonnage by the Sunset Route. More of it was caused by an increase from the natural growth of the business by the all-rail route. Mr. Spence, acting upon his own motion, discontinued exchanging those percentages with the trunk lines for that reason, and my recollection is that either he volunteered the information to me or some objection was made by the trunk lines, and I took it up with him and he explained the reasons why he had done it, and I let it stand, did not change it, because I thought he was right in the matter. Now, that is all the significance that can be attached to the reduction of those percentages it seems to me."

Percentage of reduction not significant.

Relative growth of Pacific Coast territory.

In respect to the completion of the Santa Fe line to Southern California as a factor in the relative reduction of the Sunset takings, everybody on the Coast knows how much more rapidly Southern California grew than Central or Northern California. That is a very important factor in the case. And most people know how the Northwest, Seattle, Tacoma and even Portland and

Spokane grew—much more rapidly than Central California or San Francisco if you like. In 1901 up to and including the time of the stock purchase by the U. P. of S. P. stock, I was the Chief Traffic Officer of the S. P. and I was never called upon by anyone connected with that stock purchase at any time for any information in respect to the traffic takings of the Sunset lines.

Asiatic business overrated.

(3914) In respect to the so-called Asiatic business; and prior to June 30, 1901, I think generally speaking the Asiatic business has always been over-rated. For the year ending June 30, 1901, the tonnage passing through San Francisco in both directions, probably inclusive of Portland, is about 34,000 tons, and the earnings for both U. P. and S. P. about $375,000. The organization of the Portland & Asiatic Steamship Line was made in 1900. The vessels were chartered in 1900, but they did not go on as I recollect until the early part of 1901. I am not sure whether it was before or after July 1st. These are the steamships that were put on subsequently to the vessels operated in that business out of Portland, and which have been referred to in the testimony, the Dodwell Line for example.

Portland line to the Orient, to take care of flour and grain

The line to the Orient out of Portland was primarily established to take care of the flour and grain traffic produced on the line of the O. R. & N. and marketed in Asiatic country, the wheat being produced in most part I think in Eastern Washington, some in eastern Oregon.

Why necessary to provide steamship line for grain and flour.

If that wheat had not moved into Portland and was not milled in Portland, or if it were milled in the interior and had not moved into Portland, it could have gone out via Tacoma or Seattle, the wheat being milled at either one of those points, or the flour going through those points. Many of these grain producing and milling stations in eastern Washington are common between the Northern Pacific and the O. R. & N., and their product was competitive no matter where the ultimate destination of the product was, even for Europe or for Asia. The grain might move into either a Puget Sound port (3915) or Portland, and then go by sea to its ultimate destination.

There were flouring mills at Portland, Tacoma and Seattle. Without an outlet for this wheat and flour from Portland, it would have sought the Orient through Puget Sound gateways; it would naturally move into Puget Sound over the N. P.; and at points which may be said to be local to the O. R. & N. it would have been short-hauled to the first junction with the Northern Pacific and then moved into Puget Sound. My understanding is that the steamship or boat service was established as ancillary or auxiliary to the rail business of the O. R. & N. originating in Oregon and Washington.

I was not connected with the O. R. & N. in 1900, and for some time after going to Chicago knew very little about these local conditions, was not concerned in them; but the question has come up once or twice since as to whether these charters should be renewed, and the P. & A. line continued; and the controlling reason for continuing that steamship line has been that it was necessary in

order to take care of the grain business of eastern Washington and eastern Oregon that might have moved out by Puget Sound and would if we did not have the gateway there. That boat service in and of itself, as distinguished from the rail service, has always been operated at a loss—its earnings have never paid the cost except in one year, the year of the Japanese-Russian war. The Asiatic flour tonnage from the Columbia River was much greater as a rule than the volume of other Asiatic business moving by the port of San Francisco and the port of Portland; that is to say the movement of flour and grain from Columbia River points, which includes Portland, to Asiatic ports, was greater than the total movement of Asiatic business in and out through the ports of San Francisco and Portland, and that was the situation as I now recollect it for the year 1901.

Boat service maintained at a loss.

(3916) The flour movement was always given the preference and that is one reason why it is impossible, with the fleet we have, to use the Portland gateway advantageously for any movement of what we call transcontinental traffic. As to the inward bound movement, there was nothing to bring back except the general merchandise business that was common in so far as its opportunity for movement to all the ports. The sailings of the P. & A. averaged about once a month; the sailings between Yokohama and San Francisco were for many years and at this time not less than every nine days—referring to 1901 and prior to that year—and they were at least that often to Puget Sound and sometimes oftener. The inward bound Asiatic business moved almost wholly all-rail. The San Francisco tonnage moved almost wholly via the Central Pacific and U. P.; the movement through Portland was practically altogether via the U. P. line—speaking with respect to the volume of tonnage that moved to and east of the Missouri River—that was the volume.

Inward bound Asiatic traffic.

(3917) In respect to the inward bound Asiatic business through the Port of San Francisco, the Occidental & Oriental Steamship Company was engaged in the water-carriage part of that business. This steamship company was organized by the U. P. and men controlling the S. P., each interest representing one-half interest in that organization. Its vessels were chartered. I think the first three vessels were chartered from the White Star Line, and were laid on usually between Japanese and Chinese ports and San Francisco, thus making a through line from the Missouri River to those points, that was owned and controlled by the U. P. and S. P. jointly.

O. & O. S. S. line organized by U. P. and S. P.

The O. & O. was formed, with the above mentioned relations of the U. P. and S. P. to it, at a time when neither the S. P., nor the Central Pacific nor its people, had any interest whatever in the Pacific Mail. It was prior to the stock interest of the S. P. in the Pacific Mail. The O. & O. and the P. M. were co-operative in this Asiatic business, the P. M. agencies in the Orient and at San Francisco acting as agents to the O. & O., and their sailing schedules were made jointly in proportion to the number of ships each had in the line.

O. & O. and Pac. Mail co-operative.

U. P. always worked San Francisco port preferentially.

The P. M., the O. & O. and the rail line out of San Francisco through Ogden to the Missouri River were a through line from the Orient to the overland destinations, and prior to and including the year 1901 the U. P. always worked the port of San Francisco preferentially for Asiatic business. If the U. P. had undertaken to force Asiatic business by the P. & A. (3918) it would not have hurt anybody but itself, and I cannot see that it would have any interest to do it. It had its interest in the O. & O. and the U. P. proper had a longer haul into Ogden than it would have had if it took it to Granger—the U. P. proper.

Bearing in mind the conditions concerning the service in the Portland and Asiatic lines, including the Dodwell line, the ships that have been spoken of in the record—bearing in mind the character of service afforded there and the purpose of installing that boat service to meet the demands of the local flour and wheat traffic, it is the fact that during all of that time the U. P. and the S. P. were members of the through Asiatic Line via the port of San Francisco which the U. P. constantly worked preferentially for that port.

Routes from seaboard to Colorado-Utah common points.

The S. P. and the U. P. were engaged in business between Salt Lake City and other Utah common points and the Atlantic Seaboard —the S. P. since about 1888. The U. P. distance to Salt Lake from Omaha is 1,037 miles, from Kansas City 1,161 miles. The S. P., counting the H. & T. C. Ry. as a S. P. interest, would reach to Fort Worth, Texas. From Fort Worth to Denver would be what is now known as the Colorado Southern, and beyond that to Salt Lake City either the Rio Grande Line, or the U. P. From Fort Worth to Salt Lake City by the Colorado Southern and D. & R. G. is 1,308 miles.

(3919) This would be 271 miles in excess of the distance from Omaha to Salt Lake City. From Fort Worth to Salt Lake City by the Colorado & Southern to Denver, and thence by the U. P., it is 1,431 miles or 270 miles further than from Kansas City to Salt Lake City over the U. P. rails via Denver. As between these rail lines there would be the Colorado & Southern and the D. & R. G. on the one hand, and the U. P. on the other, in that business north of Fort Worth. So far as the movement of business is concerned there was nothing to prevent the U. P. from working with any and all lines that would deliver the business to that road at Omaha or Kansas City, and nothing did prevent it.

The U. P. worked with all its connections. That is a matter of public knowledge among railroad men. The S. P. for this Utah traffic was an initial carrier, taking up the business at New York City, thence by its steamers to New Orleans, thence over these lines I have described to Houston, thence over the Houston & Texas Central to Fort Worth; there its interest and control over the traffic ceased and there it delivered the traffic to the Colorado & Southern which carried it to Pueblo or Denver, delivering it to the Rio Grande

at Pueblo and possibly to the Colorado Midland at Colorado Springs or through a connection that would reach Colorado Springs; or to the U. P. at Denver.

(3920) Mr. Love testified that he shipped some business over that route and used the Union Pacific west of Denver, sometimes —not always. The all-rail routes, or the South Atlantic steamship and rail routes would be the initial carriers from New York as against the S. P. boat line on this business. There are the trunk lines, not necessary to name them, through Chicago and their connections through Chicago and to St. Louis, Omaha, and Kansas City, the short line being the Pennsylvania, which might go through Chicago or St. Louis, the average length of the Pennsylvania road and its connections via Kansas City and Omaha to Salt Lake City being 2,624½ miles. Initial carriers.

All these trunk lines made the same rates. There were several ocean and rail lines by way of the South Atlantic ports, like Portsmouth, Newport News, Norfolk, and Savannah. The ocean haul from these lines from New York to the port ranges from 325 miles via Norfolk to 814 miles via Savannah. Then there were the Gulf lines, the Mallory line and the S. P. line, serving New Orleans and Galveston, the ocean haul to New Orleans being 1,800 miles and to Galveston 2,200 miles. I figure the average haul from New York City to Salt Lake City via the South Atlantic ports—Portsmouth, Norfolk and Savannah—at 3,062 miles, or 121 per cent. of the short all-rail haul, and the average haul via the Gulf ports at (3921) 3,965½ miles or 157 per cent. of the all-rail distance and 129½ per cent. of the distance rail and water by the South Atlantic ports. The all-rail rates are the standard rates. All trunk lines make same rates.

The ocean and rail rate by the South Atlantic and by the Gulf ports are the same, but with a differential under the all-rail rates by a scale of 30c for first class. The U. P. service whether in connection with all-rail lines or with broken service, water and rail, begins in either event at Omaha or Kansas City. The distance from Omaha to Salt Lake City on the U. P. has been reduced 29 miles since 1901. Distances compared.

If the S. P. steamship lines and rail lines, referring to the H. & T. C. Railroad, take the freight that freight, when it arrives at the taking point of the Colorado & Southern at Fort Worth, will be 270 or 271 miles farther from Salt Lake City than if it had been delivered to the U. P. at Omaha, and this distance might be still longer according to the route used west, either west of Kansas City or west of Fort Worth. (3922) Salt Lake goods moving from New York via the Morgan Line and the H. & T. C. would, upon reaching Fort Worth, be 271 miles more distant from Salt Lake City than upon arrival at Kansas City to be forwarded over the U. P. to Salt Lake City.

Assuming provisionally that any interest controlling the S. P. should withdraw the ships from the Utah business, there would be the Mallory line which serves that business through the Gulf and

Light tonnage to Utah.

which has been operating continuously between New York and the Gulf ever since a time prior to 1882 or 1883. The tonnage to Utah from New York via the S. P. in 1900 was 1,632 tons. In respect to the testimony of Mr. Love and Mr. McCarthy at Salt Lake City about their use of the Gulf Routes and their respective estimates as to 90 per cent. and 70 to 85 per cent. respectively of their business moving through the Gulf ports to Salt Lake City previously to 1901, of course I can't check those statements; (3923) but from the best information obtainable by us we make out that less than 55 per cent. of the Seaboard business to Salt Lake City moved via the Gulf ports, and the statistics we have since obtained, these 1,600 tons, since that estimate was made, show that certainly that is over the mark very much—55 per cent. I have heard read now the following testimony of McCarthy at Salt Lake: "Q. From your knowledge of movement of freight, what percentage of the business into Salt Lake City from Atlantic Seaboard territory would you say moved by water and rail lines combined, previous to the amalgamation of the Southern Pacific and Union Pacific? A. I should say a conservative estimate would be 70 per cent. Q. I ask what percentage of the business moved by the broken, rail and water lines, either by the Union Pacific line or by the Gulf Route; I mean as opposed to the all-rail route from the Seaboard? A. I answered with that understanding —70 per cent."

McCarthy's testimony as to percentage of seaboard business moving water and rail.

As I read that over, somewhere I found he stated that from 70 to 85 per cent. of the Salt Lake Hardware Company's business moved by the water routes, and I think his testimony went to show that he shipped altogether by the Gulf Routes. I don't know that it is important. However that may be the assignment to the water routes, South Atlantic and Gulf—1900 up to 1901—of a percentage of 90 per cent. or from 70 to 85 per cent. of the Salt Lake business as against the all-rail lines, would be an exaggerated percentage. In respect to the Mallory line, the S. P., the H. & T. C. and the Colorado & Southern would be a line for which the counterpart as a gulf route might be said to be the Mallory line, the International & Great Northern, and again the Colorado & Southern, or the Mallory line and the Gulf, Colorado & Santa Fe, or the Mallory line and the M. K. & T.—several routes could be made from it and any one of them could drop out of the situation and not be missed.

Exaggerated percentage.

(3924) I have not the figures to show the exact proportion of Utah business by broken service as opposed to all-rail lines from the Seaboard territory for the period previous to 1901—that is that we have been able to get. I believe that Mr. McCarthy was for years U. P. agent at Salt Lake, but not when he testified, and Mr. Love is at the head of the traffic, traffic manager of the largest mercantile institution in Utah. I perhaps would oppose with some degree of success the opinion of Mr. Love or Mr. McCarthy as to the general situation, not however when they spoke with respect to their own particular business.

Would oppose opinions of Love and McCarthy as to general situation.

I was not personally in touch with this business nor were they, outside of their own particular business. (3925) My source of information with respect to business not their own would probably be quite as good, and in my judgment would be better and more accurate than theirs. I would say that if Mr. McCarthy were there to-day as the representative of the U. P., my sources of information in my present position or any position that I ever held, even when only representing the S. P., were better than his. Our Salt Lake Agent before 1901 was I think Mr. Gray—we had several.

The Salt Lake agency of the S. P. was seeking the business by the Gulf Route and I presume Mr. McCarthy and his agency, if he was there in that capacity, was seeking the business by the U. P. (3926) I have no personal information as to whether before the "amalgamation" of the S. P. and U. P., the U. P. agency at Salt Lake was working with the Kanawha Despatch, but otherwise I was pretty well posted about the business between the Seaboard and Salt Lake. (3927) The best information we could obtain would make the movement via the Gulf ports 55 per cent. And I made that statement with the understanding in my mind that McCarthy had made it from 70 to 80 per cent., and Love, 90 per cent. The other 45 per cent. moved by the broken rail and water lines, South Atlantic ports, and all-rail, but as to the proportions, respectively, I have not inquired.

About 55 per cent. moved via Gulf ports.

From Fort Worth to Salt Lake via Pueblo and the D. & R. G. it is 1,308 miles, and via Denver and the U. P. 1,431 miles. I think after 1901—whether just before or after I don't know—we opened a line to Galveston. (3928) We simply transferred the regular sailings of freight from New Orleans to Galveston for the rail line, and we have always during certain seasons of the year served the port of Galveston, but the regular line was not established until somewhere about 1901, and it may have been later. The S. P. route from Galveston to Fort Worth was by the G. H. & S. A. up to Houston, a little over 50 miles, and then, as in the case via New Orleans, by the H. & T. C. up to Fort Worth. The route via Galveston lengthened the water haul, and shortened the rail.

Transferred at Galveston.

The P. & A. Line was inaugurated early in 1901, the company being organized in 1900. For a good many years before that different lines of steamers had served the Port of San Francisco, and I presume they connected and interchanged traffic with the O. R. & N. to the Orient. At one time, there was a line put on by Samuels & Co. from Portland to the Orient, doing a through business to the eastern part of the United States—the Samuels line might have made up a through line under contract with the O. R. & N. to the Missouri River in connection with the O. R. & N., Short Line and U. P., but I can't say whether the Samuels Line had any contract with the O. R. & N. (3929) According to my recollection the O. R. & N. and the Samuels Line interchanged traffic with each other. I understand Dodwell had a line on there for a time with an ordinary interchange arrangement with the O. R. & N., but whether there was any contract behind it, I don't know. Whether inward

Portland & Asiatic line.

tonnage from the Orient was handled to the East exclusively over the O. R. & N., Short Line and U. P., I don't know. I would presume it would be, but I do not know. The Samuels line and the Portland & Asiatic had the same ports of call in the Orient as the Pacific Mail, I think, but there may have been some exceptions. An occasional vessel may have gone up to Vladivostok, which the Pacific Mail did not do.

Tonnage before 1901.

I have not accurate information as to the tonnage from the Orient by the Samuels line before 1901. The tonnage I testified to has been collected in view of this suit, that is the reason I happen to know it. The O. R. & N. when it established the P. & A., as I recollect it, put a traffic man over there in the Orient to seek the routing of business this way, soliciting business for that line in connection with the rail lines of the U. P. and sub-lines to Portland in the same ports with the Pacific Mail. (3930) I testified at one time that the line through Portland was in active competition with the lines that I represented through San Francisco. I still say that, in that sense. I have nothing to do with the P. & A. which is run by Mr. Schwerin, as is the P. M. The O. & O. is still running.

The Occidental & Oriental line still running.

Mr. Schwerin has not anything to do with the traffic of the Japanese Lines. The P. M. organization are simply their agents not to secure traffic. I think they have their own independent organization, so far as that. I am giving my best judgment, I don't know. The local agency which is not an agency for the soliciting of traffic, at San Francisco I think is the same for the Japanese as for the other lines. The U. P. I think owns the stock of the O. S. L., and these companies, both or either, own the stock of the O. R. & N.

U. P. has through line from Asia to Mo. River.

(3931) As to Asiatic business via Portland by the P. & A. or its predecessor lines, the U. P. as owner of the O. S. L. and O. R. & N., has practically a through line from Asiatic ports to the Missouri River. If the Asiatic business moved through the port of San Francisco, the Union Pacific had a half interest in the Occidental & Oriental, and the haul from Ogden to the Missouri River. In respect to the P. M., the U. P. interest had no interest in that particular movement except the haul from Ogden to the Missouri River. I do not recall a single shipment inward bound, of Asiatic business by the Sunset Route—am under the conviction that no attempt was ever made to send that business via the Sunset Route.

Atlantic seaboard traffic to Orient small, via Sunset.

(3932) The movement of business to the Orient originating in Atlantic Seaboard territory by the Sunset Route was very small. I don't know that the S. P. organization in New York as a regular thing tried to move the business that way, there may have been cases depending upon the character of the freight where the S. P.'s New York agency did attempt to send the business that way, but it didn't amount to a great deal in my judgment. Cotton moved to the Orient from S. P. territory in Texas through San Francisco, also through Portland and also through the Puget Sound Gateway, but that cotton originated for the most part upon S. P. lines in Texas.

Texas cotton shipments.

Cotton moved to the Orient by St. Paul west over the G. N. and N. P. I doubt whether there was much Texas cotton moved out via St. Paul. I think some of it, very, very little of it went up through Kansas City; for the most part the Texas cotton moved out via Galveston or Houston over our lines. The cotton business to the Orient at one time was quite extensive, all the lines and vessels seeking it, but I might qualify that by saying according to my recollection, the S. P. was only seeking that which originated on its own lines in Louisiana and Texas; I don't think we ever made any attempt to go east of the Missouri River or up into Oklahoma. (3933) I am not so sure that other lines were seeking to take cotton from S. P. territory into Northern ports. I think the rate conditions were such as to send that Texas cotton out southward to the Gulf. I wouldn't be accurate about that, but that is my general impression.

So far as the maintenance of the P. & A. in connection with the O. R. & N. is concerned, the P. & A. was put on primarily for the purpose of moving grain and flour to the Orient, and I understood that was the fact previously. This traffic as I stated was very largely competitive with the N. P. in eastern Washington—quite a considerable business, enough to exceed the total tonnage, in and out, of the other Asiatic traffic. There is some competition between the U. P. system and the N. P.—I am only hesitating to answer whether it is great or small. They compete at Portland, and in some measure although greatly to the disadvantage of the O. R. & N. at Spokane, and there are other points in Eastern Washington where they compete—I believe they compete at Pendleton, greatly to the disadvantage of the N. P. That is about all I can think of. The traffic into Portland I should say is worth seeking.

N. P. and U. P. compete at common points.

I think whenever the N. P. and U. P. serve a common point, they each undertake to get, under fair and reasonable conditions, all they can, (3934) each trying to get the business, and in that particular case, I would say it was competition, and that in some respects the N. P. and U. P. were competitive systems. In respect to the Sunset Route the fact that the water carrier was the initial carrier, taken in connection with all the facts I have connected it with, is very important. I would not be willing to say that in all cases that might be so, but in this particular case that circumstance is very important.

Competition between N. P. and U. P.

The Sunset Route was seeking eastbound traffic in which case the rail line was the initial carrier, and got quite a good deal of business, but we originated that business (3935) and in getting that business we competed in one sense part of the way against ourselves. We tried to move by the Sunset that business which could move with success, not all of the business, there was a great deal of it we didn't try to move that way. The U. P. maintained and still has a traffic agency in San Francisco, and the S. P. had its agency in San Francisco. As to whether I have stated that a soliciting agent was regarded by me as very valuable in securing traffic, I think it would be puzzling to find where I so stated it. I said they were valuable, and I still think so. The agents of the U. P. were

U. P. and S. P. maintain separate agencies in San Francisco.

undertaking to get business over the S. P. line—the joint line of the U. P. and the S. P.

(3936) The S. P. agency was trying sometimes, not always, to move business to the Atlantic Seaboard, where it would properly move that way. We wanted 100 per cent. of the haul, and if we got that business the U. P. did not share in any of that revenue. In respect to my stating in Chicago in reference to the Portland Route, which I have called today an impracticable route, that I wouldn't say the route is impracticable, but I would say it would be inefficient as compared to the all-rail route, I am probably a little more exact in the one case than in the other—I think probably they come to the same end. When you consider the line in its relation to capacity of doing the business or getting the business it is an inefficient line, and I don't know but I would be quite willing to substitute the word "impracticable" for "inefficient" in both cases. It is a matter of opinion, of course. I think it is an impracticable route; so do you (addressing counsel for complainant).

Portland-San Francisco route inefficient.

I think that if the rate was put down by way of Portland, it would go down all along the line. Referring to Blye's figures, those statistics included all business from New York to all of the transcontinental territory from the Mexican Border up to British Columbia and also the Asiatic business. (3937) I stated that one reason for the lesser percentage in 1901 than in the earlier years was because of the great development of the northwest, served by the other lines. I don't know absolutely whether during all these years the absolute tonnage of the Sunset increased or not, it may have done so in one year and fallen off the next. The Sunset Line had the effect of stimulating the lines, particularly east of Chicago, to better endeavors. The U. P. did the best they could, but were handicapped by the indifference of their eastern connections.

U. P. handicapped by connections.

I think they continued to give good service and I don't think they ever ceased to solicit business for the joint line. (3938) I suppose that is taken for granted. We might just as well not bandy words on that. The U. P. couldn't get into California without the use of the Central Pacific; the U. P. agent couldn't solicit business for his line without soliciting for the S. P. If the S. P. secured the business by the Sunset, the U. P. did not share in it. I should think the only way the U. P. could get any revenue out of transcontinental business was to move it over its line and thence over the S. P.

Only way U. P. could enter California.

At the opening of the overland route the time of the Panama route was about 45 days. As to its being the same now, I don't know of any improvement in it, I couldn't be sure about that. I don't know anything about that. My impressions are, if you were to pursue that inquiry of Mr. Schwerin, you would find where the fault was, and that it wasn't with him. The American-Hawaiian Line, as I understand it, gives very much better service between New York and San Francisco, (3939) and I think it would be regarded as an active factor in the competition for transcontinental

business. It is an entirely independent line, having no arrangement with the Transcontinental Lines as to rates.

Wholesale points and rates.

The principal wholesaling points in Northern California are San Francisco, Sacramento, Stockton. They can be reached by water. The San Francisco and Sacramento merchants wholesale north, south and east, the traffic moving out on local distributing rates from Sacramento or San Francisco. Most of the merchants in the territory indicated roughly (by counsel for complainant—"over to Salt Lake perhaps or through Nevada and in California north of the Tehachapi and up into Northern California toward Oregon") get their supplies from San Francisco and Sacramento merchants to a large extent. Between the rates from San Francisco or Sacramento to Ogden or Salt Lake City, and the rates from Omaha to Salt Lake City, there has been a certain relation, at one time 86 per cent., I believe now 75 per cent.—I am not sure (3940) whether 75 per cent. of the rate from Chicago or of the rate from Omaha. This relation of rates is to enable the San Francisco and Sacramento merchants to sell their goods in that market in competition with wholesale merchants anywhere, it might be with the products locally.

Relationship of rates.

"The rates between San Francisco, the California jobbing points, on the one hand, and Omaha on the other hand, to Utah common points, bear a certain relation each to the other, and always have; that is, for a long time. Just what that relation is at present I do not know. I have been out of the rate business, you know, for some time, that is, the technical part of it. But it is not true that there is any material, if any competition at all, between the jobbers of San Francisco and the jobbers of Omaha or any other eastern point, on goods which are manufactured in the East and taken by any route to San Francisco. In the early days there was such a business, but that has been dissipated for a long time. I do not think that the amount of business that is distributed by the California jobbers into Utah, which originated in the eastern territory, for years has been worth noticing. There may be sporadic cases of that, but generally speaking, my statement is correct; at least it represents my belief in the matter."

Coast rates to Nevada and Utah.

(3941) If it should be the fact that Mr. Luce, General Freight Agent of the S. P., Pacific System, had testified concerning the rate from Sacramento and San Francisco to Nevada and Utah points as follows: "Then as I understand it Mr. Luce the San Francisco-Ogden rate was made upon the basis of 75 per cent. of the Missouri River rate and upon the full measure of the Colorado-Ogden rate in order to enable the San Francisco shipper or manufacturer to compete with those other communities into the Utah common territory? MR. LUCE. That was the precise reason. We endeavored to carry that business from San Francisco and Sacramento to Ogden and Salt Lake, instead of its being handled from the Missouri River direct to those points and from Denver;"—I should still let my statement stand as representing my belief and knowledge. If you would get down to the particular business

Mr. Luce was talking about you might find that there was not so much difference between what he said and what I say. I know, as a matter of fact, that there has been a very great change. When I first went to California, California did a great deal of business with Utah over the Central Pacific. With regard to the Portland route to San Francisco by the Union Pacific, and as to whether a mere matter of distance does not always affect the ability to compete, I have spoken in terms of contrast, in days rather than distance—that is what I meant and intended. I said that the five days' additional time, and that is the minimum, required to send business via Portland, was fully one-half of the time required for the total movement from Omaha to San Francisco.

Time rather than distance.

(3942) The length of haul is not always the controlling factor. While the route from Salt Lake via Omaha by the Burlington and the D & R. G. is about 300 miles longer than the U. P. direct line, I would not advance that reason by itself considered, nor would any practical man, but there are a number of considerations that enter in. Those that I gave are more controlling. The main feature of it is that it was not to the interest of the U. P. road to do it. I think it is obvious that they never felt it was to their interest to try to work traffic that way. There is a Transcontinental Freight Bureau organization to-day, practically. The various transcontinental lines, including those to Puget Sound, Portland and Vancouver, unite in a common transcontinental rate, arrived at by conference.

(3943) Naturally the views of the lines to the north Pacific points are considered, and they all have a vote on the question. The same kind of commodities are moved to north Pacific Coast points and to California points, but not always under the same rate; I suppose there are differences today, and there have been times when the differences were quite general. I think class rates are the same, and I believe that more of the commodity rates are alike than unlike, but I am not an authority on that. I should think it is the general policy that transcontinental rates to all Pacific Coast terminals shall be uniform, usually they are, it ought to be so, but we are not always able to bring that about, there is quite a good deal of difference. Portland and San Francisco are wholesaling into the same territory to some extent, but not so much as they were formerly, and that has its influence in keeping the coast rates uniform, I think.

Uniformity in coast rates.

(3944) The representative at these transcontinental meetings of every road that is a member of the association, has his opportunity to express his views and judgment and desires about it, and if it is a question necessary to vote on, he has an opportunity to vote. While the uniformity of rates, determined in conference, reduces the matter of competition very largely to a question of service, solicitation, seeking to get the business by giving good service, by settling claims promptly and doing other things, still in making these rates, even these class rates and these commodity rates, it

remains true that they could not be made so far as California is concerned without the consent of either or both of the terminal lines.

California rates could not be made without consent of terminal lines.

While service and solicitation are elements, and important elements in competition, I wouldn't want to say whether they were all or not In 1885, I believe, the Santa Fe went up to San Francisco Bay over the S. P. line. The lease of the Needles branch to the Santa Fe,—the full transfer could not be made as long as the S. P. bonds were outstanding—put them into Mojave, and they wanted to get into Stockton, Sacramento and San Francisco, and we made a connecting line contract with them for interchange of traffic (3945) as with any other connection with divisions of the through rates and a right upon 90 days' notice or 6 months' notice to enter upon a joint use of that track from Mojave to San Francisco on certain terms.

Connecting line contract, with Santa Fe.

Afterwards they acquired the San Joaquin Valley line and we gave them trackage rights (which are still in force) over the Tehachapi Pass from Mojave to Bakersfield. In 1881, when they connected with us at Deming, they made a through line and sought transcontinental business; and the completion of the Atlantic & Pacific to Needles for the time being made a line of the Santa Fe east of Albuquerque, Atlantic & Pacific west to Needles, and S. P. from Needles on. The Santa Fe line to San Diego was built by some one else who failed and sold the line to some people interested in the Santa Fe, and they finally had to rebuild it and they connected it with the Santa Fe line at Barstow, and sold it, subsequently to 1885, to the Santa Fe.

San Diego line of Santa Fe.

(3946) That line was hawked about for sale. I am not sure that the Santa Fe did not have that line or a connection with it to San Diego before they completed their own line to Los Angeles, but they had an interchange arrangement with us from San Bernardino into Los Angeles, on getting possession of the Barstow Line. In 1870 the first-class rate to California was $6.00 per 100. I don't remember the Panama rate at that time, it fluctuated. As I recollect, the Panama route for some time was able to maintain a pretty steady tariff because of the limited tonnage they could carry in their vessels. The real controlling factor was the Cape Horn route.

The Central Pacific proper was built eastward from Sacramento to Promontory; the U. P. westward to Promontory, where the rails joined. The Central Pacific and U. P. had graded east and west of Promontory, respectively, for some distance, the U. P. almost to Wells. After controversy, the junction point was finally settled as a point 5 miles west of Ogden, and the U. P. gave to the S. P., or Central Pacific a perpetual lease of the 5 miles, so as to make the terminus at Ogden. The Western Pacific purchased in 1870 by the General Pacific and finally consolidated into the Central Pacific Railroad Company, was from Sacramento down through Stockton, Niles, to San Jose.

Building of Central Pacific and U. P.

Extensions of Central Pacific.

Some lines were built—I think they (3947) were independent—from Niles into Oakland, and purchased and consolidated by the Central Pacific people. That was the original Central Pacific line. North from Roseville Junction, 18 miles east of Sacramento, the California & Oregon road, a Central Pacific property, was built and under that corporate title went to the Oregon State Line, there joining the line built south, which had been built originally by Ben Holiday under the title of the Oregon & California. From Lathrop, 10 miles west of Stockton, the Central Pacific built a line down through Merced, and Fresno to Goshen, being the central one of the blue line on complainant's exhibit 107, opposite page 1015 of the record. The eastern line from Merced down to Goshen, was the S. P. line from San Jose south; they expected to build across over there, but never completed that link. The line from Lathrop to Goshen was built very early in the 70's and I understand is still part of the Central Pacific property, and all the other lines are under some other corporate title, I don't know what they are.

So far as the U. P. and S. P. are concerned, I don't remember as to whether substantially all of the cotton that went to the Orient and in the movement of which the U. P. participated at all, went by Ogden and the S. P. through the Port of San Francisco—the bulk of it—I would like to refresh my memory on that between now and the next hearing. I was generally under the impression that the cotton which we moved to the Orient originated on our own lines in Texas and went out by the S. P., and I think that is true as to the bulk of it—that it moved by San Francisco.

Cotton traffic to Orient.

(3948) "Q. Mr. Stubbs, I recall that Mr. Severance inquired yesterday concerning Asiatic traffic, and the comparative proportion of the Sunset-Gulf tonnage in the Asiatic tonnage; and I will begin with a statement which I have marked as Sub-Division 'A'. I will ask you to identify it; and you may indicate the Auditor's statement supporting it, if you have it there. Have you a statement of the west-bound Asiatic tonnage, volume and revenue, U. P. via Portland, and the S. P. via the Sunset-Gulf? A. I have such a statement. MR. DUNNE. It is a very short statement, and I think, if there is no objection, I will ask Mr. Stubbs to read it. MR. SEVERANCE. Who made it? MR. DUNNE. It was made by the Auditor. MR. SEVERANCE. Of what road? By Mr. Young? WITNESS. No, by Mr. Stebbins. Q. You might read that statement, Mr. Stubbs. It is very short, and I will have these papers marked. A. This is a statement of the west-bound Asiatic traffic, and its volume and revenue, for the Union Pacific and Southern Pacific, via Portland, and via the Sunset-Gulf route; movement outward and inward. MR. SEVERANCE. When? WITNESS. For the year ending June 30, 1901. Q. Now will you just read that, please. A. Via Portland, the total traffic was, tons 262; Union Pacific revenue $1,044.27; an average of 22 tons per month and $87.02. Via the Sunset-Gulf route, for the year ending June 30, 1900, (we couldn't get the figures for 1901), total traffic, tons

West-bound Asiatic traffic.

1,098; Southern Pacific revenue $24,789.92; average per month, 91 tons, $2,065.83. Q. You have the Auditor's statement attached? A. I have. That is simply a statement of the information that is embraced in the Auditor's statements that are attached. MR. DUNNE. I want to say, Mr. Severance, that for the Sunset-Gulf we have the Auditor's statement (Mr. Bartholomew's) which I will attach."

(3949) The statement just testified to by the witness was marked Defendants' Exhibit 45, and is as follows:

DEFENDANTS' EXHIBIT 45.

Traffic between Portland and San Francisco.

The statement marked "B" is traffic between San Francisco and Portland, the volume and earnings on the U. P. and S. P. lines, respectively, for the year ending June 30, 1901. The figures are as follows: O. R. & N., tons 76,700; earnings $217,050.55; S. P., 25,879 tons, earnings $110,691.80; a total of 102,579 tons; revenue as described, $327,742.35; being an average per month for the O. R. & N. of 6,392 tons, earnings $18,087.54; and for the Southern Pacific 2,156 tons, earnings $9,224.32 per month; a total average of 8,548 tons per month; total earnings, average $27,311.86 per month. The showing for the O. R. & N. is taken from the Auditor's statement. Because of the total destruction of the records of the S. P. by fire, the showing for the S. P. is an estimate, which assumes that the movement by rail for 1901 was equal to the average movement for the years ending June 30, 1907 and 1908,—an assumption very much against us, and applying a rate of $4.20 per ton, that being the average rate for years last above named.

(3953) The statement just testified to by witness was marked Defendants' Exhibit 46, and is as follows:

DEFENDANTS' EXHIBIT 46.

(Stubbs.)

Lovett's question No. 13.

Sub-Division "B."

TRAFFIC.

Between San Francisco and Portland, Volume and U. P. and S. P. Earnings, for Year Ending June 30, 1901.

O. R. & N. Co.	Tons..	76,700	Earnings	$217,050.55
Southern Pacific	" ..	25,879	"	110,691.80
Total		102,579		$327,742.35
O. R. & N. Co. Avg. Per Month	Tons..	6,392	Earnings	$18,087.54
Sou. Pac. Co. Avg. Per Month	Tons..	2,156	"	9,224.32
Total		8,548		$27,311.86

Authority: The showing for the *O. R. & N. Co.* is taken from Auditor's statement.

The showing for the *Southern Pacific* is an estimate which assumes that the movement by rail for 1901 was equal to the average movement for the years ending June 30, 1907 and 1908 (an assumption very much against us), and applying a rate of $4.20 per ton, that being the average rate for the years last above named. This showing is, *at best*, only a guess, but the guessing is an over estimate rather than an under estimate.

(3954)

Statement of tonnage and Union Pacific System (The Oregon Railroad and Navigation Company's) revenue on freight traffic handled by The Oregon Railroad and Navigation Company's Steamship Line between San Francisco and Portland locally (not including traffic to or from points beyond Portland) for the fiscal year ending June 30, 1901.

Union Pacific System and Southern Pacific Company.

Willamette Valley traffic.

With reference to "Sub-Division 'D,' Willamette Valley Traffic, year ending June 30, 1901. Excluding traffic to and from local points on Union Pacific system, rail and water lines, west of Ogden. Via O. R. & N., tons 37,066; Union Pacific system earnings $120,291.39; monthly average 3,088 tons, $10,024.28. From that is deducted as non-competitive 30,474 tons, the revenue from which is $83,481.02; remaining, said to be competitive, 6,592 tons, earnings $36,810.37; average per month 559 tons, $3,067.53. Via the Southern Pacific, estimated average per month 2,120 tons, earnings $12,196.50. Total average per month, 2,669 tons, earnings $15,264.03. The authority for this is the O. R. & N. Company's Auditor's statement which is attached. For the Southern Pacific, the tonnage is estimated at 50 per cent. more than steamship tonnage, and the earnings are computed at 90 cents per ton higher than the rate via O. R. & N. Co."

Freight traffic between San Francisco and Portland, not competitive.

(3955) Going back for a moment to Sub-Division "B," traffic between San Francisco and Portland, in my judgment that freight business was non-competitive as between the S. P. and the steamship lines. "My reasons for that statement are these: The steamship ser-

vice between San Francisco and Portland is better than the rail service, with this single exception—that the rail service is daily while the steamship service is probably only once in five days. The points of delivery and taking at San Francisco and at Portland favor the steamship line. In the early opening of the Shasta route, we had some ambition to load our trains north bound, and made some attempts to get the business, but found that we absolutely could not take the business as against the steamship lines, but, besides this is the fact that there were outside competitors with the O. R. & N.: other steamship lines, and steam schooners, that made the rates not only unremunerative, but they were unstable; so, after several attempts to join in that business, we quit. And that was before this merger, so-called—before the year 1901."

Referring to the expression "Deduct non-competitive," in subdivision "D," "that business which is deducted represents the tonnage to and from the paper mills at Willamette Falls, 15 miles above Portland, on the Willamette River. Those mills are on the west side of the river, and away from the reach of the railroad. They are served directly by boats. And we have never been able to take any of that business, in fact have not attempted to do it for many years; local to the steamship line," the O. R. & N.

In that same exhibit, is the statement that the tonnage for the S. P. is estimated. That was because of the destruction of the records; and we made the best estimate possible. My best judgment is that the tonnage for the S. P. is estimated at 50 per cent. more than the steamship tonnage and the earnings are computed at 90 cents per ton higher than the rate via the O. R. & N. Company. (3956), is over-stated; that it represents a taking by the rail lines more than the actual, if we were able to get the actual. The difference in the rate is derived by taking the average difference. On less than car loads, the difference in the rates, by sea, by the O. R. & N. steamer and by rail is $1.20 per ton; on carloads it is 60 cents per ton. I have added the two together and divided them equally, giving me the result of 90 cents, which, in my judgment, is against us. The paper testified to by the witness and identified as Sub-Division "D" was marked Defendants' Exhibit 47, and is as follows:

DEFENDANTS' EXHIBIT 47.

NOTES—1. Union Pacific System includes Union Pacific Railroad Company, Oregon Short Line Railroad Company, and the rail and water lines of the Oregon Railroad & Navigation Company. Owing to the destruction of certain records by fire, the total tons carried have been partially approximated. The gross operating revenue is one-half of the gross operating revenue for the year.

2. Southern Pacific Company Lines include the So. Pac. Co.-Pac. System, and the lines east of El Paso in which the Southern Pacific Company has an interest, including the Sunset-Central Lines (so-called), and the Southern Pacific Company's Atlantic Steamship Lines. Owing to the destruction of certain records by fire, the total tons carried and gross operating revenue have been approximated. The gross operating revenue is one-half of the gross operating revenue for the year.

3. Owing to destruction by fire of the records of the Southern Pacific Co. the information in respect to business carried via Rio Grande Western Railway was obtained from the Denver & Rio Grande Railroad Company, successor to Rio Grande Western Railway Company.

4. Owing to destruction of records by fire, the tons carried and freight revenue on traffic from Portland to Ogden, Utah, via Southern Pacific Company, are not included.

5. Railway material is not included.

For Southern Pacific, statement of B. G. Bartholomew, Auditor, Atlantic Steamship Lines, January 12, 1910.

Competitive business to Utah and Colorado.

(3970) With regard to the alleged competitive business as to Utah and Colorado, to which these figures were addressed, "I think I referred to that in my testimony of yesterday. The Southern Pacific did not have any control of this traffic from seaboard to Utah or to Colorado beyond Fort Worth, which is, according to my examination, 270 and 271 miles farther east from these points than Omaha and Kansas City. The competition, if there is such, in the sense of restraining trade is not between the Southern Pacific and the Union Pacific, and I wish to add to my testimony of yesterday this fact: That when the Sunset Gulf route was opened for Colorado business, which was in 1888 or 1889, the Union Pacific owned the line from Denver to Fort Worth; it was then the U. P., Denver and Gulf line; and the line was opened in connection with the Union Pacific road. The Union Pacific road operated that line in connection with the Gulf line, upon equal terms, that is, indifferently as to whether business from the Atlantic seaboard went over that line via Fort Worth or via Omaha or via Kansas City. * * * The rates and divisions in connection with the Southern Pacific's lines from New York to Fort Worth, and, beyond that, the Colorado Southern, have always been applicable to the Union Pacific as a connection, as well as to the Rio Grande as a connection. The business has moved, off and on, by that route.

Recapitulation.

"MR. DUNNE. In connection with these exhibits, Mr. Severance, we will put in evidence a recapitulation which contains, as additional factors, the comparison of the Southern Pacific and Union Pacific revenues and the combined Southern Pacific and Union Pacific

revenues. MR. SEVERANCE. You will do that with Mr. Stebbins? MR. DUNNE. Yes. I will have it marked now. It is really an arithmetical computation. The recapitulation referred to was marked Defendants' Exhibit 54, and is as follows:

Previous to the merger Mr. Edmund Hawley was the Assistant General Traffic Manager of the Sunset and S. P. Lines, located in New York, the general representative of the Traffic Department. In 1901 the U. P. did not own the Union Pacific, Denver & Gulf road, afterwards the Colorado Southern, and had not for several years previous, and had no interest at that time in forcing business over that route.

(3973) I don't think it ever had any interest in forcing business over that route. They would get the longer haul, bringing it from the Missouri River. I gave yesterday the various routes, all-rail, via the South Atlantic ports, and via the Gulf, in respect to the distances and showed what I believed the facts would warrant, that when the freight moved from the Atlantic Seaboard towards either Denver or Salt Lake City when carried or delivered by the S. P. and its allied interests at Fort Worth, it was 270 and 271 miles—and against some lines farther—distant from the destination than when delivered to the U. P. at either Omaha or Kansas City. I claim that that is evidence that the competition, if there were competition, was between the lines via the S. P. steamships and the H. & T. C. up to Fort Worth with the lines east of the Missouri River and not with the lines west.

On Utah business S. P. competed with lines east of Missouri River.

(3974) Referring to Mr. Hawley's testimony as follows: "Q. As to that business in Colorado, were you competing with the Union Pacific? A. Certainly. Q. How is that? A. Surely.

Mr. Hawley's testimony as to competition for Utah business.

Q. Now, as to Utah business, Utah common points, were you in competition with the Union Pacific as to them? A. Yes. Q. Did any of your traffic into Utah common points that was brought around through Texas move to Utah by the D. & R. G. and the Rio Grande Western? A. Yes. Q. Most of it did, didn't it? A. Yes sir."

I think it is merely a question of terms; I do not think he properly conceived what the term "competition," in the sense that we are using it here, meant—in the sense that the law uses it,—you may take it as my legal opinion or traffic opinion, as you please. I do not think Mr. Hawley would have made that statement if he had thought 5 minutes as to the real definition of the term. Mr. Hawley is a very able and competent man. Under him the New York agency was actively soliciting business to Colorado by the Gulf Route. The U. P. always solicited business everywhere for its long haul, as every other line. If the solicitation of business by the S. P. by one route, and by the U. P. by another route makes competition, they were in competition, if that itself would make competition. I stated that in my opinion there was no competition between Portland and San Francisco. As to the paper mills, I testified as follows:

Traffic of paper mill.

(3975) "That business which is deducted represents the tonnage to and from the paper mills at Willamette Falls, 15 miles above Portland, on the Willamette River. Those mills are on the west side of the river and away from the reach of the railroad. They are served directly by boats, and we have never been able to take any of that business, in fact have not attempted to do it for many years—local to the steamship line," the O. R. & N.

Mr. Graham's testimony as to paper mill traffic.

My attention was called to the testimony of Captain Graham as follows: "Q. You spoke about the traffic from the paper mills. That is paper in large rolls, is it not? A. Large and small. Q. Do you seek that traffic? (That is, his boat line.) A. No, sir, we don't care for it. Q. Why not? A. Not enough revenue in it. Q. That paper is destined to what points as a rule, that is, this heavy roll paper? A. Mostly San Francisco. Q. Goes to San Francisco by boat routes, does it not—one by your boat line to Portland? A. Boat line to Portland. Q. And the other by the line over to Pulp? A. To Pulp. Q. Just directly across on the west side of the river: and is there loaded on the Southern Pacific and taken down that way? A. Yes, sir. * * * (3976) Q. By the O. R. & N. So the O. R. & N. moves some of it to San Francisco, which goes out by boat to San Francisco? A. Yes. Q. And the Oregon City Paper Mills sends some of it across the river in their own boat, over to Pulp, and that goes down on the Southern Pacific? A. Yes, sir."

With this testimony in view I fully stand on what I said. As to my knowing anything about this matter personally, I know it only as I know the movement of all the traffic, by reports, and am willing to have my statement stand as a statement of fact in opposition to the statement of Mr. Graham, to the best of my

knowledge and belief. I want to stand by that. In reference to there being no competition between the S. P. rail line and the boat line to Portland, I think what I said would convey the idea which I meant to convey, that the advantages of the boat line over the rail line were such that the rail line could not overcome them, and that the competition between the several carriers on the sea route for that business not only made it undesirable but intensified its undesirableness. We did try to get it, we did compete for it, we tried very hard. In the early 90's, after the opening of the Shasta Route, we tried it out, did a great many foolish things, and we had to learn by experience. Yes sir, we tried very hard to get it, and we demonstrated to our satisfaction that it was impossible for us to do it.

San Francisco-Portland traffic not competitive. Rail line unable to overcome advantages of boat line.

(3977) We did not continue to carry business between San Francisco and Portland up to the time of the "merger"—any more before than since—I think some little jags of business would move that way, no doubt about it; when any man would come down and put it on our platform, of course we would take it. What I mean is, that there was no competition for that freight. We had no active solicitation. In other words, we practically, in our parlance, went out of that business, and we went out of it not willingly any more than we would go out of any other business that was profitable. We ran daily freight trains between those cities; I mean to say that we do not solicit the business now and did not then—no different now than then, that is it.

In 1900 and 1901 my understanding of it, my recollection of it, is that we didn't solicit that business. If the men in immediate touch in the solicitation of traffic there testified that that business was solicited, I would not dispute it. If the Portland merchants testified that that business was solicited by the S. P., I might question them about it. I think they might be a little careless about statements of that sort; I think we are all very loose in our statements at times. I do not mean to be, I am trying to be very exact on this thing. I would not attempt to say that that business was not solicited if a large number of gentlemen of repute in Portland, and in San Francisco too, had testified it was. Business moved that way.

(3978) For a time, we made active efforts to get passenger business over the Scenic route of ours, the Shasta route, and we do to-day, but not in the sense of competing for it with the steamship. "I simply want to put this thing before you as I see it, properly; and there isn't any use of trying to twist what I say. You will get all the facts out of me. There isn't any doubt about this fact—that busines can move, passenger business, by steamship, between San Francisco and Portland, and by rail between San Francisco and Portland. There isn't any doubt about that. But each line has its characteristics, and, as a practical matter, there is no substantial competition between those lines. We pay no more attention to-day, and have not for years, to what the steamship lines do in

Passenger traffic between San Francisco and Portland not competitive.

passenger matters, than if there was no steamship line there. The steamship lines, according to my information—my observation, pay no more attention to what we do. That was not true in the beginning; we didn't know as much as we know to-day. We did a great many foolish things. That whole passenger war, there was no possible excuse for it, unless it might be argued that it was good as an advertisement for the Shasta line; no possible excuse for it. If we had known as much then as we know now, it would not have occurred. That is the idea I am trying to convey to you. You might take the boats off or you might take our rail line off, and, so far as the increase or decrease of the traffic to either one or the other is concerned, I do not think it would be noticeable."

There is a route from Portland to San Francisco by the ships and one by our rail line. The ships of the O. R. & N. and now of the San Francisco & Portland Steamship Company are not the only ships, there are loose ships all along carrying passengers; the steam schooners carry passengers; I will not testify as to the extent between Portland and San Francisco, but they did to a very considerable extent between San Francisco and Los Angeles for a time.

(3979) The O. R. & N. boats sailed once in 5 days. We run three through trains a day from San Francisco to Portland, all an engine can pull, and loaded to the guards with people paying fare. There has been practically no competition between the rail line and the ship line. You might just as well say that our steamship line between New York and New Orleans competed with the all-rail route. It is entirely tourist travel, and there is practically no competition in the sense that we use the word, taking business that the other fellow has.

(3980) We advertise the Shasta Route, "the route of a thousand wonders," as a very delightful way to travel from San Francisco to Portland, by folders, magazine advertisements, newspaper advertisements, every way we know how, very expensive, spent $100,000 in one year in advertising that route. I don't think I have ever seen any advertisement of the boat line from San Francisco to Portland—that is trifling you know. "Q. Now, you do that advertising with a view of getting people to travel over the Shasta route, don't you? You don't do it just for fun? A. Creating travel. Q. People have to travel. You want them to go that way? A. We created all the travel we have on that line. Q. Did you? A. Yes, sir; by our advertising. Q. And from whom did you take it? A. We didn't take, we made it; induced the people to go there. Q. No, but I am speaking of travel between San Francisco and Portland. A. We didn't take it. I don't think we have taken any from the steamships. I think they have as much as they ever had, to-day. Q. Of the local business? A. Of business, whatever business there is. Q. You don't do any local business? Do I understand you that you have not taken any passenger business between those places, locally? (3981) A. I think some of it, yes. Q.

Created travel on Shasta route by advertising.

A great deal of it? Most of it is local, isn't it? A. No, sir, not by any means. Q. A vast amount of it is? A. I don't know. I can't tell you as to the proportions.

"Q. Then, as I understand, to sum it up, your position is that passengers can go either way, but that, so far as you know, there is no effort made by your organization or the steamship organization, to take the business away from each other; is that about the substance of it? A. Barring the nonsensical warfare that we had at one time, just as much now as ever. Q. You did have a warfare at one time? A. Yes. You know that. It is in the record. Q. When was that war? A. It was in the nineties some time? Q. Who ran the O. R. & N. at the time of that war? A. The O. R. & N. Steamship Company, I think. Q. Who was the active man at the head of affairs at that time? Was it Mr. McNeill? A. I think it was McNeill; I am not sure whether it was McNeill or Mohler. Q. And at that time when McNeill had that steamship war with you, or that war of rates with you, you put your rates very low, didn't you? A. I believe they went as low as five dollars. Q. And you published a tariff, in which you stated that your rates were forced by the excessive competition of the ocean lines, didn't you? A. Very likely. I don't remember that. Q. The tariff is in the record. A. Then you don't need my statement. Q. Well, you remember it, don't you? A. No, I do not remember it. Q. You remember the fact that you did put your tariff down as an act of competition? A. I have already testified to that—that we put the rate down to five dollars. Q. As an act of competition, to get business? A. You may say so. Q. Well, I ask you to say so. A. I do say so. Q. Yes, that is what I knew. A. At that time. Q. Now, at the present time, as I understand you, there is no competition, and has not been since that war? Do I understand you to mean by that that you make your rates irrespective of the ocean rates? A. Yes."

Rate war.

No competition since rate war.

(3982) Our rates are not affected by the ocean rates. When I use the term "competition" in all this testimony, I am using it in the sense of a competition that is in restraint of trade. If Mr. Jones, S. P. Freight Traffic Manager, testified that whenever Mr. Schwerin, perhaps because of increased expense in operating boats, put up the rates between San Francisco and Portland, the rail rates went up automatically at the same time, he ought to be a better authority than I as to the facts to-day.

"Q. Would the fact that Mr. Luce testified as follows, in a recent case pending before the Interstate Commerce Commission upon this subject, affect your opinion? He was being examined by Mr. Durbrow: 'MR. DURBROW. And I also understand that from Portland south as far as Albany, the Willamette river is navigable, and that in some measure affects the San Francisco-Portland rate. MR. LUCE. Yes. They have made reference to the rates from Portland. The rates from Portland by rail are held down by the Willamette river as far as Albany, 80 miles. When these rates

Testimony of Mr. Luce before Interstate Commerce Commission.

were first placed in effect the competition was quite severe, but now it is not so severe, though at the same time these rates cannot be raised beyond a normal rail rate of what we would charge if the water had not been there, because it is not our policy after we have met the steamer rates locally to advance them. Q. Now, outside of the competition by way of the inland water ways between San Francisco and Portland and Los Angeles, you have other competition, do you? MR LUCE. The competition of the sea from here to Los Angeles and from here to Portland, which is well known.' (This testimony was given in San Francisco.) 'Q. And is that competition so severe as to have had the effect upon the San Francisco-Portland, and San Francisco-Los Angeles rail rates? A. Certainly it has. Q. So that I understand from you that the rates by way of the Southern Pacific Company from San Francisco to Portland, and from San Francisco to Los Angeles, and in the opposite directions, had forced and compelled a rate dictated by the carriers operating on the Pacific Ocean. A. Yes, sir.'

"That is rather an involved question, but that is the way the question is asked, and he said 'Yes, sir.' Now, does the fact that Mr. Luce so testified alter your view that the railroads are in any way affected now by the ocean rates? A. I do not know what Mr. Luce had in his mind. I do not think I have said that the rail rates were in no way affected by the ocean carrier. Q. I think you did. A. Now, wait a moment, please. There is not any question about the general fact that, the ocean being there, the general scale of rates between San Francisco and Portland, as everywhere else where like conditions exist, is much lower than it would be were no ocean there. Now, if that is the kind of competition that you refer to, we are not talking about the same kind of competition. As I said to you, I am talking continually in this testimony with respect to competition that has the effect or might be reasonably supposed by a court or a jury to have the effect of restraining trade."

The steamship service now, between Portland and San Francisco, is I think every 5 days. (3984) The tabulations, defendant's exhibits 45 to 54 inclusive, have been made up by Auditors and are statements purporting to be made with reasonable accuracy of tonnage movements by different routes, and revenue and all that. I think I may have had something to say with regard to what would be a proper estimate. Where the records were destroyed we made estimates; with that exception, the figures are from the Auditor's records, or have been secured by the Auditors from some source. I personally know nothing about the accuracy of those figures, but in some cases I have joined with others in making up what I regard as a fair estimate. You may say that I personally do not know anything about the correctness of the reports that are made to me, but they are my guide in the conducting of the general business of the company that is put in my charge. The men are available who made them up anyway.

"MR DUNNE. In fact we made up statements for you that you put in the record, Mr. Severance. MR. SEVERANCE. Certainly. Mr. Stebbins verified them. MR. DUNNE. We have verified statements for you. MR. SEVERANCE. Those were verified by Mr. Stebbins and I understand he is to go on the stand. MR. DUNNE. Yes. Q. Mr. Stubbs, in reference to the freight business between San Francisco and Portland and the rates applying by rail, you have stated that the proximity of the ocean was itself a factor, as it always is under those circumstances, in the establishment of the rail rates. Let me ask you, in addition to that, if over and above these two steamships of the O. R. & N., with their five days' service, there are other water craft plying upon that highway between San Francisco and Portland? (3985) A. I understand so. I cannot give you what they were, but I think perhaps it is in the record. Q. Now, I will ask you the question whether the operation of freight trains between San Francisco and Portland, and conversely, prior to 1901, and since this foolish rate war that you have spoken of, freight and passenger, whether the operation of the freight train by the rail carrier between San Francisco and Portland made any substantial impression, as a matter of fact, upon the freight business of the steamship companies? MR. SEVERANCE. I object to that as purely speculative. A. It has not.

Effect of proximity of ocean on rate.

"Q. Passing to the passenger business between San Francisco and Portland, I will ask you the question whether you would have advertised the Shasta Route and expended these large amounts of money in giving publicity to that method of carriage for passengers —if you would not have done those very things if the O. R. & N. Company steamboats had never turned a wheel between Portland and San Francisco. MR. SEVERANCE. I object to that as purely speculative. A. We certainly would have done it just as the D. & R. G. did it for its scenic route. Q. In other words, as you said, you were creating traffic for the line? A. That is exactly what we did. Q. Mr. Stubbs, Mr. Severance has read to you some testimony from Mr. Graham about this paper mill on the Willamette River, which he said was given by Mr. Graham in answer to questions by Mr. Cotton; so I suppose Mr. Severance will not object to a few answers by Mr. Graham responsive to questions put by Mr. Severance. I will read them to you and ask you if they express the situation. I am reading from page 2,693 of the printed record—speaking of sixteen years ago, going back as far as that:

Would have advertised Shasta route regardless of boat line.

"'Was the O. R. & N. Company operating boats on the river at that time? A. Yes, sir. Q. What time did they cease? A. About a year and a half ago, above Oregon City. Q. Do they still run to Oregon City? A. They run to the Oregon City locks, to the paper mills. Q. One boat? A. One steamer called the 'Ruth.' Q. Do they handle any traffic now with the exception of the output of that mill? A. Supplies to the mill and the output from the mill. Q. Do they handle it all? A. Yes, sir. They take all the output; we handle a little of the supplies in. Q. You didn't

Testimony of Mr. Graham as to mill traffic.

participate in the output at all. A. No, sir. (3986) Q. How far from Portland is Oregon City? A. Thirteen miles by river. Q. How far by rail? A. Fifteen by Southern Pacific, and a little over fourteen by Oregon Water Power. Q. Oregon Water Power, an electric line? A. Yes, sir. Q. Does the Southern Pacific reach this paper mill? A. No, sir. Q. How far are they from it? A. Right across the river. The paper mills are in the locks and they are inaccessible even to a team. Q. The product can only come in by boat? A. Yes, sir. Is that your understanding of the situation there?"

Outside boats.

I cannot say as to the number of outside steamers and schooners, but we can get them if you want them; I think Mr. Miller has them. (3987) If in 1901 the only other regular boat line, outside of the O. R. & N., was the California & Oregon Coast Steamship Company, referred to by the witness Baumgartner, and they were under agreement to maintain rates made by the O. R. & N., if that was the only boat and those facts were true, it would be a very much neutralized competition. I do not mean to be understood for a moment as saying that that would be the only water craft plying between those two ports; I said, if that was the only line.

Spence.

(3987) LEWIS J. SPENCE.

Traffic representative of S. P. in New York.

I reside at New York and represent the S. P. as General Eastern Freight agent of the rail lines, and General Freight Agent of the Atlantic Steamship Lines. (3988) Since October 7, 1885, have been connected with the S. P. as stenographer, secretary, chief clerk, and eastern freight agent in the office of the General Eastern Agent, and the Assistant General Traffic Manager at New York; and since March 1, 1902, as General Eastern Freight Agent of the S. P. and the P. M., O. & O., and the Japanese Lines; and since February 15, 1906, as General Freight Agent of the Atlantic Steamship Lines of the S. P.—my jurisdiction covering Atlantic Seaboard territory in respect to the S. P. and the Pacific Steamship Lines, and covering also freight traffic between New York and the Gulf ports, New Orleans and Galveston.

Atlantic Seaboard territory defined.

This Atlantic Seaboard territory embraces all territory east of a line from Toronto, Canada, through Buffalo, following the western boundary of New York State, through Pennsylvania, just east of Pittsburg, Wheeling and Charleston, West Virginia, to the southern boundary of Virginia at about Bristol, Tennessee, and north of a line drawn thence east by the southern boundary of Virginia to the Atlantic Ocean. When the Sunset Route was opened in 1883, the steamship service consisted only of a line between New York and New Orleans, or more correctly, Algiers, across the river from New Orleans; Galveston came later.

(3989) The maximum sailings were three a week. Service between New York and Galveston began August 2, 1902, with minimum sailings of 3 a week, 2 steamers being dispatched weekly between New York and Algiers, and 3 weekly between New York

and Galveston, making 5 a week. Since August 2, 1902, when the fleet consisted of 16 steamers, three passenger and freight steamers have been constructed at a cost of about $3,000,000, a lighterage fleet at New York has been acquired and constructed at a cost of half a million dollars and there are now under construction four new freight steamers at a cost of about two and a half million dollars. And since August, 1902, we have established expensive wharves and terminals at Galveston for the accommodation of traffic handled through that port, and within two months we expect to remove to more commodious wharves in New York at an approximate increased rental of 100 per cent. There are now 19 steamers in service. Between New York and New Orleans we have passenger and freight steamers, between New York and Galveston, freight ships exclusively. The ships now in the fleet will take average cargoes of merchandise of from 2,500 to 3,000 tons each. Ocean fleet and service of Sunset.

(3990) Between the Atlantic Seaboard and Mississippi, the east coast of Central America, Louisiana, Arkansas, Texas, Oklahoma, Mexico, New Mexico, Arizona, California, Colorado, Utah, Oregon, Nevada, China, Japan, the S. P. Steamship Line—the Morgan Line—has been engaged in traffic. The U. P. has never engaged in traffic between Atlantic Seaboard territory and Mississippi, the east coast of Central America, Louisiana, Arkansas, Texas, Oklahoma, Mexico, New Mexico, or Arizona, nor can I conceive of any way in which they could. During the fiscal year ending June 30, 1900, 60.46 per cent. of the total east and westbound seaboard business of the Morgan Line was represented by this territory which I have eliminated so far as the U. P. is concerned, and for 1898 the percentage was 60.21. I have been in this Sunset business over 25 years. I have heard recently, never until recently, of the so-called "Portland Route," by way of Portland and the ocean to San Francisco. Traffic limitations of U. P. Never heard of Portland route until recently.

It has been a part of my duty to keep track of the lines engaged in the same business that we are and I never heard of that line being engaged in traffic between Atlantic Seaboard territory and California until recently. The question of wharf delivery at San Francisco would be a very important factor in connection with the practicable or impracticable character of this Portland route.

(3991) In taking freight to a port reached by steamship lines at equal rates from an all-rail line, we are never able to get a substantial share of the traffic because of the convenient facilities for delivery offered by the all-rail lines with their side-tracks, spurs, and delivering depots, usually more than one in a town and convenient to the consignee or shipper. There is considerable traffic from the Seaboard to California, or conversely, that would not stand transportation by the Portland route—for example harnessed pianos from New York—the cheap pianos are harnessed right in the freight car and cannot move by water at all or part water and rail. Take the immense cracker business of the National Biscuit Company, it is put up in such frail form of package that they ship Certain commodities not adapted to water transportation.

exclusively by all-rail routes to enable them to load in the original car and send through to destination. Take earthenware and crockery from Trenton, New Jersey, packed in the cars in straw, not in packages—it cannot be handled by the water and rail route. Those are fair examples.

Puget Sound gateways.

I never knew of any business in a substantial sense going to California territory by the Pacific ocean through the Puget Sound Gateways. There was traffic which moved through Vancouver when they had differential rates into San Francisco, but it was not substantial as compared with the total traffic and the movement absolutely stopped after the differential was withdrawn. (3992) Assuming that the S. P. Lines in California had stopped at the Southern boundary of the State, and that the S. P. had not been in the management of the entire line from Coast to Coast, the Sunset Route in my judgment would never have been able to secure a substantial share of the traffic between Atlantic Seaboard territory and California,—say, that the S. P. short haul had been to Los Angeles or to the Southern boundary of California and its longer haul to Ogden. If the influence of the S. P. on that traffic had been exerted in favor of the Ogden haul, the Sunset route could never have made the progress it made in getting business. The S. P. would naturally have preferred its long haul.

The volume of the Sunset traffic to and from the southwestern territory described by me is what has enabled that line to maintain sufficiently frequent sailings between New York and the Gulf to remain an important factor in the California business. Apart from that southern and southwestern business, and looking to the California business, including Los Angeles and interior points not available to the Portland Route, the California business of itself would not have supported more than one-third of our steamship service in operation between New York and the Gulf. In all the 25 years of my railroad experience I never knew of any business to move to or from California by that Portland route.

California traffic in itself would not support more than one-third of Morgan line business.

Never knew of any business via Portland-San Francisco route.

Blye statements.

(3993) Touching the Blye statements, showing a decline in the westbound tonnage percentages of the Morgan Line from 77.17 in 1895 to 39.6 in 1899, and 38.6 in 1901, those statements cover business from New York City only. These statistics included tonnage from New York City by the Sunset Route and by the Trunk Lines respectively, not only to California but to Nevada, Western Idaho, Oregon, Washington, and British Columbia. The Sunset traffic in which we are substantially engaged, was practically confined to California. There was an enormous growth of traffic in the Northwest, and almost all of it was reflected in the tonnage of the Trunk Lines, which very materially increased their percentages, while the Sunset percentages were not correspondingly increased.

Statements had been furnished of Pacific Coast tonnage for a number of years—they were not begun by me—and after I took charge of the office, succeeding Mr. Hawley, March 1, 1902, I could

see no value in them to us, whatever value they had for the Trunk Lines, because they did not reflect the true situation, the percentages of the Trunk Lines increasing by this expansion of northwestern traffic in which the Sunset did not participate; and the statements appear to me to serve no purpose whatever, and as a practical proposition I simply cut out the clerical work of my office, discontinued the statements entirely of my own initiative and responsibility; in fact I did not report to anybody that I had done so, I just did it.

Increase in Sunset tonnage.

Speaking absolutely, between June 30, 1900, and June 30, 1907, there was an actual increase in the east and westbound tonnage of the Sunset from 204,827 tons for the year 1900, fiscal, to 348,673 tons for the fiscal year ending June 30, 1907, an increase of 143,846 tons, or about 70 per cent., based on actual takings.

Ocean lines to California.

The clipper ship service around Cape Horn from the Atlantic to the Pacific was superseded by steamships through the Straits of Magellan on October 15, 1900. Between the year 1900 and the year 1902, the Panama Railroad Company was giving service between New York and California. (3994) It maintained a service by the Isthmus,—a complete service of its own between the Atlantic and Pacific Coasts, composed of the steamships between New York and Colon operated by the Panama Railroad, the rails of the Panama Railroad across the Isthmus, and steamships chartered and operated by the Panama Railroad between Panama and San Francisco. Between December 15, 1900, and June 11, 1902, the P. M. was not engaged in transcontinental business between the Atlantic and the Pacific Coast. A five year contract between the P. M. and the Panama Railroad expired December 15, 1900, and between that date and June 11, 1902, the Panama Railroad operated its own steamers on both sides of the Isthmus, and the P. M. was out of the business. The P. M. was still engaged in business to and from the west coast of Mexico and Central America, what may be called its local business.

Between Dec. 15, 1900, and June 11, 1902, the Pacific Mail was not engaged in transcontinental business.

American-Hawaiian line

The service by steamships through the Straits of Magellan was inaugurated in 1900, and continued until January 1, 1907, when it was superseded by service by the Isthmus of Tehuantepec—composed of the American-Hawaiian Steamship Line on the Atlantic side, the Tehuantepec Railroad across the Isthmus, and the American Hawaiian Steamship Line on the Pacific side. (3995) As the S. P. agent in New York City, I represent one line from New York to San Francisco, and another line from Ogden to San Francisco; and there is a U. P. agent in New York, maintained there as long as I can remember. Since the stock purchase of February, 1901, there has been a consolidation of agents in some sections, but the separation in New York between the U. P. agent and the S. P. agent has continued ever since the stock purchase. As between the U. P. agent and the S. P. agent in respect to transcontinental business from New York to California, my first duty would be to work preferentially for the long haul. The U. P. agent would be solicit-

Witness represents line, Ogden to San Francisco.

Works preferentially for the long haul.

ing California traffic for the U. P. line to Ogden, and for the S. P. line thence to California.

All rail traffic, New York to California.

I have never known the entire New York business to be attracted to the decks of the Morgan Line ships—a substantial tonnage moves west over the Trunk lines to California (the amount is shown in the record), which would leave the Trunk lines at Chicago or St. Louis, and if it did not move by the Omaha and Ogden gateways it would have to go over the Santa Fe, from Chicago to California, and if it moved by the Rock Island, it would go through the El Paso gateway, and then pass over the rails of the S. P. into California. (3996) The chief duty of the U. P. agents in the Atlantic Seaboard or for that matter of any other agent in what you might call a foreign territory—a territory not reached directly by his own line—is to promote the relations of his company with the connections. The U. P. agencies in Atlantic Seaboard territory serve the purpose of maintaining harmonious relations with their connections—cultivate them, if you please—and the benefits derived therefrom by the U. P. are also derived by the S. P. line from Ogden to California.

Duty of agents.

Of traffic originating on the Trunk Lines and going over the Santa Fe from Chicago, neither U. P. nor S. P. gets any part of the haul. Every pound of business and every dollar of revenue in respect to California business that the U. P. solicits is as well for the S. P. line as for the U. P. The percentage of the total tonnage of the Morgan Line going to California for the fiscal year ending June 30, 1898,—as related to the total business of the Morgan Line --was 37.31 per cent. This includes Nevada business which is very small, trifling—the Nevada business taken by the Sunset line has never amounted to anything. (3997) For the fiscal year ending June 30, 1900, the corresponding Morgan Line percentage was 34.79. These percentages include business to and from.

All the California traffic obtained by U. P. is for the S. P. as well.

Percentage of Morgan line traffic going to California.

Colorado and Utah traffic.

Of the total business to Colorado and Utah originating on and east of the Missouri River, about 22 per cent. originates in Atlantic Seaboard territory. During the calendar year, 1900, the westbound business to Colorado from Atlantic Seaboard territory was divided, all-rail 57 per cent., Atlantic port routes 7 per cent., Gulf routes 36 per cent.—in those days there was comparatively little business by the Atlantic port routes. For the calendar year 1908, the division was, all-rail 41 per cent., Atlantic port routes, 43 per cent., Gulf routes 16 per cent. The figures for Utah for 1900 are not accessible. For the calendar year 1908, the westbound Atlantic Seaboard business to Utah divided, all-rail 45 per cent, Atlantic port routes 30 per cent, Gulf routes 25 per cent, the Atlantic port routes and Gulf routes together representing (3998) about 55 per cent. to Utah, and 59 per cent. in respect to Colorado. For the fiscal year ending June 30, 1898, our tonnage—Morgan Line westbound—for Utah was 1,665 tons, our eastbound tonnage 97 tons, or a total of 1,762, of which the revenue westbound including the Morgan steamers and the rail line New Orleans to Fort Worth was $25,123.70.

and on eastbound $1,393.65, the total to Utah being $26,517.35—for the year. For the fiscal year ending June 30, 1900, our westbound Atlantic Seaboard tonnage to Utah was 1,632 tons, (3999) eastbound 180 tons, total 1,812 tons; westbound revenue, New York to Fort Worth $24,372.91, eastbound $480.57, total $24,853.48.

Tonnage and earnings on Colorado and Utah business unsubstantial.

Although we have not the figures for comparative distribution of percentages among rail routes and broken service lines into Utah for 1900, we have this expression of the tonnage and earnings of the Morgan Line just given for 1900, as well as for 1898—so that the business by that line was very unsubstantial. Our westbound tonnage from Atlantic Seaboard territory to Colorado for the fiscal year ending June 30, 1898, was 4,525 tons, and eastbound 1,384 tons, total 5,909 tons; earnings New York to Fort Worth steamship and rail, westbound, $46,733.24, and eastbound, $9,580.93, total $56,314.17. These figures are for 12 months. The corresponding figures for the year ending June 30, 1900, on westbound tonnage are 14,673 tons, eastbound tonnage 6,938 tons, total 21,611 tons; westbound earnings, steamship and rail, New York to Fort Worth, $166,255.26 and eastbound $35,917.89. Total, $202,173.15—covering the entire period of 12 months.

Union Pacific-Gulf route.

(4000) The U. P. Route in respect to the Gulf consisted and now consists of the S. P. Steamship Line, New York and Galveston, the G. H. & S. A. railroad, Galveston-Houston, the H. & T. C., Houston-Fort Worth, the Colorado & Southern, Fort Worth-Denver, and the U. P., Denver-Utah. The Colorado & Southern is the north and south line in this Gulf business, and was operated by the U. P. prior to the Receivership, prior to 1898, known then as the Union Pacific, Denver & Gulf. The U. P. lost that line through these financial reverses, but prior to the difficulties of the Receivership, the U. P. was operating the Colorado & Southern by the name just mentioned, between Colorado and Fort Worth with rail connections to the Gulf and steamship to New York, and that is precisely what the Union Pacific is doing now. (4001) Instead of being interested in the Colorado & Southern, it is now said that the U. P. is somewhat interested in the S. P. which was the water end of the transaction.

Map showing lines from Seaboard to Colorado and Utah.

I have prepared a map reproducing the lines from the Atlantic Seaboard to Colorado and Utah during the year 1901 as they actually exist, except that for simplicity—where they intersect and cross each other—they are drawn straight, side by side, so that each will show, practically to a scale, in fact, traced as far as possible. The red lines represent the initial part of every differential line to Colorado and Utah—steamship lines, and the blue lines represent the rail connections of the water lines from the ports as well as the all-rail lines from New York and Boston to Colorado and Utah, the South Atlantic port and Gulf port routes being exhibited as they existed in 1901. The Mallory Line, which is shown on that map from New York to Galveston, has been engaged in the

water and rail business from the Seaboard to Colorado and Utah longer than the Morgan line.

Morgan and Mallory lines.

(4002) The Mallory had operated longer than the Morgan Line —a great many years—between the Atlantic Seaboard and the gulf ports, and has been operated uninterruptedly since 1901. In respect to the relative falling off of the percentages on the Sunset line in the taking of the seaboard business to Colorado and Utah since 1901, as I have developed in my figures, the Mallory Line has been similarly affected during the years that followed between 1900 and 1908 or 1909, during that decade—there has been more than a corresponding decrease in the business of the Mallory Line to Colorado and Utah; there has not been anything singular or peculiar about the Morgan Line as distinguished from the Mallory Line in that aspect of the case. I have prepared a diagram of the principal available routes between New York and Boston and San Francisco as they existed during the year 1901.

Decrease in percentage of Colorado and Utah business.

Maps showing principal routes to California.

"It does not represent every conceivable route to California: it represents just what it states—the principal available routes, which means the avenues of traffic which are used daily for the business between the seaboard and California. The green lines represent the railroads operating between New York and Boston on the one hand and San Francisco on the other, with the exception of the dotted green lines which represent the steamship lines which operated and engaged in California business, to the Virginia ports, to Algiers, Louisiana, and to Galveston, Texas, in 1901, and call attention to the fact that the same number of water routes are not shown on this sketch as on this other sketch because it is confined to the routes that were engaged in the California business. It shows, in addition to those indicated by the green lines, additional routes—it states, rather, additional routes, 'A' by American-Hawaiian Steamship Company by Magellan, and 'B' by Panama."

These maps to the extent that they go are correct representations of the available routes on the business specified therein, and these are the various lines having through arrangements.

(4003) These lines form through routes; every line between New York and Buffalo can handle traffic over every line operating west of Chicago, so that the actual routes represented by this map would multiply into thousands. The Atlantic Port routes have rail connections to the distributive territory in question: the Old Dominion line to Virginia ports, and the Mallory Line and the Morgan line to the Gulf ports have rail connections with which they are engaged in the California business. This multiplication of routes applies as well to the map of Utah and Colorado routes as to California routes. I have not undertaken to express that multiplication of routes, it would be an interminable job. I have endeavored to make that diagram as simple as possible, and to represent the avenues of traffic that are used. (These maps are Defendants' Exhibits 55 and 56, and face page 4003 of the record.)

Multiplicity of routes.

For the fiscal year ending June 30, 1900, the westbound tonnage

of the Morgan Line to Portland was 1,372 tons, eastbound from Portland 2,026 tons, total 3,398 tons. This total represented 58-100 of 1 per cent. of the tonnage of the Morgan Line. (4004) For the fiscal year ending June 30, 1898, the corresponding figures are for westbound 3,483 tons, eastbound 1,260 tons, total 4,743 tons; this total representing 9-10 of 1 per cent. of the Morgan Line tonnage. For the year ending June 30, 1900, the westbound earnings to Portland were $31,130.34, eastbound $40,553.07; total $71,683.41 for the full period of 12 months. The gross freight revenue of the S. P. for that fiscal year was $42,851,952. The entire system earnings upon the Sunset traffic between Atlantic Seaboard and Portland represented 16-100 of 1 per cent. of the gross freight earnings of the S. P.

Portland tonnage and revenue via Morgan line.

The Sunset Route never did participate in the inbound Oriental business, it may have carried 50 tons in a year, or something like that, but not any appreciable amount. As to the outbound business the principal transportation facility for the business originating in Atlantic Seaboard territory, excepting during the Japanese War, was the Suez Steamship Lines, and this was true up to and including 1900 and 1901. (4005) The outbound business from the Atlantic Seaboard, of Oriental destination, going by the Sunset, went entirely through San Francisco. For the fiscal year ending June 30, 1900, the tonnage to China and Japan would represent 39-100 of 1 per cent. of the Morgan Line westbound tonnage, and a considerably less per cent. of the combined east and westbound. These fractions get so small that I almost lose them.

Sunset never participated in inbound Oriental business.

Volume of outbound Oriental tonnage.

The earnings upon business between the Atlantic Seaboard and these Oriental destinations via the Sunset Route, for the fiscal year ending June 30, 1900, were $24,998.24, representing 5-100 of 1 per cent. of the gross freight earnings of the S. P. for the same period. Of the gross freight earnings of the S. P. for the fiscal year ending June 30, 1900, the earnings accruing on the total Colorado and Utah business represented 53-100 of 1 per cent., on the Portland business 16-100 of 1 per cent. and on the Oriental business 5-100 of 1 per cent. (4006) Referring to the testimony of complainant's witness White, that in 1900 the Morgan Line had 65 commodity rates lower than the all-rail rates from the Seaboard to California, and that in 1909, or up to date as he expressed it, there were 26 or 29, I have examined the tariff to ascertain if that statement was correct. The figures for the first period were substantially correct, we make it 71 where he made it 65; the figures for the more recent period were for some reason very inaccurate.

Earnings on Oriental business.

Testimony of witness White as to number of commodity rates lower than all-rail rates.

I have compiled it and it can be checked by the transcontinental tariff to which reference has been given, the I. C. C. Number—a list of the actual items that are in effect lower from the Morgan line pier than the all-rail routes from New York to California terminals, and it shows 77 items at the present time. I made it up myself and know it to be correct. It is an abstract of the Tariff.

The paper from which the witness was last testifying was marked Defendants' Exhibit 57 (Spence), (4007) and is as follows:

DEFENDANTS' EXHIBIT 57.

(Spence.)

Rates in effect Jan. 25, 1910, in trans-continental freight bureau west-bound tariff No. 1-J (R. H. Countiss, Agent, I. C. C. No. 904) to California terminals.

Effect of broken service.

There are quite a number of commodities that cannot be moved by broken service. Everything can be moved all-rail, some things cannot be moved by water and rail. The bulk of the westbound traffic out of New York can go boat and rail. The Canadian Pacific movement was not substantial at the differential tariff. I have not looked up the tonnage figures recently, but when the line was in operation we used to get copies of the manifest. (4010) I refer to seaboard territory, know nothing of what they have taken west of the seaboard zone. The traffic in this zone was general in character, and they took about the same classes of commodities as the Morgan Line. The increase in Sunset tonnage to California points from January 30, 1900, to January 30, 1907, ceased after the opening of the Tehuantepec Route, a quite successful competitor of the rail lines and Sunset, and Sunset traffic has fallen off I think in the last few years about 10 per cent. per annum, attributable partly to the American Hawaiian competition and partly to improved service all-rail.

(4011) I only know in a general way of the American Hawaiian tonnage, we don't get their original manifests. It is part of our business to find out if possible the sources of traffic and amount carried by competitors. It is one of the values of an agency to gather information for the management which the agency may use in soliciting business—I should say the information was gathered chiefly for the benefit of the management, it keeps you posted—it would be useful in trying to get business of a corporation whose product could go over the Sunset Route. I would go after the traffic, the ordinary case of a soliciting agent. The chief duty, one of the most important duties of the agent of other than initial lines is to maintain relations with connections.

Soliciting agents.

(4012) At places like New York City, Pittsburgh, Chicago, Cincinnati and other large centers, where traffic originates, the lines other than the initial lines have soliciting agents in the field who personally call on shippers and solicit their traffic, endeavor to get the routing over their lines whatever initial line may take it. I think the agents of a carrier in a foreign territory are expected to promote relations between the shippers and their company, so that shippers will not object to shipping over their lines. To some extent they get their friends among the big shippers, whatever the initial line, to direct its shipments to pass over their lines. If I was representing a line in a foreign territory I should spend most of my time in cultivating my connections—that is my view of it. I know that agents for western lines go to big shippers all the time seeking their business, and I know that they spend a lot of time cultivating their connections—both these things are their duties.

Value of cultivating connections.

(4013) To some extent an agent having business originating west will give some of that business to lines reaching New York and in return get the assistance of the local lines in routing business west. But what I mean by cultivating their connections is this. That there is more of the results of good fellowship between the agents of carriers than between the agents of carriers and the shippers—I can have a friend on the connecting line that will give me more business than half a dozen shippers. We have five soliciting agents in New York for the S. P., and my guess would be that the U. P. have about that number. We work together in New York, the U. P. and ourselves. When I was with Mr. Hawley, the U. P. men solicited business here for the U. P. from shippers, and in endeavoring to route business by the Sunset we would meet the efforts of those men to route business by the U. P.

U. P. and S. P. agencies work together in New York.

(4014) In the early days just after the Sunset Route was opened, Mr. Hawley's estimate of the percentage of the total movement from New York proper to California by the Sunset Route, 85 per cent., that it ran as high as that at times, would accord with my recollection. I couldn't estimate it in 1900, that is, taking out all the other business. It was a substantial business, we have expressed it here in tons in 1900 and I think in cash.

Sunset earnings on east and westbound California business.

(4015) The Sunset earnings for the year ending June 30, 1900, on westbound California business represents $2,406,915.05, eastbound $1,658,568.15; total $4,065,483.20. These are the Auditor's figures, from the Auditor of the Steamship Line. For 1898 the corresponding figures are westbound $1,752,411.90, eastbound $1,687,030.25; total $3,439,442.15. Since 1900 the development of California has been very marked, I think traffic between New York and California has increased enormously—I have no means of estimating the percentage of increase, I know in a general way of the development. The citrus fruit movement of California eastbound does not come by steamship. (4016) But ordinary California products do, dried fruits and canned goods, everything of that sort, but not any vegetable movement, such as celery and that sort of thing.

Panama road and Pacific Mail.

From December, 1900, down to 1902, the Panama road had its own ships on the Pacific side, up to the time they made the new contract with the P. M., June 11, 1902. I don't think, during the time they operated their own ships a much larger traffic moved by the Panama route than since, unless it would be that they chartered ships capable of carrying certain classes of traffic that the P. M. ships were not large enough to carry, or something of that sort, but I don't remember that a great deal more business went then by the Panama Route than now. We meet the Panama Route in competition here, the Panama Railroad agency, find it rather active.

Time of shipments, all routes.

(4017) I never represented the P. M. Isthmus Line. It does not maintain an agency here for that business, but depends upon the Panama people. The usual Sunset time, New York to San Francisco, trains running on time, is 15 to 16 days; the Panama time about 35 days. It may be nearer 45, I don't think it is about 30 days on the other side of the Isthmus—our information on the subject is what we get from intercourse with people who use the line, and my understanding from them is that it is about 35 days. The Tehuantepec time is about 25 days. The all-rail time is about the same as the Sunset, 16 or 17 days, making better time very often—I am trying to give an average; I don't think they make slower time a good deal of the time. The time is about the same by all of the lines—there are only two routes practically into California, the Southern Pacific and the Santa Fe, and their time is about the same.

If witness cannot get business via Sunset, he solicits it via Ogden.

(4018) Up to two months ago, the San Pedro was a delivering line into California, and the time into Southern California is about the same by the San Pedro, Sunset, and Santa Fe. Business does also move over the Ogden Route to Southern California, but I don't think they can make as good time, it is a pretty long line. I route business via the Sunset, not aiding the Ogden route as against the Sunset, representing the S. P. only; and if we can't get the Southern California business via the Sunset I usually try to get it via El Paso; in other words I have got to use a route that can compete with the Santa Fe.

The Sunset makes 3 or 4 days better time into Los Angeles than the Ogden route. San Francisco time as between the Ogden route and the Santa Fe is about the same. The Ogden line is not able to go down south and meet the Santa Fe time—I think that stands to reason. In 1898, the Sunset carried from all the Seaboard territory 37.31 per cent. of the California and Nevada business—I mean that percentage was the percentage of the total business of the Sunset route; that is something over a third of the whole Sunset business found origin or destination in California and Nevada.

Sunset faster to Los Angeles.

(4019) In 1900 it was 34.79 per cent. Under the method of doing business at that time we had to absorb the rail rate into the New York pier, what we call the local rate. Under the published tariffs of to-day they are published in the tariff. It is on a percentage basis. Generally speaking, the rate from the Seaboard to California by Sunset, is the same as all rail with these exceptions—from the actual point of origin to California. Whether you absorb it out of the rate or call it a division with the originating line does not make any difference so far as the total rate is concerned; it is absorbing somebody's local. We stopped doing that when we had to issue joint tariffs under the Hepburn law, but it amounts to the same thing so far as the integrity of the through rate is concerned.

Sunset rate same as all-rail rate.

Twenty-two per cent. represents the entire percentage of the Colorado-Utah traffic originating in Atlantic Seaboard territory; 78 per cent. originates west of Buffalo and Pittsburgh and up to the Missouri River. In 1900, of the westbound business 57 per cent. went all-rail into Colorado, 7 per cent. South Atlantic ports, and 36 per cent. Gulf routes. (4020) We have not the percentages for Utah for 1900, the Utah tonnage was not compiled in 1900, there was no Bureau to compile it; we have our own records, of our own Auditor, but not the comparative records. The Utah business, South Atlantic and all-rail, was not compiled by a Bureau until later as to all lines; hence we cannot give it for 1900.

Colorado-Utah traffic.

The revenue we got from business by the Gulf Route in 1908, our actual business as compared with 1900 is considerably less; there is more movement by the South Atlantic ports and the U. P. and other lines, and the Gulf tonnage has decreased, actual movement as well as percentages; not only the movement by the Morgan Line, but the movement by the Mallory Line; that is to say the entire movement by the Gulf Route has materially decreased. (4021) The Mallory Line decreased more than we did. I have no figures for the Mallory line preceding 1902, but in 1902, the Mallory tonnage to Colorado was 7,812 tons, in 1908, 2,412 tons. To Utah in 1902, 4,884 tons, and in 1908, 1,374 tons The Mallory Line operates into Colorado over the Santa Fe through from Galveston; over the M. K. & T. to Fort Worth in connection with the Colorado Southern and with the Rock Island; and via the International Great Northern from Galveston to Fort Worth in connection with the Colorado Southern and Rock Island.

Movement by Gulf routes has decreased.

Mallory line.

To Utah their traffic naturally follows either the Colorado Midland and the Rio Grande Western, or the D. & R. G. either through Colorado Springs or Pueblo. The Mallory Line is an independent line not affiliated with any railroad, now a constituent part of the Atlantic, Gulf & West Indies Steamship Company, and it interchanges business with all-rail lines, interchanging with us at Galveston. It is not affiliated with any through line to the Pacific Coast; it takes Pacific Coast business in connection with the Santa Fe. They have not of late years moved any considerable quantity that way. At the time Blye's statistics were made there was perhaps as high as 2 or 3 per cent. by the Mallory Line; (4022) they really have not been much of a factor in California business. I might say there, that the traffic upon which they would chiefly engage in California would be commodities where the same rates were made of course from the Mallory Line pier as from the Morgan Line pier.

Revenue on traffic to Utah and Colorado.

The total revenue, Morgan Line to Utah, as I testified, for the year ending June 30, 1898, east and westbound, was $26,517.35; for the year ending June 30, 1900, for Colorado, $56,314.17. The Utah business has fallen off.

(4023) I do not say it has fallen off in 1906; I said it had fallen off now. I think we can compile the revenue each year. I said the Colorado business had fallen off, but that was in the last two or three years. In 1906-7, according to Mr. Stebbins' figures, our Colorado business as compared with 1898 was as $150,000 to $56,000, and the Utah business as $100,000 to $26,000. The falling off has been in the last two or three years.

Improvement in service via South Atlantic ports.

(4024) There has been a material improvement in the service of the South Atlantic port routes, resulting in the division of the traffic, between the all-rail and Atlantic ports and the Gulf—in the earliest division about 7 per cent. by Atlantic routes, and 36 per cent. by the Gulf, and in the latest 43 per cent. by the Atlantic, and 16 per cent. Gulf. I speak of through service through Norfolk, Newport News and Savannah. It is about a thousand miles farther by rail from Norfolk to Salt Lake than from Galveston. Our ships take 6 days to Galveston. Our best time to Utah is 16 or 17 days; but they make to South Atlantic ports as good as 12 or 13. The time to California all-rail is about 16 days.

Time.

(4025) The running time from New York to Norfolk by ship is 20 hours. They can make better time than by the Gulf route even though they had a thousand miles more rail haul. The ships' time to Savannah is about 48 hours, and they make quicker time to Utah than we can by the Gulf. They make 14 up to 16 days. The Savannah business to-day is I think worked to Colorado points over the U. P., Kansas City or Omaha. As to Norfolk, there is an active route now by the Old Dominion and the Seaboard Air Line through Birmingham, and the Frisco & Rock Island to Denver, and then the U. P. or the Rio Grande. The Kanawha Despatch Line is the Chesapeake & Ohio from Newport News, one of the Old Dominion fast freight lines.

Earnings on Colorado business for 1900.

(4026) In 1900 the Sunset Colorado earnings east and westbound were $202,173.15, increasing from $56,000 in 1898. Defendants' Exhibits 58 and 59 are here offered in evidence as follows:.

AUDITOR'S OFFICE,
New York, N. Y., Jan. 12th, 1910.
(Sgd) B. G. BARTHOLOMEW,
Auditor.

(4029) I gave some statistics on Portland business. They were taken from this exhibit. For the year ending June 30, 1900, the total tonnage Sunset to Portland east and westbound was 3,398 tons, earnings $71,683.41, including business from the whole Atlantic Seaboard west. This does not include the business in the Willamette Valley, the hop business or anything but what went into or came out of Portland. The Willamette Valley is a great hop region. There is nothing in those figures except Portland traffic, destination or origin. I think hops went into Portland, and dried fruit went in there for process, and all that is in this statement. I understand that hops were taken into Portland on our line and shipped back over our line.

Sunset tonnage, Portland business.

(4030) We have hops in the Portland traffic, I know that to be true. I do not know that there was a large volume of hops originating in the Willamette Valley at towns along the river like Salem, Albany and Corvallis, and going Sunset to New York. I know our share of it was small, and it is not included in that statement if it did not go into Portland, as any other local traffic that didn't come into Portland proper, fruit or anything of that sort would not be included. This statement includes salmon taken from the Columbia River packing houses and brought into Portland. We never had any traffic by Sunset routed from New York to Columbia River towns down the river passing through Portland where it was competitive with the O. R. & N. river boats.

Hops.

(4031) This statement made up by the Auditor covered only traffic which came out of or went into Portland, waybilled there. If freight was waybilled from a station in the Valley on the line in Oregon on that side of the river which is not the through line, and the cars were switched around through and went through the Portland yard, I believe that freight would be included in this statement.

(4032) I called for a statement of the Portland traffic which consists of everything that went in and out of Portland, shown by the waybills. If traffic was waybilled at valley stations competitive with the O. R. & N. river boats, it did not move through Portland—if it did, it was not so waybilled. I have been to Portland and have seen traffic handled there. These figures are not from my own knowledge but I get them from the Auditor and it is represented by me to include all business into and out of Portland, nothing more, nothing less. Business up the Willamette Valley, competitive with the O. R. & N. boats, I do not know anything about. The testimony I have given is the figures submitted in the Auditor's statement, and he would have to testify as to the source from which he got his information, how he made them up or anything of that kind.

Statement does not cover Willamette Valley traffic.

(4033) This statement does not purport on Portland business to include business moving all-rail to territory west of the Atlantic Seaboard, like Cincinnati and St. Louis, or from that territory to Portland, or by way of El Paso unless it moved via New York. I am giving the figures for such business as moved to Portland,

steamer and rail from New York, not all-rail from that territory, nor all-rail from Portland east. I stated that the U. P. never engaged in traffic between Atlantic Seaboard territory and Mississippi, the east Coast of Central America, Louisiana, Arkansas, Texas, Oklahoma, Mexico, New Mexico and Arizona.

Takes majority of New York-New Orleans traffic.

(4034) The U. P. might have been in business originating on the Pacific Coast and moving to Texas points or Louisiana and Mississippi—I did not testify that it was not. As compared with the all-rail takings from New York for New Orleans, we take the great majority of the traffic; we have no industry tracks for the steamship line, but we have a very large differential rate to New Orleans. While the Sunset Route carries a large amount of traffic eastbound to New York City at equal rates with the rail line, we have a lighterage plant whereby we make deliveries around New York Harbor the same as the Trunk Lines—why, the industries in New York must be all deliverable by lighter.

Difference in terminal conditions—New York and San Francisco.

(4035) The conditions at San Francisco are different. Rail delivery in San Francisco would be an actual track delivery. There was nobody capable of making track delivery in New York except one line. All the all-rail freight that is secured against the Sunset at an equality of rates is deliverable by lighter. San Francisco is a large wholesaling town. The boat line might secure business of a firm located as conveniently to the wharf of the boat line as to the depot of the rail lines if there was no track connection. We recently acquired and constructed a lighterage plant of our own in New York; we had it performed by contract before.

Wool.

We moved comparatively little wool from Nevada-Utah points Sunset; from Utah points none; from Western Nevada, I think there may be some. Boston is the great wool center. We have a rate by the Sunset Route in the tariff—I think so—from Corinne, Utah, by Sacramento. As to why we keep it in the tariff if we don't move any business over it, I don't know, I didn't put it in. It has been renewed.

(4036) The business from Eastern Nevada wouldn't come around by Sacramento. As to why we have the tariff—we haven't to any extent. I said we carried a small share of this traffic; I didn't make the tariff. This statement that I have been asked about is a statement that the Auditor prepared for me in the regular course of business, exactly as he would prepare any other statement. I could not carry those things in my mind, nor could any other man. The Auditor is here.

Munroe.

(4037) JOHN A. MUNROE, (2).

Freight Traffic Manager of Union Pacific.

Freight Traffic Manager of the U. P. Witness states character and extent of his railroad experience. He was connected with the U. P. during the entire period of its receivership. Witness is asked to explain why the 32 hours train between Council Bluffs and Ogden was put into service during the year 1897.

"That train at that time was known as the Portland Special, and was inaugurated by the receivers of the Union Pacific as one of the results of a controversy, quite severe in character, which was obtaining at that time as between the receivers and the Oregon Short Line. The principal question of difference was this: Prior to the receivership, which took effect on October 13, 1893, the Oregon Short Line was a part of what was known as the Union Pacific system. When the receivership occurred, the jurisdiction of the five receivers extended over the Union Pacific, Oregon Short Line, and the Oregon Railroad & Navigation lines. In 1897, about March 17, as I recall it, the Oregon Short Line was taken out of the hands of receivers and operated thereafter by its own company. During the receivership, and prior thereto, its traffic was substantially exclusive to the Union Pacific via the Granger route; and in the division of earnings a constructive mileage allowance obtained under (4038) which the Oregon Short Line received 1¾ miles for one as their pro rata of the revenue. The receivers stated that there had been some criticism by the court on that allowance, as being unjust to the Union Pacific proper property and excessive as to the Oregon Short Line. Immediately after the Oregon Short Line Company was taken out of the receivership, they served notice on the Union Pacific receivers that they must have a larger division of revenue, and coupled with it the statement of their intention to open the Ogden and the Provo gateways.

Reasons for 32 hour train—"Portland Special."

"Q. To whom? A. To the Rio Grande and their eastern connections. The receivers felt that, having been criticised as they had been, they would not be justified in accepting a smaller unit of revenue for Union Pacific on a less volume of traffic than formerly they received on the greater and therefore they declined the Oregon Short Line proposition. As the result of that there was a good deal of feeling and a good deal of contention. And the Union Pacific, in order to lift its Portland traffic from the Oregon Short Line's, undertook to handle it via Ogden in connection with the Shasta route of the Southern Pacific, realizing, as they did (the Shasta route being so much longer.) * * * About 650 miles, I would say, approximately that, may be a little more—that they would have to give an accelerated service to Ogden; and the order was made effective almost instantaneously by giving instructions to the operating department to run this freight train on approximately passenger schedule, which, as I recall it, at that time was 32 hours and 40 minutes, Council Bluffs to Ogden. That train was put on, and ran three times a week. Its consist was about 22 cars. And it was operated, I would say, 60 or 90 days; and it was discontinued by reason of the settlement of the differences between the Oregon Short Line people and the receivers." It was not regarded as a practical service and I do not think it was, nor could it possibly have been made permanent. It was put on as an emergency matter, and everybody regarded it as extraordinary and exceptional and

Service lasted 60 to 90 days.

Train was a war measure.

justified only by an emergency, and as temporary in character. It was a war measure.

Prior to the receivership, October 13, 1893, the jurisdiction of witness was general over the O. S. L. and O. R. & N. lines as well as the U. P. proper. During the receivership it continued over these lines as long as the five receivers were in charge. The O. R. & N. went (4039) under the hands of a separate receiver on July 4, 1894, but the O. S. L. remained under the receivers until, witness thought, March 17, 1897. Witness' connection with the Traffic Department of the O. R. & N. ceased when a separate receiver was appointed. Witness' connection with the O. R. & N. and O. S. L. went back to 1887, possibly 1886. While witness was connected with the Traffic Department of those allied lines, practically no business for San Francisco was ever routed or handled via Portland and the boat line from Portland down, that is, from points on the U. P. and east thereof. Once in a while a shipment moved that way; but it was so spasmodic as to justify him in saying none moved that way.

Witness' connection with O. R. & N.

No San Francisco business routed via Portland.

The U. P. officers—and they changed quite frequently about those years—considered very carefully the question of opening the Portland gateway, so-called, for the handling of San Francisco traffic; and the conclusion always reached was, that it would be an unprofitable move for the U. P., hence it was not opened. A serious objection to the route was the length of the line. "Portland is substantially the same distance from Omaha as San Francisco is. The sailings from Portland south, one in about every five days, enabled continuous service only when by happenstance the train might make direct connection with the ship. On the great bulk of the freight, there would be a several days' delay at Portland. The service south from Portland would have to be also added. And the combination, we felt, would virtually drive away rather than increase our takings. Furthermore, we recognize that San Francisco business was practically all that would be available to that route. We were not unmindful of the fact that water did extend to Sacramento. But when we went by water to Sacramento, our service was longer than to San Francisco, and we were competing with a correspondingly shorter rail service. As to Stockton, we never considered very much that the business justified anything of that kind. So all of our conclusions were that it was a San Francisco proposition, practically, pure and simple. And even (4040) after we should get to San Francisco, we would be handicapped to the extent of delays in moving the freight from the pier to the warehouses, especially when the same were located upon rails of the Southern Pacific and served directly by that company. The Southern Pacific was the only connection we had for our California business at that time; and the value of our California business was very much greater on other than San Francisco than on San Francisco proper business. We also bore in mind that we had quite a movement of perishable freight that under no circumstances could be successfully handled via Portland. Then we also tried to view the matter from the standpoint

Consideration of route by U. P. officials.

Reasons for refusal to use Portland route.

of the Southern Pacific as well as ourselves, and we felt that any move we might make along those lines would be regarded as a hostile one by the Southern Pacific, and that they would naturally retaliate, and that they were in a position to do this very successfully, and could and would, we believed, make the experiment a very costly one for the Union Pacific. Those were the reasons which appealed to us then, and which would to-day; coupled with this; that the service via Portland, being necessarily inferior, the competitors of the Union Pacific, notably those operating via Kansas City and Albuquerque (the Santa Fe System), those in territory nearer to us (notably the C. B. & Q. and the D. & R. G.) via Ogden and Southern Pacific, would be able to also profit by our experiments. So it was a knife that would cut both ways."

The divisions as between the S. P. and U. P. were on a basis as originally established. They were not unjustly excessive as far as the S. P. was concerned, and there seemed to be no necessity of swinging a club so long as there was no injustice to be removed, and the U. P. was satisfied with the divisions. The route to San Francisco via Portland was a club which, if swung, might prove a boomerang and cost more than it was worth. The U. P. was satisfied it could do no San Francisco business via Portland, except on a differential basis. Such a basis would be unprofitable. Any basis it might put in via Portland would be duplicated by its competitors through Ogden, and "that simply would be the means as it were, of committing suicide with our own revenue; and we recognized that we were trying to use a tool that was not sharp enough to do the (4041) business; that we were handicapped geographically, and that there was nothing we could do via that round about broken-service gateway that would really prove a money-making proposition to our company." The use of that route would have caused the S. P. to use its influence to deflect business from U. P. rails to the D. & R. G. and connections. It would have very largely affected the traffic of the U. P. and would have diminished its revenues far beyond any profit which could have been realized by the use of the line via Portland.

The use of the Portland route would be the means of committing suicide.

In the year 1888, or possibly 1889, the U. P. people consolidated a number of the railroad corporations which it owned, forming the Union Pacific, Denver & Gulf. This line (including among others that witness described, the line from Denver to Fort Worth) was operated by the U. P. until the receivership, and thereafter from October 13, 1893, to December 18, 1893, when a separate receiver was appointed. Since that time the U. P. has had nothing to do with the management of that property, except that they purchased that portion of it extending from Julesburg, Colo., to La Salle.

Union Pacific, Denver and Gulf.

The present Colorado & Southern System is the successor company of the U. P. D. & G. (4042) In 1888 or 1889 the U. P. established a through route from the Atlantic seaboard to Colorado and Utah common points via its line to Fort Worth and the S. P. interests south thereof. The U. P. interests practically were the

U. P. water and rail route to Colorado and Utah via the Gulf.

first to open that line. The constituent members of that route were the Southern Pacific Steamship Lines from New York to New Orleans; then the rails of their Atlantic system to Fort Worth; then the U. P. D. & G. to Denver, and the U. P. from Denver via Cheyenne to Ogden, and the O. S. L. rails from Ogden south to Salt Lake City. This was the first through route inaugurated for the purpose of carrying seaboard business to Colorado and Utah common points via the Gulf ports. The through rates for this route from New York were based on 80 per cent. of the New York-Chicago canal and lake rates plus locals west of Chicago; that basis was effective for several years, and until after the receivership. Under that basis the Gulf lines had a differential of 43 cents per hundred, first-class, grading from that down. After the Trumbull receivership, the question was resurrected and that was modified to a 39 cent scale, which still obtains, both as to Colorado and Utah common points. This through route still continues, but the U. P. proper had no interest in the revenue south of Denver, subsequent to the Trumbull receivership; but it did cooperate in the same through line as it does to-day, to the Utah common points.

First Gulf route.

Rate basis.

U. P.'s three gateways—Council Bluffs, Kansas City and Fort Worth.

(4043) At the time the Colorado & Southern was controlled by the U. P., it worked this seaboard traffic through Council Bluffs, Kansas City and Fort Worth. Its principal gateway was Council Bluffs. It had had a very good interchange via Kansas City. The new line gave them another gateway at Fort Worth. The Council Bluffs gateway was the one preferred by the U. P. because it represented a greater net return, although the policy of the U. P. then was, and is now, to offer the various kinds of transportation it has to sell, to the various patrons seeking purchase. The Kansas City gateway was preferred to the Fort Worth gateway, because it offered more net returns for the service rendered. If the business could not be obtained through Council Bluffs or Kansas City, it would be taken via Fort Worth, and the company would be very glad to get it. "While we had that preference, I do not think we ever announced it openly to our patrons. We generally felt our way, and found out what they wanted, and endeavored to sell them the kind of goods they were seeking." The U. P. also worked certain business via the South Atlantic ports to points in Colorado and Utah.

(4044) It has always had more or less traffic in connection with the South Atlantic ports—principally less, until about 1905; then the more active working of the South Atlantic port gateways commenced, and has been actively worked from that day to this. In the spring of 1901, the extent of the traffic the U. P. received through the South Atlantic ports was very small. At that time practically all the water and rail seaboard traffic moved by the Gulf ports. The Kanawha Despatch route was the principal South Atlantic port route at that time. It used the Old Dominion Steamship Company from New York to Newport News, and Chesapeake & Ohio and connections from there west. The reason why the U. P.

U. P.'s route via South Atlantic ports.

more actively worked for the business via South Atlantic ports after 1905, were as follows: From the year 1893 to 1898 the conditions all over the country were very bad commercially. Every merchant was seeking to reduce his expenses and increase his earnings, in every possible way. The differentials, therefore, appealed then more strongly than ever before, and witness noticed a material deflection of traffic theretofore moving all-rail, to the water lines, and felt that it was high time to get busy and work a water line.

(4045) At that time the Ocean Steamship Company, running between New York and Savannah, and the Georgia Railroad from Savannah to Birmingham made direct connection with the Frisco from Birmingham to Kansas City, "and with our line to Denver, we thought we could develop quite a traffic." The Frisco people promised to cooperate in the establishment of such a route, notwithstanding their very close relations with the Rock Island, and agreed that the U. P. should have their undivided support west of Kansas City. "On that basis we got together and worked very hard, and built up a very nice tonnage." That was in 1905 and 1906.

U. P.-Frisco alliance.

"After we had gotten it going pretty well, the Frisco people underwent a change of heart and notified us that their relations with the Rock Island were such that they would have to work preferentially with the Rock Island as against the Union Pacific; would have to operate their through package cars Rock Island and not Union Pacific; would be glad to handle anything we might give them, as far as Kansas City, and give it to us there, handling it in their Kansas City car. That convinced us that we could not afford to have a half-hearted partner, and that it meant the breaking up of the line; and we so accepted that situation, and cast about and did make new alliances, and were successful in transferring a nice lot of our business from the old to the new line thereby created." They did not take out, or threaten to take out, the through rates which existed between New York and Utah and Colorado common points via this route, nor did they refuse or threaten to refuse to handle the business over their lines. They said they would be very glad indeed to handle the U. P.'s business, but that the latter could not expect any particular support from them. That was the idea conveyed—that they intended to work preferentially in the future, with the Rock Island.

Frisco withdrew and new line formed.

(4046) Not desiring a partner that was more interested in the Rock Island than the U. P., the U. P. transferred its efforts from the so-called Savannah-Frisco Line to the Cumberland Gap Despatch, which consisted of steamship service from New York to Norfolk, and the Norfolk & Western and its connections to Kansas City; U. P. beyond. That line is still in existence. Conditions have also changed somewhat as to the Savannah line, and the U. P. is getting some business from that line now, but working through links other than the Frisco between Birmingham and Kansas City.

Cumberland Gap Despatch.

Carriers participating in transcontinental traffic.

(4047) Witness identifies Trans-Continental Freight Bureau Westbound Tariff No. 1-J, issued October 15th, 1909. It gives a list of participating carriers, 473 in number, all of which are engaged in transcontinental traffic; practically the same railroads were engaged in transcontinental traffic in the spring of 1901. (4048-4061) Defendant's Exhibit 60—giving first eight pages of the Transcontinental Freight Bureau tariff referred to, and a list of all participating carriers. (4062) There are hundreds of different through routes between Atlantic seaboard points and eastern territory on the one hand and Pacific coast points on the other, over which traffic actually moves. Witness describes a number of typical through routes—first, between New York and San Francisco—(a) New York Central, Lake Shore, C. & N. W., U. P. and S. P. (b) The Pennsylvania, A. T. & S. F. (c) Baltimore & Ohio, C. B. & Q., D. & R. G., and S. P.—second, between New York and Portland, Oregon—(a) Erie, C. M. & St. P., U. P., O. S. L., O. R. & N. (b) Baltimore and Ohio, C. B. & Q., N. P.—third, between Boston and Kansas City—(a) Boston & Maine, West Shore and the Wabash (b) Boston & Albany, New York Central, Michigan Central, Chicago & Alton—fourth, between New Orleans and St. Paul—(a) Illinois Central and C. M. & St. P. via Chicago (b) L. & N., Big Four, C. & N. W., and C. St. P. M. & O. "Those are simply typical illustrations of routes that could be formed all over the country, of various roads connecting each with the other."

Through routes designated.

In a general way all the lines which reach Chicago from the West form through routes with all the lines which reach Chicago from the east. On traffic going through to New York, Philadelphia or Baltimore, Union Pacific exchanges traffic on the east with all the lines operating between Chicago and the Mississippi River, on the one hand, and the Missouri River on the other; and they in turn, with all the lines operating east of the Mississippi River. "So we have more or less traffic with all the railroads in the country, participating in transcontinental tariffs." At Kansas City the U. P. exchanges business with the Missouri River, Mississippi River and Chicago lines, such as the Alton, Missouri Pacific, Wabash, and Santa Fe.

All roads make connections with all other roads, to form through routes.

(4063) And those roads in turn with the Big Four, Pennsylvania and Baltimore & Ohio, and the lines operating via Chicago or Illinois junctions. As a matter of fact all the railroads in the United States make connections with practically all other railroads in the United States for the purpose of forming through routes for the transportation of freight and passengers. The El Paso & Southwestern and the Delaware & Hudson River railroads form links in a through route extending from Boston to El Paso; the lines constituting that through route being the Boston & Maine, Delaware & Hudson, the Erie, the Rock Island, and the El Paso & Southwestern. The Colorado Midland forms a link in through routes between the Atlantic and Pacific in connection with all railroads; Grand Junction, Colorado, and west on the one hand, and Colorado

Springs and east on the other. The Philadelphia & Reading and the Colorado Midland are links in the same through route; so are the Boston & Albany and the Chicago & Alton.

(4064) The Colorado & Southern and the Pere Marquette. Most of the lines which witness has described as making up these through routes are east of the Missouri River. There are comparatively few of them west of the Missouri River. Up to the River, and particularly up to Chicago and the Mississippi, there are a great number of lines that participate in the through business. The lines that deliver traffic at the Pacific Ocean are the Canadian Pacific, G. N., N. P., recently the St. Paul, the O. R. & N., the S. P., Santa Fe and San Pedro. The rates set forth in the tariff, Exhibit 60, are called bureau rates. They are largely made by conference at stated periods, at which practically all lines interested are invited to be present. As a matter of fact, the rates are made by the lines (4065) west of Chicago very largely. In the case of rates to California, the S. P. is recognized as of controlling force in rates from New York, and the Atchison in rates from Chicago. The divisions of revenues west of Chicago are such that the Chicago lines feel, as a rule, that their interests are well taken care of by the lines that are interested in the greater revenue. The divisions are 15 per cent. east and 85 per cent. west of Missouri River. The lines east of the River are satisfied that those west of the Missouri will not put in unremunerative rates when they have such a large percentage.

Divisions east and west of Missouri River.

Witness endeavors to represent the U. P. at meetings of the Trans-Continental Bureau, but when he cannot be present he usually sends one of his assistants. The San Pedro is usually represented by Mr. Sloane, the General Freight Agent, sometimes by Mr. Wann, General Traffic Manager. It would be the exception when they would give the U. P. their proxy. The trans-continental rates are the same to Los Angeles over the U. P. and San Pedro lines that they are over the U. P. and S. P. Both lines participate in that business. The San Pedro has no rates into San Francisco. It forms no part of a line into that city.

Rate meetings.

(4066) The San Pedro is the U. P.'s preferential route for southern California traffic, both east and westbound. Witness has solicited business personally in Los Angeles, and the S. P. organization in that territory is seeking the same traffic that witness in connection with the San Pedro. has solicited there. (4067) The traffic which witness was personally soliciting was the vegetable shipments, all of which had origin upon S. P. rails, and which were covered by a joint rate, "and we were not soliciting it, in that sense, against the Southern Pacific, because they were partners in the chain which I was seeking to have favored."

San Pedro preferred by U. P. for So. California.

S. P. a partner on vegetable traffic.

Witness was of the opinion that on that particular traffic, the S. P. was a partner regardless of revenue received by it, because they joined in the through rates and divisions. "It is true that the Southern Pacific service from the celery fields to Los Angeles is comparatively short; by that, I mean something less, we will say, than

50 miles. That may appear to you as a switching charge. It would not so (4068) appear to me. In the division of the revenue, the Southern Pacific received a percentage proportion of the total revenue accruing west of the Missouri River, which pays them for the service they render, and would not be viewed as a switching charge, as we interpret it."

Division of rate.

Witness' recollection is that the S. P. received 20 per cent. of the line revenue west of the Missouri River, and the remainder subdivides between the U. P. and the San Pedro. As to business local to Los Angeles, it is customary to add a switching charge to the Los Angeles rate, which follows the freight when going to industrial tracks, not team tracks. "The custom there differs from that obtaining in some other parts of the country. That excess is not absorbed." Witness remembers a meeting he attended about the 2nd of August,

Understanding as to Southern California traffic.

1905, at San Francisco, at which representatives of the San Pedro, O. S. L., S. P., and U. P. were present, at which a memorandum was made of an understanding as to the handling of southern California business.

(4069) Witness is not sure about the second conference held on the 27th of January, 1906, with reference to switching charges in Los Angeles. He knew about it in a general way. The bases originally referred to were modified or changed subsequently. At the first conference there was a percentage allowance, and in the second an arbitrary one. Witness is handed a copy of a memorandum which he thinks is substantially correct.

"This is the memorandum of understanding had at San Francisco, August 2, 1905, and among other things it provides that on freight traffic between all points on or via the various west of Missouri connections and the San Pedro Company, including Utah common points served by the San Pedro Company, and points on Southern Pacific and California south of Santa Barbara and Mojave and west of Banning, all inclusive, divisions west of Missouri River will be as follows: Southern Pacific industrial tracks in Los Angeles 12½ per cent. San Pedro Company and connections 87½ per cent. of Los Angeles rate; all other points in California south of Santa Barbara, Mojave and west of Banning, Southern Pacific 25 per cent., San Pedro and connections 75 per cent. of Los Angeles rates."

Modification of understanding.

Witness' attention is called to modification of the agreement and states that he thinks it is correct, but that there is another modification that the Complainant's counsel evidently has not seen. "My understanding is (that the other modification was) a reduction of the Southern Pacific per cents. from 25 to 20 and the entire abolition of the 12½ per cent. to cover the Southern Pacific switching service in Los Angeles." (4070) Witness thinks Mr. Luce is better qualified to testify as to the last modification than he is. The paper which was handed to the witness was marked Complainant's Exhibit 210, and is offered in evidence by counsel for the Government as part of the cross-examination of Mr. Munroe. It is set out on pages 4070 to 4076, inclusive.

(4076) The divisions on transcontinental traffic routed through Ogden, 54 per cent. to the U. P. and 46 per cent. to the S. P., on San Francisco business, had always been satisfactory to U. P. (4077) If rates were put down to San Francisco via Portland, it would cause a break in the rates all along the line—the cut would be met by all the other lines. All lines would suffer from such an act, but the loss of revenue would obtain so far as the U. P. was concerned if the rates were not cut, because the S. P. would deflect the traffic. (4078) The line from Denver to Fort Worth was not built by the U. P. U. P. interests built the other lines which formed the component parts of the whole U. P., Denver & Gulf. U. P. has never owned or controlled that line since December, 1893. Since that date the interest of the U. P. on business from New York common points was entirely by the Missouri River. The U. P. had a line via Galveston with the M. K. & T. and Junction City, but it was a small factor,—hardly worthy of recognition. It is a fair statement that after the U. P. lost the control of the Colorado Southern it worked its Utah and common points business through the Missouri River. The Southern Pacific worked theirs by the Gulf.

Division of rates on traffic via Ogden.

Fort Worth line.

(4079) "My answer refers especially to Colorado, because the Union Pacific was part and parcel and an active member of the through line via the Gulf and Denver to the Utah common points—always has been and is today. Q. But Mr. Hawley testified that the bulk of the movement to Utah common points, that the Southern Pacific participated in, went by the Denver & Rio Grande, previous to the merger. A. There were times when that was undoubtedly true. We always participated in that business, to a greater or less extent. Q. But your interest was to get the long haul from the Missouri River, of course? A. That is our traffic interest, but we have always worked a great deal with that Gulf route, and are doing it today." The San Pedro was not in operation in 1901. It was first put in operation in May, 1905. In the spring of 1901, and prior thereto, the S. P. was practically the exclusive connection of the U. P. for California business. That road afforded it practically the only entrance which it had to California. The S. P. dominated the rate situation on business from the Atlantic seaboard to California points; because they had their own line under one common control and (4080) management from New York to San Francisco and were able to take action without conference with any partners. The extent of the divisions of the lines west of the Missouri River had nothing to do with their power over the situation.

U. P. still a part of Gulf and Denver through line to Utah.

Always worked with Gulf. route.

S. P. dominated rates from Atlantic Seaboard.

The competitive lines from southern California, which witness had in mind in giving his testimony, were first, the Santa Fe, second, the S. P. line via El Paso and its connections at that point, third, the San Pedro in connection with the D. & R. G. (4081) The San Pedro and U. P. also formed a through line. In determining whether the route to San Francisco via Portland and the boat line down was a satisfactory one or not, "the question of our having unsatisfactory relations with the Southern Pacific never arose at all. The only

Competitive lines from southern California.

Roundabout Shasta route not successful.

point that influenced us was that we could not make a success of that roundabout route, and our view was subsequently confirmed by our later experience in trying to operate the all-rail line from Omaha via the Shasta route to Portland; and, if we could not make that a success on all-rail service, we could hardly expect to make broken service in the opposite direction a success." If the U. P. could have made more revenue and made the route pay via Portland and the San Francisco line, it would have worked business that way regardless of its relations with the S. P. "If we could have made it a money-making proposition for the Union Pacific, we would have worked it instantly and actively." It was not a practicable route. It was one that would lose the U. P. money and therefore it would not open it. (4082) The Sunset Route was carrying at times, according to the testimony here, 80 or 85 per cent. of the business from New York pier to San Francisco. If the U. P. had cut that rate by Portland and thereby caused a cut all along the line, the S. P., through its enormous tonnage over the Sunset Route, would have suffered in revenue to the extent of that cut.

Would have used Portland route if it were profitable.

Portland route stronger weapon against U. P. than S. P.

(4083) The Portland route "was a strong weapon against the Southern Pacific, but a stronger one against the Union Pacific, for this reason: That the total volume of the New York business handled by the Sunset was very much less than the volume of the business from other territory open to the Ogden route; so that the result would have been, while we might have injured the Southern Pacific some, we would have injured ourselves more. Q. It was something of a weapon, however; in fact, you say it was a strong weapon? A. Why, it was a weapon in the same sense that a razor in your hand would enable you to suicide if you wished to do so. Q. Is that the only way in which a—— A. In my judgment, that is the only way in which the weapon could have been effective. It would have killed us. Q. Wouldn't it have injured the Southern Pacific at the same time? If I take a razor and kill myself it doesn't hurt you, except as you are a friend of mine and do not like to see me do it A. You must not ask me before you do it, then. Q That is it exactly; that is what I wanted to develop. A. I was the fellow that was holding the razor."

Portland route was a weapon for self destruction.

Rate war would have been disastrous to both.

(4084) If the transcontinental rates were cut, it would have been a cut on all the rates from east of the Missouri River to the coast, and the result would have been if the U. P. and S. P. got into a rate war, that both would have suffered very severely. Witness does not think that the Sunset Route was a competitor of the U. P. at Ogden. He thinks that the matter of competitive routes is to be decided upon considerations of ordinary reason and common sense. That is the way the U. P. has tried to conduct itself in respect to the Portland gateway and other things. It was viewed simply as a business proposition—whether the U. P. could or could not afford to engage in it. Assume hypothetically that the U. P. owned a railroad beginning at Omaha and extending through Ogden to San Francisco and extending from San Francisco down to Los Angeles, and had

built a cut-off from Salt Lake to Los Angeles, witness would not regard that as the development of two competitive routes.

(4085) Witness thinks there is a tariff in effect on wool from Corinne, Utah, to Boston via Sunset Route. It has been in effect so long that it has become a dead letter. "Everybody knows, everybody familiar with the wool traffic in that section, that the Sacramento route cuts no figure whatsoever, and has not for years, on any wool from any point in Utah to any point in the Atlantic seaboard. Now, we have traffic departments, tariff departments; we have inheritances in the way of rate bases, and unless something was said to the contrary, a tariff once in effect is reestablished from time to time, but in actual movement the tariff amounts to nothing and we pay no attention to it. Q. Years ago traffic did move that way, did it not, and was competed for actively as between the Union Pacific interests and the Southern Pacific? A. Why, I don't think there was any material movement of wool traffic that way; there may have been an occasional shipment, but—— Q. Now, do you know anything about it? A. I do know something about it because we have always had a very respectable eastbound wool traffic from that section, and I cannot recall a case where we were ever influenced in any of our actions by any rate via Sacramento on any Utah wool. Q. How about northern Nevada and southern Idaho? A. I don't think that any rate made on Nevada wool by the Southern Pacific ever had any material effect upon wool from opposite points on the Oregon Short Line, but on that question I am not as well prepared to testify as some others here who have been in direct touch with it; but all the reports made to me indicate that it never has amounted to more than talk, out there at Salt Lake. Q. Now, Mr. Munroe, of course that is a sarcastic remark—talk at Salt Lake. A. It is like a good many other things out there in the West, Mr. Severance. There seems to have been an optical illusion come over a great many, and that is supplemented by a lot of exaggerated talk. (4086) You think you are getting a tremendous result, but you analyze it and you will be surprised how little there is left. * * *

Sacramento route not a factor as to Utah wool traffic.

S. P. rates on Nevada wool never had any effect on O. S. L. wool traffic.

"Q. Now, you don't attempt to contradict the testimony of the gentlemen who testified at Salt Lake City with reference to the efforts that were formerly made to induce the shearing of sheep on the line of the Southern Pacific, on the one hand, and the Short Line on the other, so as to get the transportation of those sheep, do you? You don't know whether it is true or not, do you? A. I do not believe the truth of the statements. I think the parties making them were under a misapprehension, according to the best information I have been able to get."

Does not believe correctness of Salt Lake testimony on wool traffic.

Samson had plenty of power; and exercised that power in pulling the temple down. He killed his enemies and took his own life. As I take it, counsel are trying to have the U. P. perform the Samson act with reference to the Portland gateway.

Trying to make U. P. emulate example of Samson.

Kruttschnitt.

(4087) JULIUS KRUTTSCHNITT (2).

I am Vice-President of the U. P. and of the Southern Pacific and Director of Maintenance and Operation. "I am a vice-president of each company and director of maintenance and operation; in other words I am vice-president in charge of operating and construction. * * * I began in the engineering department in 1878, having charge of construction of what are now the Southern Pacific lines in Louisiana. After those lines were completed I had charge of their maintenance and after that of their operation until 1885, when I was made assistant to the general manager of the Southern Pacific lines east of El Paso. I continued in that capacity until 1889, I think, when I was made general manager of those lines, and there had charge, as now, of operation and construction and maintenance. In 1895 I was made general manager of the entire Southern Pacific system, both east and west of El Paso; and in 1901, when Mr. Harriman was made president of the Southern Pacific, I was appointed assistant to the president, and continued in that capacity, with the same general duties that I have defined, until 1904, when I was made director of maintenance and operation of both the Southern Pacific and the Union Pacific systems, the title of vice-president having been added as to the Union Pacific recently and as to the Southern Pacific some time in the late '90s—I have forgotten just what year."

His railroad experience.

Between 1901 and the present time, with respect to the policy and practice of the U. P. and S. P. Systems, in respect to the improvement and betterment of the physical properties and operating conditions—"to put it as briefly as possible, when recommendations would go up to president and board for improvement in maintenance and operating conditions or for the construction of new lines, the first question generally asked of me was whether the device or plan recommended was absolutely the best that could be gotten. That seemed to be the criterion. When answered in the affirmative, I can hardly recall an instance where permission was not given to make the improvement. (4088) In consequence of that policy, both systems are today in the highest state of efficiency. * * *

The criterion for betterments was, whether they were the best that could be gotten.

Both systems today in the highest state of efficiency.

"Starting with the Union Pacific, a great deal of the work of reducing grades, eliminating curves, and rebuilding the Union Pacific was begun prior to 1901, though some of it was still unfinished in 1904, and we have done a great deal since that, since my connection with it began; but at the time my connection began with the Union Pacific a great deal of the reconstructoin work had been completed, the grades had been reduced, the line straightened out, a great deal of it ballasted with ballast of a very high character, and a great deal of new equipment added, old locomotives repaired, old rolling stock repaired, and new substituted. The work on the Southern Pacific both prior to and subsequent to 1901 was entirely in my hands, and subsequent to 1901 the same policy of eliminating grades and curves, ballasting the road, laying with heavy rail, adding to the equip-

Rebuilding the U. P.

Rebuilding of S. P. entirely in hands of witness.

ment, expanding terminals, building new side tracks, new water stations, and all the instrumentalities of transportation, was very vigorously pushed, very much in the same way that the work had already been done on the Union Pacific. * * *

Physical condition of S. P. prior to 1901.

"Prior to 1901 the Southern Pacific was deficient in equipment, both passenger and freight, was short of locomotives; a great deal of the mileage of the system was laid with rails that were too light for the traffic being conducted over them, being generally from 60 and 62 lbs. down. The properties were maintained in as good and safe condition as such shortage of equipment and lightness of rail permitted. * * * The principal changes (after 1901) were the placing of new equipment orders. We bought more freight cars, more passenger cars, more locomotives, and the greatest change was made in getting out the light rails. Another item of importance was the ballasting, reduction of grades and curves."

Principal changes.

Charts showing increased cost of labor and operation.

Respecting the cost of labor and the increased cost of operation from that point of view, I have prepared in graphic form two charts for the U. P. and S. P., showing the comparative wages paid employes in the years 1897 and 1908. (4089) These "being copies of charts that I have gotten up on other occasions, and that accounting for the selection of the year 1897. The data for preparing these charts were taken from returns sent in to me specially by the managing officers. The charts cover employes in train service, agents and operators; in other words, those employes with whom we have and have had for a number of years contracts for rates of pay. I have supplemented the charts with a typewritten statement, taken from our return to the Interstate Commerce Commission, giving the comparative compensations of certain employes, such as maintenance of way employes and the shop employes, appearing on these charts."

I have aimed to cover substantially all employes charted, and uncharted. "On the Union Pacific it covers 29,500 employes, and on the Southern Pacific a little over 50,000; in other words, practically 80,000, which, I suppose, at that time would take in 90 per cent. of all the employes. * * * What I call the contract classes of labor, which are train men, agents and operators, on the Union Pacific it shows an increase of 20 per cent. and on the Southern Pacific 25 per cent. The average of all classes on both roads, lump, is about 17 per cent. increase. * * * For maintenance of way employes it would be 10 per cent. increase, and those figures, being taken from the Interstate Commerce Commission reports, are between the years 1901 and 1909. Prior to 1901 they were made up on a different basis. The increase of the maintenance of equipment or shop employes is 17 per cent. * * * Of all classes, on both systems, 17 per cent."

Per cent of increase.

Chart showing increased cost of material on U. P.

These charts marked Defendants' Exhibits 61, 62 and 63 appear—61 at page 4090 of the record and 61, 62 and 63 facing that page. (4090) "I have charted in a similar way, for the Union Pacific system, the comparative prices paid for material used in

operation in 1908 and 1897. That shows the principal commodities used by the railroad, the relative prices in those two years, and the percentage of increase. The authority for most of the prices is the price actually paid by the company in those years, and as to one or two, marked with an asterisk, the prices given by the United States Department of Commerce and Labor. On the typewritten statement attached to the chart are given a number of comparative prices for the same years, taken from Bulletin 81 of the United States Department of (4091) Commerce and Labor. Those prices are, of course, for the entire country; those on the chart are for the Union Pacific system." The chart and bulletin were marked respectively Defendants' Exhibits 64 and 65, 64 facing p. 4091 of the record and 65 appearing on that page. I have prepared a statement explanatory of the purchasing power of labor, materials, and freight rates in the United States.

Statement explanatory of purchasing power of labor, materials and freight rates.

"We took the prices of commodities as given by the Department of Commerce and Labor, Bulletin No. 81, for the years 1890 to 1907, inclusive. These prices were based upon an examination of the prices of 258 commodities by the Bureau. Some 42 hundred manufacturing and mechanical establishments were considered in making these computations. (4092) We took the prices of wages from the same source, Bulletin No. 77 of the Department of Labor. We took the freight rates from the Interstate Commerce Commission statistics. We put those in parallel columns, and by dividing the prices of commodities by the price of freight rates, we determined the convertibility of commodities into payments for transportation. By dividing the prices of labor by freight rates we determined the convertibility of labor into payments for transportation. By dividing the prices received by the railroads for compensation by commodities we determined the convertibility of the product of the railroads, or transportation, into what they required, or commodities, and by dividing the prices of transportation by the prices of labor we determined the convertibility of the product of the railroad organization in purchasing labor. Having determined those we charted them, and the results are shown on the chart which I have marked 'C,' a copy of which my secretary will hand you, which shows that from the year 1890 up to 1907 there were very large increases in the power of both labor and commodities to buy transportation, when there was just as pronounced a fall in the power of transportation to purchase either labor or commodities. Two of the lines trend upward very rapidly and two downward very rapidly, the separation in any one year showing the extent to which the value of the product of the railways depreciated and the extent to which labor and commodities appreciated. The object of going back to 1890 was for the reason that the Department of Commerce and Labor takes as the basing figure the average for the ten years from 1890 up to date; in other words, we were seeking for a period 1901 to date, and found they used the period from 1900 to 1890, the average of those years as the basis,

Chart showing increase in power of labor and commodities to buy transportation, and decrease in power of transportation to buy labor or commodities.

but as all the years are put on here anyone can easily determine the rate of separation of these two sets of figures. * * * The purchasing power of commodities and labor in terms of railroad transportation has increased about 43 per cent. from 1900." The purchasing power of commodities and labor—to purchase railroad transportation has increased that much. The power of railroad transportation to purchase commodities and labor has fallen about 30 per cent. in the same time. One has risen 42 per cent. above, the other has fallen 30 per cent. below the average for the basing decade.

Commodities and wages have risen very rapidly, while transportation rates have remained stationary or declined.

The short of it is this: that commodities and labor yielded more dollars and transportation less dollars. "Or, to put it in another way, the commodities and labor have both risen very rapidly and they follow almost parallel from 1898 or 1899, and they fall in the purchasing power of transportation for commodities and labor, running almost parallel lines down hill from 1899. Or, to put it in still another way, commodities and wages have risen very rapidly, and (4093) rates for the transportation of freight and passengers have remained stationary, or possibly have declined a little." (Chart last referred to, Defendants' Exhibit 66, faces p. 4092 Record.) I have prepared a chart showing the effect of the economic conditions described here upon the public as a consumer of transportation. (This chart, Defendants' Exhibit 67, faces p. 4092 of the Record.) "This chart is headed: 'Relative Prices of Labor and Material, and Actual Earnings per Passenger and Ton Mile of Union Pacific System and Southern Pacific Company compared with what Earnings should be because of depreciation in exchange value of Transportation since 1901.'

"The upper diagram on the chart shows the prices of labor and prices of commodities from 1901 to 1909 and the purchasing power of money to buy labor and commodities between the same periods, the authorities being, as before, the bulletins of the United States Bureau of Labor, the numbers of which are given on the chart. The second diagram shows the earnings per passenger per mile in cents. The two upper curves in that second diagram show what the Union Pacific and the Southern Pacific earnings should have been to have kept pace with the rises in prices of material and labor. The two lower lines in that diagram show what the rates actually were. The separation each year between the two sets of lines shows the savings in rate per passenger mile to the public through the roads having refrained or, perhaps I should say, having been unable to raise their rates to offset them for the higher prices of labor and material that they were forced through economic conditions to pay. The third diagram on that sheet gives exactly the same data as to earnings per ton mile on freight. The divergence of the two sets of lines again being the cents and fractions of a cent per ton mile that the public did not pay through the roads not having raised their rates to offset the increased prices of material and labor.

"At the bottom of the sheet there is shown in dollars and cents

the actual amount saved to the public in those years. Those amounts, of course, would be gotten by multiplying the ton mileage and the passenger (4094) mileage rates by the total number of passenger miles and ton miles. In the eight years the public were saved $154,000,000 through non-raising of the freight rates to meet the raises of the prices that the roads were paying for commodities and labor. * * * I will read the note on Exhibit 67: 'In 1901, the basing year, labor and commodities had already greatly increased over previous years, labor being 8 per cent. and commodities 21 per cent above 1897 and 8 per cent above average for years 1890 to 1899;' * * * the basing figures are taken from the bulletins of the Bureau of Labor and the Interstate Commerce Commission, the deductions therefrom having been made under my immediate direction in my office."

Public saved $154,000,000.

Exhibit 68 (appearing at p. 4096 of the Record) shows in tabular form what exhibit 67 shows graphically. "The first line of the statement shows relative prices of labor for the years 1901 to 1907, and 1908 and 1909 are estimated. Those relative prices were taken the same as in 1907, as estimates, and would at least be as much. We know, however, from what has transpired since that they would be very much more, because the index prices that are published by political and economic journals show the highest in January, 1910, that they have ever been in the United States. The first line shows the relative prices of labor between 1901 and 1909, in percentages, 1901 being taken as the basing year or unity. The second line shows the relative prices of commodities. The third line shows the relative prices of labor and materials. And the fourth line shows the purchasing price of the dollar in transportation. * * * Under Union Pacific system the statement shows that the average revenue per ton mile was one cent and three mills in 1901, 96-100 of a cent in 1902, 98-100 in 1903, 99-100 in 1904, 96-100 in 1905, 93-100 in 1906, 96-100 in 1907, 1.003 in 1908, and 1.025 in 1909. (4095) * * * Now those were the actual rates.

Tabulated statement showing relative purchasing power of labor, and commodities, and of transportation.

Ton mile rate on U. P. reduced.

"The next line shows what the revenue per ton mile should have been to offset the depreciation in the exchange value of transportation. In 1902 the actual rate was .96—it ought to have been 1.07; in 1903 the actual rate was .98—it ought to have been 1.09; in 1904 actual .99—it should have been 1.09; in 1905 actual .96—it should have been 1.12; in 1906 it was actual .93—it should have been 1.17; in 1907 it was actual .95—it should have been 1.23; in 1908 it was 1 (unity)—should have been 1.19; in 1909 it was 1.02—it should have been 1.23. Now, the next line on that statement shows, of course, the difference between the first two lines. * * * The next line shows a saving to the public per ton mile. The next line shows the average actual revenue per passenger mile; immediately below it what the revenue per passenger mile should be to offset the depreciation in exchange value of transportation. The next line shows the saving to the public per passenger mile and the last line the total

saving in dollars and cents to the public. Exactly the same figures are shown under the head of Southern Pacific Company. In the last line of the statement is given the total saving to the public on both systems; and finally, outside the frame, at the bottom of the sheet is given the aggregate saving by both systems for the entire period, or $154,000,000. * * *

"The rates given are, of course, average rates for the entire traffic of the company. Between the years 1901 and 1909 there was a material difference in the class of freight carried; for instance, the products of mines decreased 818,000 tons; the products of agriculture increased 290,000 tons; the products of animals increased 106,000 tons, and the average haul was much less in 1909 than in 1901, showing a growth of local freight traffic, the rates of which are generally higher than through rates. In other words, the slight change in the actual rate would be accounted for by those changes in the character of freight carried and in the character of the freight as dependent on classification, and the character is distinguished between local and through. For instance, the average haul in 1901 was 343 miles, and 1909, 267 miles. * * * Southern Pacific."

Difference in class of freight carried.

I have prepared a statement of the data which I have just given in my explanation of the showing by the actual figures of an increase in the average revenue per ton mile, S. P. (4097) My authority is the Annual Reports. (This statement, Exhibit 69, appears at page 4097 of the Record.) As to capital expenditures and the way in which they have been made so far as the benefit to the public is concerned, in the operation of the properties for public use:—

"Capital expenditures, as I have already touched on it, were all made with a view of increasing the efficiency of these railroads as instrumentalities of transportation. Of course some of the capital expenditures were applied to the building of new branches and the acquisition of new lines, but outside of that all of the other capital expenditures were for the purpose of making these railroads more efficient transportation machines, by increasing the equipment, reducing grades and curvature, which is another way of saying that you increase your equipment, because by increasing the capacity of what you have, by making grades less, you add that many more locomotives to your equipment; by increasing the number of side tracks, extending terminals, purchasing property all over the line, at small stations and large ones, for increased facilities, putting up larger stations, increasing the size of water stations, building double tracks, putting in automatic signals." Without these capital expenditures and improvements, the roads could not have handled the business at all. "They could have handled it to a certain amount, but with the increased traffic on all of the roads, due to the development of the country, they would have been actually swamped."

Capital expenditures all made to increase efficiency of the roads.

(4098) I have prepared a graphic showing of the improvement in physical condition on the U. P. and the S. P. Systems since the

Graphic showing of improved physical condition of U. P. and S. P. since 1901.

year 1901. "I have this also in two forms—a typewritten sheet giving the actual figures, and a graphic chart platting those figures. The two give exactly the same information, but in different shape. * * * Firstly, as to the Union Pacific system, the two years compared being 1901 and 1909; mileage of first main track increased 10 per cent.; mileage of additional main tracks 517 per cent.; mileage of sidings 42 per cent.; expended on maintenance of roadbed and structures per mile operated 26 per cent.; percentage of rail 75 lbs. or over in main lines, in the first year was 25 per cent., and in the second year it was 78 per cent."

Percentage of increase in improvements on U. P.

It increased about three times as much. There was a slight increase on the branches, 6 per cent. "On the total system it increased from 17 per cent. to 50 per cent. The percentage of track ballasted increased from 28 per cent. to 50 per cent. Percentage of road fenced from 60 to 83. Percentage of timber trestling creosoted from none to 2 per cent. Percentage of ties Burnettized, that is, treated with chemicals to prevent decay, increased from nothing to 42 per cent. Percentage of track with tie plates increased from 4 per cent. to 49. Percentage of tracks protected by automatic block signals, that is, main lines, from 6-10 of 1 per cent. to 70 per cent. The train accidents per million locomotive miles run decreased from 19.3 to 9.9. The locomotives owned increased from 832 to 1,088. The average hauling capacity of locomotives owned increased 39 per cent. The tons of freight handled per train increased 50 per cent. Passengers per train 66 per cent. Passenger equipment 25 per cent. Freight equipment 18 per cent. Average capacity of freight equipment 38 per cent. Average tons of freight handled in each loaded car 16 per cent. Expended per annum for maintaining each locomotive 22 per cent.; for maintaining each passenger car 62 per cent.; and for maintaining each freight car 82 per cent. * * * Total capacity of cars owned, in tons, 62 per cent."

Correspondence in quality of improvement as between U. P. and S. P.

The correspondence in the quantity of improvement as between the U. P. and the S. P. is shown by the chart to the eye at once—there is a correspondence in nearly every item. (4099) The chart referred to, marked Defendants' Exhibit 70, faces page 4098 of the record, and the typewritten sheet carrying the charted statement into arithmetical expression, Defendants' Exhibit 71, is at page 4099. (4100) The authority for Exhibit 71 is the annual report. Exhibit 71 shows the improvement in physical condition of the U. P. and S. P. Systems between the years ending June 30, 1901, and June 30, 1909, and the data given on the sheets have been platted graphically on Exhibit 70.

Total expenditures for improvements on U. P.

For the eight years ending June 30, 1909, on the U. P. the expenditures on improvements under 36 items that I have listed on this exhibit, covered in round figures nineteen and one-half millions; on some ten other items, such as second-named track and terminals, $32,475,000; reconstruction and grade revision, $5,334,000; rolling stock, $22,611,000; change of line between Omaha and Lane, $3,841,000—total $64,263,000; construction and acquisition

of new lines $57,245,000—total $121,508,000. In addition, the U. P. purchased jointly with the S. P. equipment of the Pacific Fruit Express aggregating $10,671,000, half of which was paid by the U. P. The exhibit of the foregoing data is marked Defendant's Exhibit 72, appearing at pages 4100 and 4101 of the record.

Expenditures on U. P. during 8½ years ending June 30, 1901.

(4102) Exhibit 72 has a statement headed "8½ years ending June 30, 1901," which is further analyzed into three years ending June 30, 1901, and 5½ years ending June 30, 1898. In the 5½ years preceding the reorganization, only $201,000 were expended on general betterments, and in the three years following the reorganization up to the end of the fiscal year June 30, 1901, the present company being organized in 1898—the amount spent was $5,341,000. This latter amount embraced for these three years 36 items of general betterments, and different items of operating expenses. The next ten items raised the total to $6,421,000; reconstruction and grade revision accounts for $9,106,000; rolling stock, $10,127,000; construction and acquisition of new lines, $6,819,000—grand total for the three years ending June 30, 1901, $32,474,000. For the 5½ years ending June 30, 1898, for all the items I have specified, there was spent only $983,000. The two columns, one for the three years and the other for the 5½ years, are combined in the last column, and total $33,457,000, carrying us to June 30, 1901; and then the first column, with its total of $121,000,000, and the $5,000,000 for the Pacific Fruit Express, makes the total for the eight years beginning June 30, 1901. I have a similarly constructed statement for the Southern for the 8½ years ending June 30, 1901, and the eight years ending June 30, 1909.

Expenditures on S. P. during 8½ years ending June 30, 1901, and during 8 years ending June 30, 1909.

(4103) For the 8½ years ending June 30, 1901, $12,390,000 was spent on general betterments, and for the 8 years ending June 30, 1909, $41,669,000. "Adding to the above reconstruction and change in line and terminal properties, the total for the 8½ years ending June 30, 1901, was $15,361,000, and for the period ending 1909, $66,327,000. Adding to these figures the amount spent for rolling stock, steamships and other floating equipment, for the period 1901, is $30,792,000; for the second period $107,373,000. Adding to the above figures the cost of line changes, grade reductions, to the period ending 1901, the total expenditure was $30,792,000; for the second period $127,431,000. And finally adding in the cost of construction and acquisition of other new lines and terminal properties, the grand total for the period ending 1901 was $57,722,000; for the second period $241,944,000. And to this total should be added $5,335,000—one-half cost of the Pacific Fruit Express equipment bought jointly with the Union Pacific." This exhibit marked Defendant's Exhibit 73, appears at pages 4103-4 of the record.

Character of improvements, etc.

(4104) Some of the important improvements that have been made in the condition of these roads since 1901 are as follows: "On the Union Pacific the policy started in 1898, of reducing grades, taking out curves, ballasting, improving terminals, and block sig-

naling, was continued subsequent to 1901 and has been continued really up to the present day. On the Union Pacific, some of the particular items might be mentioned, such as the change of line between Omaha and a point about 22 miles west of it, by building what is known as the Omaha-Lane cut-off, which substitutes for a high grade single track line with very heavy curvature and for a considerable part of its distance through a thickly settled community, a low grade double track line with very straight alignment, with few or no grade crossings on it, which can be operated at very high speed, and with a reduction of distance in the 22 miles of about 10, or nearly 50 per cent. A second notable improvement was the reduction of the summit of the Union Pacific over the Rocky Mountains, and a substitution of a road with excellent alignment, fully ballasted, and for nearly all of its distance double tracked in place of the old line, which was very crooked and climbed the summit several hundred feet higher than the present one, and was single track. Both of these lines have been fully protected by the most modern block signal devices. On the Union Pacific, between Omaha and Ogden, there have been built, at the present time, rather over 400 miles of double track, and there must be from 150 to 175 miles authorized and under various (4105) stages of construction.

Particular items of improvement on U. P.

Omaha-Lane Cut-off.

Reduction of grade at summit of Rocky Mountains.

Double track.

"All of the main line of the Union Pacific, some of its line from Cheyenne to Denver, and some of its Kansas division from Kansas City to Denver, has been thoroughly and absolutely protected by the most efficient means of automatic electric block signaling known. When I say Union Pacific, passing on to the O. R. & N. and Short Line, the policy of block signals has been followed there; and the main lines of those two roads are well advanced in block signaling. The O. R. & N. is complete, from one end to the other, from Huntington to Portland; and the Oregon Short Line, for a considerable part of its mileage is complete. So to-day the Union Pacific has a larger percentage of its main line track on which its traffic is densest and the risk of accident greatest, protected with high grade block signaling, than any road west of the Mississippi River, and it is exceeded in that respect by very few roads east of the Mississippi River. At the same time, on the Union Pacific, freight division terminals have been increased as to trackage and have been remodeled, making the work of switching, marshaling and breaking up trains, quicker and more efficient. Water stations have been increased; ballasting has been pushed; the standard of rail has been raised from 70 and 75 pounds to 90; and in the renewal of small structures, metal, concrete and masonry have been substituted for timber. As to the Southern Pacific, some of the principal items of improvement have been the Bay Shore cut-off, giving a new entrance to the Sunset lines into the City of San Francisco, avoiding very heavy grades, very crooked track, through a densely settled part of San Francisco, substituting for a single track a double track at water grade, reducing distance about 4 miles between common points, and cross-

Automatic electric block signals.

Improvement of freight terminals.

Principal items of improvement on the S. P.

Bay Shore Cut-off on Sunset line.

ing every street in San Francisco that is crossed, at separated grades instead of at grade. The second notable improvement has been the construction of what is known as the Dumbarton cut-off. This is also on the Sunset line, and will enable trains from the San Joaquin Valley lines of the Southern Pacific to come into San Francisco over a bridge in lieu of transferring over the ferries—as they do at the present time"—I mean the ferries from the Oakland to the San Francisco side of San Francisco Bay. "The second notable improvement on the Sunset line has been the new line between Montalvo and Burbank, by which a low grade line, with low curvature, has been substituted for a very crooked line with numerous choppy grades. The policy of double tracking has been followed on the Southern Pacific also, double tracks having been built from San Francisco to San Jose, from Los Angeles to Burbank, and from Los Angeles to Shorb. In Arizona and New Mexico, construction has been begun on a line in the canyon of the Gila River, which will eventually give a low grade line for a long distance as against lines with very obstructive grades now (4106) being operated.

Dumbarton Cut-off on Sunset line.

New low grade line between Montalvo and Burbank.

Double tracking.

"Extensive improvements have been made in the terminals at San Francisco, Oakland, Los Angeles, San Jose, and at almost every freight terminal on the entire system. Sidetracks have been lengthened. Renewals of light metal and wooden bridges have been made with modern steel bridges of the heaviest specifications. On the lines east of El Paso, over two millions of dollars have been spent in building an ocean terminal at Galveston, for the accommodation of the Company's New York and Galveston fleet. At Avondale, 10 miles above New Orleans, a ferry transfer has been put in, to enable the passenger trains to enter the modern passenger station of the Illinois Central, in the heart of the city, the Southern Pacific before that time having had such poor passenger terminals in New Orleans as to be negligible; indeed, they were so poor that the passengers alone crossed the river; the baggage cars were ferried; and it made a break for the passengers in crossing the river. At present, the whole train is ferried, and passengers do not leave the train until they reach the Union station. In the suburban lines around San Francisco Bay, steam motive power is being abandoned and electric motive power installed. Numerous additions have been made to the company's fleet of steamers plying between New York, on the one hand, and New Orleans and Galveston on the other. A number of these ships have been delivered, and four very large freight ships are now under contract for delivery in the latter part of 1910. Automatic block signaling has been pushed on the Southern Pacific lines, as it has been on the Union Pacific, primary attention being given to the main lines. So, in connection with the Union Pacific, the line from the Missouri River to San Francisco Bay is now fully protected by the highest grade of electric block signaling.

Improvements at terminal points of S. P.

Ocean terminal at Galveston.

Ferry transfer at New Orleans.

Additions to fleet of Morgan line.

Automatic block signals.

"And on the Sunset line, from San Francisco to New Orleans, a very considerable part of the mileage has been protected, and

future additions to this equipment are being made on this line, it receiving second attention on account of its much less traffic density than the Southern Pacific's line from San Francisco to Ogden. On the lines east of El Paso, in the past four or five years every metal bridge that has been put in the line in the construction in 1882 and 1883, has been removed and replaced with very much heavier steel structures. Sidings have been lengthened, terminal properties purchased, and equipment added to very generously; as a result of which the property is in a very high state of efficiency. There are some photographs here of these various improvements, selected from a large collection, that possibly will illustrate some of these points, showing the standard of bridge construction, station construction, terminals, block signals, bridges, and so on. In listing these improvements on the Southern Pacific I should like to add an allusion to the Ogden Lucin cut-off—perhaps the most important improvement they have ever made. It escaped my memory. That is the low grade line across Salt Lake, saving 44 miles of distance in 144, and saving a climb over the Promontory Mountains.

New bridges.

S. P. property in a very high state of efficiency.

Lucin Cut-off.

"And another piece of work of great importance, which (4107) is now perhaps half finished, is the reconstruction of the line over the Sierra Nevada Mountains from Rockland to Colfax, a distance of 32 or 33 miles, substituting a 1½ per cent. grade of good alignment, suitable for fast time, for a road with 2.2 per cent. grades and extremely crooked; the new line being intended as an up-hill track, the old one as a down-hill track, so that incidentally, those 33 miles will be double tracked. The photographs referred to by the witness, and produced by him, were offered in evidence by the defendants, received without objection, and marked Defendants' Exhibits 74 to 98, both inclusive; but it was stipulated that the same need not be printed in the record of this case but might be used by counsel in the argument the same as if the photographs had been incorporated in the record. * * *

Reconstructing line over Sierras.

"Defendants' Exhibit 74 is a photograph of the stone passenger station at the entrance of Yellowstone Park. Defendants' Exhibit 75 is a distant view of the new station at Salt Lake City, new tracks, and street viaduct across the freight and passenger yards at Salt Lake City. Defendants' Exhibit 76 is a new masonry and brick station at Payette, in western Idaho. Defendants' Exhibit 77 is a photograph of the Salt Lake station complete except as to the train shed and concourse, which has yet to be built. Defendants' Exhibit 78 is a section of the recently completed double track of the Union Pacific near Lawrence, Kansas, between Topeka and Kansas City, showing the installation of the electric block signals. Defendants' Exhibit 79 is a section of the Union Pacific track near Kearney, Nebraska. Defendants' Exhibit 80 is the same, from a little different view point. Defendants' Exhibit 81 shows overhead road crossing, in a very deep cut just west of Omaha, on the Lane cut-off. Defendants' Exhibit 82 shows a section of track ballasted with furnace slag, near El Paso, Texas. Defendants' Exhibit 83 is the Bay

Photographs of improvements.

Shore cut-off, in San Francisco, showing block signaling, separation of street grades, and tunneling. Defendants' Exhibit 84 is a photograph of a crossing of San Francisco Bay at Dumbarton Point. Defendants' Exhibit 85 is a section of present standard Southern Pacific track with rock ballast, ninety pound rail and block signals, near San Jose, California. Defendants' Exhibit 86 shows a reinforced concrete passenger station at Santa Barbara, California. Defendants' Exhibit 87 shows a masonry passenger station at Tucson, Arizona. Defendants' Exhibits 88 and 89 are photographs of the trestle and station in the middle of Salt Lake, with passing side tracks on trestle work, Lucin cut-off, Southern Pacific Company, near Ogden, Utah. Defendants' Exhibit 90 shows a rock ballasted curve between Del Rio and Sanderson, Texas. Defendants' Exhibit 91 shows 90 pound rail and gravel ballasted track near El Paso. Defendants' Exhibits 92 and 93 show standard 90 pound track near (4108) Sierra Blanca, Texas. Defendants' Exhibit 94 shows a brick passenger station at Beaumont, Texas. Defendants' Exhibit 95 shows a brick passenger station at San Antonio, Texas. Defendants' Exhibits 95 and 96 are the same; San Antonio. Defendants' Exhibit 97 shows a new steel bridge over Berwick's Bay, 80 miles west of New Orleans, Louisiana. Defendants' Exhibit 98 shows signal bridges and interlocking in the freight passenger yards at Houston, Texas."

Annual expenditures for maintaining roadbed and equipment, with comparative figures as to other lines.

For the last decade, for instance, the annual amount spent for maintaining track and equipment, per mile, on the U. P. system, averaged $2,327; S. P. $2,676; Atchison, $2,282; N. P. $2,095; G. N. $1,648; D. & R. G., $1,738; C. & N. W., $1,921; C., M. & St. P., $1,633. On June 30, 1909, the U. P. and S. P. systems had in operation 5,324 miles of line protected with these block signals. In 1901 they had 89 miles. On January 1, 1910, there were only 14,419 miles in operation in the entire United States. The U. P. and S. P. had considerably over one-third of the entire mileage operated with those signals, in the United States. I have said, several times, that these signals were the most modern and improved that we could find. We have adopted the most modern and most efficient type.

Block signals give warning of broken rails and open switches.

"These signals not only notify a train by the setting of two signals, of danger ahead of it, that there is a train, or a broken rail, or an open switch within two blocks ahead of it; but they also maintain two signals, at all times, of danger behind a train; so that, as the train passes over the road it keeps two signals always set ahead of it, and two signals set behind it, so as to protect against collision of either approaching or following trains. In addition to that, the signals give warning of broken rails, or of open switches, or of a car blown out of a switch on to the main line, or of any metallic obstruction, such as a rail laid from one rail to another for wrecking purposes, the theory being this: That the signal is maintained at safety by an electric current that is sent through the rails. Anything that breaks the continuity of that current sets the signal at danger, so if a rail breaks the signal is set at danger, or if a switch

is open, breaking the continuity of the main line, the signal goes to danger; if an iron bar or rail is set across the track for the purpose of wrecking a train, that lets the current escape and sets the signal of danger. If the wheels of a car escape out of a sidetrack to the main line, they set the signal of danger; and, of course, if a train (4109) is ahead, the axle connecting the two rails sets the signal of danger. So you get, in that way, protection not only against collision, but against broken rails, open switches, wash-outs that may break the track, landslides that may break the track; and it is largely to those signals that the increased safety of operation has been brought about."

Statement of betterments on line, Omaha to San Francisco, and line, New Orleans to San Francisco.

I have a statement showing betterments and additions on the route Omaha to San Francisco, and the route New Orleans to San Francisco, for the 8 years ending June 30, 1909. (This statement, marked Defendants' Exhibit 99, appears at page 4110 of the record.) (4111) The routes are the Ogden route and the Sunset route. "The corporations in the route making up the Omaha-San Francisco line are the Union Pacific Railroad Company and the Central Pacific. There were spent in betterments and additions, for the Union Pacific, on that particular line, in those years, $27,834,000; on the Central Pacific, $29,972,600. On the betterment of their through line, $57,806,000. On what is known generally as the Sunset Line, from New Orleans to San Francisco, there was spent on the lines in Texas, or east of El Paso, that are headed 'Sunset Lines' on this statement, $7,908,000; on the Southern Pacific Railroad (which is the corporation covering the line from El Paso to San Francisco) $27,391,000. Total for the New Orleans-San Francisco line, of $35,299,000. This excludes rolling stock, and floating equipment. Of course the Sunset Line is made up partly by water line, and the value of the steamships and floating equipment is not in these betterments, nor is the rolling stock."

Expenditures for second main track.

Referring to the item of second main track $9,390,416.03, under the Omaha-San Francisco tabulation, and as against that $885,919 in the tabulation for the route New Orleans-San Francisco, much of the difference in reference to betterments is explainable by reference to that one item of second main track. Speaking of the betterment items, outside of reconstruction, the elimination of that one item would reduce the Omaha-San Francisco to $25,000,000, and leave the other about $22,000,000. The situation in respect to this item of second main track in this regard, is a question of traffic density. "The traffic density, that is the amount of traffic per mile, over the one route, is so much greater than the other, that the second main track on the line from the Missouri River to San Francisco Bay is one of the most urgent needs of the present day. On the other line the traffic is so much lighter that that necessity has not been felt, except (4112) around extremely important traffic centers; for instance, around Houston, Texas, we have a few miles of double track; and out of our New Orleans terminals we have some double track; in the sugar districts of Louisiana we have a

piece of double track; around Los Angeles, north and south, we have double track; and north and south out of San Francisco. But the mileage of second track on the Southern Pacific is smaller. The traffic density on the Ogden route is just double what it is on the other."

The difference in traffic density would be reflected necessarily to some extent in the difference of automatic signal mileage as between the two routes. "The installation of automatic signals is extremely expensive, not only in first cost but in the cost of maintenance; because it is a delicate bit of machinery, and requires a great deal of watching, and, unless in the highest state of efficiency, it is useless; so, of course, we have selected the mileage where the returns from this protection would be greatest. Those are the high speed lines of high traffic density." They are the lines that need the improvement most. Referring to the item of "Reconstruction and Changes in Line," of eleven million assignable to the Omaha-San Francisco route, and the item of $856,511 attributable to the New Orleans-San Francisco route, there are two reasons at work in respect to that difference.

Automatic block signals have been placed on high speed lines of high traffic density.

"The first one is the same one that I have mentioned—traffic density. When we consider the question of reconstruction of a piece of track, the elimination of curves and grades, the cost of the improvement is studied, and a very careful estimate made of the economies that will result from the changes. The economies, of course, are directly proportional to the density of traffic. In other words, if the new line will shorten the distance two miles, and there is one train a day over that track, it is not very much of a saving. But if there are 40 trains a day over that track, and each one saves two miles, in the aggregate the saving is very large. And when the proposition is presented to the directors, the saving in operation, based generally, for conservatism, on the traffic of the present time, is capitalized at the ruling rate of interest; and if that capitalization will build a line, it is always authorized. If not, we may be told that the time is not ripe yet; that the traffic should get a little denser before warranting that expense; or, with the existing increases of traffic, they may conclude to anticipate the increases and authorize it to-day and take their return a year or two hence. That is one reason why more reconstruction was done on the Ogden line. The traffic is much more dense, and expenditures are warranted there, under that traffic, that would not be warranted under the traffic of the Sunset Line, which averages only half as much.

Economies directly proportional to density of traffic.

Traffic on Ogden line more dense than on Sunset line.

"The other reason why the reconstruction expense (4113) is so much greater is this: That the Union and Central Pacific lines were completed in 1869, were located and begun in the early sixties. The Sunset Lines were completed in 1883. Counting from the times of completion, that was practically 14 years later; and the standards of railroad construction had risen very much in those 14 years. The Sunset Line in the beginning was built to higher standards of location and ruling grades than were the Union and

Why reconstruction expense was larger on Ogden line.

Southern Pacific. In other words, the ruling grades on the Sunset Line with the exception of a few spots in Arizona, were 1 per cent. (52.8 feet to the mile). On the Central Pacific they were 116 feet to the mile—more than double as much. Again, the Central and Union went through much more mountainous country than the Southern; and the original alignment of the Southern Pacific was very much better than the alignment of those two. Therefore the necessity to reconstruct and improve was not as great on the Sunset Line as it was on the others, and never will be. The Sunset Lines west of San Antonio were built, from one end to the other, with the highest grade of metal bridges that were built at the time of their construction; built almost uniformly on masonry piers. On the old Central and Union Pacific all of the bridges were wood."

Chart showing improvements, Council Bluffs to Oakland Pier, compared with main line, Algiers to San Francisco.

I have charted the improvement in physical condition since June 30, 1901, of the main line Council Bluffs to Oakland Pier, compared with the main line Algiers to San Francisco. (Defendants' Exhibit 100, facing page 4114 of record.) "The mileage of first main track, on the Council Bluffs line, was 4 per cent. less in 1909 than in 1901; due, of course, to the elimination of a little mileage by reconstruction. On the Sunset Line, it was 1 per cent. less. The mileage of additional main tracks, on the Council Bluffs line showed an increase of 402 per cent.; on the Sunset Line, 143 per cent. The mileage of all main tracks on the Council Bluffs line showed an increase of 16 per cent.; and on the Sunset Line, of 2 per cent. There was expended on maintenance of roadbed and structures, per mile of road operated, on the Council Bluffs line, 19 per cent. more, and on the Sunset Line 62 per cent. more in 1909 than in 1901. The percentage of total road laid with 80 pound rail or heavier, increased from 18 per cent. in 1901, to 81 per cent. in 1909, on the Council Bluffs line; and from 6 per cent. in 1901 to 60 per cent. in 1909 on the Sunset Line. Miles of rail 75 and 76 pounds, was 35 per cent. on the Council Bluffs line in 1901; 19 per cent. in 1909; and was 49 per cent. on the Sunset Line in 1901, and 40 per cent. in 1909."

(4114) This means simply the rails of that particular weight, heavy rails 80 and over, medium 75 and 76, and light 70 and under. "In other words, the three statements together show the gradual retirement of light rail and the substitution of the heavier rail. The miles of rail 70 pounds or under, which we would class as light rails now, on the Council Bluffs line was 47 per cent. of the total, in 1901, and was nothing in 1909. On the Sunset Line it was 45 per cent. in 1901, and was nothing in 1909. Miles of fully ballasted track was 57 per cent. of the total on the Council Bluffs line in 1901; 92 per cent. in 1909; on the Sunset Line, 62 per cent. in 1901; 72 per cent. in 1909. Miles of track fully protected with tie-plates, Council Bluffs line, 19 per cent. in 1901; 95 per cent. in 1909. On the Sunset Line 78 per cent. in 1901, 96 per cent. in 1909. Miles of track protected by automatic signals, on the Council Bluffs line, none in 1901; 96 per cent. in 1909. On the Sunset Line, 1 per cent. in 1901 and 54

per cent. in 1909. Per cent. of timber trestle, built of timber treated with creosote; Council Bluffs line 12 per cent. in 1901, 32 per cent. in 1909. Sunset, 56 per cent. in 1901, and 80 per cent. in 1909. Percentage of ties Burnettized, on the Council Bluffs line, 26 per cent. in 1901; 60 per cent. in 1909. On the Sunset Line, 26 per cent. in 1901, 39 per cent. in 1909. The increase in the length of sidings in the eight years ending June 30, 1909, between Council Bluffs and Oakland Pier, was 292 miles; and between Algiers and San Francisco 479 miles. * * *

"On the Council Bluffs line, between 1901 and 1909, there was an increase of 803 miles of 90 pound rail; 679 miles of 80 pound rail; with decreases of 172 miles of 76 pound rail; 74 miles of 75; 551 of 70; 21 of 67; 344 of 60 and 62, and 1 each of 56 and 50. On the Sunset Line there was an increase of 1 mile of rail weighing 141 pounds to the yard. * * * It is a city rail; it is the girder rail in cities. 256 miles of 90 pound rail; 1,163 miles of 80 pound rail. The decreases were 139 miles of 76, 60 miles of 75, 972 miles of 60 and 62, 3 miles of 56, 50 miles of 54, and 121 miles of 50 and 52." (4115) Between Algiers and El Paso, in the eight years ending June 30, 1909, there were 40 bridges built, aggregating 14,103 feet, nearly three miles, the material used being steel and masonry, and the total cost $2,339,000; and $384,000 was expended in strengthening trestles. In connection with Exhibit 100, I have prepared an arithmetical statement for the U. P. and S. P., showing the improvements annually on each system from 1901 to 1909. (Defendants' Exhibit 101, appearing at page 4118 of the record.)

Arithmetical statement showing annual improvements on U. P. and S. P.

This exhibit shows for the Union Pacific new locomotives purchased in 1902, sixty; in 1909, six; total for the eight years ending June 30, 1909, 522. The locomotives purchased in 1907 were 179, and in 1908, 48. (4116) Passenger cars: in 1902, 23 were purchased; in 1909, 22; in 1907, 76; in 1908, 57. Total for the eight years, 258. Freight cars: in 1902 we bought 303; in 1903, 649; 1904, 1701; 1905, 858; 1906, 2175; 1907, 3100; 1908, 1378; 1909, 2326. Total for the eight years, 12,499. Work cars: in 1902 we bought 10; 1903, 7; 1904, 107; 1905, 36; 1906, 60; 1907, 171; 1908, 312; 1909, 4. Total for the eight years, 707. The number of miles of new steel rails laid was as follows: in 1902, 550; 1903, 196; 1904, 220; 1905, 292; 1906, 417; 1907, 288; 1908, 215; 1909, 250. Total for the eight years, 2,428. In the eight years ending June 30, 1909, 17,220,000 cross-ties were renewed. It is equivalent, in miles, to 6,146. The total for the same period, of tie-plates used was 15,766,000; equivalent in miles to 2,818. The total miles of track ballasted, for those years was 1,455. In respect to wooden bridges, as expressed in lineal feet, and their replacement by permanent bridges or embankments, the total for those eight years was 88,256 feet.

There were put in during these eight years 54,398 feet of iron or concrete bridges. 659 miles of new sidings were built; and 159

miles of old sidings taken up—the net result was 500 miles more of siding. During these eight years the S. P. purchased 920 locomotives (4117); passenger cars, 881; freight cars, 26,471; work cars, 2,489; laid 3,970 miles of new steel rail; renewed 24,372,000 crossties, equivalent in miles to 8,555; used 25,696,000 tie-plates, equivalent in miles to 4,542; ballasted 1,447 miles of track; replaced 136,411 lineal feet of wooden bridges; put in 49,826 lineal feet of new iron or concrete bridges; built 1,231 miles of new sidings; and took up 269 miles of old sidings.

Train service on Sunset and Omaha lines.

(4119) The passenger service is more frequent on the Omaha line as compared with the Sunset, in view of the greater train density, but the passenger train service on the Sunset is quite up to that on the Omaha line except as to frequency. A slightly greater speed is made on the Sunset freight trains than on the Omaha freight trains, there being much less obstruction by trains, the movement of trains being less impeded by meets of opposing trains. For the last year on the Omaha line the average speed of freight trains, excluding stops, was 17.10 miles per hour; on the New Orleans line 18.06; this is the actual time from the train sheets; it is taken from a form rendered every month showing the actual speed of freight trains, excluding stops.

Chart showing average speed of freight trains and relative number of meeting points.

(4120) I have prepared a chart of the average speed of all freight trains in miles per hour, and relative number of meeting points of all trains, including in that a specification for the U. P., O. S. L., O. R. & N., and S. P. (Defendants' Exhibit 102, facing page 4119 of the record). This exhibit shows in the diagram in the upper left hand corner, the average speed of all freight trains between 1900 and 1909, reasonably uniform up to 1907, a sharp drop in 1908, and reasonably uniform in 1908 and 1909; up to 1907, between 17 and 17½ miles per hour; a drop to 16½ miles per hour in 1907, at which it remained during 1908 and 1909. This is for all freight trains of the four lines specified. The second diagram relates to the U. P. proper. The full line shows the freight train speed, and the dotted line above it the relative number of meeting points in the different years. The next diagram shows the same data for the O. S. L.

"I overlooked the fact that the basis of comparison changed in the second diagram. I will explain that now. In the second diagram, instead of being actual figures, in the left hand marginal column, they are relative, based on unity in the year 1900. That is to say, the lower lines, showing freight train speeds, show that in 1909 the freight train speed was 87 per cent. of what it was in 1900; and the number of meeting points was 47 per cent. more than they were in 1900. As to the Oregon Short Line, freight train speeds in 1909 were approximately 10 per cent. more than they were in 1900, and meeting points 65 per cent. more. On the Oregon Railroad & Navigation Company, the speed in 1909 was about 95 per cent. of what it was in 1902, the record being missing prior to that time. The meeting points increased by about 45 per cent. On the

Pacific system of the Southern Pacific Company, freight train speeds in 1909 are almost exactly the same as they were (4121) in 1900—a very trifling increase. The meeting points are 50 per cent. greater. * * *

"All these data were made up from these forms of ours, which exclude stops. But I want to call attention to the fact that, whilst that would change the actual speed of trains, it does not change their relation. All of these figures except the first diagram, relate to relative speeds and relative meeting points. * * * 1907 was an entirely abnormal year. All of the lines west of the Mississippi River—and I don't know but I might omit that and say all of the lines in the country were offered such quantities of freight that it was very much delayed; and October, 1907, also marked the time of the panic; and the sharp drop in the meeting points of trains after 1907 was due to the reduction of traffic following the panic. * * * I have a typewritten statement, giving the actual speeds, in miles per hour, which covers the same period as the chart. With the Union Pacific, Oregon Short Line and Navigation Company we could not get the data prior to 1902. For the Southern Pacific Lines we have them from 1900, and for the Union Pacific system lines from 1902 to 1909. * * *

Freight train speed on U. P.

"For the Union Pacific in 1902, the actual speed was 18.7 miles an hour; 1903, 17.6; 1904, 17.0; 1905, 16.5; 1906, 17.6; 1907, 18.4; 1908, 16.9; 1909, 16.3.* * * Oregon Short Line, in 1902, 15.8; 1903, 16.4; 1904, 16.7; 1905, 17.0; 1906, 17.1; 1907, 17.2; 1908, 16.9; 1909, 17.5. For the Oregon Railroad & Navigation Company, in 1902, it was 15.9; 1903, 16.5; 1904, 16.6; 1905, 16.1; 1906, 15.8; 1907, 15.4; 1908, 14.5; 1909, 14.9. For the Pacific system of the Southern Pacific Company, in 1900 it was 17.5; 1901, 17.7; 1902, 17.8; 1903, 18.0; 1904, 17.9; 1905, 17.6; 1906, 17.8; 1907, 17.3; 1908, 17.11; 1909, 17.7. For the Southern Pacific lines east of El Paso (or the Sunset Central lines, as they are called for brevity), in 1900, 16.8; 1901, 16.0; (4122) 1902, 16.1; 1903, 15.7; 1904, 16.6; 1905, 17.1; 1906, 16.8; 1907, 16.8; 1908, 15.8; 1909, 16.1. For all of the lines of the Southern Pacific in 1900, the speed was 17.3; in 1901, 17.02; and for all the lines, in both Union and Southern Pacific systems, in 1902, the speed was 17.2; 1903, 17.1; 1904, 17.2; 1905, 17.1; 1906, 17.3; 1907, 17.6; 1908, 16.7; 1909, 16.8."

On S. P.

On all lines.

Since 1901 we have moved the same volume of traffic in a very much less number of trains. "With the increase of traffic that culminated in 1907, with our roads generally, with single tracks only, the rapid increase of meeting points, with an increase of the number of trains, would have been such that we should not have been able to move the traffic at all; instead of being congested, we would have been absolutely unable to move. And as this increased traffic was offered us, through the purchase of heavier locomotives, and more efficient car and train loading, we were enabled to handle an equal volume of traffic with a largely reduced number of trains. To make my meaning clearer in regard to the obstruction of a single

Ability to handle traffic with less number of trains.

track line by multiplication of trains; if you have one train in each direction, there can be but one meeting point. If you have two in each direction, each of the two trains can meet either of the other two; and the number of meeting points becomes four. With three trains each way, the number of meeting points would be nine. In other words, the number of meeting points increases by the square of the number of trains in each direction. So if you increase from one train to ten each way, you increase the meeting points from one to ten times ten, or one hundred; with the additional obstruction of following trains having to look out for preceding trains. So the obstruction from a multiplication of trains on a single track increases so rapidly that the increase in the number of trains becomes almost prohibitive of traffic, after you double or treble the number of trains that you are handling, if you are handling a reasonable number in the beginning."

Number of meeting points increase by the square of the number of trains.

The number of trains become prohibitive of traffic.

Bearing in mind the figures that I have given for the speed of the freight service since 1901, we have still been able, with increased traffic, heavier locomotives, and longer trains, to give the speed indicated by those figures. Our freight service upon the U. P. and S. P. since 1901 is quite as good as that given by other transcontinental lines; we could not hold our business unless we did give it. (4123) As to the policy of the S. P. and U. P. in using heavier equipment to handle freight: "All of the transcontinental lines are really working on the same policy. In other words, efficient railroad management can be epigrammatically stated to be simply efficient car-loading and efficient train-loading; that is all there is to it. The fellow that gets the most efficient car-loading and the most efficient train-loading, distances his competitors. We are all working on the same lines; and there is only one way to do it. All of the lines are doing it in the same way, because there is no argument possible in that."

Freight service on U. P. and S. P. as good as that given by other transcontinental lines.

In respect to the line between Omaha and Ogden, I have prepared a chart showing gain in traffic density and changes in condition (Defendants' Exhibit 103, facing page 4123 of the record). "Defendants' Exhibit 103 shows, for the Union Pacific Railroad proper, the relative traffic over the main line between Omaha and Ogden, between 1896 and 1909, inclusive, the traffic of 1896 being taken as unity. The increase in freight traffic density, shown by the full line at the bottom of the chart, was 180 per cent. The increase in train density, which would be the number of trains per mile of road, is shown by the dashed line; and that increased only 80 per cent. Of course, if the trains had not been loaded better, the increase in train density would have been practically the same as the increase in traffic density, or 180 per cent., as shown by the line of dashes and crosses. Now, under existing conditions, that is, the conditions under which the increased traffic was moving, the increase in meeting points, or the handicap to trains getting over the road, increased 230 per cent. If the traffic had not been handled in a lesser number of trains, the handicap to the movement of freight

Chart showing gain in traffic density between Omaha and Ogden.

trains, in the increased number of meeting points, would have increased 680 per cent. as against 230."

Arithmetical statement showing gain in traffic density between Omaha and Ogden.

I have a statement converting the graphical descriptions of the chart into arithmetical statements for the same period, estimated on the basis of car mileage (Defendants' Exhibit 104, appearing at page 4125 of the record). (4124) "This typewritten statement shows, in actual figures, what the chart shows in relative figures; and the foot note 'Estimated on the basis of car mileage,' refers to the gross ton mileage in the years 1896, 1897 and 1898, at which times it was not kept, and it means that that was based on estimates of car mileage. In other words, we had the car mileage figures, and we estimated the load and weight of the cars in those three years only. From 1900 to date, we had the actual figures kept. It shows, briefly, that for the Union Pacific Railroad proper, the gross ton miles moved per mile of road (or traffic density, for short) was 2,838,000; in 1900 it was 3,655,000; in 1901, 3,810,000; in 1902, 4,098,000; in 1903, 4,312,000; in 1904, 5,468,000; in 1905, 6,520,000; in 1906, 7,349,000; in 1907, 8,087,000; in 1908, 7,765,000; in 1909, 8,114,000. The daily train density of passenger trains in 1896 was 4.5 and freight trains 9.1; a total of 13.6. * * * In 1907 the passenger train density was 11.7; freight, 17.0; total, 28.7. In 1908, the passenger train density was 12.5; freight, 14.2; total, 26.7. In 1909, the passenger train density was 12.1; freight 12.7; total, 24.8. * * * In 1900 the passenger train density was 6.9; freight, 11.1; total, 18.0. In 1901, passenger 8.3; freight 11.1; total 19.4." The basis of these figures from and after the year 1900 is "the actual statistics kept; we kept gross ton mileage after that date. I will say, by way of explanation, to make it entirely clear, that 'gross ton miles' means the weight of train and contents." The next column in my statement shows what the train density would have been had we not loaded our cars and trains more efficiently. In 1896, the train density, with no change in the freight train loads, would have been 13.6; in 1897, 14.6; in 1898, 15.8; in 1900, 18.6; in 1901, 20.5; in 1906, 34.4; in 1907, 37.6; in 1908, 37.4; in 1909, 38.1. The actual meeting points in 1896 were 46; in 1897, 51; in 1898, 59; in 1900, 81; in 1901, 94; (4125) in 1906, 164; in 1907, 206; 1908, 178; and 1909, 154. Assuming unchanged freight train load, the meeting points would have been, in 1896, 46; in 1897, 53; in 1898, 62; in 1900, 86; in 1901, 105; in 1906, 296; in 1907, 353; in 1908, 350; and in 1909, 363. In other words, the difference between the actual meeting points under the more efficient car and train loading in 1909 was 154, and the unchanged freight loading would have been 363, a reduction of 210 meeting points, practically.

51 hour freight schedule between Omaha and Ogden.

Referring to the 54-hour schedule of 1900, main line Omaha-Ogden, I have a statement of the schedule covering that movement showing their variations from and after 1900. (4126) In June, 1901, the freight schedule Council Bluffs to Ogden was 58 hours, 25 minutes; November 3, 1901, 60 hours, 30 minutes; December 21, 1902, 64 hours; January, 1903, 82 hours, 10 minutes; October,

1903, 74 hours, 20 minutes; November, 1903, 74 hours, 30 minutes. In October, 1907, 100 hours, 45 minutes. These figures represent schedule time. The schedule was lengthened in 1907 to meet the conditions that confronted us at that time. "We had this panic; we could not reduce expenses, we could not increase revenues; and the problem that confronted the management of roads was how to get satisfactory results without either increasing revenues or decreasing expenses—a pretty tough problem; but it was solved, as I have already shown, by more efficient car loading, more efficient train loading; and, whilst freight takes a little more time to get from Council Bluffs to Ogden, I showed in my testimony yesterday that the bonus paid to the public for that was $154,000,000 in about eight years. * * * Traffic density in 1907 attained its maximum up to that year. It was slightly exceeded in 1909, but it was the greatest in any year up to that time."

Train discrimination.

Uniform speed.

We made no schedule change in 1908—the schedule figures are the same today as in 1907. The faster you undertake to run some one particular train, the more you discriminate in its favor, the more other traffic has to suffer necessarily. The best operating conditions for moving the entire traffic between terminals in respect to speed and loading, is, as near as possible, uniform speed; and aside from operating difficulties the faster you undertake to run, the greater is the liability to accident, and the greater the uncertainty, because you have less of a margin to work on. If you work your locomotives and plant to maximum capacity, without any margin for contingencies—if anything happens you are thrown out. (4127) This 54-hour schedule was not in my time; I understand it was maintained. And we could maintain it now by practically sidetracking everything else and making it a preferred train; but we don't want to do that, it is not wise, and it is not right. Upon the speed of trains, I have prepared a showing with reference to the hauling power of the locomotives, and the increase of meets. (Defendant's Exhibit 105, facing page 4127 of the record.)

Chart showing hauling power of locomotives, and the increase of meets.

"The upper part of the diagram shows by a curve in full line, marked 'Relative Density of Trains,' immediately under the words 'Velocity—Miles per Hour,' the speeds from 10 up to 45 miles an hour. At the bottom of the sheet it shows the relative number of meeting points, increasing from 1, at the left hand, to 83, at the right hand. In other words, to move a given amount of traffic, if we follow that curve from the left up to the right, moving the traffic say at 10 miles an hour, the actual number of meets would be 1. If we take the same traffic and split it up into more trains and move it at 45 miles an hour, we would increase the meets to 83. A further disadvantage is shown in the bottom half of the diagram on the two lines marked 'Relative Total Weight of Train including Locomotive and Tender' and 'Relative Total Weight of Train excluding Locomotive and Tender.' Following the upper line from the left hand corner of the diagram shows that if the hauling power of a given locomotive be 100 at 10 miles per hour, it falls to 42 at 30

miles per hour; that is to say, the locomotive can haul only 42 per cent. as much of the load, including her own weight, at 30 miles per hour, as she can at 10. If the speed be increased to 45 miles per hour, she can only haul about 20 per cent. of what she can at 10. This explains why we have kept the speed of our trains low: firstly, because we did not want to run locomotives without hauling loads; we did not want to increase meeting points and impede the movement of these trains so we could not get them over the road, and we were confronted with the problem of how to show results from the traffic moved in the face of very large increases in the rates of pay to employees and in the prices paid for materials, without any increase in the rates."

The lower of the two curves, in the lower half of the diagram "is the same as the upper one, but it excludes the locomotive and tender. In other words, it would be the paying load, and it shows that if the speed is increased from 10 to 45 miles an hour that the locomotive will only haul about 10 per cent. of the weight that she will haul at the lower speed, after furnishing the power to (4128) haul herself and tender. In other words, her efficiency is almost gone. If the curve were run a little farther down she would have capacity to move only herself and tender and no load." The upper curve shows that if to move a given traffic at 10 miles an hour requires a density of unit of train, to move the same traffic at 45 miles an hour would require a density nine times as great.

Increase of speed lessens carrying power of locomotive.

With respect to a 54 hour schedule between Council Bluffs and Ogden: "Based on last year's traffic, when the daily train density was 12 passenger trains and 13 freights, or a total of 25 trains, the actual freight speed run was 17 miles per hour; the average train load was 700 tons of freight. Now, to increase that speed to the 54-hour schedule as compared with a 100-hour schedule, which means an increase in percentage of 85 per cent., would have required an increase from 17 miles per hour to 31 miles per hour. * * * Calling the power of a locomotive to haul freight at 17 miles per hour unity, at 31 miles per hour it would have been only 48 per cent. of unity." The expression of unity signifies 100. "I have already said that the weight of the train at 17 miles per hour was 700 tons. It would have had to be reduced to 336 tons for the higher speed, and the number of trains required to move the same traffic would have been, of course, as to passenger trains 12 and freights 27—a total of 39 as against 25 under existing conditions, and the number of meets would have been 2.43 times as many."

Effect of adopting a 54 hour schedule.

Assuming that the meets of the 25 trains are 100, the meets of the 39 would be 243. Double tracking has helped out the speed of trains to the extent that we have gotten in the double track. The double track is not continuous, but on the pieces we have got in it has helped immensely. Forty per cent. of the U. P. main line is double track, sixty per cent. is still single track, and the single track is the weakest point of the chain from a traffic point of view, and really limits the capacity of the road, but wherever we do get a piece of

Ratio of meeting points to number of trains.

Double track helps.

Only partially double tracked.

double track on that road it helps immensely. (4129) The fact that the road is double track only partially must be taken in connection with the fact that even that partial improvement is limited and discounted by the single track. I do not know of any other lines now maintaining as fast a schedule as 54 hours.

New York Central freight service.

"The New York Central moves most of its freight on the west side of the Hudson River, where it has the West Shore road; on the east side of the Hudson to Albany there is doubletrack; from Albany to Buffalo it has 4 tracks, 2 of which are devoted exclusively to freights. So they have absolutely no meets. The Lake Shore road, which is their connecton running to Chicago, for a considerable part of the distance has 4 tracks, and for the entire distance it has 2. The Pennsylvania has 4 tracks from New York to Pittsburg, 4 tracks for part of the way from Pittsburg to Chicago, and never less than 2. The New York Central's schedule on their through freights, freights that they turn over ultimately to the Union Pacific, is 60 hours from New York to Chicago, or, roughly, 15 miles an hour. And that is over a level track, a track of few curves, and a track where a freight train has absolutely no meeting points." That, I understand, is a merchandise freight schedule. I don't know whether the New York Central to Chicago for freight other than merchandise freight has a 100-hour schedule.

Comparison between New York Central and U. P. freight service.

"This is the schedule that I took that corresponds to the 100-hour schedule on the Union Pacific, which is the schedule on which we pull our Pacific Coast freight, and while the average speed including stops from the Missouri River to Ogden on the Union Pacific is only 10 miles an hour as against 15 on the New York Central, it is a vastly more creditable performance and a harder schedule to maintain and requires higher operating efficiency than the 15-mile schedule, because the Union Pacific freight has to be lifted at one point alone over an 8,000-foot mountain ridge, over the Rocky Mountains, besides a number of intermediate summits, and the New York Central freight moves from New York to Chicago practically on a water grade, and with a track for westbound freight and a track for eastbound freight, totally without handicaps from opposing traffic." (4130) As to the delay of train movement consequential upon the inspection required by the Federal laws, "we have taken the actual time of inspectors going over trains at the various inspecting points between Council Bluffs and Ogden, and out of the total time of 100 hours that we have for that run, 27 hours and 39 minutes are consumed in inspection. I do not mean to say that all of that is due to federal law, but a little over 6 hours out of the total are due to the extra time taken now as compared with the time it took before the law was so extremely enforced as it is at the present time."

Delays occasioned by new laws.

As between 1901 and the present time, the consumption of time is six hours and six minutes greater than it was then. As to the 16-hour law, "the effect of all these new laws has been to lengthen out the time. There are laws affecting the length of time that you can

keep animals in cars. If it is violated, even unintentionally, you have got to prove that you did it unintentionally, otherwise you have got a heavy fine. There is a law prohibiting working train crews over 16 hours. Of course every train crew is a self-constituted check on the road, every member of the crew is quick to report any infraction or supposed infraction of the law to the Interstate Commission inspectors, who are very numerous over the roads; heavy fines are the result of infractions, suits are sometimes instituted even if the carriers are totally blameless and they are put to the trouble of delaying trains on account of these laws, to be certain that they do not run up against fines. Formerly a slight defect in a car, that in no way made it unsafe to run was overlooked and the car was taken. At the present time even the slightest defect will prevent it, even though not rendering the appliance unsafe; requires the whole train to be stopped, the car switched out and sent to the repair track.

"At times a defect will develop in a car that left a terminal in good order—it develops on the road, and to comply with the law the train has to be stopped, the car switched, set out on a side track, and men sent out to repair it. We had an extreme case, where a locomotive left a terminal after proper inspection, with the air pump in perfect condition. The air pump gave out 15 or 20 miles from the terminal to which the locomotive was destined, the train was taken to the terminal, and a suit was promptly instituted because the whole train was not stopped and the locomotive detached and another one sent out from the terminal to take its place." (4131) I have some figures, comparative figures, showing the average distance a freight car was moved per day for the year ending June, 1909. "a memorandum here taken from the monthly reports of the Committee of Relations between Railroads of the American Railway Association, that publishes monthly the car movements of the different roads of the United States. For the year ending June, 1909, the average movement per day per freight car on all the roads in the United States was 22.1 miles; on the Union Pacific Railroad it was 41 miles, on the Oregon Short Line 31.8 miles; on the Oregon Railroad & Navigation Company 23.9, on the Pacific System of the Southern Pacific 32.7, and on the Sunset-Central lines 22.9."

Average movement per freight car per day.

The disparity between the U. P. mileage, 41 miles, and the Sunset-Central mileage of 22.9 is largely a question of the nature of the traffic. "The Sunset-Central has a number of important terminals, particularly tide-water terminals, which are the graveyards of freight cars. Custom, that in some cases has been made the law, the regulation of railroad commissions, gives the man who ships freight to tidewater an unusually long free time in a freight car. The Sunset-Central lines at New Orleans and Galveston, Port Arthur and Sabine Pass, have ocean terminals, and that interferes very much with their car movement. The Union Pacific does not reach tidewater, and a great deal of their traffic is delivered to them by connection at the east and west ends and is hauled through. Therefore they show somewhat better daily car move-

ment. The Union Pacific Railroad is in a large sense an intermediate carrier." Passenger trains in their operation interfere with the promptness of freight train movement and delivery vastly more than an equal number of freight trains, because the passenger is a preferred movement and the freight trains have to give way. Between Council Bluffs and Ogden in 1900 we had seven daily passenger trains; in 1909 we had twelve. Since 1901 the S. P. and U. P. together have had 1,178 new passenger cars, either purchased or under construction, being about one-half of the total equipment.

(4132) The average cost of a passenger car repair for the United States is $750 per annum. On the S. P. and U. P. Systems it is $1,000 per annum, and the present cost is about 40 per cent. more than it was in 1901. About two years ago both S. P. and U. P. adopted steel as the standard of construction for passenger equipment, and since that time nothing but steel has been ordered. We earn no more money from a steel car than from a wood car, and the steel car costs about 50 per cent. more than the wood. We stay on the track more than we used to, because we have got a better road than we used to have. A lot of this money we put into it makes it better and safer. We are giving the public more for the same money to-day than they used to get. Frequency of passenger service increased about 30 per cent. in the face of a number of new lines of light traffic.

Steel equipment adopted as standard for passenger service.

As to the percentage on the Council Bluffs-Ogden line, 1901, and subsequently, it increased about 45 per cent. and the character of the trains was entirely different. We had more of these high-grade luxurious trains with observation cars and electric lights, and dining cars, and all modern improvements. In 1901 we owned one observation car; now 45 are either owned or under contract for early delivery. In 1901 we had 39 dining cars; now we have running or under contract for early delivery 145. These luxurious trains are giving better service, as shown by the receipt of commendatory letters. Sometimes, when the trains are not on time, we get the reverse, but the majority are commendatory, and we have every reason to believe that the public is well pleased with the service. (4133) "In 1900 the time made by the mail between Chicago and San Francisco was 69 hours and 45 minutes; in 1905, 59 hours and 43 minutes; in 1909, 65 hours and 38 minutes, but in 1900 the mail reached San Francisco late in the afternoon—too late for that day's delivery. It lay over night and was delivered the next morning. At the present time the mail reaches San Francisco early in the day and is delivered the same day, so that the actual reduction in the time of the mail, counting its delivery as the delivery to the person addressed, is from 12 to 15 hours. * * *

More high grade, luxurious trains.

Public pleased with the service.

"The change in the time of these trains was practically forced on the carriers by the post-office department by excessive and arbitrary fines whenever the schedule was not made. In other words, to come back to what I said about freight trains, when too fast a schedule is undertaken and you haven't a margin, you don't make

Schedules of mail trains.

it. In the case of the freight trains the penalty was, of course, diversion of freight and dissatisfaction on the part of our patrons. In the case of the mail there was not only dissatisfaction on the part of the public, but excessive fines were put on by the Department, and when we found that the schedule could not be made certainly without paying these high penalties, we simply lengthened out the time. On two of the mail routes only in one year the fines aggregated $62,330, or about 20 per cent. of the entire mail earnings." On account of the different arriving times, there has been really a decrease in the time of mail delivery, from 1905 to 1909, counting the delivery of the mail up to the time that it is put in the hands of the person addressed.

Chart showing increase in safety of passenger service.

I have a charted showing for 1909, as compared with the earliest available date, the increase in the safety of passenger service. (Defendants' Exhibit 106, facing page 4133 of the record.) "The earliest date of which data were available on the Union Pacific system was 1904, and the comparison on Exhibit 106 is made between the years 1904 and 1909, and shows on the Union Pacific a reduction in the number of train accidents per million miles run by locomotives from 20 to about 9.2, on the Oregon Short Line from 20.1 to 14.3, on the Oregon Railroad & Navigation Company from 15.1 to 6.5, on the Pacific System of the Southern Pacific Company from 29.4 to 24.1, on the Sunset-Central lines from 22.7 to 15.3." (4134) In explanation of this improvement of service: "To begin at the bottom, the better roadbed and track; next, to what runs on the track—better equipment; next, the greater attention paid by the staffs on all of the lines to operation and maintenance, and to the block signals. Those are the principal causes. That, however, would be included under the efficient management to which I have alluded. And also to the constant aim to move the traffic in a minimum number of units, to reduce meeting points, and to reduce the possibility of either head-end or rear-end collision; because when we speak of meeting points increasing by the square of the number of trains, the possibility of tail-end collisions increases, not quite so fast, but it increases directly as the number of trains increases; in other words, with one train running each way on a given section of track there can be, necessarily, no tail-end collision. If you have two trains in each direction, there can be two tail-end collisions.

Constant effort is to move trains in a minimum number of units.

"In other words, the rear train of the two can collide with either of the preceding trains. If there are twenty trains in each direction, any one of 19 can collide with those in front. So with 20 in each direction you will have 38 possible tail-end collisions in addition to the head-end collisions which are proportional to the square of the number of meets. So that the reduction of the number of units moving over the track has a very large influence on the item of accidents from collision. * * * This question of accident is one that at all times is receiving the most careful study on the part of general managers, general superintendents and all officers who are charged with the movement of traffic or whose management would be respon-

Effect of reducing number of train units.

High speed trains and accidents.

sible for accidents; and a special study made by the general superintendent and general management of the Union Pacific proper for the year 1906 showed that they had 14 accidents to passenger trains, 10 of which (or 71 per cent.) occurred to the limited trains, the very high speed trains. There were 10 of them. There were 62 other passenger trains on the slower schedules and they had only 4 accidents."

Relation between construction of equipment and train speed.

The physical construction of the freight car and freight locomotive is related to the question of freight train speed. The freight car, to begin with, circulates freely. "The passenger cars, in a train, as a rule, belong to the road running the train; they are maintained at a very much higher standard and are built for higher speed than the freight cars. The freight trains, as is evidenced by an examination, are made up of cars from roads all over the country, and despite the inspection that you can give at junction points, you are liable to get cars with defects in them, that will be brought out by running them at high speed. The passenger trains are equipped with steel wheels, the freight cars with cast (4135) iron wheels. The freight locomotives, as a rule, are not built for as high speed, they have smaller driving wheels; and, again, regardless of the size of the driving wheel and the policy that I pointed out before, any great increase in speed affects the hauling capacity of the locomotive so rapidly that at present rates you could not possibly afford to run freight trains at any very high speed."

As to freight speed Harriman Lines have struck a happy medium.

As to the present freight speed on the U. P. and S. P., regard being had to safety of operation, "I think—and I base my opinion on the opinions of my associates in the operation of these roads —that we have about struck a happy medium. We seem to please our patrons quite well. Some times we run against a fellow who is disgruntled, and I have no doubt justly so, but I mean the general run of people are satisfied with our service, and when we have done that, when we are serving the public satisfactorily and at the same time serving the owners of the property satisfactorily, and obeying the law, we think we are doing fairly well.

Public satisfied.

Taxes.

* * * In 1901 the taxes per mile of road on the Union Pacific were $225, in 1909 $424—an increase of 89 per cent. On the Southern Pacific, in 1901 $206 per mile, in 1909 $393 per mile—an increase of 91 per cent. Or if we put those figures in dollars, the Union Pacific system paid last year $2,570,000 in taxes. * * * It paid to its station employees $2,257,000, and to all of its train men $2,057,000; to all of its locomotive engineers $2,255,000; for renewing all the rails and ties $2,009,000." Since the year 1901, the credit of the S. P., its physical development, its economies and improvement of service "have increased in the most marked way. These numerous charts that I have given in regard to the improvements of the road show what they have been since 1901; they show its increased capacity to move traffic, and the increased safety of operation." I have called attention to the immense expenditures made for the

Most marked development of S. P. since 1901.

improvement of the Southern Pacific property since 1901. Before that time we did not have much money; we were poor.

(4136) I have a revenue chart comparative of the U. P. with the G. N. and N. P., and of the S. P. with the Atchison—also with roads generally. (Defendants' Exhibit 107 faces page 4135 of the record,—the authority for the chart being the annual reports of the Company.) It "shows in graphic form the growth of revenue per mile of Southern and Union Pacific systems and of a number of other eastern and western roads. Between the fiscal years ending June 30, 1901, and 1909, the Union Pacific gross earnings per mile of railroad operated increased from $7,525 to $12,761. * * * The Northern Pacific increased from $6,384 to $12,071; the Great Northern from $5,450 to $7,900; Southern Pacific from $8,453 to $11,515; Atchison, Topeka & Santa Fe from $6,977 to $9,624. * * * The Denver & Rio Grande from $7,021 to $8,238; the Chicago & Northwestern from $7,826 to $8,642; the Chicago, Milwaukee & St. Paul from $6,506 to $7,974; Chicago, Rock Island & Pacific from $6,912 to $7,623; the Chicago, Burlington & Quincy from $6,404 to $8,556; the St. Louis & San Francisco from $6,032 to $7,274. * * * The Illinois Central increased from $8,754 to $11,804; the Wabash from $7,438 to $10,287; the Baltimore & Ohio from $14,649 to $17,745; the Lehigh Valley from $19,302 to $22,922; the Lake Shore & Michigan Southern, for the year 1900 compared with 1909, from $20,746 to $27,492; the Michigan Central, for the years 1900 to 1908, from $10,232 to $14,272; the New York Central & Hudson River Railroad, between 1900 and 1908, from $19,368 to $23,500; the Pennsylvania Railroad, between 1900 and 1908, from $27,602 to $33,878; the Southern Railway, between 1901 and 1909, from $5,230 to $7,278."

Chart showing growth in revenue per mile of Harriman lines and of other eastern and western roads.

The use of the year 1900 in some of these instances means the calendar year, which the roads in question use, and 1908 was the last of their reports that we have. The addition of new mileage to the U. P. and S. P.—within the period named, 1,000 miles to the S. P., and 500 to the U. P.,—is reflected in these statements of revenue by its reduction of the earnings per mile. (4137) There has been an improvement since 1901 in the service on the Sunset route. "In the passenger service the character of the trains has been improved, observation cars put on, and in general the standard of service has been raised. In freight train service, the regularity of the service has been improved. The time through from New York to San Francisco is practically the same to-day as it was then. There had been a shortening of service on that line, as on others, up to October, 1907, when I think we added a day to the through time for the same reason that we added to the schedules on the northern lines, that is to say, to permit us to more efficiently load our trains and locomotives."

New mileage.

Improvement in passenger service.

The freight train service has been improved by transferring freight at Galveston. "About 1900 or 1901 the terminus of the New York line, that served California, was changed from New Orleans

Transfer station of Sunset line changed from New Orleans to Galveston.

to Galveston. At New Orleans (Algiers is really where the terminals were) our room was limited; there was more or less delay with the fogs, and in high water there was the rapid current of the Mississippi River, navigating 110 or 120 miles from the jetties up to New Orleans, and the line between New Orleans and Lafayette, Louisiana, which takes in the sugar district, has such very heavy traffic on it at the time the sugar crop is being harvested that there was considerable difficulty in getting the freight trains through; there was delay and congestion, and we were confronted either with spending a great deal of money at Galveston to make a new terminal or to double-track the line from Houston to New Orleans. It was cheaper, and we considered a more satisfactory solution of the difficulty, to transfer the terminal to Galveston. We got ample room there. The range of the tides is much less there than the range between high and low water in the Mississippi River. That was a very embarrassing factor at Algiers. The range there is about 21 or 22 feet between low water and high water. At Galveston it is only 7. Having very much more room and less of this variation in the height of the discharging port of the vessel, we could make the transfer quicker and better, and it was a decided improvement in the through service, by transferring the terminus to Galveston."

We had reduced the time to El Paso from New York, a little bit up to 1907, but we took more time then to load the trains, so that the through time now to Pacific Coast is about the same as in 1901. (4138) The ships, however, that we have had since 1901 are faster than the old ships. The through Sunset time is a little more than on the Omaha route, the mileage is very much greater; the speed is a little bit greater. In 1900 the time from New York to San Francisco averaged 15 days and 7 hours; in 1909 a check of the cargoes of 34 steamers covering 1,200 or 1,390 cars was 15 days and 5 hours—2 hours less or practically the same. The Sunset route, steamship New York to Galveston, thence rail to San Francisco, is 2,233 statute miles ship distance; rail miles 2,186—total 4,419; average daily speed 295 miles. The through distance to California all-rail by U. P., S. P. and Lake Shore is 3,258 miles, average daily speed 251 miles; and by the Atchison and the Lake Shore 3,558 miles, average daily speed 264 miles. The distance Omaha to San Francisco is 1 786 miles. 168 carloads of freight that moved to San Francisco in May, June and July, 1909, averaged 9 days and 3 hours, 200 miles per day

Sunset service.

(4139) This would be 8 1-3 miles per hour, excluding all delays. New York to San Francisco is 3,258 miles on a 13 day schedule, or 250 miles a day—same as Santa Fe schedule. The Galveston terminals cost $2,118,000. I have a blue print of the same scale of the abandoned Algiers terminals and the substituted Galveston terminals. (Defendants' Exhibit 108, Algiers terminal blueprint; and 109, Galveston blueprint, by stipulation omitted from printed record but producible at argument.) These blueprints are on the same

ocks at
lgiers and
alveston.

scale, 100 feet to the inch. "The Algiers docks had a frontage of 1,755 feet, accommodating four large steamers. 71 freight cars could be placed for unloading at the steamers. The capacity of the yards serving the docks was 281 freight cars. At Galveston we have 6,235 feet of dock front; 14 steamers can be accommodated; 547 cars can be placed opposite these steamer-berths for unloading, and the yards serving the docks have a capacity of 1,225 freight cars. I have here separate photographs of these docks which I did not have yesterday when I offered the other photographs. These were in the mails and I had not received them yesterday." (These photographs in book form are marked Defendants' Exhibit 110, with same understanding as to Exhibits 108 and 109.)

Tonnage of Sunset fleet.

(4140) In 1900 the tonnage of the Sunset fleet was 43,478, in 1901, 56,554, in 1909, 87,568—an increase in 1909 over 1900 of 55 per cent. "In 1901 we added 4 steamers to the fleet, aggregating 18,448 tons, at a cost of $2,226,000. In 1902 we built 2 steamers, aggregating 9,664 tons, costing $1,092,000; in 1906-7 we added three steamers, aggregating 20,196 tons, costing $3,113,000. We have under contract at the present time, for delivery in the latter half of this year, 4 large freight steamers, aggregating 26,000 tons, to cost $2,350,000. That is to say, from 1901 up to and including the vessels for delivery within a few months, have been added or will be added 74,308 tons, at a cost of $8,782,000. That will increase the total tonnage of the coast fleet from 87,568 at the present time to 113,568. * * * The vessels added in 1901 were 15-knot ships; the New York steamers in the fleet before that were 12½ and 13-knot ships; the vessels added in 1906 and 1907 were 16-knot ships, and the vessels under contract at the present time are 16-knot ships. Or, expressed in another way, the older vessels of the fleet took an average of about 160 hours between New York and Galveston, the next lot of vessels 136 hours, and the last 3 completed, as well as the 4 now under contract, will take about 119 to 120 hours."

New boats.

Improvement in lighterage service.

Prior to 1901 "the lighterage service in the port of New York was conducted by outside concerns under contract. Of course the ability of the company to control tonnage is largely dependent on the efficiency of this terminal service. The lighterage service with the steamship is a good deal like the switching service at a terminal with a railroad. And since that time we have added 5 tugs and 42 lighters to the coast plant, which have very greatly increased its efficiency and its ability to control the traffic. * * * In 1901 we owned 1 tug, 150 tons burden; in 1909 we owned 5 tugs, 780 tons; 3 barges, 1,078 tons, and 39 lighters, 10,259 tons." Since 1901 "we built the 'Momus,' the 'Antilles,' and the 'Creole.' These are very large vessels, 16 knots, and with the very finest passenger accommodations."

Profile chart of line from Portland via Huntington compared with line via Roseville.

(4141) These three vessels were built in 1906-7. I have a profile chart of the rail route from Portland via Huntington, and via Roseville to Ogden and Granger. (Defendants' Exhibit 111, with same understanding as in case of Exhibits 108, 109 and 110.)

"Defendants' Exhibit 111, in its upper half, shows profile of the line from Portland to Granger via Ashland, Oregon, Marysville and Roseville, California, Truckee, Ogden, to Granger. It gives the mileage and the elevations to be overcome by a train carrying freight between the two terminals. The lower profile shows the mileage and elevations to be overcome in moving freight from Portland to Granger via Huntington, Oregon; McCammon, Idaho; Montpelier, and Granger; and it also shows the profile from McCammon to Ogden. In the table marked 'Physical Characteristics' are shown for each of these routes the total rise and fall in feet, the total degrees of curvature, the actual distance in miles, with the equated level distance in miles to be overcome between the various termini, and the equated level length in miles being the mileage additional to the actual distance to offset the work done in lifting the loads over the grades and in forcing them around the curves, the equation being made according to well-known engineering formula. In other words, it is impossible to compare two routes varying in grades and curvature unless, so to speak, they are reduced to a common denominator, which is the resistance of pushing the load over a straight and level track.

Relation of grade to distance.

"In overcoming a foot of grade the same work is done as in hauling the load over 344 feet of straight and level track, and in pushing the load through a curve of a little more than a mile in radius, or what is known as a one degree curve, is equivalent to hauling the load on a level over 7.2 feet of track. That enables the two routes to be compared on the same basis. * * * The route from Portland to Granger via Roseville and Ogden has a total rise and fall of 40.364 feet. * * * Total degrees of curvature 86,019, actual distance in miles 1,487.3, total equated distance in miles 6,164. The route from Portland to Granger via Huntington and McCammon has a total rise and fall of 21,040 feet, 35,705 degrees of curvature, actual mileage of 945.3, and equated mileage of 3,493. * * * (4142) The first line described has an excess of 19,324 feet of rise and fall, 50,313 degrees of curvature, 542 miles of actual distance, and 2,671 miles of equated distance against it. On the route from Portland to Ogden via the Southern Pacific's lines, the total rise and fall is 36,020 feet, total degrees of curvature 80,547, actual distance 1,341.2, equated distance 5,552 miles. From Portland to Ogden via Huntington and McCammon, total rise and fall 19,376 feet, 32,334 degrees of curvature, 865.2 miles actual distance, 3,203 miles equated distance. Line No. 3, from Portland to Ogden, via the Southern Pacific Company's lines, has an excess of rise and fall of 16,644 feet, 48,213 degrees of curvature, 476 miles actual, and 2,349 miles equated. * * *

Physical resistance.

"There is one thing that it is necessary to explain this, that I did not touch on here. What I have given so far has been the relative resistance, the physical resistance, the traffic going over these two routes. The grades on the Southern Pacific line are very much heavier—the rate of grade—than on the other, and the expenses of

moving the freight are not given on the diagram, but for an understanding of it should perhaps be added. The cost of moving a ton of freight from Portland to Ogden via the O. R. & N. and O. S. L. lines, or via Huntington, would be $2.69 a ton, Portland to Ogden via the Southern Pacific lines $5.53, from Portland to Granger via Huntington and Montpelier $2.75 a ton, and from Portland to Granger via the Southern Pacific Company and Ogden $5.94 a ton." The grades shown upon the profile are from 5-10 of 1 per cent. to 2 per cent., from 2 per cent. to 3 per cent. and then 3 per cent. and over, and the lengths of those grades are shown in the tabulation. These profiles were made to show the relative obstructions to moving traffic, and the relative costs for the two routes. (4143) Longer lines, with more difficult grades, might, I suppose, compete with shorter water-level lines on the same rate up to a certain point, but there may come a point where the competition—with all respect to that term, which has been the subject of a good deal of misunderstanding apparently—would be impossible.

U. P. a water level grade Omaha to Julesburg.

The U. P. from Omaha to Denver, or to Julesburg Junction has practically a water level, following the Platte River. The grade from Julesburg to Ogden and Salt Lake is practically 90 feet, and the height above sea level, roughly 8,000 feet. The D. & R. G. and the Rio Grande Western grade over the Rocky Mountains is greater than the U. P., about 10,000 feet at Leadville, I think—2,000 feet higher than the U. P.

Grades on New York Central and Pennsylvania lines.

(4144) The D. & R. G. and R. G. W. operates there, has been operating for 20 years after a fashion. The New York Central from New York to Chicago is practically a water-level road. The Pennsylvania goes over the Allegheny Mountains, putting on extra engines on the grade from Altoona to the top of the mountains. The Pennsylvania competes successfully I think with the New York Central in time and in rates, and generally. It runs an 18-hour train, as does the New York Central, to Chicago, a cut of five hours in the last ten years, but I think there are other trains of about 23 hours. 1893 was the year of the great panic. The beginning of it was a period of great railroad depression, but there was a gradual recovery from 1893 up to 1896 and 1897—considerable recovery towards the end of the period.

Effect of panic 1893.

(4145) At the time of the panic of 1893 many western railroads went into the hands of receivers, the U. P. and its allied lines, and the Santa Fe and N. P., and many eastern and southern lines. The great improvement in business has been roughly, during the last ten years up to 1907 when we had the panic—a period of unusual expansion. After the panic of 1897, on, and from 1900 on, the railroads that had the money commenced great development in the improvement of their properties: the S. P. not until some time later, about 1901. Between 1900 and 1907 the roads spent a great deal of money in improvements.

Expenditures for betterments by other lines

(4146) I would say the Burlington had done something in the way of reducing grades. I understand the Pennsylvania graded a

new line over the Alleghenies; I think they spent a great deal of money in the same class of development as our lines. I understood—as gossip—they were spending $150,000,000 right here in New York. I understand the Santa Fe has spent money freely on its property. It is in good shape, but I have not been over it for eight or ten years. I do not know that the capital expenditures on that system have exceeded $125,000,000, but that seems small as compared with what we have spent.

Expenditures by S. P.

(4147) The S. P. alone spent over $250,000,000 and my recollection is that its mileage is about the same as the Santa Fe between 9,000 and 10,000 miles. I show in Exhibit 73, in round figures, other than the construction of new lines and terminal property, $127,000,000 expended for betterments and improvements on the S. P.; I cannot answer offhand as to what the new lines and terminal properties of $114,000,000 are. I think I said we purchased and built a thousand miles of railroad, but do not know whether that includes the lines in Mexico. I can furnish you a statement of what the $114,000,000 cover.

New lines.

Expenditures by U. P., compared with those made by other lines.

(4148) The U. P., including new construction, was 121 million, 57 million being new construction. The total mileage of the U. P. and allied lines, in round numbers, is 6,100 or 6,200; total expenditures for improvements 64 or 65 millions. As to the Santa Fe expenditure of 128 millions, I would like to know what that covers; it may cover a lot of new lines; we must be certain of getting in the same items before we make a comparison. I understand the G. N. and N. P. have spent a great deal on grade reduction. I do not know that all of the leading railroad systems in the country since 1900 and 1902 spent enormous sums of money in all the classes of improvements that we have spent money for—I don't know anything of the kind, on the contrary, as to a good many I know that they have not. (4149) I suppose the total capital invested in railroads has increased enormously in ten years, because there have been a great many improvements and a great deal of new mileage, but when it comes to capitalization per mile, I doubt whether there has been any great increase. My recollection is clear that the capitalization per mile on the roads of this Company for the past ten or fifteen years has not increased very much.

402 per cent increase in double tracks.

In Defendants' Exhibit 100 I state that the mileage of the additional main tracks has increased between 1901 and 1909, on the main line of the U. P. and Central Pacific roads 402 per cent—from 96 miles of double track in 1901 to 482 miles in 1909. "Q. What did you put that percentage in there for—482 per cent? to make it sound well? A. No. I cannot conceive of any other way by which you could convey to any one an intelligent idea of what the increase had been, except that way. * * * (4150) Q. If you will look on your exhibit to 'miles of track protected by automatic signals'—you had 2 miles, in 1901, of track protected by automatic signals? A. Yes. Q. And in 1909 you had 2,165 miles? A. Yes. Q. What

is the percentage of increase there? About a thousand per cent., isn't it? A. Roughly, about a thousand per cent., yes.

"Q. Why didn't you put that percentage in after that? A. I called attention in my testimony yesterday, that where you come to the miles of rail 80 pounds or over, the amount being less than will reach to the hundred or basing line, you will find a little note, in the second column, headed 'Relative,' at the top, on the line marked 'Miles of rail 80 pounds or over,' that we give the per cent. of the total—just to avoid such questions as '2,000 per cent. increase.' I have no doubt we put it in there just for that purpose. That is why I have been so anxious, when you endeavored to get me to admit that the Atchison, Great Northern, and other roads' expenditures were quite as much as ours, that you should let me know exactly what you were quoting; in other words, whether the figures were comparable or not. To understand each other, we must know that we are referring to exactly the same thing. Q. Why didn't you make the percentage of increase in miles of track protected by signals compare with the percentage of increase of double track, so we could see what percentage of increase there was in double track and what percentage of increase of automatic signals? Wasn't it put in there so that your counsel could point to big increases, of four and five hundred per cent—which don't mean anything at all? A. No doubt you think so. But counsel had absolutely nothing to do with the preparation of this statement. And after all, I want to say this again, and to say it with all the emphasis I can, that I do not at all understand the drift of the questions, or why a percentage, whether it be a thousand, ten thousand, or ten million per cent, does not convey to the mind a mathematically accurate impression of the increase. I don't know of any other way to put it."

Comparison with other lines.

Statement of increase in percentages only accurate way to express them.

I testified substantially that between 1897 and 1908 the increase in the cost of labor on the U. P. system had been 20 per cent. and on the S. P. 25 per cent.; and all classes of labor 17 per cent. (4151) I selected 1897 as the first year for this comparison because this statement had been drawn up for evidence in one of the other numerous cases—the Salt Lake case—in which we were all cited to appear to make explanations of operations; and it was continued from that date to this—simply added on to. The figures, I think, for 1908, came out after that, and were added to it. I suppose I have the records of it for each year. I will state the question that was involved in the Salt Lake case "in very general terms: Why, with the large business the Union Pacific had done, the net earnings (I think) had not been turned over to the public by a great reduction of rates? Q. The question was upon the reduction of rates was it not? A. That was about it."

1897 taken as first year for comparative statement of increase in cost of labor.

I think the question I was called on to testify about was generally where the net earnings come from, how they had accrued, and what benefit the public had gotten through the large capital expenditures on the U. P. I don't know what the question at issue was; there are so many, and we are hauled up so often that the layman

Why rates were not reduced.

cannot keep track of that. The object of getting up the statement was to show why rates had not been reduced, because every expense had been increased, everything that we bought had increased in price, and that which we had to sell remained (4152) stationary; and the public got the benefit of the difference which I have valued here in money, for the U. P. at about 63 or 64 million dollars in eight years—that information I did not have at Salt Lake—I wish I had had it.

Why year 1897 was used.

As I understand it, according to the theory of this case, we began sinning in 1901, so having all the statistics worked up as far as we could, we began in 1901. As to taking 1897 instead of 1900, this was a statement of comparative prices of labor and commodities already worked up, and considered to be interesting information in this suit, showing the trend of prices of labor and materials, and it was not worked up de novo. That the prices of labor, material, and everything, were higher in 1901 and 1900 than they were in 1897, was exactly the reason why in the Salt Lake case 1897 was selected. At Salt Lake we were endeavoring to show the handicap under which the road had been operated, and we took the list of prices in 1897, and that statement was brought up and introduced in this case. 1897 was the lowest in the list of prices I have got here from 1890 until 1907, and for that reason, and that reason exactly, it was selected as an exhibit in the Salt Lake case (4153)—to show to what extent our expenses had increased through rises of prices of wages and material.

Exhibits which show saving to the public.

Defendants' Exhibits 67 and 68 are, one a chart, and the other a typewritten statement showing the rates and savings to the public through non-raising of rates. "Defendants' Exhibit 68 shows, in the third line, the relative prices of labor and material for the years from 1901 to 1909, inclusive, 1901 being used as the basing year, or 100. The figures show the increases in percentages of cost of labor and material. Line 5, Union Pacific system, shows the average revenue per ton mile, actual, not relative. Line 6 shows what the revenue per ton mile should have been to have offset the increased prices paid for material and labor. The difference between the actual rate obtained and the rate that we should have obtained to offset these increased prices, we say, has enured to the benefit of the public. * * *In other words I applied the same percentage of increase to the rate that we should have liked to have gotten; the same percentage in the increase of rate that we had to pay for material and wages."

Railroads should be permitted to raise rates to meet increased expenses.

I made up the table to "show that if the railroads had been treated reasonably and had gotten a square deal, and if the public and the authorities had treated them as they do ordinary corporations, that they could have expected, and had every right to expect, that when every expense that they had incurred had gone up a large percentage, that rates should have gone up; if not in the same percentage, at least should have gone up with the increase in wages and material.

(4154) But the railroads being treated entirely different from any other interest, when they were confronted with the panic of 1907, and some suggestions or hopes of raises in rates were indulged in, it was very evident that it was absolutely impossible to get a raise in rates; and when it was suggested that the wages should be cut, every interest in the country, up to the highest, was arrayed against the railroads and they were told they could not cut wages. Therefore they were reduced to working out their own salvation, which they did." From 1906 I think the U. P. has paid 10 per cent. on its common stock, but when you take the lean years with the fat ones, the dividend does not begin to average that. In 1907 I said we were obliged to increase the time because of the hard times of 1907. I think we increased our dividends in 1906 and paid 10 per cent. that year, and in 1907—why shouldn't we? Since the reorganization of the U. P. in 1899 I think its net earnings—its surplus increased every year, I hope it is so; its dividends have not been very largely increased. I call 10 per cent. a moderate dividend in comparison with 16 to 24 per cent. paid by National banks, and as compared (4155) "with 12 or 13 per cent. paid on farm values, and with returns paid on mercantile concerns of such size that the witnesses were ashamed to name them in Salt Lake. I do not think that 10 per cent., six of which was really on railroad operations and the other four on investments, as I understand it,—I do not think that is out of the way, when you take into account the risks of the early days, and the lean years with the fat years; because, strangely enough, railroads are treated this way; that complaint is made when they have a prosperous year, and, when they have bad years, we have the public, the commissions, the administration, even, against them; they do not want to accord them any relief when they have any hard times, they are simply told 'sink or swim, it is none of our business.'" As to the usual dividends of railroads in this country, I think the Interstate Commerce Commission shows it is only 4 per cent. (4156) Taking the consolidated statement, U. P. and auxiliary companies, the annual report June 30, 1899, shows gross receipts from operation $34,394,000, net receipts $13,942,000; the report for the year ending June 30, 1909, shows gross operating revenue $78,750,000, net income—revenue over expenses and taxes—$38,234,000. The net earnings were substantially $38,000,000 in 1909, and $13,000,000 in 1899, substantially three times as much in 1909. It was during those years that there was this great increase in cost of labor and material.

Taking lean years with fat ones, dividends have not been large.

Comparison between railroad dividends and those paid by banks and others.

Usual railroad dividend 4 per cent.

Gross and net earnings of U. P.

(4157) In 1899 the ratio of expenses to operation was 57.6 per cent., and in 1909, 47.19 per cent.—we had succeeded in reducing operating expenses, earning a dollar of money practically 10 per cent. There was a slight decrease of rates between 1899 and 1909. I have admitted already that whilst we should have liked to have gotten the same increase in percentage, we did not expect to—but we did expect that we would get some increase in the rate to make up for these losses. "The examination of two years is misleading.

Ratio of expenses to operation.

Result of deferred expenditures.

The fact is that in 1908 and 1909 all roads in the country were still skimping their expenses to make showings; in other words, there were deferred (4158) expenditures. 1908-9 was an unusually low year for expenditures. The previous year 1907-8, instead of showing a ratio of 47 per cent. showed a ratio of 54 per cent.—over 10 per cent. higher than 1909. In other words, there is a hereafter which we have got to meet. And all of the roads, after this panic of 1907, which was one of the worst for the railroads that they ever knew, had to do everything possible to meet these increases in material and labor, because there was no other way to meet them than by deferring expenditures and by increasing efficiency. * * *

Extent of deferred expenditures.

"The fiscal year 1908 was 54, and in 1909, 47. In other words, the difference shows the extent to which expenditures had been deferred. It is notorious that every road, under the stress of these hard times, with one strong influence opposing reduction of wages and other strong influences opposing increases in rates, was, to use a vulgar expression, between the devil and the deep sea; and they had to work out their own salvation. They worked that out by more efficient management, and by deferring to some more propitious day or more prosperous time expenditures that could be deferred." (4159) October 1907 was high-water mark for gross earnings. For the year ending June 30, 1908, there were two or three months of heavy gross earnings with heavy expenses, followed by eight or nine months of depression after the panic of October, 1907. The year ending June 30, 1908, was the bad year. The year preceding—that is, the year ending June 30, 1907, was fairly good. Reading from the annual report for the year ending June 30, 1908, gross earnings of U. P. $74,422,776.81; year ending June 30, 1907, $74,656,152.11—this leaves out revenues from outside operations. The decrease on the gross operating revenue between those years for the U. P. System was $233,000.

Prosperity and panic.

Slump in net earnings.

(4160) That was not a big slump, but when you come down to the revenues over expenses and taxes, there was a slump of $2,182,000—that is what I mean by a big slump—in the net revenue. The net revenue for 1908 over operating expenses was $31,900,000, as it has been read off, from which 10 per cent. was paid on capital stock after interest and fixed charges with a large surplus; but with other industries, making two or three times as much, alongside of that. Averaging the years, it was very moderate, very much less than that. I cannot say as to all railroads, but it is a general fact that if you are operating with reasonable economy, a very large increase of traffic—unless, as in 1907, it be so great as to congest you, ought largely to increase gross and net earnings.

Cost more than $1.00 to earn $1.00 in early part of 1907.

In the first three or four months of 1907 it cost considerably more than a dollar to earn a dollar, and taking the whole year together it cost 54 cents to earn a dollar. The U. P. gross earnings have a little more than doubled as between 1899 and 1909.

(4161) I suspect the tonnage over these roads has more than doubled since 1899. Improvements, such as cutting grades, taking

out curves, improved larger engines, larger cars, and other large expenditures were made in order to handle traffic cheaper and make more money at the same rates. "But as it figures out, whilst we did not have that object in mind, it enabled us to be very, very charitable, when the stress of 1907 came. That terrible panic that struck us, you know, about that time, hurt the public, hurt the railroads. The railroads had reached the high water mark in expenditures in October, 1907; such a high water mark that it was costing them a great deal more than a dollar, in the first months of that fiscal year, to earn a dollar; and when they were subjected to the stress, they rendered the public better service than they had before and relieved the public of the necessity of paying more when the railroads had to pay more for material and labor. In other words, in the eight years, all together, they turned back to the public $154,000,000."

Improvements were made so as to handle traffic cheaper.

Panic hurt public and railroads.

Public were given better service without paying more.

There is not an absolute uniformity as to the speed of all freight trains. I testified as to the time of certain trains carrying Pacific Coast business, would not call them fast, would not call them slow. (4162) About 1900 the train, Council Bluffs to Ogden, making the S. P. connections, was scheduled at 54 hours; in June, 1901, it was 58.25, and in November 60 hours 30 minutes. In 1907 it was 100 hours. (4163) It would not be fair to make up a statement showing reduction of all freight trains from 100 hours to 54 hours if we never had but one freight train running 54 hours. "But I do not recall having made such a statement. Possibly in the testimony I may have said what the effect would be if there had been a large increase in the speed of trains involved in a 100 hour schedule up to the speed in a 54. I may have said that, simply to illustrate what the relation of increased speed to meeting points was; I think I may have said that. It was said in a great many different ways. But I did not mean to be understood by that, that all of our trains were run at any such speed, or at a uniform speed, because I do not believe it is the case now, and I do not believe it was the case then."

Speed of freight trains.

Relation of increased speed to meeting points.

The Council Bluffs-San Francisco line was shortened on the S. P. about 50 miles; on the U. P., as I am informed, 40 miles. (4164) We have improved the grades very much, taken out curves, reduced grades, have a better track and better power than in 1899 or 1900. I don't think our passenger trains are slower. (4165) The Sunset freight trains carrying steamer freight made a slightly faster speed per hour than the trains on the Council Bluffs-San Francisco line. (4166) I do not know personally whether the passenger trains are run as fast now as they were ten years ago, but all I do know is that when we satisfy the public and give them the service they want, I dismiss the whole matter. I know that the service is satisfactory to the public. I understand the Sunset Limited train to be a train that ran three times a week, a high-grade train on the Sunset line. (4167) I think the Santa Fe have two high-grade trains, one of which runs daily, and the other three times a week—

Grade and curve improvements.

Satisfied when people are satisfied.

years ago, but the last time I looked into the Santa Fe schedules my impression is they had two trains. They had a daily limited train, and they have since put on one three times a week. The Sunset Limited train, three times a week, was taken off a long time ago. I am quite certain the present train is not as fast as the other, because the first train was taken off because it could not earn its axle grease, perhaps that is an exaggeration—it was a money-losing proposition and we took it off.

Sunset Limited did not earn expenses.

New lines constructed by S. P.

(4168) I have a list here of the new lines, the principal ones, constructed on the S. P., covered by the $114,000,000 expenditure. I cannot give the mileage or cost. I picked out the principal items. I had only a little over an hour to pick these out: "Southern Pacific Company: Principal new construction built or acquired during eight years ending June 30, 1909. In Louisiana, from Cypremort to Weeks Island; Raceland to Lockport; Lafayette to Port Allen; Arnaudville to Port Barre; Bayou Sale to South Bend; Gueydan to Abbeville; Lacassine Branch; Mallard Junction to Hayes; Eunice to Mamon. In Texas, the Dallas Division of the Texas & New Orleans; Sour Lake Branch; Branch to Port Arthur; Gallatin to Rusk; Stockdale to Cuero; San Antonio & Gulf Railroad; Branch from Van Vleck southerly; Tres Palacios Extension; Wharton down Carney Creek; Lampasas Extension; Mexia to Nelleva; Lancaster Tap Railroad; Southern Pacific Terminal Co., elevators, buildings, etc., at Galveston. In California and Oregon: The Fair Oaks Extension; Branch Wyo to Hamilton; Tres Pinos to Lime Rock; Benedict to Smeltzer; Empire to Rossi; San Ramon Branch Extension; Fresno Branch; branch for the irrigation service, (4169) from Araz to Laguna Dam; Henderson to Springfield; Arizona & Colorado Railroad; Arizona Eastern Railroad; Butte County Railroad; California Northeastern Railway; Central California Railway; Coast Line Railway; Gila Valley, Globe & Northern Railway—reconstruction; Inter-California Railway; Lake Charles & Northern Railroad; Lincoln Northern Railway; Oregon Eastern Railway; Oregon Western Railway; Pacific Railway & Navigation Company; Peninsular Railroad; Sacramento Southern Railroad; San Francisco & Napa Bay Railway; Southern Pacific Railroad Company of Mexico; Beaverton & Willsburg Railroad; Oroville & Nelson Railroad; Sunset Western Railroad (½ interest); Fallon Railway in Nevada; Hazen to Churchville; Mojave, California, to Keeler, Nevada; extension of local tracks in Oakland, 14th street to 20th street; spur track via North Point to Beach street to Presidio, Government Reservation in San Francisco; Phoenix & Eastern Railroad; Maricopa & Phoenix Railroad; Corvallis & Eastern Railroad; Northwestern Pacific Railroad (½ interest); San Bernardino & Redlands Railroad; Coos Bay, Roseburg & Eastern Railroad & Navigation Company; Sunset Railroad (½ interest); Los Angeles Pacific Electric; Pacific Electric; Santa Clara Interurban; San Jose, Los Gatos Inter-

urban Railway Co.; Visalia Electric; Los Angeles Railway; Los Angeles Interurban Railway."

Mexican lines of S. P.

The line in Mexico is the Southern Pacific Railroad of Mexico. All of the Mexican lines, with the exception of the Sonora road, which is leased, are now under the corporate name of the S. P. of Mexico. Substantially all of the lines built in Mexico would cover a mileage of about 750 miles, but this mileage is not a part of the thousand miles I mentioned as having been constructed and shown in Exhibit 73 under the 114 million dollars. As to the $57,245,082.04 of construction and acquisition of new lines of the U. P., I read the list: (4170) "Union Pacific proper: From Grants Mine to La Salle, Colorado; from Greeley, Colorado, eastward; from Onaga to Marysville, Kansas; O'Fallons to Northport, Nebraska; Rock Springs to Coal Fields, Wyoming; Sand Creek to St. Vrains, Nebraska; Cedar Rapids to Spalding, Nebraska; Stromsburg to Central City, Nebraska; Thayer to Horse Thief Canyon, Wyoming; Topeka & Northwestern Railroad; South Omaha & Western Railroad; Pleasant Valley Branch; Salina & Northwestern. On the Oregon Short Line: Mendon to Wellsville; Logan to Wellsville; Malas Valley Railroad; Malheur Valley Railway; Minidoka & Southwestern; St. Anthony Railroad; Salmon River Railroad; Wyoming Western Railroad; Yellowstone Park Railroad; Northwestern Railroad. Oregon Railroad & Navigation Company: Elgin to Joseph, Oregon; St. John's to Troutdale, Oregon; Portland to St. John's, Oregon; Lewiston to Grande Ronde River, Idaho; Albina to St. John Extension; Dayton Extension; Sierra Nevada Mine Branch; Columbia River & Oregon Central Railroad; Snake River Valley Railroad; Gray's Harbor & Puget Sound Railway; Ilwaco Railroad; Lake Creek & Coeur d'Alene Railroad; Oregon & Washington Railroad; Oregon, Washington & Idaho Railroad; Umatilla Central Railroad; Clearwater Valley Railroad; Columbia Valley Railroad; Columbia Southern Railway." The U. P.'s interest in the San Pedro road is not in the 57 million dollars.

New U. P. lines constructed.

Increase in price of commodities.

Exhibit 64 shows the percentage of increase in the price of commodities which the U. P. purchased between 1897 and 1908. We purchased of course a great many commodities besides those specified, but we did not select the specified commodities with any reference to the rise in prices. We asked the purchasing agents to furnish a list of some of their principal purchases between those dates, showing prices paid in 1897 and 1908. Another statement shows the rise in prices of all commodities for all railroads of the United States. It was a matter of great labor to take everything. We took some. A few on this statement, for instance car wheels, show a very slight increase in price. (4171) The price of lubrication has increased during the last ten years, I know; because when we came to negotiate a new contract they wanted a good deal more money, and we paid them, as I recol-

lect, some more, but not as much as they wanted. Steel rails have been $28 a ton for a number of years. The lowest price we ever bought them for was in 1897; probably three or four years after that they were put up at $28. Most of the articles on this list increased materially between 1897 and 1908. My recollection is that there were very rapid and marked increases immediately prior to 1907.

Comparison of commodity and wage prices and freight rates.

(4172) I have a memorandum here to supplement Defendants' Exhibit 66. "I think it has not been introduced; I do not remember it, and I was careful to number all. It gives, for each year, the commodity and wages, prices, and freight rates, from 1890 to 1907. This list enables me to answer your question: that, taken from the Government reports, 258 commodities considered by them in making the computations, rose 44 per cent. between 1897 and 1907. I have not the figures for 1908; they do not seem to have been published. And, as confirming what you asked me, there was a rise, from 1897 to 1900, from an average price of commodities based on their basing price, which is the price of the preceding decade, from an index number of 90, to 110. That was to 1900. From 1900 to 1907 the average rose from 110 to 129½. In other words, from 1900 to 1907 the advance was a good deal more than half of the 44 per cent.; and a good deal less between 1897 and 1900. Even more striking was this: In 1905 the index number was, in round figures, 116; the next year, 122.5; the next year, 129.5; showing the rapid increase to which I referred in the two or three years preceding the panic of 1907." The increase from 1897 to 1900 was from index number 89.7 to index number 110.5; an increase of 21 points; and the other is 19. Exhibit 102 is made up on the basis of the actual speed of freight trains, exclusive of stops. During that time the diagram shows the number of stops or meeting points to have largely increased.

Increase in stops and meeting points.

(4173) Many of the meeting points did not involve stops. They involved delay, and if they are fortunately made they may not involve a stop. There was more time taken in stops. What interests the shipper is the actual time from one point to another. I have not an exhibit showing actual time of all freight trains during the two periods. I gave you the time in 1901 and to-day of the principal freight trains, carrying Pacific Coast traffic, and the reasons why it was longer. The time I gave for the 54 or 58 or 60 hour train, Council Bluffs to Ogden, was simply schedule time, but that train makes the schedule very regularly. In the Salt Lake investigation we had that looked up—a great complaint was made about Salt Lake time—and 88 or 89 per cent. of the time that freight was delivered in Salt Lake on time; and then the Salt Lake people said they were not complaining about the U. P., they were perfectly satisfied.

Shipper interested in actual time from point to point.

Freight delivered in Salt Lake on time 88 per cent of the time. Salt Lake people satisfied.

(4174) The 100-hour train runs a thousand miles, about 10 miles an hour. This train is included in the through time of 13 days from Atlantic to Pacific points, which is as good time as

made by our principal competitor, the Atchison, and, as we understand from conference with them, entirely satisfactory to the public. Of course there is a small percentage who are dissatisfied. It is our aim always to work on this small percentage and to try to please them because we would like to please the entire public. We do please, I can assure you, a very large per cent of them. In respect to inspection, the government regulations added six hours 6 minutes to the time it took us for inspection; since 1901. I gave 27 hours and 39 minutes as the estimate made to me of the total time and delays in inspection, of which about 6 hours had been added by government requirements. (4175) "The Government do not inspect whilst the railroad people are inspecting. What I mean is this: that the Government requirements as to the maintenance of safety appliances are so rigid, the fines are so harsh, so burdensome, that the railroads have been compelled to consume very much more time in insuring the condition of equipment to be such that they will not be fined."

Time of 100-hour train satisfactory to public.

Government regulations consume much time.

We arrange this inspection at points most convenient to us, and when the trains are naturally stopping. "But I think I also called attention to this fact, in my testimony: that trains moving between terminals will frequently develop some small defect that does not make a car or a locomotive at all unsafe, but it technically comes under the law; and the law has been enforced so rigidly that we cannot afford to take risks; therefore, the train has to be stopped and these cars switched out. We cannot exactly estimate that as coming within the 6 hours. The 6 hours is for inspection at terminals. The other delays would be added to that, whatever they may be." The enforcement of the law has been changed altogether since 1901. I believe a train may run now 28 hours without unloading, feeding and watering stock, with a proviso that you can take 36 hours, but they are so strict in construing the conditions on which you can make the difference, that it is rather dangerous to run it. I think it was 28; possibly the delay would be the difference between what we had voluntarily added and what the law had added.

Effects of law on defects occurring between stations.

Enforcement of law changed.

(4176) On the U. P. the average daily mileage for the year ending June 30, 1909, for freight cars, was 41. This depends in all these statistics on how much time the car is standing still at terminals and loading and unloading points—an average is made up. "Q. So that you take in the thickly settled portion of the country, like the Pennsylvania road, where there is enormous local traffic to coal mines, to industries, all along the line, to very large terminals in many places, the actual time made, of a freight car, is much less than on a line where the traffic is largely a through haul? A. Of course, if you concentrate your mind and your examination on that particular traffic, yes. But take again an example that you have taken yourself: the Pennsylvania line, for its entire mileage, is a double track line, and, for the larger part of its mileage a four track line, where they have absolutely no obstruction from meeting points, and where you see whole strings

Average daily mileage freight cars on U. P.

Pennsylvania has 2 and 4 tracks.

of freight trains, sometimes, one in seven or eight sections going along without any delay. That advantage is compensatory, and makes up for the handicap of delay of cars at coal mines. * * * That particular reason to which you called attention, unquestionably would tend to reduce the mileage per day. But there are other reasons that tend to increase it. The heavy-traffic eastern lines have so many tracks; take the New York Central; they not only have four tracks from Albany to Buffalo on their main line, but they have the West Shore road, with two tracks; they have six tracks, you may say, between the Atlantic and the Great Lakes. * * *

New York Central has practically 6 tracks.

(4177) "The Erie has a double track; the B. & O. has a double track a large part of the way; and so on. You can show that those roads, whilst in some directions there are influences tending to pull down the daily average mileage of freight cars, there are others contributing to a high daily average. Q. The principal delay in freight car movement is at terminals, and at loading and unloading points; isn't that true? A. That is quite true, yes, sir. I have said that. Q. The principal delay is not simply at meeting points of a through running train, is it? A. Yes, but a car, when you take the first case— Q. Can you answer that? Is that true? A. I am tying to answer it. No, I do not think it is true. The trains on the Union Pacific run up to 70 and 80 cars each, and every time you have a train delay it is imposed on 80 cars. Every time you speak of a delay in loading and unloading, the mind, naturally, from the line of your questions, concentrates on one car. The Union Pacific, with its 41 miles, has an excessively heavy coal tonnage, you know,—very heavy; and the same delays that the Pennsylvania experiences, the Union Pacific experiences at its mines."

Other lines double tracked.

Delays in car movements.

Heavy coal tonnage on U. P.

Not on the entire line, but "on that part of the Union Pacific where it has its coal mines, the density of traffic in 1907 was higher than on any railroad in the United States, as I remember it, with the exception of the Reading and the Pennsylvania. That was on a single track. The Pennsylvania had four, and the Reading had, as far as I know, double all the way, and perhaps in places four. Therefore, to answer your questions categorically, the Union Pacific, on those parts of its line where it had these coal mines, was operating against handicaps compared with which those of the Pennsylvania were almost negligible. * * * But the obstruction of traffic at one point would have struck traffic on the whole line."

Density of traffic on U. P. highest in U. S. exceeding two roads.

(4178) A large part of the U. P. and S. P. System mileage is in a country of small industries, no large terminals in that district, but the car mileage is affected by the single track, and the number of trains on a single track. I understand that our mail train took 6 hours more in 1909 than in 1905, and as I said the other day, the mails were delivered at an earlier period in San Francisco, the train starting at an earlier hour in Chicago and enabling us to get to San Francisco at an earlier hour in the day.

A country of small industries.

Mail train schedule.

I understand that the value of the U. P. Railroad property for taxation is fixed at so much per mile. The value had increased largely between 1901 and 1909, with all the money that we put in. (4179) "I have some information that I promised you I would work up for you. Adverting again to that rather disagreeable feature of percentages, the percentage increase—you will pardon me for referring to that, but really my mind is so constituted that it is about the only thing that pictures to me clearly just what does happen—on the Union Pacific there was an 80 per cent. increase in taxes. The periods are not exactly the same. That is 1901 to 1909. The figures I have before me, taken from the Statistics of Railways of the United States, which is an Interstate Commerce Commission publication, show between 1899—which was the date referred to by you last week—and 1908, not double the capitalization, as you thought, but 52 per cent. * * * I am speaking of the roads of the United States. You asked me, as I understood your question, whether I did not know that there had been a large increase of money put in all railroads. * * * Now, that is an increase of 52 per cent.; but only 20 per cent. of that is due to the additional money put in the railroads. Now, the taxes have increased 89 per cent."

89 per cent increase in taxes on U. P.

Tax increase disproportionate.

I cannot say offhand what the value of the U. P. property was in 1901 and today—it is much larger to-day; and the same with the S. P. I cannot say offhand whether the values have actually increased in this same percentage of increase as the taxes.

(4180) "With regard to the 168 cars, I made my previous answer on the language of a memorandum here, which is a little ambiguous. The 168 cars were not all the cars that moved from Omaha to San Francisco; but this memorandum was made up for me when I was in San Francisco some months ago, and I asked to have the time that was being made by manifest freights between those points checked up. They took a number of these manifests, spread over the months of (May), June and July, and they happened to total 168 cars, with the result that I have testified. * * * Q. Some reference was made to the reports of the Interstate Commerce Commission in 1904, and the years previous thereto. Was the tonnage of company freight included with the tonnage of revenue freight in the total tonnage reported in the ton mileage and also in the earnings for those reports; that is, for 1904 and previously thereto? A. The Interstate Commerce Commission, at a certain time, some years ago, did change the basis on which they computed the statistics. I don't know just what year it was. Perhaps I have some note on it that would show. Q. I think this is the memorandum that you gave me. (Handing paper to witness.) A. Yes; I was misled in your question. This related to a question of average rates, and when you asked the question I thought at once of ton mileage. Of course one has a great deal to do with the other. The reason I did not understand your question was that the

Time of manifest freight.

memorandum I made related to rates. (Mr. Reporter, will you read the question, and my answer, please.)

"The question and answer were read.

Method of computing ton-mile rate changed.

(4181) "WITNESS. As to the ton mileage, I think our reports still show that, but when it comes to a computation of the average rate, which is based on ton mileage, I do know that the Interstate Commerce Commission changed the basis for that; that, prior to a certain date, they computed the average rate on all of the tonnage carried, and subsequent to that date they confined the average rate to the commercial tonnage carried, cutting out the freight carried for the company itself. Q. The dividing year was, I think, 1904? A. I don't remember the year, but that seems to me about right. I should say, offhand, three or four or five years ago. Q. This company freight at that time took the half percent. per ton per mile rate, did it not? A. As I remember it, the Union Pacific carried freight for the Short Line and the Navigation Company, which they owned outright (every share of the stock they owned), and I think the company rate was 5 mills up to the point where the freight reached the rails of the road on which it was used, and then no freight was charged. The Interstate Commerce Commission changed that, and I am quite certain that at the present time the Union Pacific must charge the other lines tariff rates."

Must now charge tariff rates on freight of controlled lines.

Ratio of operating expenses to earnings.

I have compiled a statement of the percentage of operating expenses to earnings for the U. P. and the S. P., from 1899 to 1909. "I was scolded so much about this operating ratio, which is really a tender point with me, because it is a question of checking up the efficiency of these gentlemen sitting around here, who are operating these properties, and I did not want them to get the idea that a low operating ratio was illegal; so I had the comptroller make this up himself. From 1899 to 1909 the ratio of operating expenses to earnings of the Union Pacific was as follows: *** 1899, 52.16; 1900, 51.59; 1901, 53.60; 1902, 50.92; 1903, 53.53; 1904, 52.51; 1905, 51.19; 1906, 52.41; 1907, 53.36; 1908, 54.83; 1909, 48.18. Southern Pacific: 1899, 64.22; 1900, 64.78; 1901, 63.56; 1902, 65.71; 1903, 68.27; 1904, 67.98; 1905, 66.65; 1906, 64.49; 1907, 64.21; 1908, 68.68; 1909, 62.89. I stated the other day, I think, that the maximum operating ratio was reached in 1908, after the full effect of the 1907 panic had been felt—on both systems it was the highest—and on both systems in 1909, in face of the rigid economy practiced and deferring repairs that were deferrable, the operating ratio was at the low-water mark. It was the lowest on both systems for the entire period of eleven years."

Rate of dividend on U. P. stock.

I have prepared a statement of the dividend rates on U. P. stock, both preferred and common, about which the Complainant's counsel asked me. (4182) "I stated in my testimony that it seemed to me the fair way to measure these dividend rates was from some previous period. I think Mr. Kellogg asked me what dividends had been paid from 1898, the time of the reorganization; so, I got the dividends from that date—from 1898 to 1909 inclusive. The preferred stock

paid an average dividend of 3.67 per cent.; the common stock an average dividend of 5 per cent., but in that average is taken 4 per cent. paid annually from 1907 to date on investments, and not from transportation operations. * * * In 1898 the preferred paid nothing, and from 1899 to 1909 it paid 4 per cent. annually. In 1898 and 1899 the common paid nothing; in 1900, 3½ per cent.; 1901, 4 per cent.; 1902, 4 per cent.; 1903, 4 per cent.; 1904, 4 per cent.; 1905, 4½ per cent.; 1906, 6 per cent.; 1907, 6 per cent. on transportation operations, 4 per cent. on investments; 1908 and 1909, the same as 1907. The average for both preferred and common was: for 1898, nothing; 1899, 2.31 per cent; 1900, 3.75 per cent.; 1901, 3.96 per cent.; 1902, 4.02 per cent.; 1903, 4 per cent.; 1904, 4 per cent.; 1905, 4.19 per cent.; 1906, 5.30 per cent.; 1907, 7.98 per cent.; 1908, 7.98 per cent.; 1909, 7.92 per cent.—average for the period, 4.62 per cent."

Average dividend on U. P. for 12 years 4.62 per cent.

I have also made a statement of the S. P. dividends. "In the years 1898 to 1904 there was no preferred, as I remember it, and it paid nothing; from 1905 to 1909, inclusive, it paid 7 per cent. The common from 1898 to 1905, inclusive, paid nothing. In 1906, 2½ per cent.; 1907, 5¼ per cent.; 1908, 6 per cent.; 1909, 6 per cent.—an average for the period of 1.64 per cent." For the years 1898 to 1904 the average for both preferred and common was nothing. "In 1905 the average was 1.2 per cent.; 1906, 3.2 per cent.; 1907, 5.6 per cent.; 1908, 6.3 per cent.; 1909, 6.4 per cent.—an average for the period of 1.9 per cent." The average rate of dividend paid on stocks by all railroads in the United States, in 1909, on the authority of Poor's Manual was as follows: "In 1898, 1.71 per cent.; 1899, 1.92 per cent.; 1900, 2.44 per cent.; 1901, 2.65 per cent.; 1902, 2.97 per cent.; 1903, 3.03 per cent.; 1904, 3.31 per cent.; 1905, 3.27 per cent.; 1906, 3.63 per cent.; 1907, 3.73 per cent.; 1908, 3.50 per cent.—or an average for the period of 2.92 per cent. In its 23rd annual report the Interstate Commerce Commis- (4183) sion, on page 62, says, as to all railroads in the United States for 1908, 'The amount of dividends declared during the year was $386,879,000, being equivalent to 7.99 per cent. on dividend-paying stocks.' * * * For the same year, 1908, the U. P. averaged on its preferred and common stock 7.89 per cent., and the S. P. Company 6.30 per cent."

Dividends on S. P.

Average dividend all roads for 11 years 2.92 per cent.

I do not say whether or not these stocks represent actual cash put in the road, but I suppose those matters have been carefully looked into by the Commission and others who have made up these figures. I don't really know what the Commission has looked into; I rather assume that they have looked into everything that they thought of interest to the public. (4184) I suppose they have satisfied themselves as to the fairness of these valuations. I do not think the dividend rate has anything to do with the fairness of valuation, or with the fairness of rates. The mere fact of a reduction of the dividend of the U. P. would not make a rate that was reasonable, unreasonable; or vice versa. U. P. preferred stock, limited, I think by charter to 4 per cent., was paid every year except

Dividend rate has nothing to do with fairness of rates.

1898. In 1907 U. P. paid 6 per cent. on its common stock from operation, and 4 per cent. from investments.

Rate otherwise reasonable could not be influenced by dividend changes.

(4185) In speaking of these 10 per cent. dividends, I stated that the public had got a very handsome return in our failure to raise rates to keep pace with increasing expenses. In thinking over the matter, I couldn't see what possible effect a reduction of dividends would have on a rate that was otherwise reasonable, or how the road could reduce its rates between certain points, which I understand are now made uniform by law, without attracting all the freight to it, and then the earnings would have been bigger still. The other roads would have been bankrupted apparently. No preferred stock of the S. P. was issued, as I think, until the year of the commencement of paying dividends. We paid dividends on the preferred stock from that date, 1905, to 1909. In the past we charged a good many improvements to operating expenses, but not now, as I understand it. The Commission has (4186) prescribed very rigid rules as to what must be charged to expenses, and what to capital. Up to the time when the Commission issued its regulations, which have the force of law, we charged certain improvements to operating expenses—all roads were doing that; so that of course operating expenses during some of these years between 1899 and 1907 or 1908 would be affected by the amount charged for improvements to operating expenses.

Methods of accounting changed.

Mohler.

(4186) A. L. MOHLER.

Omaha. Vice Pres't and Gen. Manager U. P.

Resides in Omaha; Vice-President and General Manager of U. P. Witness gives statement of his railroad experience, beginning with the Chicago and Northwestern at Galt, Illinois, as warehouse and office clerk; transferred to the Rockford, Rock Island and St. Louis as station agent; then to the auditor's office of the same road at Rockland, Ill.; then to the Burlington, Cedar Rapids and Northern as pioneer agent, chief clerk of the freight department, assistant general freight agent, and general freight agent; then to the Great Northern Railway as general freight agent, land commissioner, general superintendent, assistant general manager and general manager; then to the O. R. & N., as president; since April 1, 1904, in his present position. Witness has become acquainted with the changes which have been made in the physical characteristics of the road since its reorganization in 1898.

His railroad experience.

Changes in physical characteristics of U. P. since 1898.

The principal changes in the physical characteristics of the road which have been made since the reorganization in 1898, are as follows: "As compiled from the chief engineer's records, from Council Bluffs to Ogden, the Omaha-Lane cut-off was constructed, a distance of 15 miles, with a saving of 8.9 mileage over the previous old line located farther south. The eastbound grade of the old line was 42.2 feet to the mile; the westbound line was 41.7 to 66 feet per mile. The new line as constructed made the grade 26.4 eastbound, and from (4187) 31.7 to 66 feet westbound. From Lane to Grand Island, a distance of 129.7 miles,

Reduction of grades.

the eastbound grade of the old line was 39.4, of the new line 26.4; the westbound grade was 42.2, and of the new line 31.7. From Grand Island to North Platte, a distance of 137.3 miles the eastbound grade and the westbound grade remained unchanged on both the new line and the old. From Sidney to Cheyenne, a distance of 102.1 miles, the eastbound grade on the old line was 45 feet to the mile, on the reconstructed line 37 feet; the westbound grade on the old line was 39 feet per mile, and the reconstructed line 37 feet. From Cheyenne to Laramie, which carries the line over the summit of the Rocky Mountains, a distance of 56.5 miles, the old grade was 98 feet eastbound, and on the new line 43 feet; on the westbound, the grade was 87 feet, which was changed to 43 for some distance, and 82 maximum.

Distance and grades reduced.

"From Laramie to Medicine Bow, a distance of 72.4 miles, this line by a change of line was reduced to 56.6 miles, a saving of 15.8 miles. The grade on the old line was 53 feet to the mile eastbound, 43 feet on the new; westbound on the old line 83 feet, 43 feet on the new. From Medicine Bow to Rawlins, the distance on the old line was 64.1 miles, which was reduced to 60.2 miles by reconstruction; the grade on the old line eastbound was 76 feet to the mile, on the reconstructed line in the same direction 43 feet. On the old line westbound 66 feet, on the reconstructed 43 feet. From Rawlins to Wamsutter, a distance of 42.5 miles of old line, reconstructed to 41.3 miles new line. The grade of both the east and westbound old line was 67 feet, while the grade was reduced to 43 feet in both directions on the new line. From Wamsutter to Green River, a distance of 93.1 miles, the reconstructed line is 92.9 miles; the grade eastbound on the old line was 70 feet, on the west line 67 feet; the grade on both east and west lines of the new constructed line was 43 feet. From Green River to Granger, a distance of 30.6 miles, reduced to 30.1; the grade in both directions on the old line was 67 feet; reduced to 43 feet on the newly constructed line in both directions. From Granger to Evanston, distance 79.7 miles, reduced to 70.1 miles, by the construction of a tunnel of 6,100 feet; the grade in the eastbound direction was 68 feet, on westbound 69. These grades were reduced to 43 feet in both directions."

Reconstruction reduced distance between Omaha and Ogden 40 miles.

The saving in the reconstructed distance from Omaha to Ogden is 40 miles. Considerably over 150 miles of the old line was abandoned. There were 188 miles of the reconstructed railroad. (4188) The reconstructed mileage was principally in Wyoming through the mountainous territory. Another tunnel, 1,800 feet long was constructed at Sherman on the top of the Rocky Mountains. The highest point on the new line of the U. P. is 8,011 feet, located at Sherman. The old line was 247 feet higher. Extensive track changes were made between Kansas City and Topeka. The single track between those points has been replaced by a double track, with considerable change in alignment and grade. By building 17½ miles of new line on the road between Denver and Cheyenne,

Reduction of grades between Denver and Cheyenne.

the grade was reduced from 95 feet to the mile westbound to 63 feet to the mile westbound, shortening the distance from Denver to Ogden 13½ miles. (4189) Since the reorganization, Union Pacific has built the following new lines: From O'Fallons to Northport, Nebraska, along the North Platte River, 114.88 miles. From Stromsburg to Central City Junction, Nebraska, 21.98 miles. From Menoken to Carden, near Marysville, Kan., 69.71 miles.

New lines constructed on U. P.

New mileage in Nebraska and Colorado.

"We constructed in Nebraska what is known as the Lane cut-off, 11.61 miles. We have constructed in the coal territory, in the vicinity of Rock Springs, Wyoming, 9.05 miles. We have about completed construction, in the vicinity of Greeley, Colorado, what is known as the Pleasant Valley branch, 13.16 miles. We have about completed in the same vicinity what is known as the Greeley branch, a distance of 26.16 miles. We have also under construction and nearly completed from Sand Creek, a station immediately outside of Denver, to La Salle, a distance of 40.47 miles. The purpose, primarily, of this construction is to put in between La Salle and Denver a double-track service. We are authorized, contract has been let, and work is under construction, to build a line in Colorado from Dent to Fort Collins, a distance of 24.75 miles. We have recently contracted for, and the contractors are on the ground, a line to what is known as Kilpacker Creek, a distance of 21.73 miles." This is in Wyoming.

Additional double track.

In 1900 there were 11.33 miles of double track on the main line of the U. P. between Council Bluffs and Ogden. It extended from Council Bluffs to Gilmore. In 1901, 1902, and 1903, there were 69.12 miles of double track; in 1904, 1905, and 1906, there were 94.65 miles; and in 1907, 214.52. (4190) In 1908 the total mileage of double track was 297.12 miles, and in 1909, 390.25 miles. This double track is located between Council Bluffs and Watson's Ranch, in Nebraska, Archer and Buford, in Wyoming, and Lookout and Hanna, in Wyoming; between Hermosa and Laramie, Rawlins and Wamsutter, Point of Rocks and Rock Spings, Green River and Granger, and two miles from Ogden station immediately east. There were 69 miles in Kansas—2 miles from Denver east. At the present time the total mileage of U. P. double track is 459 miles. All of it is under actual operation. 70 miles were put in commission during various parts of the summer of 1909. There are now under active construction 226 miles of double track, running from Watson's Ranch to Julesburg; Rock Springs to Green River, in Wyoming; Hanna to Rawlins, in Wyoming, and 2 miles in the vicinity of Denver, from Sand Creek to Pullman. Every effort is being made to complete all this double track now under construction during the year 1910.

Mileage covered by block signals increased from 10 to 1,529.

(4191) "There were about 10 miles of block system on the Union Pacific Railroad about the time of the receivership, between Council Bluffs and Gilmore. This has now been extended so that we have

at the present time 1,529 miles, covering our main line from Council Bluffs to Ogden, our Denver line from Julesburg to Denver, our Kansas line from Kansas City to Topeka, and now under construction and coming in service daily (small portions of it) from Topeka to Salina, in Kansas; from La Salle to Cheyenne in Colorado and Wyoming." The Denver line leaves the main line at Julesburg, from the east; so that makes a continuous system of automatic block signals on your Denver line from Council Bluffs to Denver via Julesburg. In addition to the block signals, the rear of trains are still protected with flagmen. In addition to warning engineers of the approach of trains, the block signal is a remarkable discoverer of broken rails. Whenever the rail breaks, as a rule it breaks the circuit and it throws the signal to danger as a consequence. The company has escaped, witness believes, some very serious accidents, through that medium. Attention has frequently been called to broken rails by the action of the automatic block signal system.

Block signals discover broken rails, etc.

Since April 1, 1904, the U. P. has installed 89 passing tracks, 68 terminal tracks (terminal developments), and 259 industrial tracks, representing a total of 946,198 lineal feet, at a cost of $1,265,224.00 (4192) It has constructed during the same period 58 stockyards at an expense of $72,853.00. It has constructed during the same period 45 section houses. "The more extensive stockyards were constructed for feeding purposes at Green River, Rawlins, Laramie, North Platte, and Grand Island. These yards were used for the purpose of taking care of stock under the 28-hour and 36-hour requirements, and were located and designed after conference with the Stock Growers' Committee of the State of Wyoming, as to the manner in which they should be constructed and where they should be located, and had their entire and full approval; and we consider they are more extensive and more modern in their character than the yards of any similar roads west of Chicago." They are fitted up with different apartments, with electric lights in many instances, with water facilities, and also with hotel accommodations. These electric lights are are lights for the purpose of lighting up the yards.

New passing and terminal tracks.

Stock yards.

Stock growers consulted.

Stock yards highly modernized.

Witness produces photographs of the following new stockyards: Green River, constructed at a cost of $28,848.00; Laramie, at a cost of $15,836.00; Rawlins, at a cost of $14,866.00; Grand Island, at a cost of $17,129.00; North Platte, at a cost of $29,761.00. These photographs were introduced in evidence and marked Defendants' Exhibits 112 to 120, inclusive. 45 section houses were constructed at a cost of $59,740.00, and 274 miscellaneous buildings at a cost of $101,713.00. 36 new depots have been built since April 1st, 1904, at an expense of $113,057.00. (4193) The Omaha depot was constructed since the receivership at a cost of $406,178.00. The title of that building is in the U. P. R. R. Co. Photographs of Omaha depot are identified and introduced in evidence. They are marked Defendants' Exhibits 121 and 122. A depot at Columbus, Nebraska, was constructed at an expense of $28,036.00. A photo-

Location and cost of some new stock yards.

Photographs of new depots, etc.

graph of it is marked Defendants' Exhibit 123. A depot was constructed at Rock Springs, Wyoming, at a cost of $12,534.00. A photograph of it is marked Defendants' Exhibit 124. A depot was constructed at Sterling, Colorado, at a cost of $6,618.00. Photographs of it are marked Defendants' Exhibits 125 and 126.

New depots at various points.

Witness calls attention to a sample of U. P. suburban depot on Lane Cut-off, with park surroundings, constructed at a cost of $5,292.00. It is located on the outskirts of Omaha. A photograph of that depot is marked Defendant's Exhibit 127. There is a new depot under construction at Central City, Nebraska, which will cost $20,000.00; also one at Green River, Wyoming, which will cost $50,000.00. During the same period there was completed at Manhattan, Kansas, a new depot costing $9,695.00. (4194) Photograph of Manhattan depot is marked Defendants' Exhibit 128. The company is a believer in ornamentation and is developing quite an extensive park system in connection with its various depots. It has 33 parks of considerable importance now installed, and quite a large number of minor ones. As a sample of some of its best parks, witness produces a photograph of the park connected with the Cheyenne depot. It is marked Defendants' Exhibit 129.

New union depot for Kansas City.

The company has entered into obligations in connection with other roads at Kansas City, to construct a new passenger depot there. The U. P. will probably have to pay not less than $2,000,000.00 as its share, in order to improve its facilities at Kansas City.

New terminals at Sharon Springs and Hugo.

The company has constructed at Sharon Springs, Kansas, and Hugo, Colorado, new terminals, at an expense of from $120,000.00 to $140,000.00 each. Photographs of the Sharon Springs roundhouse and depot and water station, which are duplicates of those at Hugo, are marked Defendants' Exhibits 130 and 131. These terminals were constructed because the Federal 16-hour Labor Law made it necessary to re-arrange the terminals.

(4195) They had been something like 160 or 170 or 180 miles apart. The construction of these new terminals at Sharon Springs and Hugo makes them from 105 to 110 miles apart. Coaling stations now being installed are of the conveyor type, and are so arranged as to feed two or three tracks. They are of expensive construction, but facilitate the movement of trains by handling the coal by gravitation. During the receivership the coal was handled by buckets and cranes and other ancient methods. Under the present system the coal is dumped into a pit about as grain is dumped into an elevator pit. It is carried from the pit up into the coaling station with link belts holding buckets, and the coal is thereafter permitted to run into the locomotive by gravity. All new coaling stations are now being built upon that plan. The cost of these modern coaling stations runs from $10,000.00 to $30,000.00. A photograph of the coaling station at Hanna, Wyoming, is marked Defendants' Exhibit 132.

Modern coaling stations.

Recreation buildings at Green River and Evanston.

(4196) The Company has constructed at Green River what is known as a recreation building. It provides accommodations for

the employees in the way of bath conveniences, sleeping apartments, etc. Cost of the building was $28,848. A building of similar design is under construction at Evanston, Wyoming. The building at Green River was completed last Fall. "It meets with the general approval of the employees and is believed to be a wise and humane and Christian proposition." Photograph of the building referred to is marked Exhibit 133. During the same period 7 round-houses have been constructed at a cost of $104,588. There is now in for approval and construction this year enlargement of terminal facilities at Green River, Evanston, Laramie, Cheyenne, North Platte and Grand Island, aggregating a little over $2,000,000.00. Numerous track scales have been constructed along the line. $188,000.00 have been expended for new icing houses to take care of the enormous quantity of refrigerator freight passing over the U. P. "I believe it is generally conceded that the Union Pacific has one of the largest icing propositions in the United States located at North Platte, where 20 or 30 cars can be simultaneously iced with very little delay."

Provision for enlargement of terminal facilities.

Icing houses are located at Ogden, Evanston, Green River, Rawlins, Laramie, Cheyenne, Sidney, North Platte, Grand Island, Council Bluffs, Omaha, Columbus and also some stations on the other divisions. (4197) Quite a number of crossing bells have been installed at grade crossings or public highways at a cost of $25,454. On the new Lane cut-off, which is substantially 11 miles long, there are 3 overhead railroad crossings, 3 underground railroad crossings and 3 over-head high-way crossings. There is only one crossing at grade. It is the policy of the Company to eliminate crossings at grade wherever possible. The Company has constructed in the vicinity of Elkhorn a new double track modern bridge at a cost of $94,116. A photograph of it is marked Exhibit 134. Over the stream at North Platte a new steel bridge has been constructed at a cost of $91,939. It replaces a wooden structure. Photographs of the old and new bridge are marked Exhibits 135 and 136. A new steel bridge has been constructed at Fort Steele, Wyoming, at a cost of $40,524. Two photographs of it are marked Exhibits 137 and 138. There is a double track bridge just completed over the Loup River near Columbus, Nebraska. (4198) Photographs of the old and new construction are marked Exhibits 139 and 140. The cost of the new bridge was $215,140.00.

Icing houses and crossing bells.

Trying to avoid grade crossings.

New bridges.

At Kansas City arrangements have been made for the construction of a new bridge over the Kaw River at a cost of $415,000. A commissary building has been constructed at Omaha at a cost of $127,465.00. A photograph of it is marked Exhibit 141. New shops at Omaha have been constructed at a cost of $2,028,296. It is one of the most complete shops of its kind in the country for its size. Photograph of it is marked Exhibit 142. Witness also produces photographs showing sample of U. P. Standard Track Maintenance at Granite Canyon, Wyoming, Exhibit 143; St. Marys, Kansas, Exhibit 144; Peterson, Utah, Exhibit 145;

Commissary building.

New Omaha shops.

Photographs showing tracks.

Watson's Ranch, Nebraska, Exhibit 146; Otto, Wyoming, (4199) Exhibit 147; Echo, Utah, Exhibit 148. Photograph of the Lane cut-off showing overhead high-way crossings, Exhibit 149. U. P. overhead bridge on the Lane cut-off, Chicago & Northwestern crossing, (the Chicago & Northwestern Railroad is 90 feet below). The photograph is marked Exhibit 150. A photograph representing the progress of construction of the Lane cut-off in filling embankments is marked Exhibit 151. Another photograph showing the construction of the Lane cut-off is marked Exhibit 152.

Location and cost of interlocking plants.

Many interlocking plants have been built at various points in Nebraska and Colorado for the purpose of protecting the railroad crossings at grade. They have been constructed at Council Bluffs, Omaha, Fremont, Central City, Columbus, Borie and others on the Kansas Division. The cost of these interlocking plants averages from $10,000 to $20,000 a plant—original cost of construction. The cost of maintaining U. P. block signals is about $80 per signal per annum. (4200) That means a cost of not less than $225,000.00 per annum for merely operating and maintaining the 1,529 miles of electrical installation on the U. P. proper, of which witness is the General Manager. About 175 men are employed on the U. P. proper in the maintenance and operation of its automatic block signal system.

New steel car freight equipment.

"Prior to the receivership the freight car equipment was largely of wooden construction. In 1899 the Union Pacific purchased its first thousand cars of steel construction for freight equipment. It purchased in 1901, 335 additional cars, 500 additional cars in 1903, 1 in 1905, which was an experiment of new design and construction; 104 in 1907, 40 in 1908, 120 in 1909, and 42 under contract since June 1, 1909. During this same period there were purchased what is called steel underframes for all kinds of freight car equipment including steel cars, to-day 46.35 per cent. of the total car equipment being steel construction or steel underframe construction. During this same period, commencing with 1906, the company commenced experimenting with steel passenger equipment. During that year it purchased 7, and additional ones since that date and under contract, having in service to-day about 80 cars, and has discontinued entirely the purchase of wooden equipment for passenger-car purposes." The cost of steel equipment is much greater than the cost of frame equipment. Freight car equipment is now largely purchased with a capacity of 100,000 lbs. or 50 tons. In 1901 the ruling capacity was about 30 tons.

Steel passenger cars now the standard.

Increase in number and capacity of locomotives.

There has been considerable increase in the number and capacity of locomotives since 1901. "In 1901 we had 551. In 1909 we had 517 with tractive power of 23,880 lbs; in 1909 we had 660 with tractive power of 29,936, or an increase in tractive power of 38 per cent." (4201) There are now many more dining cars in service than in 1901; observation cars have been attached to many of the trains, and other observation cars with sleeping facilities—

many others. Witness thinks the number of observation cars is twelve times as great as in 1901, and in the matter of dining cars we operated about 10 in 1900 and now have 39.

Number and character of through limited trains.

"We had no electric lighted trains in 1900 or during the receivership. There has since been installed an electric lighted train operating from Chicago to Portland without change of cars; another one installed from Chicago to San Francisco without change of cars; another one installed from Chicago to Los Angeles, up to the period of the recent flood, without change of cars; another one installed from St. Louis to Cheyenne, without change of cars; 2 each way installed between Chicago and Denver without change of equipment." Between Chicago and Council Bluffs these trains run over the C., M. & St. P. and the C. & N. W. The character of equipment carried in these trains is the equal of any equipment carried in any other train in the country. It is the best of modern construction. These trains are carrying sleeping cars, observation cars, dining cars, and steel chair-cars in some of the trains, as well as steel baggage cars. The Denver trains, and the Los Angeles trains and the Portland trains carry steel day-coaches. The Overland Limited carries no coaches. The betterments just described have resulted in a material improvement to the service. Without them it would have been impossible to handle the present traffic satisfactorily. Traffic in general volume is handled very expeditiously, with more satisfactory and better service in both freight and passenger than was provided for in 1900.

Increase in freight traffic between Council Bluffs and Ogden.

The traffic between Council Bluffs and Ogden increased from the year 1901 to the year 1909 about 113 per cent. (4202) In 1900 the ton miles from Council Bluffs to Ogden were 3,775,980,210; 1901, 3,855,436,652; 1902, 4,110,833,810; 1903, 4,324,881,370; 1904, 5,484,663,397; 1905, 6,539,550,092; 1906, 7,371,347,196; 1907, 8,111,666,457; 1908, 7,718,508,000; 1909, 8,064,882,000.

Increase in passenger traffic.

Between Council Bluffs and Ogden, the passenger train mileage in 1900 was 2,597,450; 1901, 3,050,152; 1902, 3,047,073; 1903, 3,787,193; 1904, 3,620,976; 1905, 3,369,509; 1906, 3,963,243; 1907, 4,297,398; 1908, 4,484,687; 1909, 4,400,949. That is an increase, from 1900 to 1909, of about 69½ per cent.

Increase in passenger trains per mile one day.

The average number of passenger trains per mile one day, over the main line between Council Bluffs and Ogden, was as follows:

1900	7.31	1905	9.18
1901	8.22	1906	10.80
1902	8.27	1907	11.70
1903	10.36	1908	15.37
1904	9.83	1909	12.28

Train increase necessitated slower time.

Those figures represent an increase of about 68 per cent. The frequency of the service, the frequent meeting of the trains, and its volume, in connection with safety and operation, made (4203) it necessary to slow up the trains as compared with the earlier history of the traffic, and made it more difficult to operate trains on schedules.

No. 19—54-hour train.

In 1900 there was a fast freight train carrying California freight between Council Bluffs and Ogden, Number 19. It handled also Utah and Oregon freight. In 1900 the schedule of that train was 54 hours and 30 minutes. In 1901 it was 58 hours and 25 minutes. In 1902, 64 hours. That train carried manifest or preferable commodities.

Manifest freight

"Manifest or preferable commodities" are "articles that, for traffic reasons, were specially selected to have preferable service, to avoid delays in transit; and represented, at that time, in total number, 34; which included beer, canned goods, cheese, condensed milk, chocolate, crackers, cranberries, crockery, earthenware, eggs, fish, fruit, furniture, go-carts, molasses, nursery stock, organs, oysters, paints, packing-house products, pianos, perishable freight, poultry, sewing machines, spirits, stoves, syrup, sugar, varnish, vegetables, whiskey and wines, woodenware, bicycles, and mixed carloads of merchandise."

Preferential attention.

This particular class of freight was given preferential attention "by what we call the manifest way bill, which is inaugurated when the shipment starts at the terminal, and carries with it a photograph record through to the other terminal or its final destination. The shipment is watched continuously from one terminal to another, and any delay reported to that shipment is at once wired to the division officer as to the cause and reason of the delay, so it can be early reinstated in resumption of service." In 1901 the preferential service was given only to the class of articles just enumerated. "Any article not embraced in this list, if this list was sufficient in volume to fill up the train, would take a very much slower schedule; would move from one division terminal to another more or less at the convenience of traffic and the disposition of the division officer. It was not an expedited service, and it was not so intended to be." The expedited service at that time was entirely confined to the 34 articles just read. (4204) "In 1904 there was a very material increase in these manifest articles, so as to give more general expedited service on all traffic handled, rather than to confine it to a few articles—as was the case in 1900."

Number of manifest articles increased.

In referring to all other traffic handled, witness meant to include freight other than general merchandise. The following is a list of all the articles which came under manifest ruling in 1904 and embraces all of the articles now included as manifest articles:

"Benzine, boards, straw and wood pulp, boats, bottles, box material, building material, bridge material not railroad, broom corn, butter, cable wire, carriages, canned goods, cans, cartridges, cement, condensed milk, cereals, cheese, chocolate, cocoa, coffee, cooperage, crackers, cranberries, crockery, demijohns, doors, windows, etc.; earthenware, eggs, enameled ware; fish frozen, pickled and salted; fixtures, bank, bar and store; flour for export; fruits, fresh and dried; furniture, gasoline, glass, glucose, glycerine, go-carts, granite, graniteware, ice-cream freezers; iron, sheet and tin; laths; lumber, finished hard-wood; machinery, malt, mantels, marbles, matches, meters, mineral water, molasses; nails for export, naphtha; nursery stock; oils of all kinds; ore, organs, oysters, packing house prod-

uets, paper bags and boxes, paper, paints, pianos, piano and organ stools, pipe, pottery, poultry, plaster, powder, pumps, plumbers' supplies, crockery, ranges, refrigerators, safes, sewing machines, sheep dip, sheet steel, soap, spirits, stamped ware, staves and heading, stoves, store furniture, stoneware, structural iron, structural steel, syrup, terra cotta, theatrical scenery, tin plates, tinware, trunks, turpentine, varnish, vegetables, vehicles in parts, wagons in parts, wagon wood, whiskey and wines, windmills in parts, wire fencing, wire and woodenware: representing 113 articles as against 34 articles covered by similar service in 1900." Those are articles which are generally carried in carload lots. (4205) Prior to 1904 the average time actually consumed in carrying the commodities other than the 34 included in the original list, between Council Bluffs and Ogden was about 125 hours. All of these articles now receive the same sort of service and attention—the same general treatment.

Time made by non-manifest freight.

"Q. Have you made an investigation to determine whether or not this train did actually make the schedule time between Council Bluffs and Ogden during the period I have inquired about, to wit, the years 1901 and 1902, and thereabouts? A. I have. Q. Please state the results of your investigation—what the facts are. MR. SEVERANCE. I reserve the same objection to that. A. As taken from the train dispatchers' sheets in effect at that time, and as compiled under my instructions by the parties who had charge of this class of work, we find—— Q. Please state, first, how the investigation was made. A. The investigation was made in this manner; we selected three days in the month of June and three days in the month of October, without reference to what they would produce, so as to take a general average of the performance. We selected June for the reason that it represented the lightest month in the fiscal year's service, where the operations were the easiest and least difficult and not affected by weather conditions. We selected October because it represented the heaviest month in the fiscal year, but entirely free, still, from what is known as weather conditions, which occur later in the winter season and are one of the serious difficulties under which we operate over the backbone of the continent. With reference to that information, we have here on June 3, 1900, this train scheduled at 54 hours and 30 minutes. The dispatchers' sheets were not obtainable from Green River to Ogden."

Actual time made by 54-hour train.

The track between Green River and Ogden was under the jurisdiction of the operating officials of the U. P. at that time. "The schedule time of this train from Green River to Ogden was 15 hours. The time actually consumed in running from (4206) Council Bluffs to Green River was 65 hours. Assuming that this train would lose no additional time and would make its schedule of 15 hours, that would represent an actual service of 80 hours as against the published schedule of 54 hours and 30 minutes. On June 11, 1900, this same train operated from Council Bluffs to Green River in 43 hours and 10 minutes. Assuming that it would not lose any additional time, its delivery at Ogden would be 58 hours and 10 minutes. On

Could not make its schedule time.

June 19, 1900, the time consumed on this train, from Council Bluffs to Green River, was 93 hours and 18 minutes. Had it lost no additional time, it would have reached Ogden in 108 hours and 18 minutes instead of 54 hours and 30 minutes. On October 1, 1900, this same train consumed, in the territory named before, to Green River, 52 hours and 19 minutes. Its time at Ogden, if it lost nothing more on its schedule, would be 67 hours and 19 minutes. On October 9, 1900, the time consumed to Green River was 71 hours and 59 minutes. If no more time was lost, Ogden would be made in 86 hours and 59 minutes from Council Bluffs. On October 17, the time consumed to Green River was 66 hours and 5 minutes. If no additional time was lost, the train would have reached Ogden in 81 hours and 5 minutes. June 2nd, 1901, at which time the train dispatchers' sheets were available for the entire district—— * * *

Schedule time and actual time.

"The schedule was 58 hours 25 minutes, June 2, 1901. The train actually consumed 82 hours and 5 minutes. June 10, 1901, the train actually consumed 84 hours and 30 minutes. June 18, 1901, the train actually consumed 85 hours and 20 minutes. October 2, 1901, the train actually consumed 84 hours and 5 minutes. October 10, 1901, the train actually consumed 81 hours and 45 minutes. October 18, the train actually consumed 65 hours and 15 minutes. On June 1, 1902, this train, in the same district, consumed 74 hours and 10 minutes. MR. SEVERANCE. What was the schedule time then—just the same? WITNESS. Just the same. On June 9, 1902, 77 hours and 10 minutes. MR. SEVERANCE. Did you intend to give only two days in June? WITNESS. That is all I find, Mr. Severance. I think one sheet has been mislaid. I can obtain it if necessary. October 3, 1902, 123 hours and 45 minutes. Q. What was the schedule then? A. 58 hours and 25 minutes. October 11, 1902, 97 hours and 40 minutes. October 19, 1902, 129 hours and 30 minutes. December 21, 1902, the schedule of this train was lengthened to 64 hours. On June 2, 1903, the train consumed 92 hours and 20 minutes. June 10, 1903, 83 hours and 25 minutes. June 19, 1903, 108 hours and 18 minutes. October 4, 1903, 81 hours and 35 minutes. October 11, 1903, 81 hours. October 22, 77 hours and 50 minutes. This information was prepared by some of our operating officers who are now here, and who had charge of the conduct of the business at that time, and who furnished this information."

Time lengthened out.

(4207) In October, 1907, this train was lengthened out to 101 hours from Council Bluffs to Ogden. It was afterwards changed to 100 hours and 45 minutes.

Number of train changed to 53.

Number 53, formerly called Number 9, has of late years had a good many sections in addition to the regular train; sometimes 3, 4, 5 and 6, depending upon the season of the year. These various sections all ran upon the same schedule as nearly as possible.

Other freight service.

In addition to train Number 53 between Council Bluffs and Ogden there was organized (witness believes in 1904 or 1905) train Number 55, which carried the freight from Council Bluffs and from the Kansas territory (connecting at Chey-

enne) to Montana, Idaho, Oregon and Washington points via Granger. That train very frequently ran in sections of 3 and 4, and sometimes as high as 6 and 7. That train was not able to make its schedule time any more than the other. The green fruit service, eastbound, in 1903, represented 9,711 cars for the fiscal year. This traffic in 1908 represented a total number of 19,748 cars. That traffic was carried usually on a schedule of 80 hours generally speaking; sometimes a little more or a little less, but 80 hours was basic time from Ogden to Council Bluffs.

No. 55 not able to make schedule time.

Green fruit service.

That traffic was confined to east-bound movements entirely. Frequently live stock was added to this train. (4208) These green fruit trains were run in sections. Sometimes there would be 4 and 5 a day. It depended entirely upon the season. Their preference was to send the stuff largely by the more southern lines during the more severe weather and via the northern lines during the Summer weather. The U. P. had another through schedule train, hauling meats, in the year 1907 and prior thereto. "When this traffic began to increase so rapidly, we finally determined upon the feasibility and advisability of inaugurating, three times a week, a train carrying from Council Bluffs to Ogden packing house products and other perishable freight, rather than have it carried indiscriminately upon what was known as manifest trains. Those trains when inaugurated were pleasing to the patrons, to the extent that they were well patronized from the outset and are to-day." All of these trains just referred to are through trains.

Train for packing house products.

There are conditions existing on the line of the U. P. which make it decidedly more difficult to operate trains, than upon the lines of the eastern and middle states. "In the first place, we are compelled to lift a car, in the first 550 miles, about a mile and a quarter in height; from a one thousand foot altitude at Omaha to slightly over eight thousand feet at the summit of the Rocky Mountains. And the weather conditions, the wind velocity, is a very serious feature in our operation, and prevails almost continuously in the North Platte and Cheyenne territories." The U. P. trains are compelled to climb in crossing the Rocky Mountains three ascents of importance; from Cheyenne to Buford, that is over Sherman Hill; from Laramie to Creston, over the Continental Divide; and from Granger to Aspen tunnel, in the vicinity of Evanston. Naturally at that altitude there are other climatic conditions prevailing in the Rocky Mountain district, which make it difficult to operate trains. "Our snow and low temperature are more general and cover a larger number of months than they do in the lower altitudes. For example, I took temperatures, from December 1, 1909, to January 15, 1910, and found the average temperature at Evanston, Green River and Rawlins, four degrees above zero. (4209) The coldest weather experienced was forty degrees below, and the most torrid weather, thirty-nine above. Q. That is the country in which you have nine months of winter and three months late in the fall? A. Sometimes we think we have fourteen months of winter.

Altitudinal and atmospheric obstacles.

Eccentric climatic conditions.

Operating conditions on U. P. in fall of 1907.

"Q. What were the operating conditions on the Union Pacific Railroad between Council Bluffs and Ogden, in the summer and fall of 1907, preceding the lengthening out of your schedule trains?

Congested condition.

A. We had increased our passenger trains to such an extent, and the freight traffic had increased to such an unexpected extent, that we were substantially congested almost continually, from one end

San Francisco earthquake.

of the line to the other. Some of this had primarily been brought on to us by the San Francisco earthquake in April, 1906. Having destroyed the terminal facilities of the Southern Pacific, we were compelled to hold cars back, by instructions, in our own territory; so it congested our terminals, it prevented the expedition of the movement of freight westbound, and even, in some instances, we had to appropriate our new second track for the storage of this equipment; and this difficulty continued well up towards what is known as the

Why trains did not and could not make their schedule time.

panic month of 1907"—October, 1907. The schedule trains at that time were not making their schedule, between Council Bluffs and Ogden. They could not; because there were entirely too many trains to pass; too many trains to meet. The speed assigned to these trains was impossible of execution; because of the large amount of traffic and the numerous trains to meet.

Receiving lines congested.

The actual time of the schedule trains in September and October, 1907, between Council Bluffs and Ogden, "fluctuated considerably, because, being unable to deliver our freight to the western lines, the matter of time was not a question of such vital importance; for after we had reached the western terminal, during a large portion of 1907, we were compelled to retain until convenience of reception of the receiving lines." Witness thought that under unobstructed conditions, trains were then actually taking about 100 hours from Council Bluffs

Why schedule of trains was lengthened.

to Ogden. The time of the schedule trains, including 53, was lengthened out in October, 1907, "because, after conferring with all of our operating officials, it was a matter of great concern to us, and some pride, and some dissatisfaction, that we were not able to make

Effort to solve problem.

a printed schedule, and we tried to find a remedy. We first applied it a number of times in try- (4210) ing to force the business, to run the trains faster and to instill into the division officers and the men its necessity. All of that was gone over repeatedly, from week to week,

Decided to utilize wasted power.

and month to month, without any apparent results. We then decided that it was very much better for us to realize the efficiency of the power, handle more cars to the train, operate less trains on the road, and cover the ground more regularly and systematically—which has substantially been done, barring the unusual conditions which occur in the operation of property since that time." By utilizing the full power of the locomotive, witness meant that "a locomotive is gauged in its capacity by the speed desired; by the grades it overcomes; and also by the weather conditions prevailing at certain seasons of the year; and in changing this rating we added from one to

Increased train tonnage and reduced meeting points.

two and three hundred tons more to the train. In that way we were enabled to overcome the congestion and permanently remove it." The reserve power of the locomotive which before that time had

been used in the attempt to make the schedule time—an impossible schedule—was utilized by adding greater tonnage to the train. And the effect of that was to remove the congestion and to permit the freer operation of the trains, and with greater safety.

Prior to the time of lengthening out the schedule, every possible effort was made to make the time upon the published schedules, with an absolute failure. When the schedule time of 53 was made 100 hours, and the time of other trains was lengthened out, "we were applying the practice to the schedule instead of the schedule to the practice." Witness thought there was no question, but that the lengthening out of these schedules was an absolute operating necessity; "because it is a matter that none of us liked to do, and we resisted it for months, until we were absolutely compelled to recognize it; until we had so increased our trackage facilities that we were able to handle this traffic with less difficulty. * * * Nobody is perfectly satisfied with a railroad, individually. But I have not had any complaints about our character of service, for some time. We have had a great many compliments."

Schedules changed to correspond with actual performance.

Change in schedules an operating necessity.

Service has been complimented.

(4211) The traffic is heavier to-day than at any time in the history of the property. The method adopted in October, 1907, made the general movement of the traffic more uniform and less discriminating than it had been previously. In 1901 the U. P. moved a few cars quicker, and a great many slower. Now it moves them all in such a way that the average is very much better for the entire movement.

Traffic heavier than ever.

General movement of traffic more uniform.

Average much better for entire movement.

The statistics of the American Railway Association show that from January, 1907, to February, 1909, U. P. equipment from Council Bluffs to Ogden moved at the rate of 41½ miles per car, per day; this includes all classes of freight service, and takes in the U. P. Railroad as a whole. The same statistics show the following movements upon other large railway systems in the United States: on the Santa Fe road between Chicago and Albuquerque, Chicago and Kansas City, Kansas City and Denver 26.7 miles; on the G. N., St. Paul to Seattle 21.5; on the N. P., St. Paul to Portland, 21.4; on the Rock Island, Chicago to Denver, 23.3; on the C. B. & Q., Chicago to (4212) Denver, 29.6; on the C., M. & St. P., Chicago to Seattle, St. Paul to Seattle and Chicago to Omaha, 24.7; on the Pennsylvania during the same period from New York to Chicago, 23.9; on the New York Central during the same period 25.2.

Car movement per mile per day much better on U. P. than on other lines.

The average speed in miles per hour of through passenger trains as shown by the same statistics, is as follows: U. P., Omaha to Ogden, 30.7 miles per hour including stops; Omaha to Denver 34.3 miles per hour; Omaha to Portland, 29.6; Omaha to Frisco, 27 5; Omaha to Los Angeles, 31.8. Santa Fe, Kansas City to Los Angeles, 27.9; Canadian Pacific, Winnipeg to Vancouver, 25.3; G. N., St. Paul to Seattle, 28.7; N. P., St. Paul to Portland, 27. This information as to the average speed of passenger trains is for the year 1909. The schedules of passenger trains are frequently

Average speed of passenger trains.

changed. It would be possible to operate a freight train between Council Bluffs and Ogden in 54 hours, at the present time, but only by side-tracking passenger trains, side-tracking mail trains, side-tracking live stock, side-tracking fruit, side-tracking manifest trains, and taking some risks in operation. The average speed would be about 18½ miles per hour, including stops. As to the maximum speed necessary to operate a train on a 54-hour schedule: "From Omaha to Ogden, about 70 per cent. of our mileage is an ascending grade, and on that ascending grade the time would naturally (4213) be slower than it would be on the descending grades. The speed would probably be, at some points on that entire district, as high as 40 miles per hour, if not more." Witness regarded that as a reckless rate of speed for a freight train. The service on the U. P. is being given the full benefit of all the betterments which have been made and to which he has testified. The traffic is being handled to the best possible advantage for the benefit of the shipper, with the present facilities. There are very few complaints as to service. There will always be some complaints.

From Omaha to Ogden 70 per cent of mileage ascending grade.

Service being given full benefit of betterments.

Reduction of U. P. mileage.

The mileage of the U. P. in the aggregate has been reduced from Omaha to Ogden, 40 miles, or substantially that since the close of the receivership. All of it was done prior to 1904, except the Lane cut-off. At the time the U. P. was reorganized witness was employed by the O. R. & N. While employed by the O. R. & N. witness had a superficial knowledge of the U. P. property. He was not very familiar with its physical condition at that time. (4214) Witness understood that immediately after the close of the receivership very extensive plans were set on foot to improve the road. After witness became acquainted with the property he found that improvements had been made. They were made during the administration of Mr. Burt, the first president of the reorganized company. He continued as President to the Fall of 1903. Witness went to Omaha shortly after his retirement. At that time the Lane cut-off had not been built. It was built under the administration of witness.

Improvements made by Mr. Burt.

Substantially all of these lines that witness described in detail, where shortening in mileage had taken place, had been finished prior to his assumption of his duties there, except that there was considerable ballasting necessary. The changes of line had been made but there was considerable unfinished work in the ballasting of track. These improvements that were made to the road, aside from reducing the mileage to the extent of 40 miles, eliminated a great deal of curvature also. Elimination of curvature aids very considerably in places in the hauling of more tonnage with the same engine. (4215) The improvements which were made, shortening the line 40 miles, cutting out a great deal of curvature and reducing the grades, made it possible to operate the same amount of tonnage more easily, assuming the tonnage remained the same. From what witness has been told he would not care to operate the road under any conditions as it was operated in 1900. It was in such bad physical condition and he believed the rate of speed was unjustified even under good con-

Improvements in grades, etc., facilitated operation.

ditions. (4216) In addition to the other improvements several hundred miles of double track have been put down. "Q. Is that any aid to you in operating your road? A. Unfortunately all the improvements we have made up to a recent date, have been more than absorbed by the increase in traffic." The double track is an aid but it is insufficient. The Rock Island uses the U. P. track between Topeka and Kansas City. The primary purpose of double tracking between Topeka and Kansas City was to provide the facilities for both Companies, and ours was suffering as much as they were.

Increased traffic absorbs additional facilities.

(4217) Both suffered in trying to move that traffic over a single track road. No more double tracking has been done on the Kansas Division because the Company is building a cross line from Menoken to the vicinity of Marysville, which connects with the St. Joe & Grand Island and then intersects U. P. main line at Grand Island. It shortens the distance from Kansas City to Cheyenne by that route about 120 miles as against the Denver-Cheyenne route. The St. Joe & Grand Island tracks are used under a contract. On the cut-off referred to about 130 to 140 miles of the St. Joe & Grand Island is used. It required about 70 miles of new construction to make the connection (4218) between Menoken, the first station west of Topeka and a point on the St. Joe & Grand Island near Marysville, Kansas. There are 203 miles of continuous double track, right out from Omaha. Instead of completing the double track between Gilmore and Lane parallel with the old track at a cost of about $275,000, the Lane cut-off was constructed at a cost of $3,800,000. This shortens the mileage and removed water difficulties which the Company was subject to almost annually under the old location. The construction of the Lane cut-off reduced the Company's earnings. It made it accept less money for freight rates locally and passenger rates locally by shortening the distance. "We paid the premium of an investment of $3,800,000 for the purpose of reducing our rates." (4219) By building the Lane cut-off which was 11 miles long a saving in distance of 8.9 miles was made.

Distance from Kansas City to Cheyenne reduced 120 miles.

Lane cut-off and earnings.

The new passing tracks which were constructed were from 4,000 to 4,500 feet long. They are necessary to enable trains to pass each other. (4220) The passenger trains to-day are interfering with the movement of freight trains. They are the ones that are affecting the service. Witness has frequently seen 5 or 6 freight trains at one station waiting to get out. Under the time card rules the first train leaves as soon as the passenger train arrives; the next train does not leave until 10 minutes after; the following train does not leave until 10 minutes later; and the next train does not leave until 10 minutes later. The result is that the 6th train does not leave that side track until an hour after the first train has left. That is the condition caused by the operation of one passenger train past that station. The passing tracks referred to by witness have been constructed to facilitate the passing of trains, and the movement of traffic. "But when we have more freight trains than we

Freight movement obstructed by passenger trains.

Delay occasioned by trains passing.

really have passing tracks, as in many instances is the case, then our troubles commence seriously."

(4221) Witness has never seen such a surplusage of passenger trains as there are on the U. P. It is difficult and dangerous from an operating man's standpoint to have so much of that service because it is accelerated, and these freight trains must get out of the way of passenger trains. "There is a time card rule that does not permit them to take any chances, because we cannot stand accidents as we once stood them. That is the matter we are constantly trying to eliminate, and we are acting in safety lines." It frequently occurs that freight trains meet, one of them being on the long passing track and the other running through without stopping.

Car mileage per day.

The average miles per car per day testified to by witness was intended to include the various roads referred to as a whole; (4222) including the U. P. as an individual property but not the O. S. L. or the O. R. & N., it included the Santa Fe as a whole and the other lines as individual properties. The rate of movement per day on the Santa Fe was 27.6, including all that portion of the Santa Fe lines east of Albuquerque; the movement on the G. N., 21.5, included all of that road. The movement of 21.4 miles included all of the N. P. The movement of 23.3 would include all of the Rock Island. The movement of 29.6 would include all of the C., B. & Q. The movement of 24.7 would include all of the C., M. & St. P. The movement of 23.9 would include all of the Pennsylvania lines and the movement of 25.2 would include all of the New York Central lines.

Basis of car mileage.

The table or chart which witness used in testifying as to the average movement of freight cars per mile per day was made up by the American Railway Association Bureau, with headquarters in Chicago and New York. Witness thinks it was made up by Mr. Hale, whose office is 24 Park Place, New York. The auditor of each railroad furnishes the mileage and the cars upon a uniform form furnished by the Association to all the railroads that belong to it; and then the information is compiled systematically by Mr. Hale and reported to all the railroads who are members of that Association. (4223) The U. P. furnishes Mr. Hale with a total movement for the month. The information is furnished monthly under a printed form that he sends out to each railroad. The information gathered by Mr. Hale is published in a large monthly sheet, quite an elaborate sheet, giving the information collectively of all roads members of that Association. The information furnished by the U. P. includes all the freight cars that it owns; also the car mileage movement for the month and train mileage of all freight cars moved over the line. It included all foreign cars.

These figures are made up on the basis of the cars actually moved over the lines irrespective of what cars they are; (4224) and the number of miles in a day that all those cars are moved; and one is divided into the other and as a result you get the 41½ miles. In furnishing these reports to Mr. Hale the cars are all taken in their

entirety; they are not divided among the different portions of the system. The statement on the chart showing the average movement per car per day on the U. P. between Council Bluffs and Ogden, Council Bluffs and Denver and Ogden to Council Bluffs, green fruit, was made under the supervision of witness, in order to make a comparison of the main lines of the various companies shown on the chart. The average movement shown of 41½ miles per car per day was furnished by Mr. Hale. (4225) The mileage for the whole system is 41½ miles per day. That is on the Union Pacific Railroad proper east of Ogden. It includes the movement of cars on all branches as well as the movement of through business from Kansas City and Council Bluffs to Ogden.

Average car mileage per day on U. P. 41½.

The chart referred to shows the average speed in miles per hour of merchandise trains to be as follows: "Union Pacific from Council Bluffs to Ogden, 9.9; Union Pacific Council Bluffs to Denver, 11.5; Union Pacific from Ogden to Council Bluffs, green fruit, 12.4 miles; (4226) Santa Fe, Chicago to Albuquerque, 12.3, Santa Fe, Chicago to Kansas City, 14.4; Santa Fe, Kansas City to Denver, 14.4; Great Northern, St. Paul to Seattle, 11.8; Northern Pacific, St. Paul to Portland, 14.4; Chicago, Rock Island & Pacific, Chicago to Denver, 14.2; Chicago, Burlington & Quincy, Chicago to Denver, 14.4; Chicago, Milwaukee & St. Paul, Chicago to Seattle, 12.4; Chicago, Milwaukee & St. Paul, St. Paul to Seattle, 12.3; Chicago, Milwaukee & St. Paul, Chicago to Omaha, 16.4; Chicago, Milwaukee & St. Paul, Chicago to Kansas City, 16.6; Chicago, Milwaukee & St. Paul, Chicago to St. Paul, 12.8; Pennsylvania Railroad, New York to Chicago, 16.2; Pennsylvania Railroad, New York to St. Louis, 18.3; Pennsylvania Railroad, Chicago to New York, 15.9, dairy products; New York Central, New York to Chicago, 17.5; New York Central, New York to St. Louis, 20.4; New York Central, Chicago to New York, dairy products, 17. * * *

Average speed of merchandise trains.

"Q. Don't you know as a matter of fact that the Great Northern, except as it uses the Northern Pacific track for a little way up the Mississippi River from St. Paul, is a single track road? A. I would not so regard it, for the reason that, when I was up there they had a line known as the Fergus Falls division, running up to Crookston and Grand Forks and Moorhead; they had another line, running by the Breckenridge division running to Fargo and Moorhead and Grand Forks; they had another line running by way of the Breckenridge division, from Casselton to Larimore; and I understand they have since extended the Breckenridge division to some point in the vicity of Devil's Lake."

Double tracks on other lines.

(4227) He is not able to say what they have east of Devil's Lake, because he has not been over their line for a great many years. From rumor he thinks the N. P. has between St. Paul and Portland quite a number of patches of double track, from what he has been told, out in the mountains. He doesn't know, only as it is rumored. The Rock Island from Chicago to some point near Des Moines, he

thought was double track, but from there to Denver single track. The C. B. & Q. is double track from Chicago to Lincoln, you might say. Substantially so, as he understands it. "Q. * * * I am asking you as a general proposition if it is not true that a road may be quite largely double-tracked and still, quite a large portion of it being a single track road, you do not get the full benefit of your double track? A. No, we do not."

(4228) Witness thinks the C., M. & St. P. from Chicago to Seattle is a single track road most of the way after it leaves Minnesota territory. Its line from Chicago to Omaha is double-tracked considerable of the way; not all of the way. The Milwaukee road from Chicago to Kansas City is single track west from some point in Iowa near Marion. (4229) Witness would think the G. N. had at least 400 miles of double track by building those separate branches. As to the N. P. he does not know. The 400 miles of double track of the G. N. is spread out over a total mileage of about 2,000 miles from St. Paul to Seattle. "Q. The 400 miles that you testify to, something like 400 miles as I recall it, is spread out over nearly a 1,000 miles from Ogden to Council Bluffs, that is true, is it not? A. Yes, sir. Q. So that your percentage of double tracking is much clearly greater than that of the Great Northern? A. Yes, I will assume that."

Comparative speed of freight trains.

The slowest time made by the merchandise trains shown on the chart prepared under the supervision of witness, is on the U. P. from Council Bluffs to Ogden, being 9.9 miles per hour, and on the U. P. between Council Bluffs and Denver, being 11½ miles per hour. The Santa Fe from Chicago to Albuquerque makes 12.3 miles per hour. The green fruit trains make the run in 80 hours from Ogden to Council Bluffs. (4230) It is a class of traffic that is preferred over ordinary merchandise. The green fruit trains are handled at that rate of speed by an agreed arrangement that is satisfactory to the shippers and serves the purpose, and is as good time as can be made with the volume of traffic handled on that line. The agreement is part of an arrangement with the shippers of California fruit, so that they can have and depend upon uniform deliveries at eastern terminals, and in 15 cars or more. "They come to us very frequently in a less number of cars than that, but we undertake to give even the smaller amount of business that movement if it is possible to do so." The information in regard to the agreement with the shippers was received from the western connections of the U. P. It has been in effect for seven or eight or ten months.

Green fruit train agreement.

(4231) Witness is of the impression that the agreement referred to includes the entire time that would be consumed in moving the traffic to Chicago. Witness does not know what the total time consumed is. Prior to the 80-hour schedule "we ran the stuff more or less as best we could." Sometimes the time consumed was as high as 90 hours; sometimes a little less. (4232) Witness thinks that the U. P. collection of stockyards in the aggregate is better than the Milwaukee and Northwestern yards. "I think we have more of them. Q. But do you not undertake to compare

U. P. stock yards.

your yards with those of your competitors; only with those of your connections east of Omaha? A. I think our facilities are just as complete, but may not have as many rooms in them. Q. Your answer the other day gave the impression, to me, at least, that you intended to say that your feeding yards surpassed those of (4233) the Santa Fe, for instance, and the other lines in the west. Your language was rather general. A. Possibly I was misled, in making that remark, by the expressions made by the committee who represented the Stock Growers' Association of Wyoming. Q. Yes, you spoke of their being very well pleased with them. A. They examined these yards in advance, and were pleased with the extensive arrangements we were making to take care of that particular traffic."

Stock growers' association.

U. P. has large stock traffic.

The U. P. has a very large stock traffic originating in Wyoming, eastern Oregon, Idaho, and Nebraska. In order to handle this large traffic it is necessary to have feeding yards. The rigid enforcement of the Federal Law requiring railroads to unload, water and feed cattle every twenty-eight hours has increased the importance of feeding yards. About two years ago, or perhaps only a year ago, the law was changed, so that cattle can be kept in the cars 36 hours. (4234) "Q. Therefore, the law itself is not wholly to blame, is it, for the establishment of these feeding yards? A. We didn't have them before, to anything like the extent, nor located so near to each other. And when we studied the effect of this law, it made it necessary for us to put in additional facilities and enlarge the facilities we had, to provide against this contingency; because the law is pretty severe, when there is any failure now on the part of the transportation line. * * * Q. You said you had built 58 new stockyards. As a matter of fact, a large number of those were built to replace old worn-out yards, weren't they? A. No, there were a great many new ones built. This is only a portion of it. I could give you a much more elaborate statement than this."

The company was deficient in many of these necessities that other roads, who were not in the hands of a receiver, had been able to provide. This made large expenditures for improvements necessary, and required the company to do more rapidly what many others had done before. (4235) The passenger station at Omaha, owned by the U. P., is used by the Wabash, Illinois Central, Milwaukee, Northwestern, Rock Island, and Great Western Railroads; also the Missouri Pacific. The basis on which they come in there is that they pay the interest charge on the property, and the maintenance on a car basis. (4236) By the 16-hour law, the train crews are not permitted to be in service more than 16 continuous hours without 8 hours rest. The divisions were so long—160 miles or more—that they could not be covered within the time without laying up the crew and power at intermediate points. The same was also true of Sterling, Colorado. And, while he said that the cost was $120,000 to $130,000, he finds that in the case of them it was $170,000.

Tenants of Omaha passenger station.

Expenditures occasioned by 16-hour law.

Other roads make improvements.

(4237) The U. P. is not the only road that has made these changes, but how extensively it has been done on the other roads, witness does not know. Other railroads are putting in coaling stations of a modern type, but witness doesn't know whether they are doing it as extensively as the U. P. The U. P. began building the new roundhouses, about which witness testified, about two years ago. "We were giving the renewing of our main line preference, which was extensively done, and putting down second track on the theory that a second track was good for twelve months in the year, and with the roundhouses we suffered inconvenience only four or five months in the year." It was not because of the fact that up to two years ago the U. P. was rather hard up for money that it did not build these roundhouses. (4238) Preference was being given to other things. "There was a limit to men and material during those prosperous times. I was authorized to spend much more money than I could possibly spend, because I could not get the men and the material."

Ample funds but shortage of men and material.

Track scales.

Icing houses.

Pacific Fruit Express.

The question of building new roundhouses has been up continuously since witness came with the U. P. in 1904. "Money has gone into other improvements that we thought were more necessary at that time to move the business." The new track scales, which were built to replace old scales which were out of date, were a necessity to handle the business. The icing houses were built to take care of the freight traffic from Pacific coast states. (4239) The icing of fruit cars is handled directly under the instructions of the Pacific Fruit Express. "They are doing all the icing and making all the collections and we are simply a transportation line." The Pacific Fruit Express is owned jointly by the U. P. and the S. P., one-half of the stock being owned by each. The Pacific Fruit Express owns the refrigerator cars that operate over the S. P. and the U. P. and over the San Pedro Line. The icing houses are leased to the Pacific Fruit Express. A rental amounting to a fair interest on your investment, or something of that sort is paid.—usually 4 per cent, witness thought.

Interlocking plants built by U. P.

(4241) The usual practice is for the junior railroad company to pay the expense of installing interlocking plants, and to thereafter divide the maintenance. This, however, was not the case in hardly any of the instances referred to by witness, where interlocking plants were put in. A considerable burden of these crossing installations fell upon the U. P., which ought not to have been true under existing practices. As to whether the U. P. had to pay the expense of putting them in, in individual cases, or how the expense of maintaining them was borne, he does not know, because they are divided on a basis of function, and he thinks only one case has occurred since he came there, that is the Fremont crossing where the U. P. did not have to participate in the expense either for the entire installation or half of it, or some proportion. It is an advantage to both lines to have an interlocking plant. It is a life saver and a time saver. Witness believes that in connection with the system

of block signals and protection, interlocking plants are a necessity. "Q. Isn't it a fact that the railroads of the country are practically uniform in that belief—that as fast as they can do it, they ought to install interlocking plants? A. I think they believe that, but they do not all do it." (4242) It is done more on the eastern lines than on the western lines.

U. P. takes lead in steel car construction.

Witness thinks the U. P. was one of the initial companies in America that started building steel coaches; and that the construction of steel coaches is becoming more general. "There are, however, a great many of the large important lines that I think have no steel equipment, unless it may be Pullman equipment which they may get into their service." Witness does not believe they have been going into steel equipment very heavily until the last year or two. "There have been a great many features in connection with that character of equipment that have made it experimental, such as the heating of those cars in the winter season." The tendency of all railroads has been to increase the size of their equipment, but they are not all building 50 ton cars. U. P. cars are all being built 50 tons, and some roads, witness thinks, are still building 40 ton cars. (4243) If the U. P. were to-day handling cars of the size it originally had of a capacity of 20,000 lbs., or 10 tons, and were to handle a train on the basis of the present engine, "we probably never would get out of one terminal until we had gotten into another. Q. It would make a very long train? A. Yes."

U. P. could not move its traffic, using small cars.

Overland Limited as good as 4 years ago.

Witness thinks the U. P. runs as good an Overland Limited train now as it did three or four years ago. The barber shop was taken off because it did not seem to be necessary. (4244) "This is the condition to-day: I find we have no compartment car. We have, on the Overland Limited, a dynamo-baggage car, a diner, a sleeper with 10 sections and with two staterooms; another sleeper of 10 sections and two staterooms; a sleeper of 12 sections. (All of them have drawing rooms, of course, in addition.) Another sleeper of 12 sections and drawing room; another sleeper of 10 sections and drawing room; and a composite observation car: * * * Q. Then I am right about it, that you have taken off that compartment car, am I not? A. Yes; but there are some cars there that have more than the ordinary number of staterooms, that are now in that service."

Effect of convention travel on volume of passenger traffic.

(4246) The average number of passenger trains one mile one day, as shown by statistics testified to by witness, for the year 1908, was 15.37; for the year 1909, it was 12.28. "Q. How did that happen to drop off? A. That is affected by large conventions, the Shriners, Democratic Convention, by the Elks, by the Woodmen, the Yukon Exposition. A number of those things will account for that fluctuation." Witness states that the year 1908 was unusual, "but it is plenty high enough now." 12.28 is very high. Passenger trains one mile one day covers all passenger trains on the main line between Council Bluffs and Ogden, whether

they are local or otherwise. There are a few trains that do not go clear through. They run out of Omaha.

Local trains.

(4247) There is one train running out of Ogden that does not go clear through. "Q. How many out of Omaha that do not go clear through? A. One goes to Valley, one goes to Grand Island and one to North Platte, and some go to Julesburg, and the rest go through. Q. And those are all included in this statement? A. By the different districts, yes." The item "Mixed Carloads of Merchandise," being the last item in the list of 34 articles testified to by witness as manifest articles, includes merchandise consigned to a number of different parties in the same territory. It is high class stuff. "Q. As a matter of fact, the high-class stuff, as you call it, was pretty well covered by these 34 articles, wasn't it? A. No, sir. Q. I mean things that merchants are particularly anxious to get in a hurry. A. Oh, no, we have a very large quantity of stuff there that we gave a much slower service on." That list was enlarged, because "the traffic people insisted on making a more general movement of a large portion of the stuff offered rather than continue the practice of moving a small portion at a faster speed and a large portion at a slower speed, because if the Union Pacific service covered a large quantity of articles, it gave them very much less trouble, and less complaint was made as to the movement of the stuff. Therefore it was handled under a manifest system, while other stuff not included was left to move along without a manifest report, as best it could."

Why list of manifest freight was enlarged.
